The performance commenced at half-past eleven o'clock, and did not terminate until four o'clock. There were two encores. "The Alleluia," and the soprano solo, "And God shall wipe away all tears from their eyes," sung by Viardot, with such pathos as deeply to move the entire auditory; her interpolated shake in the last work, and its repetition with the chorus, greatly increased the effect of the composer's text. Perhaps, the most impressive chorus of the oratorio was the melody of the psalm, composed by the Rev. M. Madan, which Mr. Pierson has treated in the chorus "Lo! he comes." The simplicity of the subject stole on the senses like sunshine after a storm: before, all had been gloom, but the hearers were evidently quite consoled by this semblance of a tune for nearly the first time during the morning. The composer was called for at the end of his work, and he was much cheered by his friends. Benedict was called upon to address the company, which he did, apologising for any mistakes in the execution

of such an intricate work for the time, and trusting that the example set by producing the oratorio of a native composer might be followed in regard to the works of other young aspirants for fame. Mr. Pierson has had a great chance, with such noble resources; but unless the "Jerusalem" be revised, curtailed, and in many parts re-written, its first and last notes have been heard in St. Andrew's Hall.

Except Tuesday's storm, the weather has been magnificent. The receipts are expected to be the largest for some years. For to-day's "Messiah" all the reserved places are gone.

THE EVENING CONCERTS.

There have been three evening performances in that remarkable edifice, St. Andrew's Hall, one of the finest rooms for music in this country. The symphonies have been Beethoven's "Pastorale," and Mozart's in E flat. The overtures have been Weber's "Oberon," and Cherubini's "Faniska." On Tuesday the National Anthem was sung; and the second part was confined exclusively to Mrs. Fanny Kemble's beautiful reading of Shakspeare's "Midsummer Night's Dream," with Mendelssohn's incidental music. This novel entertainment, though it filled the hall with an unusual attendance for a first concert, did not altogether please; and long before the play was half read—or, rather, embodied—by the gifted reader, the auditory began to leave the hall. The orchestral playing has been magnificent, and not the least interesting feature has been a new overture, by Benedict, the talented conductor, the "Minnesinger" (the Minstrel), a MS. opera. It is in E flat minor, has a majestic introduction and a fiery allegro in the major, with a short and effective episode of vigorous writing, the subject being frank and large. Some passages for the first violins, and for the violoncellos with a pizzicato effect, were much admired. Mr. Sims Reeves has a passionate romance from the same opera, "As weeping on my breast she lay," which was naturously redemanded. Miss Louisa Pyne had an elegant ballad, "My home is in the peasant cot," and a hunting chorus, rather imperfectly executed, completing the selections from this interesting work. Amongst the instrumental displays have been Bottesini on the contrabasse, and Wilhelm Hausmann, a concertante duo for violoncello and contra-basso, composed by the latter. Mauren's concertante, for four violins, was played by Sainton, Blagrove, Cooper, and Day. Amongst the concerted pieces have been Mozart's quintetto, "senta Dio," from "Don Giovanni;" sung by Miss L. Pyne, Miss Alleyne, Belletti, Lockey, and Weiss; Weber's quartett and chorus, from "Euryanthe," by Miss L. Pyne, Miss Dolby, Sims Reeves, and Formès; Weber's unaccompanied quatuor, "Dors en paix," by Gardoni, Lockey, Belletti, and Weiss; Beethoven's trio, "Tremate," by Mdme. Fiorentini, Gardoni, and Belletti; Nadermann's beautiful trio, from "Marie Stuart" (in which "Auld Lang Syne" is introduced), sung by Viardot, Miss L. Pyne, Miss Dolby, Gardoni, and Weiss; Sir H.R. Bishop's glee, "Blow, gentle Gales," given by Misses L. Pyne and Dolby; Sims Reeves, Lockey, and Weiss; Horavanti's quintett, from "La Virtuose," by Viardot, Miss L. Pyne, and Belletti; Macfarren's madrigal, "Maidens, never go a wooing;" Benedict's part song of "The Wreath;" Mozart's trio, "Pensaga o gusto ciel," from "Don Juan," sung by Miss L. Pyne, Miss Alleyne, and Lockey; and the "Lonely" finale, in which Miss Louisa Pyne distinguished herself by a fine reading of this brief dramatic piece.——On Wednesday and Thursday evenings, Mdme. Fiorentini made her appearance. It is to be regretted that her magnificent organ was not heard in the oratorios as well. She delivered Cimarosa's tryingscena, from "Il sacrificio d'Abramo," and the prayer and cabaletta from Donizetti's "Maria di Rohan," admirably, and was much applauded. The other airs were *Alice's* air "Vanne," from Meyerbeer's "Robert il Diavolo," and Lockey's ballad air, "La calesera." Miss Louisa Pyne made a great impression here by her brava singing, as well as in the sacred school; she is an admirable *artiste*, always thoroughly prepared for her work. Madame Viardot, in addition to her operatic honours, has won them by her singing of the "Orfeo" scena she rendered so richly at Birmingham, and by the "Non piu mesta" rondo and Spanish songs, in both of which she obtained encores. Miss Dolby and Miss Alleyne (a promising pupil of Manuel Garcia) might claim special notice in this meeting; but to follow them, from "Marie Stuart" to certs in detail would be impossible. Herr Formès won an encore in the bass song from the "Seraglio," but he scarcely deserved it: he has been singing very coarsely, and appears to slight the public in a way which may one day be resented.

THE NORWICH CHORUS SINGERS.

An especial eulogium is due to these enthusiastic singers; it is stated that they have attended 65 rehearsals for this festival. They sing with amazing earnestness and precision; attacking the most difficult passages with intrepidity. Nothing can be more delicious than the young fresh voices of the soprano: a fully equal union of the Lancashire women. The professional chorus singers from London only amounted to about 40; Norwich provided the remainder from its excellent choral societies. Mr. J. F. Hill, the chorus master, has reason to be proud of his excellent troop, who spontaneously offered to Benedict to assist in any additional rehearsal he might require: thus displaying a truly artistic spirit.

NATIONAL SPORTS.

The present week has very materially reduced the number of racing fixtures for the short remainder of the season, leaving, however, seven meetings for next week, and a fair sprinkling for October. Pain's Lane is the only fixture for To-day: but on Tuesday we have Newmarket and Sandown; on Wednesday, Chesterfield and Wavertherpe; and on Thursday, the Western meeting in Scotland, Upton, and Brecon. The Aquatic register offers nothing of public interest; and the only appointments in the Cricketing department are an All England match in Scotland on Monday, and a match on Thursday at Lords. The Coursing campaign commences in Scotland, in Roxburgshire, on Monday, and promises to be a very busy one.

TATTERSALL'S.

MONDAY.—The town settling for Doncaster races took place this afternoon, and passed off quietly. On future events business was dull, admitting, however, of a full pitch current.

ST LEGER WITH.	
12 to 1 Agst Lady Evelyn	20 to 1 Agst Wax Bougie (t) 25 to 1 Agst Alonzo
16 to 1 —— Stavrophulos (t)	20 to 1 —— Hide on the Wing 25 to 1 —— King Pepin (t)

THE IRVINE CUP.—Sir Robert, 1. Harrier, 2.
THE DINING-ROOM STAKES.—Marquis, 1. Colsterdale, 2.

FRIDAY.

SWEEPSTAKES.—Colsterdale, 1. Doubt, 2.
HANDICAP.—Lancaster, 1. Feejoina, 2.

PRINCE OF WALES' YACHT CLUB.—The fifth and last match of the summer amongst the yachts of this very popular club took place on Wednesday, for a handsome cup. The distance was from Blackwall to Gravesend and back. The *Valentine* won by a quarter of an hour. The *Julia* was second, about six minutes ahead of the *Albatross*.

CHESTER REGATTA.

This regatta took place on the Dee on Tuesday, with great *eclat*. The day was on the whole fine. There were about twenty races, of which the following were the principal:—

A MATCH for £3 between pair-oared boats.—Nymph (W. Crewe, W. Chadwick), 1. Magnet (R. Dodd, E. Jones), 2. Won by two boat-lengths.

THE TRIAL STAKES of £10 in specie, for four-oared boats (not cut-rigged), to be rowed and steered by boys under 18; second boat £2 out of the stakes. Final Heat: Harkaway, 1. Mystery, 2.

THE CHESHIRE STAKES of 25 guineas, for four-oared cut rigged boats; to be rowed and steered by gentlemen amateurs.—The Lady Wynn (Royal Chester Rowing Club), 1. Nonie (a (Nemesis Rowing Club, Manchester), 2. Nemesis, No. 2 (Nemesis Rowing Club, Manchester), 3. Won easy

THE DEE STAKES.—Deciding Heat: The Tyne, 1. The Five Brothers, 2.

THE LADIES' PURSE, to be rowed by women. Won by the Cardinal.

PEDESTRIANISM.—A match between G. Seward, the American Wonder, and William Jackson, the American Deer, to run one mile, for £25 a side, took place on Monday, at Copenhagen House, Seward giving ten yards start. Seward was the winner by six yards. Time, 4 min. 55 sec., over a very heavy ground.

A. Macnamara, Esq., of Caddington Hall, Herts, undertook to walk from Braamar to Banchory (N. B.), a distance of 41 miles, in ten hours. He started from Braamar at ten minutes past ten in the morning, and arrived at Banchory exactly nine minutes to eight in the evening, accomplishing his great feat in nine hours and a half.

RARE BIRD.—(From a Correspondent.)—On the 20th inst. a fine specimen of *Coracias garrula*, or starling roller, was shot in an orchard adjoining Cat Spring Hill, Watford, Herts. It is an adult female, in full plumage, united with brownish red, light azure, and rich blue; and wanting a little color, more of the a-pect of a Tropical bird, than of the sober-liveried tenants of our woods and gardens. Being only wounded in the wing, it was not killed instantaneous y, and offered an opportunity of hearing the harsh "squalling noise," described by Shaw, which originated its specific name. The roller is said to be frequently found in the thickest and most secluded parts of Germany. In Malta, at certain seasons, rollers are caught in such numbers that they are exposed in the market for sale. In Russia, says the author of the "Life of a Travelling Physician," the most striking object worthy of notice, is the beautiful bird called the steppe Parrot, which is common in this country. It is the roller. Its plumage is beautiful, and when flying in the sun it looks like a moving rainbow. The name "parrot" is descriptive of its rolling mode of flight, which is said to resemble that of the Tumbler Pigeon. According to Yarrell, the last occasion on which it was shot in Eng and was in 1838.

NOVEL DISCOVERY IN GERARD'S HALL CRYPT.—On Monday, as the workmen were engaged in removing Gerard's Hall Crypt, they found behind some brick-work in the thickness of a wall, which is now in the possession of Mr. Kent, landlord of the Old Red Lion tavern, Basing-lane, City, from the position in which they were found it is evident that the cat, which is of a very large size, must have suffered the painful death of starvation in pursuing the rat, which is firmly held in its mouth. The frames of the cat and the rat are most perfect, although supposed to have lain in their places of sepulture some time. The cat is described in the oratorios as well. She delivered C.marosa's tryingscena, from "Il sacrificio d'Abramo," and the prayer and cabaletta from Donizetti's "Maria di Rohan," admirably, and was much applauded. The other airs were *Alice's* air "Vanne," from Meyerbeer's "Robert il Diavolo," and Lockey's ballad air, "La calesera." Miss Louisa Pyne made a great impression here by her brava singing, as well as in the sacred school; she is an admirable *artiste*, always thoroughly prepared for her work. Madame Viardot, in addition to her operatic honours, has won them by her singing of the "Orfeo" scena she rendered so richly at Birmingham, and by the "Non piu mesta" rondo and Spanish songs, in both of which she obtained encores. Miss Dolby and Miss Alleyne (a promising pupil of Manuel Garcia) might claim special notice in this meeting; but to follow them, from "Marie Stuart" to certs in detail would be impossible. Herr Formès won an encore in the bass song from the "Seraglio," but he scarcely deserved it: he has been singing very coarsely, and appears to slight the public in a way which may one day be resented.

MONETARY TRANSACTIONS OF THE WEEK.

(From our City Correspondent.)

Notwithstanding that the purchases of money stock during the present week have been comparatively small, the value of Consols have continued steady: the leading quotations for the Three per Cents having been 100¼ ⅞. An immense demand for cash is daily springing up, chiefly for circulating purposes; hence, the rates of discount, although the Bank is making large advances upon stock at 1½ per cent. per annum, have become higher; yet, as the private banters and bill-brokers are now actively employed in money-lending, there is no scarcity out of the question. Complaints are still very general respecting the great scarcity of silver coin. Up to the present time, the authorities at the Mint have been unable to keep pace with the demand, which appears scarcely to increase, rather than diminish, arising from the fact that most of the shipments to the Australian colonies have been made from the country districts, for some time past, will be chiefly confined to silver. A few parcels of gold have just arrived from Sydney, and the accounts at hand are extremely of a startling character. On good authority we are informed that the mines were yielding at the rate of £20,000,000 sterling per annum. From California, our advices are to the effect that, up to the present time, the total yield of gold in that country has exceeded £35,000,000, or half the entire circulation of the United Kingdom. We have had an arrival of 700,000 dollars from New York, and nearly 1,700,000 dollars from Mexico. These shipments, however, been very extensive, viz., £275,000, chiefly in silver, to India and Alexandria. Where is to terminate the great increase in the commercial activity in this country, and the numerous new chains. a thereof? What good is now spreading itself in our colonies and elsewhere, we feel justified in stating that any great addition to the stocks of the precious metals is not can hardly be anticipated. Up to the present time, the effect of the gold discoveries has been to invest the produce in the most profitable markets, in lieu of allowing it to accumulate in the vaults of the Bank.

For most Foreign Stocks, the Market has been devoid of interest; yet the quotations, generally speaking, have been well supported. Transactions have taken place to the new Turkish loan, at 96¼, and the Austrian, 94¾ ⅝. It is believed the new Austrian loan of £8,500,000 has been subscribed for at Vienna. The subscription has likewise been chosen in the amount of £3,000,000. On Thursday, Buenos Ayres six per Cents were 74½; Grenada Deferred, 12; Mexican for the Account, 25¾; Portuguese Four per Cents, 38¾; Spanish Three per Cents for the Account, 36¾ ⅞. Ditto, New, Deferred, 24¾ ¼ ⅞; Ditto, Passive, 6¼; Turkish 1844, 96¾ pm.; Belgian Four-and-a-Half per Cents (exchange 25 francs), 98¾; Dutch Two-and-a-Half per Cents, 65; Dutch Four per Cents, 99¾. Railways have been steady in their turn, at 104 to 105¾. Russian Four-and-a-Half per Cents, 105 to 105¾; Sardinian, 95¾ 96; and Aus trian, 85.

On Monday the three per Cent Consols for immediate transfer were done at 100¾ ⅞ and for the Account, 100¾ ⅞. A slight decline took place on Tuesday and Wednesday, which on Thursday the market was very flat, as follows.—Three per Cent. Consols, Money, 100¾ ¼ ⅛ ditto, for the Account, 100¾ ⅜ ⅛. A transaction was marked in South Sea Stock, at 111¾. Exchequer Bills (March), were 71s to 73s pm.; Ditto, 5% premium. India Bonds have sold at 98s to 99s; premium

Railway share transactions have been reported in Bank Shares, the value of which is somewhat improved. Bank of Australasia Shares, 39¾ ⅜; Bank of North America, 37¾; Colonial, 15¾ to 16¾; Commercial of London, 2¾; London Chartered Bank of Australia, 4¾; London and Westminster, 5¾; Union of Australia, 30¾; Union of London, 17¾.

Dock Shares have continued firm, and London Stock has advanced £1 per share. Commercial, 105; East and West India, 168; London, 130; St. Katharine, 98; Southampton, 84; Victoria, 64

Steam boat Shares have commanded very little attention. Australian Royal Mail, 4; General Screw, ; General Steam Navigation, 2½; Peninsular and Oriental, Ditto, New (£5 paid), 3½; Royal Mail Steam, 7¾ to 7½. Shares in the North of Europe Navigation Company have marked 1-16 to 3-16 premium.

The produce markets generally have exhibited rather more firmness, and prices have ruled the turn in favour of importers. The heavy stocks in warehouse operate against any permanent improvement.

The market for Railway Shares has been in a very inactive state; yet the general quotations have been fairly supported. The following are the official closing prices on Thursday:—

ORDINARY SHARES AND STOCKS.—Aberdeen, 26; Bristol and Exeter, 101; Caledonian, 42¾; Chester and Holyhead, 20¾; Eastern Counties, 11¾; Eastern Union, Class A, 8; East Lancashire, 16¾; Great Northern Stock, 76 ex div.; Great Western, 96¾; Lancashire and Yorkshire, 84¾ ex div.; Lancs Northern, 18¾; London and Blackwall, 8¾; London and Brighton, 104; London and North-Western, 120; London and South-Western, 89¾; Manchester, Sheffield, and Lincolnshire, 51; Midland, 76¾; North British, 30¾; North Staffordshire, 12¾, Scottish Central, 80; Shrewsbury and Chester (Converted), 16¾; Shropshire Union, 3¾; York, Newcastle, and Berwick, 72¾; ex div: South Wales, 40¾ ex div; Thames Haven, 9¾; York, Newcastle, and Berwick, 68; ditto, G. N. E. Purchase, 7¾; York and North Midland, 45.

LINES LEASED AT FIXED RENTALS.—The only transaction was in Birmingham and Oxford Guarantees, at 30

PREFERENCE SHARES.—Chester and Holyhead, Five-and-a Half per Cent., 18; Cork and Bandon, 1½; Eastern Counties, No. 2, 3¼ premium; ditto, New, Six per Cent. Stock, 14¼; Great Northern Five per Cents, 126; Great Western Four-and-a Half per Cent., 108; London and South-Western Consolidated Thirds, 88; Manchester, Sheffield, and Lincolnshire New £10 Shares, 11¾; Consolidated Bristol and Birmingham, 149; North British, 93; Shrewsbury and Birmingham, 11¾.

FOREIGN.—Charleroi and Erque fees, 10¾; Dijon and Besancon, 8¾; Dutch-Rhenish, 7¾; Luxembourg, 7¾; Ditto, Railway, 3¾; Ditto, 1¾; Lyons and Avignon, 2¾ pm.; Namur and Liege, with Interest, 4¾; Orleans and Bordeaux, 19¾; Paris and Lyons, 22¾; Paris and Rouen, 25¾; Paris and Strasbourg, 23¾; Paris, Caen, and Cherbourg, 6¾; Rouen and Havre, 16; Sambre and Meuse, 10¾; West Flanders, 4¾; Western of France, 1¾.

Mining Shares have sold slowly. Anglo-Californian have been 2¾; Baden, 1¾; Imperial Brazilian, 7 to 6¾; Ditto, Coxaes and Caldas, 3 to 2¾; Caraan's Creek, 1 to 1¾; Cobre Copper, 46 to 44¾; Colonial Gold, 1¾; Copiapo, 2¾ to 1¾; English and Australian Copper Smelting Company, 42; Lake Bath rat, 8; London and Caucasian Gold Quartz Crushing Company, 1 to 1¼; Nouveau Monde, 1¾ to 2; Port Philip, 1¾ to 1¾; Santiago de Cuba, 13; South Australian, 1¼ to 1; Tin Croft, 12¾; United Mexican, 8¾.

FRIDAY EVENING.—Consols have been steady to-day, at 100¾ for Money, and 100¾ ⅞ for the next Account. No change can be noticed in the value of the Unfunded Debt. Foreign Bonds and Railway Shares appear yesterday's quotations.

THE MARKETS.

CORN EXCHANGE (Friday.) During the present week the arrivals of English wheat up to our market-morning have been confined to 3740 quarters, more by from Essex and Kent. Fresh up-coming samples, by land carriage being limited, the show of samples of both kinds of wheat while was very moderate. For all kinds we experienced a slow inquiry, but no change took place in the quotations. On Monday last a fair demand for foreign wheat has set in, at the prices we had with more firmness. The amount of business done, however, was by no means extensive. Barley commenced on Tuesday morning's market very little attended to, and generally refused to sell except at full prices. Barley, the show of which was small, moved off steadily, and late rates were well supported. In malt, very few sales took place. Beans and peas rather more in demand, and for the best of the former, and for fine new Scotch beans and peas were quite as dear as on Monday; whilst a fair average business was doing in flour.

ENGLISH.—Essex and Kent, wheat, 47s to 50s; ditto, 44s to 46s; ditto, 42s to 44s; ditto, 40s to 42s; ditto, 37s to 39s; ditto, 34s to 36s; Scotch and Irish, ditto, 27s to 29s; rye, 34s to 36s; grinding barley, 24s to 26s; distilling ditto, 28s

"STOCKWELL," WINNER OF THE ST. LEGER, RETURNING TO WEIGH.

"STOCKWELL," THE WINNER OF THE ST. LEGER.

We this week Engrave the winner of the St. Leger stakes, at Doncaster, on Wednesday week. The following are the details of the race:—

The St Leger Stakes of 25 sovs each, for three-year olds; colts 8st 7lb, fillies 8st 2lb; the second to receive 100 sovs out of the stakes; the winner to pay 100 sovs towards the expenses, 25 for the judge, and 25 for the starter; St Leger Course; 116 subs.

Lord Exeter's ch c Stockwell, by The Baron ..	(Norman)	1
Duke of Richmond's br c Harbinger, by Touchstone	(Flatman)	2
Mr Bowes's ch c Daniel O'Rourke, by Irish Birdcatcher	(F. Butler)	3
Mr Padley's b m br f Trousseau, by Gaveboy ..	(Templeman)	4
Mr J Scott's b f Songstress, by Irish Birdcatcher ..	(A. Day)	5
Mr Duncombe's ch c Alfred the Great, by Orlando ..	(Basham)	6

Betting: 7 to 4 agst Stockwell, 5 to 2 agst Daniel O'Rourke, 3 to 1 agst Songstress, 7 to 1 agst Harbinger, and 10 to 1 agst Trousseau. The start took place a few minutes before three o'clock, Alfred the Great jumping off with a decided lead, followed in rotation, and at wide intervals, by Harbinger and Stockwell, Scott's two next nearly abreast; the pace as good as Alfred the Great could make it. No change whatever took place until near the Red House, where Alfred the Great was joined by Harbinger and Stockwell, and immediately after gave away. Harbinger then showed in front, but was headed in a few strides by Stockwell, who went on by himself, and won in a canter by ten lengths, Harbinger beating Daniel O'Rourke by a length. Run in 3 min. 21 sec.

The winner was bred by the late Mr. Theobald, at Stockwell, whence he takes his name, under the care of John Lowry, who was Mr. Theobald's stud groom. Before the colt was weaned, he was offered for sale to various leading men on the turf, but without success. The Marquis of Exeter called at Stockwell to look at the colt, admired him much, and the bargain was struck; and the new owner of Stockwell gave John Lowry orders to send him to Burleigh as soon as he was weaned. When Lord Exeter was gone, John inquired of Mr. Theobald what sort of a bargain he had made, and the old gentleman replied, "Why, John, I have sold him for £180, but I would not have sold him to any one else at that price, so you must say it was £250, and you stand £50 to nothing if he wins the Derby." Such is the history of Stockwell.

GLOSSOP HALL, DERBYSHIRE.

Glossop, which has recently been honoured with the company of the Duke and Duchess of Norfolk, Lord and Lady Edward Fitzallan Howard, Lady Adelaza Howard, together with a continual succession of noble and distinguished visitors at his Grace's mansion, is a place of very considerable interest. The neighbourhood abounds with some of the best specimens of the varied and romantic scenery of Derbyshire. The distance is about thirteen miles from Manchester, and easily attained by the Sheffield and Lincolnshire Railway. On the journey, the magnificent viaduct of Broadbottom presents itself to view, completely overtopping the residence of John Marsland, Esq., and his extensive cotton manufactory; and three miles further, Dinting Vale is crossed, from which the new part of Glossop, Howard Town, may be seen to great advantage, embracing a view of the several cotton manufactories of the firms of John Wood, Esq., and Brothers, and Francis Sumner, Esq. On the right is the line formed some years since by his Grace the Duke of Norfolk, at a cost of £16,000: it terminates with a neat architectural station, the principal entrance to which is surmounted with the crest of the Duke (a lion, neatly worked from one huge block of stone). From this point there are three ways leading to Glossop, one of which is a park or field road over what is called the "Royle." From the summit of this hill is obtained a view of the great mountain, "Shire-hill," and also of those widely-extended moors upon which many grouse have lately been sacrificed. The Hall, formerly a place of no attraction, and inadequate for the reception of his Grace and suite, has of late been considerably enlarged, re-modelled, and beautified. The grounds, walks, and shrubberies are tastefully laid out; the terraces are of exquisite design; and a costly ornamental water-fountain plays gracefully in front of the mansion. The stables and offices also form a considerable portion of the recent extensive alterations. They are surrounded with numerous ingenious devices in stonework, and surmounted by a neat cupola, containing a sweetly harmonious and loudly-toned bell, under which is also a bold archway, to admit of a circuitous carriage drive from the principal entrance. From the front of the magnificent mansion may be obtained an extensive view of the lofty towering hills, raising, in fantastic forms, their rocky summits or miles around, by which the village is surrounded, with the ancient time-worn spire of the parish church slightly tapering over a finely wooded plantation. The next object of interest is the new large school in connexion with the Church of England, erected at the cost of the Duke, to meet the increased want of education on a more extended and improved system in that neighbourhood. The old Parsonage, formerly the residence of the late Rev. Christopher Howe, vicar, who held the living upwards of half a century, and who had been in holy orders for the protracted period of sixty-one years, is still standing, but presents a very imperfect model of what it was in by-gone years, having been stripped of its rich ivy-clad covering and the beautifully variegated foliage which formerly rendered it a conspicuous object of admiration to the traveller. A spacious new Vicarage has, however, been erected closely adjoining. It is expected that many other extensive alterations and improvements will originate, in a great measure, from his Grace's more intimate acquaintance with Glossop; his sole object being, as much as possible, to advance the prosperity and condition of his tenantry, by all of whom he is held in universal esteem. The architects employed by his Grace in carrying out the improvements at Glossop, are Messrs. Weightman, Hadfield, and Goldie, of Sheffield.

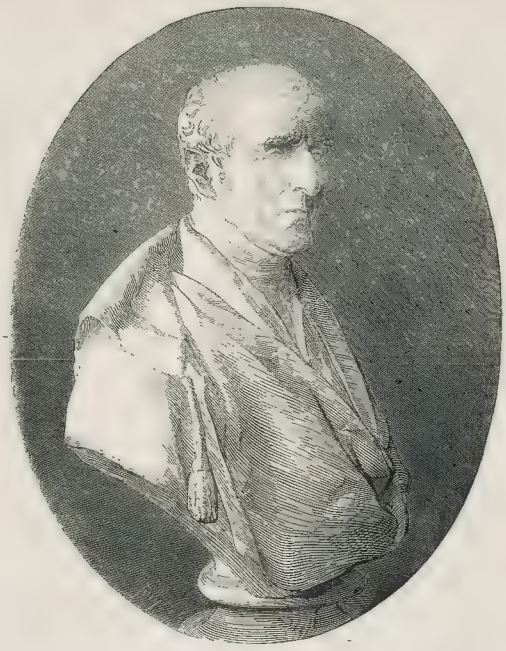
GLOSSOP HALL, DERBYSHIRE, THE SEAT OF THE DUKE OF NORFOLK.

THE HENSMAN TESTIMONIAL.

This handsome vase, of Greek design, has lately been presented to Mr. Hensman, in commemoration of that gentleman's exertions in aiding the distribution of the various medals to the exhibitors at the Great Exhibition of 1851. On the body of the vase is a view of the Crystal Palace from the west end; on the reverse is the inscription. The handles, introduced in wreaths of laurel, are representative of the obverse of the various medals; while on each side of the body are the busts of her Majesty and the Prince Consort; and on the foot of the vase, whilst on a series of shapes, are engraved the names of the subscribers. This piece of plate is from the establishment of Messrs. Hunt and Roskell.

TESTIMONIAL PRESENTED TO MR. HENSMAN.

London: Printed and Published at the Office, 198, Strand, in the Parish of St. Clement Danes, in the County of Middlesex, by William Little, 198, Strand, aforesaid.—Saturday, September 25, 1852.



THE ILLUSTRATED LONDON NEWS.

No. 582.—VOL. XXI.] WELLINGTON SUPPLEMENT, SEPTEMBER 25, 1852. [TWO NUMBERS, 1s.

WELLINGTON'S PLACE IN THE WORLD.

In that profession which Wellington ennobled, it is a common saying that every "bullet has its billet," and if this be true of the missiles that man projects, it is true of man himself. Every man has peculiar talents, peculiar functions, and a peculiar duty. Though the utter insignificance of each common individual, and the similar and almost equal fate of great multitudes, may throw a doubt over their lives; of such great men as Wellington, who appear one or two in a century, and tower, like "great sea marks," high above the level of the human ocean, there can be no doubt they were sent into the world for a purpose—to guide and to teach mankind, and to influence the great current of history. Cæsar, though he did not know himself to what purpose he was destined, was, by his great talents, the chief destroyer of the Roman Republic; and, loosening the bonds of an old and decaying society, he prepared the way for that better order of society, and the prevalence of that purer religion which commenced soon after his time. He destroyed the prestige that made the Republic sacred, and that might have continued it an incubus on the world. Charlemagne, an agent at a distant interval in the same work, fused into one many barbarous tribes and nations, and made modern civilisation possible. What Washington and Napoleon effected is too recent to admit of doubt or contradiction. One contributed to make the New Continent a safe home for the oppressed people of Europe, and to establish the superiority of civil wisdom over military prowess; the other helped to drive the Old World into the New, and bring into discredit the most transcendent military talents that ever appeared—for good judges admit his superiority on many points as a mere soldier and strategist to Wellington, though he was morally less grand, and infinitely inferior in motive and in dignity; and, like Washington, though by a converse action, he exalted civil wisdom in the general estimation.

The great Duke was a Field-Marshal and a Prime Minister; combining his moral with his military qualities, he was the first and noblest soldier of the age, and the greatest practical statesman. But these terms only express his political relations. He was also a most influential member of society, of which military men and statesmen are only portions, and not always the most influential portions. He was for fifty years before the public, attracting the eyes of all men; and, after a life of incessant activity and exposure to every kind of danger, he died in peace at a very advanced age, and is embalmed for ever in the grateful memory of mankind. Never before was any man so much spoken of, never before was any individual for so long a period the observed of all observers. The fame of his victories, and his statesmanship, and the length of his life, have made him known all over the world. Swift as the telegraph could convey the information, the one topic, that every man had on his lips last week not only in England, but throughout France and Germany, and the rest of Europe, in our Colonies, and the United States, was Wellington. He connected the sympathies of all nations. He was kindred to them all. His death was knelled throughout the world. Though entirely an Englishman, he was the heritage of all mankind. His great success as a soldier, his plain common-sense and sturdy honesty as a statesman, his protracted and happy life, and his universal fame, all combined to make him a man the like and the equal of whom is not to be found in history. It is impossible to suppose that such a man was to answer no other purpose than to lead English armies and govern for a time the English State. His existence has a greater moral and a nobler purpose. He had a place in the heart of the world as well as in the heart of England. His presence amongst us was a significant sign of something greater and more important than himself; and what that was—the moral that his existence taught, and the purpose that his life served to society, it is now our intention, however feebly and imperfectly, to endeavour to trace.

To the generality of mankind he is great, chiefly as the conqueror of another great man. His courage, skill, and indomitable perseverance prevented society from being trodden under the hoof of a great military tyranny. For this he was most deservedly honoured; but, while we honour his great military deeds, we cannot overlook the fact that a military tyranny like that which he broke in pieces is again raising its head in France; and that as terrible a military tyranny as that of the Emperor Napoleon is dominant over all the Continent. To put down Bonaparte was not the greatest purpose for which Wellington was sent into the world. His successful statesmanship emancipated the Roman Catholics, and gave them equal political rights; but it failed to satisfy them or abate the restless ambition of their priesthood. His military prowess and his statesmanship were more successful in their immediate than in their ultimate results; and we must look beyond both to discover the real purpose of his existence, and find his true place in the moral history of society.

Coming into manhood at the period when the French Revolution began to agitate Europe, it influenced powerfully his quick and discerning mind. Pledged by his position to the service of the State, he was necessarily adverse to the Revolution: he noticed it with becoming horror in his first speech in Parliament; and was from the beginning, by birth, by connexion, by inclination, a true Conservative, devotedly attached to the service of his King and country. As Bonaparte was the child and champion of the Revolution, so Wellington, whose great fame was acquired by defeating him, was its offspring also, but in the second degree, and almost born with hostility to the parent he was to struggle. The one was the champion of rude and hasty violence, the other the champion of old, steady, methodical, established political order. In the end the latter triumphed, and Wellington's talents and his great military success produced the triumph of Conservatism over Anarchy. He carried back society to principles from which it had too rashly departed. Wellington's genius, like the cause he served, was orderly, steady, resolute, unflinching, humane, and in the end beneficial. It had none of the rash impulse or fitful violence of revolution. Even in using destructive means it was eminently conservative; and in his character, prowess, and success, society finds the most convincing testimony ever afforded of the superiority of inherited method and order, and of the gradual transmission of improvement over hasty and theoretical revolution.

But Conservatism, carried too far, and persisted in too long, was in its turn taught a lesson by the man who had restored it to dignity and power. The statesman completed the task of the warrior. If the perils and horrors of the Revolution first made him a Conservative; if the public wants then made him a great general the progress of society, and of very different wants at a later period, made him a Reformer. He was always a reformer of the army; because it was necessary to his military success. He also reformed the public offices, because it was necessary to his civil success that he should do so. He reformed the political and religious institutions of the State; he lent his aid to reform our commercial system; and, in the very spirit of Conservatism, he led the way in quiet and safe innovation.

The great Duke was truly the champion of right at all times, and the herald of a new social order, of which the great principle is that the wants of society are to overrule every pre-established system. If it be not degrading so high a moral subject by a material comparison, the Duke seems to have filled a place in society like the points on railways which lead the train quietly and safely from line to line, sending it forward on its way, or shunting it securely till danger is passed; or it was like that of a turn-table, and served peaceably to move society from the narrow gauge of old Toryism on to the broad gauge of new Reform. Emblem both of the restoration and of the decay of the old system; he was, by his peculiar virtues and the length of his life, the medium of connexion between two great systems of society; to each of which, in turn, he gave the superiority, though he gave the final victory to that which is only a step forward to a better system still. To show the futility of both, he was successively their master; and to impress on us the comparative inutility of military success, his own great conquests of Bonaparte were even before his death demonstrated to be incapable of rescuing the French from military subjugation. Influenced by the wants of the age, Wellington was at each epoch the successful champion of opposite systems, and expressing at both epochs the prevailing truth, he became in succession the destroyer of revolutionary violence and of stagnant Conservatism.

And how did the great Duke accomplish these objects? He obeyed the aphorism of Bacon, and conquered nature by studying her laws. The distinguishing characteristic of his mind was a quick appreciation of facts. Like an Indian on the trail, he was all eye and all ear. His own safety, and the safety of his army—which he thought much more of than his own—required from him a ready and just appreciation of facts. By them he guided his military operations, and by them he decided his policy. He was in no sense a theoretical or philosophical politician: he had none of the genius of a Turgot or a Burke: he was born an Englishman and an aristocrat, and he loved the Constitution from habit, and from an instinctive rather than a reasoning conviction; but old convictions, habit, and attachments, all gave way to the influence of facts; and to that he sacrificed the longest cherished principles of his party and his class. He accepted the repeal of the Test and Corporation Acts, when he saw that only by such acceptance could the Government be peacably carried on; and he emancipated the Roman Catholics, when he saw that longer to retain the penal laws was to endanger the public peace. So, he willingly co-operated and used all his interest with his party, to carry the commercial reforms of 1842, and the still more important changes of 1846—though opposed to the principles he had always defended, and though he had to separate from his own friends—because he saw that the safety of the State and the welfare of the people demanded it. In the field and in the Cabinet facts were his guides. That a huckster, a merchant, or a carpenter, must shape his conduct exclusively by facts, to be successful, is readily admitted, but the example of the Duke of Wellington was required

to carry the conviction to all minds that the politician and the legislator can proceed by no other method. To flights of rhetoric and flights of fancy, to antiquated maxims and fine-wrought theories, his life was opposed; to every appeal except to the senses, to all other authority but that of the world in which we live, he was deaf and blind; and to the latest times, and to men of all classes, his wonderful success throughout life teaches the great lesson of guiding conduct exclusively by observing and following the fact and the truth.

Even his reverence for the principle of duty was subordinate to his respect for facts. It was his duty to serve his country; it was his duty to perform all his functions with care, and patience, and indefatigable zeal; but, in doing that duty, he followed blindly no transmitted maxims: he ascertained what was his duty by an examination of facts. So, when in India, he prepared to proceed to Egypt without waiting for orders; but he submitted without repining to being superseded. No man had a stronger sense of the principle of duty; throughout his life he acted on it; but his ideas of duty were formed by the living facts of existence. The immense height to which this governing principle led him is an encouragement to all men to do their duty. In works of supererogatory beneficence the Duke never engaged. He planned no philanthropic societies, he never took the lead in schemes for bettering the condition of the poor. He was never importunately busy with this charity and that humane project; nevertheless, his services in the cause of humanity and of his country far surpass those of many loud-talking professors of philanthropy. His life is a perpetual hymn in praise of the humble principle of duty, and tells every man, each in his sphere, that only by doing his duty can he be the benefactor of his species.

The Duke from the beginning of life followed the bent of his own genius. He achieved greatness by no self-mortification. He continued in the state in which he was born, but he ascended to its topmost height. His whole life till he reached the very pinnacle was spent in climbing. Every day almost saw an additional success and an additional gratification. He made even occasions of happiness from mortifications; denials of money and men in the early part of the Peninsular War were additional difficulties in his path which gave him delight to overcome. All his great exertions were great pleasures; and no more happy existence can, perhaps, be conceived than his,—day after day overcoming new difficulties, and achieving new successes. Unexampledly prosperous, his career as a soldier scarcely ever received a check; and, in well serving his country, he served himself. In following the guiding hand of Nature, he became a happy as well as a great man.

The general admiration loudly testifies to the attachment of the people. But Wellington never was a popularity-hunter. He took the utmost care of his soldiers; but he never mingled with them, or, like some of his generals, sported with them. By being always just, and doing what was right, he won attachment. He was rigid with the common soldiers; but he was rigid with their superiors also. He was in no sense a democrat, nor a demagogue; yet he served the people faithfully, in serving the Crown; and, in spite of some of his predilections, conferred more benefits on them than their professed friends.

Acting as a man, he ennobled human nature; conquering all political systems, he established the superiority of the living man and the living truth to all pre-existing forms. He was morally great, but his moral greatness was all founded on facts. The basis of his duty was nothing superstitious nor supernatural. He was guided by the external world; he followed the bent of his genius, and was great and powerful by nature. His life, as an encouragement to duty, and contrasted with the lives of his opponents and contemporaries, is a warning against ambition. His place in history, or we should say, in civilisation, will be alongside, or even above, that of Washington. Like him, he was the defender of the right, the scourger of wrong; the destroyer, without intending it, of decayed institutions; and the introducer, without intending it, of a new and improved order of society. His whole existence was a practical refutation of all falsehood. He may finally be said to be the founder of a new reverence in high places—the reverence of facts, which is but another name for nature.

THE DUKE OF WELLINGTON,

AS POLITICIAN AND CIVILIAN.

We last week published a full Memoir of the Life and brilliant Military Services of the great Duke of Wellington, and appended a short *resumé* of his civil and political career. We now subjoin a more copious retrospect of the Duke's services to his country as a statesman—embracing the long and eventful period between 1815 and 1852.

Very rarely in the history of mankind has it fallen to the lot of those who have distinguished themselves as conquerors or generals to exercise control over the civil affairs of the countries they may have conquered, served, or saved. Alexander and Cæsar are examples in the ancient world; Napoleon among contemporaries: for, although he lived to accomplish wonders in the internal organization of France, his loudest complaint, and his strongest plea with posterity, was, that he was, in a manner, forced into perpetual war, was suddenly arrested in his career as a ruler, and that, had he been spared to "fulfil his mission," he would have developed still grander plans.

The Duke of Wellington was favoured, in this respect, more than any other great commander, of past or present times. After a military career of unparalleled glory—the time occupied in his achievements, and the greatness of the interests at stake, being considered—fortune reserved for him a civil career, which, if it was less brilliant in its incidents, was certainly of scarcely less importance to the welfare of his country. After nearly twenty years of war, in which conquest seemed an inevitable result of his appearance in the field, it was his lot to pass through more than five-and-thirty years of civil activity; during the greater part of which period he was the most prominent and influential among our statesmen, as in the former part of his life he had been the foremost man in an age productive to a marvel in military talent.

The Duke of Wellington commenced his political career under circumstances at once favourable and unfavourable. With the *prestige* of his conquests still around him; with the vivid remembrance in men's minds of the great scene that had attended his first entrance into the House of Lords; and when the eulogistic gratitude of his countrymen, expressed through the Speaker of the House of Commons, furnished the noblest justification that could be offered for the dignities heaped on him by the Crown; with these brilliant accessories, and while still in the full vigour of early manhood, that the Duke of Wellington should have lived to fulfil all the great expectations that had been formed of him, from his conduct in India, while entrusted with the civil administration of conquered provinces, as well as by those who had perused his Peninsular despatches—not yet communicated to the world—this might have been looked upon but as the natural consequence of great services and a grand reputation. Yet, flattering and favourable as were the circumstances under which the Duke entered the political arena, there were other and hidden causes at work which silently and secretly tended to undermine his great influence, and to destroy, in the apprehension of the great majority of his countrymen, the brilliant *prestige* derived from his military services.

It is one of the necessary and salutary consequences of our constitutional system of government, that public men are not always esteemed in proportion to their actual personal merits; that is to say, according to their intellect, experience, sagacity, and general political talent; but that they stand or fall, in the public esteem, by the opinions which they may entertain on great disputed questions, and the degree in which they may oppose or support the wishes of the people. It is not here necessary to moralise on this notorious fact—its notoriety is sufficient. Three of the most eminent of British subjects during the present century have marvellously exemplified the power of the popular will in this respect. Sir Robert Peel, while he stood forth as the champion of defunct Toryism, was held up as an object of antagonism for the people; Lord Brougham, while still Henry Brougham and the eloquent champion of popular rights, was on the other hand, a popular idol. When Sir Robert Peel discovered that the tendency of the age was adverse to his earlier creed, and boldly resolved to meet the wants and wishes of the nation, the popular antagonism became converted into enthusiastic admiration; while Lord Brougham, in consequence of the obtrusive propagandism of his late reactionary opinions, has lost his popularity, and been ranked with the enemies of the people.

During a part of his long career, the Duke of Wellington was subjected to similar vicissitudes—was alternately the object of popular disparagement (to use the mildest term), and of popular respect. It is well to know that public men in England are so constituted that, without hardening their hearts towards their countrymen, when they believe them to be ungrateful, they can maintain their equilibrium alike amidst adulation and censure, popularity and unpopularity, love and hatred. It was the natural privilege and advantage of Wellington that he was physically and mentally so organised as to be, we will not say insensible, but imperious to all such influences. His common-sense protected and shielded him alike against flattery and odium. He best knew, better than his eulogists, in what he had really done good and served his country; so that he could afford to weigh and test the praises awarded for his deeds; and equally, when later in life the current turned against him, he was the fitting judge of his own motives and principles of action. His adamantine nature stood by him through all trials; and when, at last, his conduct proved that, in obstructing the public will, he had not acted from pure obstinacy, but rather from his own ideas of his duty and of the philosophy of statesmanship; and when he once more received the long-suspended ovations of his countrymen, he showed himself as little moved in the one case as he had been in the other.

The political life of the Duke of Wellington began inauspiciously. The great enemy of England being laid low, the empire began to feel the reaction consequent on a long period of mad excitement. Enormous debts had been contracted; an artificial prosperity had long subsisted, which was now to decay: the nation had ridden on the high tide of enthusiasm till the prosaic facts of life were disagreeable, if not intolerable; war prices, scarcely felt during the war, became unbearable in a time of peace; an active, energetic, and most able Opposition in both Houses of Parliament was engaged in arousing the attention of the public at large to the enormous abuses that had crept into public affairs during a succession of corrupt, not to say profligate, Administrations, fostered and shielded in the shadow cast on domestic Government by the events on the Continent; the ancient spirit of the British people—their love of self-government (not stifled by the disastrous result of the attempts of the French in the same direction) was once more aroused; and once more they sought, though for long in vain, to realise the practical blessings of the theoretical liberty guaranteed by their Constitution; in fine, the nation was being prepared for one of those great convulsive throes—one of those impulsive movements which, at various times have characterised its history, and in the course of which, as experience showed, the people would be prepared to sweep away any obstructions, whether of Reputations, of Men, or of Institutions, that could stand in the way of the accomplishment of their righteous will. Now the Duke of Wellington, by the constitution of his mind, by his hereditary associations, by his personal preferences, by his military habits, and, let us add, by his conscientious convictions, was utterly and sternly opposed to all this new and agitating spirit of inquiry and reform. He looked upon the measures proposed, and on the instruments of the movement, with equal scorn. His fixed ideas led him to resist Catholic Emancipation, Fiscal Reduction, Parliamentary Reform—every proposition, in short, that was advocated by Grey, Brougham, Tierney—nay, in some instances, even by that brilliant champion of his own peculiar party—Canning. He ever worshipped a political god, Terminus. Not greater was his dislike to the measures than his contempt for the press, that most potent yet developing agent in their accomplishment. He had suffered so much in Portugal and Spain from "those rascally newspapers," as he termed them, that he forgot the great difference between a journalist who, in his avidity for news, betrayed to the enemy the positions or plans of the British forces abroad, and the organ of the public wishes at home, engaged in a legitimate crusade against corruption and administrative tyranny. All these things considered, one cannot marvel that the Duke of Wellington should have stood in imminent danger of seeing his popularity wane, or that in the course of a few years he should have become, in the popular mind so identified with the hated system of Government, that no small portion of the hatred it excited should have been concentrated on himself.

It was not, however, until some time after the great events of 1815 that the Duke of Wellington began to take any prominent part in home politics. He attended with tolerable regularity in Parliament, and voted with the Tory Ministry of the day, but rarely took any part in the debates. In 1818 he was appointed Master-General of the Ordnance, an office which he continued to fill until several years after a great schism arose in the Tory party. In 1819 the Duke made a speech in the House of Lords, which is worthy of notice, as embodying one of a series of energetic protests against Catholic emancipation. It is due, however, to the political memory of the Duke, to say that he never took a religious or sectarian, but always what may fairly be called a statesmanlike view of that question. Nearly a quarter of a century before he had sat in the Irish Parliament, and soon after the commencement of the present century he had first been appointed to the office of Secretary for Ireland. An Irishman by birth, he had thus enjoyed many opportunities of studying the Catholic question in its bearings on State policy. At the same time, he always proclaimed the great principle that difference of religion was no disqualification for the public service; and although he then opposed not only Mr. Pitt's transmitted scheme of Emancipation, but also the suggested increase of the grant to Maynooth, he did so avowedly not in animosity towards his Catholic countrymen, but because, on political grounds, he dreaded an increase to the political power of the Catholic Church. In the speech in 1819, already referred to, the same view is taken; and it is also remarkable for that frankness and plain speaking which characterised the Duke's speeches when he became a more important political character. He did not disguise that the Protestant religion was hateful in Ireland, as having been imposed by the sword; and he assumed, as a matter of course, that the Catholics would use any power conceded to them in the recovery not only of their lost position, but also of the alienated possessions of the Church. Still he did not object to emancipation, if adequate political securities could be procured; but he frankly confessed his conviction that such securities were impossible. It is curious to notice, that the Duke, at the early period, touched on one point which has much occupied men's minds at the present time—that of a veto in the British Crown on the appointment of Catholic Bishops. At that date, the Pope had willingly yielded this concession on his part, reserving only to himself the spiritual ordination; but the Irish had expressed the strongest disapproval of this scheme as an attack on their national independence. Under these circumstances, the Duke thought it was impossible at that date to concede emancipation consistently with the security of the Protestant Church; but, at the same time, he set an example to the Eldons and Perevals of looking at the subject from a political rather than from a religious point of view. Nine years after, and within a very few months of his standing forward as the agent of emancipation, the Duke repented his belief in the impossibility of its being granted.

We now leap to the year 1823, when we find the Duke of Wellington once more engaged in the service of his country abroad. It was no new position for him to be engaged as a diplomatist and plenipotentiary; he had already manifested an extraordinary capacity for those functions, although his calibre was too large to permit his being employed in the ordinary functions of an ambassador, except on very important occasions. One of the first acts of Mr. Canning on his being appointed Foreign Secretary, in 1823, was to nominate the Duke of Wellington as Plenipotentiary at the Congress of Verona. It was well that a man of his stamp was so sent, for when the Duke reached Paris on his way, instead of finding that the relative positions of Russia and Turkey would be the object of the consultations of that Congress, it appeared that the great object of the Allied Sovereigns was to determine the conditions of an intervention in the domestic affairs of Spain. The Duke of Wellington immediately communicated this intelligence to Mr. Canning, demanding instructions. Mr. Canning's reply was prompt and decisive. He said, that, if France attempted an interference in Spain, whether by arms or by threats, the Duke was frankly and peremptorily to declare that to any such interference, come what might, his Majesty the King would not be a party. Acting on these instructions, the Duke opposed the project; and when the other powers resolved on isolating themselves from Spain, the Duke of Wellington refused to withdraw our Ambassador, but left him there, in the hope that he might, by his good offices, abate the annoyance and irritation occasioned to the proud Spanish people by the conduct of the Holy Alliance. Subsequently, Mr. Canning requested the Duke of Wellington to become the medium of a special communication which he desired to address to the Spanish Government; and in selecting the Duke of Wellington he wished to pay a compliment to him personally, and at the same time to increase the probability of his wishes being acceded to, from their being conveyed through one who had rendered such great services to the Spanish nation.

In the year 1826, the Duke of Wellington again figured in a diplomatic capacity. The embassy to St. Petersburgh is usually held to confer a mark of great honour. The Duke was sent thither, and his appointment tallied in date with the arrival of the Allied Army in Paris. The Emperor of Russia seized on the occasion to pay the Duke of Wellington a very distinguished compliment. He addressed to him an autograph letter, announcing that, in consideration of his great qualities as a soldier and a civilian, and of the distinguished services he had rendered to Europe, the Smolenks regiment of infantry, which had been organised by Peter the Great, and which was held to be one of the oldest regiments of the Russian line, would thenceforth be called the Duke of Wellington's regiment. This regiment was one of those which had been under the Duke's general command as the Generalissimo of the Allied Forces.

The office of Commander-in-Chief fell into the gift of the Ministry on the death of the Duke of York. It was immediately conferred, with the unanimous approval of the nation, on the Duke of Wellington.

We now approach an era in the Duke's life when he may be said to have first entered on his period of unpopularity. Among the Tories, as politicians, there was one man who was the object of popular sympathy—not more on account of his genius, for statesmanship, and the fascination of his oratory, than for the enlarged and liberal character of his views on the subject of Catholic Emancipation and foreign policy. Canning was now to receive, at the hands of his Sovereign, the reward of his brilliant career. On the retirement of the Earl of Liverpool, early in the year 1827, King George IV. desired Mr. Canning to form an Administration. The public were surprised, but much pleased, at this recognition of the claims of genius over those of rank or routine. But the chief members of the late Administration, having all along differed from Canning on the great question of Catholic Emancipation chose to assume that he would propose a measure on the subject; and, without allowing the new Ministers the time necessary for negotiation or explanation, six of them simultaneously gave in their resignations. Of these the Duke of Wellington and Mr. Peel were the most important. They were immediately charged with personal and ignoble motives; more especially the Duke of Wellington was considered to have shown a marked hostility to the new Premier, because he not only resigned his office as Master-General of the Ordnance, but also the Command-in-Chief, which political etiquette permitted to be held by an adversary of the Government of the day.

A fierce controversy arose at once as to the motives of the seceding Ministers—a controversy, which was renewed about six years ago, by Lord George Bentinck and Mr. Disraeli, when their object was to damage the character of Sir Robert Peel. The public at large are now better instructed in political affairs than they then were; and they know how comparatively little purely personal motives influence the political combinations of public men.

Without attempting here to settle the general conditions of such a controversy, we give the correspondence that took place between the Duke and Mr. Canning, with some subsequent observations by the former in explanation of his conduct. Mr. Canning opened the correspondence with the following letter:—

TO HIS GRACE THE DUKE OF WELLINGTON.

Foreign Office, April 10, 6 P.M., 1827.

My dear Duke of Wellington,—The King has at an audience, from which I have just returned, been graciously pleased to signify to me his Majesty's commands to lay before his Majesty, with as little loss of time as possible, a plan of arrangement for the reconstruction of the Administration. In executing these commands, it will be as much my own wish as it is my duty to his Majesty to adhere to the principles upon which Lord Liverpool's Government has so long acted together. I need not add how essentially the accomplishment must depend upon your Grace's continuing a member of the Cabinet.

Ever, my dear Duke of Wellington, your Grace's sincere and faithful servant,

GEORGE CANNING.

The Duke of Wellington replied with something less than his usual straightforward frankness.—

TO THE RIGHT HON. GEORGE CANNING.

London, April 10, 1827.

My dear Mr. Canning,—I have received your letter of this evening, informing me that the King had desired you to lay before his Majesty a plan for the reconstruction of the Administration; and that, in executing these commands, it was your wish to adhere to the principles on which Lord Liverpool's Government had so long acted together. I anxiously desire to be able to serve his Majesty, as I have done hitherto in his Cabinet, with the same cabinet. But, before I can give an answer to your obliging proposition, I should wish to know who the person is you intend to propose to his Majesty to succeed to the Government. Ever, my dear Mr. Canning, yours most sincerely,

WELLINGTON.

The sneer implied in this question provoked the following reply:—

TO HIS GRACE THE DUKE OF WELLINGTON.

Foreign Office, April 11, 1827.

My dear Duke of Wellington,—I believed it to be so generally understood, that the King usually intrusts the formation of an Administration to the individual whom it is his Majesty's gracious intention to place at the head of it; that it did not occur to me, when I communicated to your Grace yesterday the command which I had just received from his Majesty, to add, that, in the present instance, his Majesty does not intend to depart from the usual course of proceeding on such occasions. I am sorry to have delayed some hours this answer to your Grace's letter; but, from the nature of the subject, I did not like to forward it without having previously submitted it (together with your Grace's letter) to his Majesty.—Ever, my dear Duke of Wellington, your Grace's sincere and faithful servant,

GEORGE CANNING.

On the evening of the same day, the Duke responded finally thus to Mr. Canning:—

London, April 11, 1827.

My dear Mr. Canning,—I have received your letter of this day, and I did not understand the one of yesterday evening as you explained it to me. I understood from yourself that you had in contemplation another arrangement, and I do not believe that the practice to which you refer has been so invariable as to enable me to affix a meaning to your letter, which its words, in my opinion, did not convey. I trust that you will have experienced no inconvenience from the delay of this answer, which I assure you has been occasioned by my desire to discover a mode by which I could continue united with my recent colleagues. I sincerely wish that I could bring my mind to the conclusion, that with the best intentions on your part, your Government could be conducted practically on the principles of that of Lord Liverpool; that it would be generally so considered; or that it would be adequate to meet our difficulties in a manner satisfactory to the King, or conducive to the interests of the country. As, however, I am convinced that these principles must be abandoned eventually, that all our measures would be viewed with suspicion by the usual supporters of the Government, that I could do no good in the Cabinet; and that at last I should be obliged to separate myself from it, at the moment at which such separation would be more inconvenient to the King's service than it can be at present; I must beg of you to request his Majesty to excuse me from belonging to his councils. Ever, my dear Mr. Canning, yours most sincerely,

WELLINGTON.

Party spirit ran very high at the time. The Whigs, or at least some of the most liberal among them, at once determined to support Mr. Canning against what they deemed a personal discourtesy and hostility on the part of the Duke of Wellington and his friends. Indeed, it required a very large and liberal interpretation of the principles on which English politicians act, to excuse so simultaneous and suspicious a desertion by the aristocratic Tories of one whose selection by the Crown seemed a triumph of talent over a tyrannical oligarchy. The Duke of Wellington personally met the charge of hostility in the House of Lords, February 26, 1828, in the following words:—

I rise to protest against any such imputation being cast upon me, as that I ever entertained any personal hostility to Mr. Canning. On a former occasion I stated distinctly to your Lordships why I did not think proper to remain in the Government of which Mr. Canning was the head. The communications that passed between me and Mr. Canning have, unfortunately, I must be allowed to say, been made public enough, and I defy any man to point out anything like personal feeling in those communications. It is true that when I found it necessary to withdraw from the Government, I also thought it my duty to lay down the military office which I held; but I beg leave to call your Lordships' recollection to the explanation which I gave at that time, and to my subsequent conduct. After I left the Government I always met Mr. Canning in the way in which I had been accustomed to meet him, and did not depart from those habits which had marked our previous intercourse. But I will go further, and say that I had no hostility towards Mr. Canning's Government. I did, it is true, propose that a clause should be added to the Corn Bill, but did I not at the same time beg of the Government to adopt that clause, or something like it, and not to abandon the bill? I must again repeat that to the day of his death I felt no personal hostility to Mr. Canning; and that I am equally free from the imputation of having entertained any political hostility towards him. To whatever persons the declaration of the right honourable gentleman (Mr. Huskisson), was intended to apply, I claim to myself the right of not being included in the number of Mr. Canning's enemies.

There is an air of special pleading throughout this correspondence; and that the Duke felt his position assailable was proved by the pains he took to explain his conduct. He stated that, in asking the offensive question in letter No. 1, he had in his mind what had happened between him and Mr. Canning a short time before, when that gentleman had contemplated making Mr. Robinson (now Lord Ripon) Premier; and he also retorted on Mr. Canning's advocates that Mr. Canning himself, on the appointment of Lord Liverpool, in 1812, had asked the identical question. The real fact was, that the old Tory party did not like Mr. Canning's Premiership, and were not yet prepared to grant Catholic Emancipation. The Duke of Wellington and his colleagues acted in their political and not in their personal capacity; and only sought a reasonable excuse to throw off their forced connexion with Mr. Canning, who was not the Premier of their choice.

In explaining his conduct in the House of Lords, the Duke of Wellington rested his resignation solely on the known antagonism of himself and Mr. Canning, on the Roman Catholic question. How, he asked, could he continue in office with a Premier to whom he must be opposed on so vital a question of domestic policy? He declared the impossibility of his giving to the right hon. gentleman the support which he had a right to demand from a member of the Cabinet. He had continued heretofore in office with Mr. Canning, because the principles of Lord Liverpool's Cabinet were known, and the granting of Roman Catholic Emancipation formed no part of them; but now he would be called upon to change one of the fundamental laws of the realm. It had been said that he had threatened the King to resign, unless he were made Prime Minister. He ridiculed the probability of his resigning the office of Commander-in-Chief, for which his past career had qualified him, for that of Prime Minister, for which he was wholly unfitted, and the taking of which would be the mere gratification of an empty ambition. "I know," he said, "that I am disqualified for any such office; and I therefore say that, feeling as I do with respect to the situation which I recently filled at the head of the army—liking it, as I did, from the opportunity it gave me to improve the condition of my old comrades in arms—knowing my own capacity for filling that office, and my incapacity for filling the post of First Minister, I should have been mad, and worse than mad, if I had ever entertained the insane project which certain individuals, for their own base purposes, have imputed to me." This emphatic declaration, which did not attract especial notice at the time, was afterwards much commented upon when, in the following year, the Duke of Wellington accepted office as Prime Minister.

The Duke also excused himself from the charge of having factiously resigned the command of the army. He deprecated the idea that a difference in political opinion was any reason for resigning the command; but he considered that the tone and tenor of the last of the letters he had received from Mr. Canning—a letter emanating from the express command of his Majesty—precluded him from continuing his relation with the new Minister, either with advantage to the country or with credit to himself. He also declared that his resolution had not been adopted hastily, but was the result of the most mature deliberation.

The Duke of Wellington did not confine himself to negative hostility to Mr. Canning. On a new Corn Bill being introduced by the Ministry, the Duke himself moved an amendment in committee, on which the Government sustained a defeat in the House of Lords; and, although the Duke afterwards declared, on the strength of a correspondence between himself and Mr. Huskisson, that he believed the Government had assented to the amendment being moved, the notion became fixed in the public mind, that he had "taken advantage" of an ambiguity of expression on the part of Mr. Huskisson, thus to strike a blow at the new Ministry at the very outset of its career. Mr. Canning, who felt very deeply and sensitively this last step on the part of the Duke, lent his sanction to the popular opinion, by insinuating in his place in Parliament that his Grace had only been an instrument in the hands of others. Looking back at these events through the diminishing glass of time and distance, we see only an ordinary manœuvre on the part of the aristocratic section of the Tories to disembarrass themselves of some men, such as Canning and Huskisson, whose Liberalism and popularity were inconvenient and distasteful—a manœuvre for which an excuse was found in a pretended zeal against emancipating the Roman Catholics.

The death of Mr. Canning having led to the formation of the Goderich Administration, the Duke of Wellington's scruples were removed, and he resumed (on the 27th of August, 1827) the command of the army. In the January following the *pro tempore* Administration of Lord Goderich having also broken down, the Duke of Wellington was called upon by the King to form an Administration. His first impulse was to decline the mission: but, to use his own words, "finding, in the course of the negotiation, which arose out of the commands of his Majesty, that there was a difficulty in getting another individual to fill the place, and that it was the unanimous wish of those with whom he usually acted that he should take the office, he determined to accept it." In other words, the idea of duty and discipline prevailed over other considerations; for all who have studied the Duke's character will believe that he was for the time quite sincere when he declared his belief that he was not fitted for the office of Prime Minister.

Installed in office, the Duke went to work in true military style. He was certainly popular with the aristocracy and with the educated classes in general, while those who did not quite agree in his principles waited with curiosity to see what he would do. His Administration was composed chiefly of the noblemen and gentlemen who had resigned with him in the previous year, of whom Mr. Peel was the most prominent. Mr. Canning, however, had infused a little Whig blood in his Ministry. The new members thus affiliated to Toryism, Mr. Huskisson and Mr. Grant, were also retained. Lord Palmerston, although an old member of the Tory Government, had always been a friend or satellite of Mr. Canning. We have said that the Duke went to work in military style. The constitution of his mind forbade his doing otherwise. Even when he gave way on a question, it was only as a general abandons an untenable position. He was a martinet in his official capacity, and exacted the most prompt and entire obedience from his subordinate colleagues. Mr. Huskisson soon felt this. The Duke, like all military men, hated ideologists; and he looked on Mr. Huskisson, with his Liberal Toryism and Free-trade tendencies, as one of this class. It was not long before he found an excuse for getting rid of him, and those others who were not Tories of pure blood. On the East Retford Bill, Mr. Huskisson presumed to hold an opinion, and gave a vote different from that which the *mot d'ordre* had prescribed. The same night, feeling the importance of the step, he sat down, in excitement, and wrote a letter, in which he conditionally placed his office at the Duke's disposal. Had the Duke desired to retain him, he would have given him time to reflect; but the opportunity was tempting; and the Duke chose to regard the letter as an unconditional resignation. He even proceeded to clench the matter by filling up Mr. Huskisson's place. In vain did Lord Palmerston endeavour to patch up a reconciliation. The Duke was immoveable; and, in answer to a suggestion that there had been a misconception, wrote his celebrated words, "It is no mistake; it can be no mistake; it shall be no mistake." This positiveness settled the affair. The resignation of Mr. Huskisson was accompanied by those of Lord Palmerston and Mr. Grant; and the Tories once more found themselves freed from the intrusion of those Liberal views which they had been obliged to tolerate in Canning for the sake of his talents, but which they did not choose to submit to in the younger statesmen of his school. Looking back to these events, there cannot be a doubt that the Duke of Wellington's conduct was more worthy of the man than the Cabinet; that in the present day, or from a less illustrious man, such proceedings would not be tolerated; that, by depriving himself of the services of Huskisson and Palmerston, the Duke accelerated the destruction of the Tory party, by stamping it as intolerant and exclusive, while forcing Lord Palmerston into the arms of the Whigs; yet such was the lingering respect of the nation for him, that these arbitrary acts were received with applause. The people thought it a capital joke to see these theoretical men thus sent to the right about by the practical soldier; and it is on record that when the news of Huskisson's dismissal was known, numerous vessels in the Thames hoisted their flags in token of satisfaction. This was because Mr. Huskisson was known to be a Free-trader.

In other respects the new Administration showed some Liberal tendencies. Apparently, its exclusiveness was confined to the possession of power; the use made of that power was gratifying to the nation. One of the first measures supported by the Duke was the repeal of the Test and Corporation Acts, a kind of *avant courier* to the Emancipation Act. The reasons assigned by the Duke in support of the measure in the House of Lords turned mainly on the inefficiency of the securities provided by the old law, and also on the desirableness of a conciliatory policy. At the same time, when the advocates of Catholic Emancipation plumed themselves on the measure as a step towards their object, the Duke protested in the most solemn manner against any such assumption, and declared emancipation impossible, "unless there should arise some very great change in the position of the question."

About the same period, the Duke took occasion to renew his former protest against any tampering with the Corn Laws, the maintenance of which he held to be necessary to the prosperity of the country. While all these Ministerial changes and adjustments had been going on, movements of an important nature had taken place in Ireland, which were destined to furnish a singular commentary on the character of the Duke of Wellington, and materially to change the aspect of parties in England. The fruits of these events, however, did not manifest themselves for some months, but in the meanwhile, that is to say in the month of June, 1828, the House of Commons having adopted a resolution favourable to the Roman Catholic claims, the Duke, in adverting to that circumstance, again laid it down that the question was one purely of expediency; and, in the hope that something might be done, he recommended that the public mind should be allowed to rest upon the subject.

Parliament having been prorogued, the public mind was no longer occupied with the immediate intentions of the Government; but, on the other hand, the agitation in Ireland, carried on under the control of Mr. O'Connell, had taken an alarming shape. The return of that gentleman for the county of Clare, to the exclusion of Mr. Vesey Fitzgerald, although it was well known that the learned gentleman, as a Catholic, could not take his seat, had violently agitated the public mind; while the universal ramifications of the Catholic Association in Ireland showed that the people of that country and their leaders were prepared to go to great extremities. Whatever might be the secret deliberations of the Government, no outward manifestations were made of a disposition to yield; indeed, the supposed inflexibility of the Prime Minister's character seemed to render any concession most improbable. Even as late as December, in the year 1828, the obstructive attitude of the Duke of Wellington was maintained. Dr. Curtis, a Catholic Bishop in Ireland, with whom the Duke had formed an acquaintance at Salamanca, wrote to him a letter on the position of the question, to which a reply was sent which seemed to preclude all hope of settlement. The Marquis of Anglesea, too, was recalled from his post of Lord-Lieutenant of Ireland, because, being openly a friend to Catholic Emancipation, he had, in reply to a letter from the same Dr. Curtis, advised the Catholics to persevere in their resolute efforts, and promised them success as a consequence of their firmness. The secret cause of this demonstration of hostility at the very time when, as it subsequently appeared, the Ministers were deliberating on the terms of concession, would seem to be that the King manifested a strong repugnance, real or assumed, to what he conceived to be a violation of his coronation oath. At length, however, the purposes of the Government oozed out through the planned indiscretion of Mr. Dawson, the brother-in-law of Mr. Peel, who, at a public dinner in Ireland talked in a way to justify the most sanguine hopes of the Roman Catholics. A few weeks put an end to all suspense on the subject.

It was at the era of Catholic Emancipation that the English people first were furnished with a clue to the real character of the Duke of Wellington as a politician. His long and close association with Toryism—his contempt for newspapers—his antagonism to Canning—his systematic opposition to all innovation—had pointed him out as an obstinate and bigoted worshipper of the past in legislation, and an enemy to all efforts to reconcile the present and the future with the altered condition of mankind. As the Prime Minister of an exclusively Tory party, he was in imminent danger of losing, or at least of diminishing, the approbation obtained for him by his splendid services; so that, if ever England was in danger of being animated by revolutionary feelings, strange to say, it was under the dominion of the man whose life had been spent in crushing revolution elsewhere. The intelligence of the resolve of the Cabinet to emancipate the Catholics, fell like a thunderbolt. In estimating the conduct of Wellington and his coadjutor, Peel, we must not be led away by the notion that in what they did they courted popularity. Far from it. Catholic Emancipation had been the war-cry of a party; and the wrongs of our fellow-subjects had admirably served to inspire the eloquence of a Canning or a Brougham; but it would be a mistake to assume that the measure was popular with the people at large, in the same sense as Reform, or Repeal of the Corn Laws. In Ireland, of course, the case was far different; and it was really in reference to the condition of Ireland that the Duke of Wellington and the illustrious commoner who aided him in the great work undertook their difficult task. They believed, or affected to believe, that Ireland was on the verge of civil convulsion, agitated as that country was by the Catholic Association; and they put that danger in the van, both with the Crown and with the Parliament. With the former they found more difficulty than with the latter; so much so, that it needed all the weight of the high authority of Wellington, backed by that of Peel, and a threat of resignation on the part of both, ere the scruples of George the Fourth could be overcome.

The Speech from the Throne contained the first authoritative announcement of the forthcoming measure. It recommended the subject for consideration. In the course of the debate on the Address, the Duke of Wellington announced that the Government were prepared to propose a measure for the emancipation of the Catholics; an announcement which could scarcely be said to have taken either the Parliament or the public by surprise, but the truth of which could scarcely be believed till it issued from the lips of one who seldom spoke in vain. Its effect on the Tory section of both Houses was maddening. Men in whom a few fixed ideas had superseded even the faculty of reasoning, looked upon the proposed act of grace as a positive injury to themselves. Not only did it "undermine the bulwarks of Protestantism;" it also robbed them of their own peculiar objects of hatred and vengeance. With politicians of the Percival and Eldon school, persecution or reprobation of the Roman Catholics was the be all and the end all of their thoughts and of their political system; take away the power of doing so, and they lost the sole object of their mundane existence. That the measure must be carried, all men at once perceived. The King sanctioned it: the "great Captain" proposed it; the leading civilian of the Tory party in the House of Lords was prepared to endorse it; the Whigs, however anxious to see their rivals out of power, could not but accept it. Thus, in the eyes of the political heirs of Spencer Perceval, the Constitution was gone for ever. There still remained, however, one sweet revenge. They could attack and vilify the men who were thus making a sacrifice of their most cherished opinions and associations, in order to save the State from threatened convulsion. And this part of their public duty they performed to admiration. Never was Minister, not even Sir Robert Peel in 1846, so assailed in this country. As for the Duke, it had been better for him that he were Bonaparte himself; for the vocabulary of abuse against that provoking personage was comparatively limited. The pens and tongues that for fourteen years and more had been employed in lauding him as the hero of heroes, till mankind at large recoiled from the exclusiveness of a praise which dwarfed the merits of so many other great contemporary commanders, were now with as much activity and a fresher motive engaged in heaping on the illustrious saviour of his country every epithet of contumely which insulted honour and virtue can apply to the traitor. The Duke of Wellington was on a tripod of which each support was a treachery. He was a traitor to the Protestant cause; a traitor, and a furtive one to boot, to the Whigs, who had been working at this question with exemplary Quixotism and great political fame for near a quarter of a century, and who now saw the Duke's sword wreathed with their coveted laurels; a traitor, above all, to the memory of Canning, who had been "hunted to death," only a year or so before, because he had wished to free the Catholics, and the Duke had passed the *mot d'ordre* that the work, at all events, should not be done by him, who had his heart in it; but, if done at all, be effected by a cold state policy and a calculating expediency. There were the two devoted statesmen, the heath on fire all around them; and, not only the prey of their enraged associates here; but assured, on the very highest clerical authority, that their fate was a matter of certainty hereafter. The Duke bore it all with his constitutional imperturbability, so long as the attacks were of a purely public and political nature. Perhaps his chief annoyance arose from the pertinacity with which his opponents forced him, night after night, to make prematurely speeches on the proposed measure, ere it came in a formal way before the House; for this guerilla warfare interfered with his ideas of regularity and discipline; but all the rest he despised, as indeed he could well afford to do, being sure of the rectitude of his own motives.

At length, the Catholic Association having dissolved itself, the better to facilitate the purpose of Ministers, and the bill having come up to the Lords, it fell to the Duke of Wellington to propose it in that assembly. His speech on the occasion, as well as some previous ones, was masterly as a clear and unvarnished exposition of the reasons of State which had led to the conduct of the Government, and which justified it. Every argument that could be advanced, or that had been advanced, short of mere fanaticism, was thoroughly canvassed and met; in short, the Duke now came out in quite a new light. An orator, in the popular sense of the term, he never was and never could have been; but, as an exponent, in language clear and forcible "to the meanest capacity," of the plain common-sense view he himself took of the question, he stood alone. In this respect, indeed, his public speaking was unique. In fact, he had but one thing to impress on his auditory and the public—the absolute necessity of a concession which could not longer be delayed, and for which there then appeared to be no substitute. In the course of his many speeches at this time, he met one by one the charges against him; denying that the new bill was the result of fear; that he was guilty of

(*Continued on page 263.*)

PARISH CHURCH OF LARACOR, ADJOINING DANGAN CASTLE.

THE REAL BIRTH-PLACE OF THE DUKE.

AMONG all the columns that stand in honour of the great Duke, the pillar erected by the gentry of Meath, in their county town, Trim, is by far the most graceful and picturesque. This handsome memorial the gentlemen of the county of Meath raised in the fulness of their pride and the certainty of their faith, that he, whose very name is a sound of glorious victory, was born amongst them—that the old fortress of the Fitz-Eustaces, the Geraldines, and the Plunkets, had been the congenial birth-place of the hero. Are they wrong? Despite of all that has been said, we maintain they are not; for, on what depends the current story that contradicts them? Weak evidence and conjecture only. "The Duke was born at the Earl of Mornington's residence in Dublin," says one person, because he heard it from another person of some more weight than himself. This at best is that kind of proof called secondary evidence, so readily rejected by lawyers. Then comes the register of the baptism, which, oddly enough, shows that they who were so positive as to place, were at any rate wrong as to time. The Duke, they assert, was born in Dublin on the 1st of May, and they adduce a register which tells that he was baptised there on the 30th of April. Their very proof shows that he was not born in Dublin on the 1st of May. As to the weight, too, to be given to the register, Mr. Phillipps, in his able work upon the law of evidence, says, "the register of itself does not prove the fact of birth in the parish," for one obvious reason, among others, viz. that it records the baptism and not the birth. The birth must have taken place before—where, the baptismal record does not say.

In the case of the Duke of Wellington, nothing is more possible or probable than that he was born in Dangan Castle, and taken some time afterwards, to the baptismal font in Dublin—a city at not twenty miles distance. This solution is confirmed by the general reputation positively pointing to Dangan; and be it observed, this testimony of general reputation (which the Column of Trim maintains with regard to the Duke) is admitted by Mr. Phillipps in matters of pedigree. Lastly, the following evidence, suggested by a Mr. Ryan, of Dublin, would seem to set the much-mooted question beyond further doubt. Mr. Ryan says:—

> A petition was presented towards the close of the year 1790, to the Irish House of Commons, which prayed that the return of the Hon. Arthur Wellesley for the borough of Trim should be deemed null and void, that hon. gentleman not having attained his majority before his election for the borough referred to. Same was, in the usual way, referred to a committee, before which the following testimony was given by a female of the name of Daly (if my memory from reading the report serves), who was produced to negative the averment on which the petition was founded:—"I remember having attended the Countess of Mornington during her *accouchement* in March, 1769, and was present in her Ladyship's room in Dangan Castle when the Hon. Arthur Wellesley was born; I do not remember the day of the month; he was, therefore, twenty-one years old last March." This, I fancy, is conclusive on this question; and any one sceptical upon the subject, may satisfy themselves by a reference to the report of the minutes of the proceedings of the Trim Election Petition, 1790 91. See Parliamentary Reports (Ireland) for that year.

Our feelings, we must confess, side with our proof, in according to this old ruin of Dangan the honour of witnessing the Duke's birth. Time-honoured in itself, as the abode of warriors and statesmen, the decayed mansion has, in its environs, architectural relics and bygone associations which also recall great names. Meath was formerly a seat of Royalty; and Trim, its county town, situated on the historic Boyne, is a place of great antiquity, and boasts of many a ruin. King John's Castle, built by Hugh de Lacy, in 1173, to whom Henry II. granted Meath by Royal Charter, was here on the south side of the river, enclosed by strong walls, and turrets, with donjon and keep. King John, when in Ireland, passed some days in Trim; Richard II. committed the young Lords, Gloucester and Henry of Lancaster, afterwards Henry V., prisoners to the castle. Strange, indeed, is this fact alone, for those who pry into such circumstances, and think they do not consider too curiously to consider them. Their imagination may easily trace the warrior King, who fixed the eternal renown of Agincourt upon our annals, passing part of his youth and imbibing his military inspiration in the very scene of the juvenile years and the juvenile aspirations of him, who filled up the cup of British pride to the brim with Waterloo. Henry could there, with Tara near him, and the English fortresses about him, hear tales of Boroihme and Strongbow. The river Boyne, as it flowed on, had other warlike recollections for the mind of Wellington. But, to return to Trim and its castle. Parliaments were summoned there in the years 1447, 1484, 1487, and 1491. There, too, in the reign of Edward II., Richard Earl of Ulster held his Court with great splendour. The ruins of this fine old castle, with the Boyne winding round its base, present a very imposing appearance. As the visitor approaches the town from one side, its unguarded battlements and lonely towers stand in sombre relief to the white cottages and modern buildings around.

From the top of the castle the view extends over several counties: at a short distance, the eye marks Tara, once the seat of Royalty and celebrated in song; and to the right the world-renowned spot where lie the ruins of Dangan. In Trim, at the castle's foot, is a small house where the Duke of Wellington's early education commenced, and, at a little distance, on the fair green of the town, rises the column of Corinthian order in memory of his fame. It is a very handsome pillar, and is surmounted by a bold full-length statue of the Duke, in modern military dress. It would seem that until the one here presented no engraving of this monument has ever been made. The town of Trim, even more than most places in Ireland, is poor and neglected, there being no resident landlord to take an interest in its welfare. The beautiful pillar is encircled by wretched cabins, more like Indian huts than Christian dwellings. It stands, indeed, in strong contrast to the squalid misery around, as if to illustrate two striking characteristics connected with Ireland—the surpassing wretchedness of her people, and the surpassing genius that may be and has been discovered amongst them.

THE WELLINGTON COLUMN, AT TRIM.

Desolation hangs for some miles about Trim and Dangan. Somerhill, the neighbouring mansion of the Lords Langford, is likewise a ruin. One tall thick wreck of a wall is all that remains of Dean Swift's house in his vicarage of Laracor, the parish in which Dangan is situated. The church of Laracor, of which a view is here given, still stands. It adjoins Dangan Castle: it used to be attended by the Wellesleys, and it, at this day, preserves—a fact now of additional interest—the hangings of the communion-table, the reading-desk, and the pulpit, the same as had been used in the private chapel of Dangan, and were removed to this church when the Wellesley family left. The Boyne, near the town, retains some few pretty seats of country gentlemen, such as that of the Drakes of Drakerath, Roriston. The handsome rectory in Trim was a favourite residence of Maria Edgeworth; and there still live her sister and her sister's husband, the antiquary, Dr. Butler, dean of Clonmacnoise, and rector of Trim. Beyond these few verdant spots, this part of Meath, so teeming with memories of the Duke, is sad and dreary to look at in its state of crumbling decay. Yet, while it can bring remembrances of Swift and of Miss Edgeworth, and while men can say of it, what we maintain is the truth, that "here Wellington was born," it will continue for ever as noted as any other of the greatest landmarks in the world.

REMAINS OF CASTLE CARBURY, THE ANCIENT SEAT OF THE COWLEY.

CASTLECARBURY.

CASTLECARBURY, in Kildare, was for ages the seat of the Cowleys, or Colleys, the direct ancestors of the late Duke of Wellington. The last of the name who lived here appears to have been the Duke's grandfather, Richard Colley, Esq., who inherited the estate of Dangan from Garrett Wellesley, and consequently assumed the arms and name of Wellesley.

The first of the Colleys who lived at Carbury was Captain in the army of Elizabeth. The architectural features of the greater portion of the building clearly refer to his time, about A.D. 1548. A neighbouring

chapel contains the tombstones of several of the Colley family. The Castle is one of the most imposing ruins in Ireland. From its summit a most magnificent view, extending over the counties of Dublin, Meath, Carlow, King's and Queen's County, and Kildare, may be obtained.

THE WELLINGTON CHAIR.

AMONG the many interesting memorials collected in the Guard-Chamber of Windsor Castle is the annexed Chair, made from part of the

THE "WELLINGTON CHAIR," IN THE GUARD CHAMBER, WINDSOR CASTLE.

elm-tree which stood near the centre of the British lines on the field of Waterloo. It has been very appropriately named "the Wellington Chair," and placed in proximity to a memorial of the great Nelson, on the right-hand, of the portion of the mast of the *Victory*.

BUST OF THE DUKE OF WELLINGTON, BY MR. NOBLE.

(*Engraved on the first page.*)

THIS fine Bust was modelled by Mr. Matthew Noble, of Bruton-street, about six months since; the likeness is very striking, and as a proof of the extensive recognition of the merits of the work, we may state that Mr. Noble has already received commissions for upwards of 100 of this bust in marble and casting. Our Engraving is from a Photograph by Beard.

WELLINGTONIANA.

PRINCE ALBERT'S LAST VISIT TO THE DUKE.—On the occasion of her Majesty's recent visit to Belgium, her squadron having anchored for one night in the Downs, his Royal Highness the Prince Consort proceeded from the Royal yacht, in a small boat, to Walmer Castle, where the noble Duke was then staying. The illustrious veteran appeared highly pleased with this mark of attention, and received Prince Albert with much cordiality. They had a lengthened conversation together, after which the Prince left the Castle to join her Majesty in the *Victoria and Albert*. This meeting between those two distinguished personages, which was on the 17th of August, has proved to be the last.

THE DUKE'S LAST WILL.—The Duke of Wellington has left a will, though the contents of it as yet remain undisclosed. It is dated as far back as 1818, and was found late on Saturday night, at Coutts's bank. The existence of this document was, we believe, unknown even to those most nearly connected with the Duke, who, though of late years he had ordered several wills to be prepared, yet never could make up his mind to execute them. The Duke appears to have always avoided the subject of his own death, and the arrangements connected with it. Those who knew him best hardly ever remember to have heard him talk of such matters, and, in illustration of this feature in his character, a curious fact may be mentioned. Every one knows that he received, in the course of his long and distinguished life, many presents of immense value, and that Apsley House is filled with a great variety of objects, the interest attached to which can hardly be overrated. This collection, as personal property, was, of course, exposed to the risk of dispersion after the Duke's death, and, with a view to its preservation, an act of Parliament was obtained, enabling his Grace, within the space of two years, to make heirlooms of such objects as he wished to see inalienably attached to his title and estates. Singularly enough, it was not till the last day of the time thus granted that he signed the documents necessary to make the act available.

A TYPE OF CONSCIOUS DECAY IN THE LATE DUKE.—Upon the late occasion of the prorogation of Parliament by the Queen in person, his late Grace supported the State sword upon that occurrence, when a noble peer, perceiving that the Duke felt somewhat inconvenienced by the incumbrance, observed to the latter, "I fear, my Lord, that it must prove irksome to you to sustain the weight of that sword." "I do feel the weight of it sensibly," replied his Grace; "I am obliged to shift it from one position to another to ease myself of the burden: it really appears to me as heavy as a regimental firelock."

HIS LITERARY STYLE.—Much eulogy has been expended at various times, and by various writers, on the clearness and precision of the Duke's style in his military despatches. His Grace was too candid to have any false modesty; if he did not admire his own compositions, he approved them. After recently reading over some of his despatches as collected by Colonel Gurwood, he said, "Well, if these were to be written over again, I don't think I should alter a single word."

THE DUKE ON HORSEBACK.

THIS Portrait was sketched on the Duke's birthday, in 1842, by "H. B.," and has been copied by permission of Mr. M'Lean, print publisher, Haymarket. It is a very characteristic portrait of the Duke, as he appeared in our metropolitan rides half a score of years since.

WALMER CASTLE.

WALMER CASTLE, where the Duke of Wellington died, is just the sort of residence that would have been pointed out by an imaginative mind as appropriate to such an event. It is placed behind the high shingly beach which the incessant action of the waves has formed on this part of the coast, and is surrounded on the landward side by lofty trees. The modern windows opened in the thick old walls look as if its warlike uses had been laid aside for the peaceful times in which we live. (See the large View at page 240.) There are, however, some heavy guns upon the upper walls pointed towards the Downs; and below, a battery of smaller pieces, that seem to include foreign invasion among contingencies. It was a place of strength built for rough work in stormy times. It has become a quiet sea-side residence, within earshot of the surf as it breaks upon the beach, and within sight of those essentially English objects, the chalk cliffs of Dover, the Goodwin Sands, and the shipping in the Downs. This was no unsuitable place for the Duke of Wellington to die in—that man in whose eventful history the largest experiences of military and civil life are so marvellously united.

We have Engraved the principal Entrance to the Castle, showing in the distance the corridor leading to the apartments. It is a covered way, lighted by a glass roof of the gable form. It runs between an outer and inner wall; the inner one, being of brick, is seen in the above Sketch, with geraniums in pots in front, and has a projection extending some way forward, which at noonday, when the Sketch was taken, throws a shadow upon the wall, the light striking full upon the pavement below. In this corridor the late Duke frequently walked during rainy weather. Visitors to the Castle alight at the second gate, close to the corridor.

We have also Engraved the Stables, the very last place the Duke visited out of doors, about five o'clock on the Monday evening previous to his death: he had been to the stables to see if any room could be found for another horse. The window over the tank is one in a small house inhabited by Townsend, an old Waterloo man; the wall beyond is the garden wall; passing the corner to the right, you come to the draw-bridge and principal entrance.

The room in which the Duke expired is of moderate size and plainly furnished; but everything neatly and methodically arranged, something like an officer's room in a garrison. On the right-hand side stands an ordinary iron camp bedstead, with a single horse-hair mattress, and a horse-hair pillow covered with leather, which the Duke usually carried with him and used in town. Summer or winter the little camp bedstead was without curtains. Here the Duke always slept and wrote, when at Walmer. Over the bedstead is a small collection of books, evidently selected for use. Among them are some of the best English writers of Anne's Augustine age, in poetry and prose—recent histories and biographies, some French memoirs, military reports, official publications, and Parliamy papers. In the centre of the room is a mahogany table, well stained with ink, and covered with papers; and here for some hours every day the Duke sat and wrote. Near this is a more portable one, and contrived so as to be used for reading or writing while in bed. This, with two or three chairs, comprises the whole; and it is sufficiently characteristic of the taste and habits of the illustrious deceased. The windows look out upon the Channel, and the view from the ramparts is very extensive, and, it may be added, magnificent. The prospect is unbroken, north and south, till it touches upon the massive and frowning battlements of Deal and Sandown Castles; directly in front it is only bounded by the French coast; while below stretch the Downs for some miles on either side, with its fleets of merchant vessels bound on their peaceful errands of commerce or enterprise. The unmistakeable military character of the Duke is evident in the notices placed by his orders on many of the doors of the Castle, "Shut this door;" although it may be added that he never addressed a request to any of his personal attendants without saying "If you please" do this or that. A still more kindly and considerate memorial of his Grace might be seen upon his table in the shape of a number of small slips of paper, on which were printed "Avoid to impose upon others the care of original papers which you wish to preserve." It is well known that the applications to the late Duke for advice and assistance were extremely numerous; and in many cases testimonials and original documents were enclosed by the applicants, which the Duke, after making a memorandum of, invariably returned, accompanied by one of these significant cautionary notices.

PRINCIPAL ENTRANCE TO WALMER CASTLE.

THE STABLES AT WALMER.

Wellington

THE DUKE OF WELLINGTON AS POLITICIAN AND CIVILIAN.

(*Continued from page 269.*)

inconsistency, inasmuch as he had never said otherwise than that emancipation was a question of expediency; affirming that it was promised at the Union; that in the then state of Ireland there existed no other remedy; and that there was no possible compact with Rome that could add to the security of the Protestant Church. It was in the course of his speech in moving the second reading of the Emancipation Bill that he made his celebrated declaration, that he "would sacrifice his life to avert one month of civil war." In the course of one of his subsequent speeches on the measure, too, he gave his well-known description of agitation in Ireland. "Agitation in Ireland," he said, "during the last ten years, means something just short of rebellion; that, and no other, is the exact meaning of the word. It is to place the country in that state in which its Government is utterly impracticable, except by means of an overawing military force." In the truth of this sentence lay the only justification of the bill in the eyes of a large section of the Tory party. It is interesting at the present time, too, to observe the view the Duke took of another question—the possible exercise by the Crown of a veto on the appointment of Catholic Bishops, or of a right of nomination. He said, "Suppose it were arranged that his Majesty should have the nomination of the Catholic Bishops. If he nominated them, he must also give them a jurisdiction; he must give them a diocese. I should like to know in what part of Ireland or England the King could fix upon a spot where he could, consistently with the oath he has taken, nominate a Catholic Bishop, or give him a diocese? The King is sworn to maintain the rights and privileges of the Bishops, and of the clergy of this realm, and of the churches committed to their charge. Now, consistently with that oath, how could the King appoint a Bishop of the Roman Catholic religion; and would not the Established Church lose more than it gained by the assumption of such a power on the part of his Majesty?"

It is unnecessary to follow the Emancipation Act through the House of Lords. The Duke's influence was the main cause of its passing by a considerable majority. But some personal matters arose out of the discussions, which require to be mentioned in a biography. The Earl of Winchilsea wrote a letter, in such terms that the Duke of Wellington felt himself compelled to challenge him. He fired, and missed his antagonist; whereupon the Earl fired in the air: and having, by the result, found that the Duke was a bad shot, he immediately saw that he had been wrong from the first, and wrote a handsome letter of retraction. The Duke of Wellington was also obliged to direct the prosecution of Mr. Alexander, the editor of the *Morning Journal*, for libel on himself and Lord Lyndhurst, the Lord Chancellor. Mr. Alexander was found guilty and severely punished. Now that we can look back more calmly at these events, it must be admitted that the license assumed at that period by those organs of the press which were devoted to the service of the losing party, exceeded the privilege of free discussion. The Duke seems to have had an old grudge against the newspapers, and he did not miss so tempting an occasion to hand one of these over to the mercies of the public prosecutor. The punishment, however, that was inflicted on Mr. Alexander—that of twelve months' imprisonment and heavy pecuniary fines—was excessively severe, considering to what extent the conduct of the Duke had excited the passions of the ultra-Tories, who not only felt the excitement of ordinary political strife, but also believed themselves to be engaged in a holy war—which, history tells us, is always held to justify what in ordinary cases honour and humanity recoil from.

The immediate result of the Emancipation Act was a violent schism in the Tory party. Those who prided themselves on their adherence to principle proclaimed their unalterable resolve never again to place confidence in such traitors as Wellington and Peel had proved themselves to be; nor was it long ere they translated their threats into acts, and created a precedent which was subsequently followed by Lord George Bentinck and Mr. Disraeli in 1846.

We now approach the era of Parliamentary Reform. The session of 1830 opened with the Duke of Wellington still at the head of affairs. He delivered, on the very first night, in the debate on the Address, an admirable speech, in which he combated with great success the complaints of the popular party as to the declining state of the country. The Whigs now saw an opening that might lead them into power, the Tory phalanx having been broken by the schism already alluded to. The Duke of Wellington was made the object of attack by Brougham, who bitterly satirized his tendency to dragoon and martinet the country; and Sir Francis Burdett, who at that time still clung to his popular associations, went so far as to say that the Duke had rightly estimated his own capacity when he had declared in the House of Lords that he would be "mad to think of being Prime Minister." Sir Francis Burdett also sufficiently forgot the civil as well as military services of the Duke of Wellington to declare that he had been treated with much tenderness and consideration on account of the services he had rendered his country: but if his services had been great, so, also, had been his rewards. This species of attack was not only ungracious and mean in spirit, but it also passed over the fact that a year had scarcely elapsed since the Duke had carried the greatest measure of freedom the century had known; and that, but for the vast influence he wielded through his services, he never could have overcome the prejudice of the King and the Tory aristocracy. During the whole of the first session of 1830 the Duke was the object of incessant attacks, not merely from his Whig opponents, but also from those Tories who conceived themselves to have been betrayed in the Emancipation Act.

The death of George IV. caused the summoning of a new Parliament which was opened by King William on the 2d of November. In the meantime the events of 1830 in France had produced their effect in England, in the shape of an overwhelming cry for Parliamentary Reform, and a strong development of the Democratic principle. The Whig leaders, but more especially Brougham, mounted with the occasion, until the nation began to believe that its salvation depended on the downfal of the Duke, and the appointment of a Reform Administration. He was held up to the people as purely a Military Dictator, importing into political affairs the manners and principles of the Horse Guards and the camp. Nor was he slow to respond to these challenges. After emancipation he had once more retired behind the lines of Toryism; and he offered only a stout and passive resistance to the new demands of the people. With a chivalrous courage, he declared against the necessity for any reform, and proclaimed that the existing House of Commons provided a sufficient representative machinery. Nay, if he had now to create a House of Commons anew, he would form it on the principle of giving the landed proprietors a preponderating influence. This bold, but needless, declaration became a torch in the hands of the Whigs, with which they set the country in a flame; so much so, that in three days after the Duke advised the new King not to go into the City to visit the Lord Mayor, lest there should arise some great riot and breach of the peace. Next came the defeat of Ministers in the Commons on the Civil List, their resignation on the following day, and the appointment of the Whig Administration under Earl Grey.

When the Reform Bill reached the House of Lords early in 1831, the Duke led the opposition to the measure, and in the course of his many speeches somewhat belied his reputation for perspicacity and sagacity. He denied that his anti-Reform declaration had caused the Reform fever, and predicted the most fatal evils to the country as the consequence of the measure proposed by the Whigs. More shrewd and statesmanlike was his celebrated question—"How," under the new *régime*, "was the Government of this country—the Monarchical Government of this country—to be carried on, according to the principles and practice established at the Revolution?" The Duke was copious in prophecies of evil; among other things predicting the downfal of the Constitution, and the repeal of the Union with Ireland, as consequences of the Reform Bill.

The Duke's opposition was so stern and unqualified that it led to the rejection of the first bill by the House of Lords; when, in the course of the popular excitement that followed, he was personally insulted in this streets by a mob, and the windows of Apsley House were broken. This was, certainly, a disgrace to the English character; but it was, in after years, stoned for.

When, in the following year, the second Reform Bill reached the House of Lords, the Duke, in April, made one of his usual stout speeches against it; but, on the 7th of May following, Ministers having resigned on a defeat in committee, the Duke was called on by the King to form a Government on the principle of moderate Reform, as being the sole alternative except a large creation of Peers. The Duke's military habits induced him to give an immediate acquiescence, as, "if he had refused to assist his Majesty because he had hitherto given his opposition to Parliamentary Reform, he would not have been able to show his face in the streets for shame of having deserted his Sovereign in circumstances so painful and alarming." The proposed plan was frustrated by the refusal of Sir Robert Peel to attempt a measure of Reform: "To do so, being a determined enemy to a Reform Bill of the kind expected from him, would be a political immorality which would not allow him to enter on his services with a firm step, a light heart, and an erect attitude." Without the co-operation of the leader of the Tories in the House of Commons any such attempt would of course have been futile on the part of the Duke, who soon after gave a reluctant consent to the Whig measure.

During the two following years the Duke continued to lead the Opposition in the House of Lords. In November of that year, being suddenly called on by the King to form a Government, he advised Sir Robert Peel to be sent for from Italy. Pending his arrival, the Duke took, provisionally, the Premiership and the three Secretaryships of State. This monopoly of power furnished the chiefs of the ejected party with admirable materials for popular appeals. The most vigorous assailant of the Duke, on the re-assembling of Parliament, was Lord Brougham. He was also accused of personal discourtesy, and something very like treachery, towards Lord Melbourne; but all these charges being essentially of an ephemeral nature, and contradicted by the permanent facts, we need not further enter into them. Those who choose can do so, by reading a speech of the Duke in self-defence, made on the 24th of February, 1835.

The Duke of Wellington entirely concurred with Sir Robert Peel in opinion, that the new "Conservative" Ministry must at least make professions of Liberal intentions; nor perhaps did his Grace regret that there was an opportunity for once more reminding the nation that he was not an incorrigible despot. With the defeat and resignation of Sir Robert Peel, in April, 1835, the Duke of Wellington once more found himself the leader of the Conservative Opposition in the House of Lords; and now commenced what, to the political philosopher, will prove not the least interesting portion of his career: although, to the biographer, it furnishes no salient points. The violent oscillations of the public mind had now sufficiently subsided to enable the people to reflect on the Duke's career as a whole; an almost necessary consequence of which was, that he found himself once more exercising a moral influence proportionate to his great services. Between 1835 and 1841, when he again took office, he stood as a kind of moderator in political disputes, and a guide of public opinion. The Whigs, being, in their hearts, unwilling to go the full length of some of their ultra-supporters, were not sorry to throw the onus of non-success on the Duke of Wellington, so long as he and his party did not take any more active steps towards destroying their position. During one period, in the year 1839, he was, with Sir Robert Peel, called on to take office. He fully coincided with that statesman in resting his refusal on the ground that her Majesty declined to make changes in the *personnel* of her Court—that is to say, in respect of the ladies of the household. This was one of the instances, among many—such as his correspondence with Canning, and his ejection of Huskisson—in which the Duke permitted his political shrewdness to supersede the frankness and straightforwardness natural to him.

We have now brought to a close the purely official career of the Duke of Wellington, though not his political life. He continued to retain the command-in-chief of the army, but declined, although in after years a member of the Cabinet, to hold any portfolio. The office he had held in 1834-35 was that of Foreign Secretary; but no events occurred of sufficient importance to induce him to diverge materially from the policy of Lord Palmerston.

One of the most brilliant moments of the second career of the Duke was when, at the coronation of her Majesty, in 1837, he encountered his old antagonist Soult, sent by Louis Philippe as Ambassador Extraordinary on the occasion. At the dinner given by the Corporation of London to the distinguished foreigners in England on the occasion, those two illustrious chieftains exchanged mutual compliments and expressions of amity.

We have seen that the Duke, in his civil capacity, did not so much court office as that it was thrust upon him. He was probably sincere in his protest against being made Prime Minister; but both the Crown and the aristocracy had scented the coming storm, and saw that in the *prestige* of the Duke of Wellington lay their best chance of riding it out. Catholic Emancipation was an unexpected blow; but they lived to wish that the same moral courage and foresight which led the Duke to initiate that measure had also led him, in like manner, to force them into other political concessions. He, however, had learned a lesson which afterwards he did not forget.

In August, 1838, a banquet given to the Duke at Dover, as Lord Warden of the Cinque Ports, brought his old antagonist Lord Brougham forth as his panegyrist:—

> Although no man, said the noble and learned Lord, on such an occasion, is entitled to entertain any personal feelings on his own behalf, it would be affectation, it would be insolent ingratitude, were I not to express the sentiments which glow within my bosom, at being made the instrument of making known those feelings which reign predominant in yours. Enough, however, of myself; now for my mighty subject. But the choice you have made of your instrument—of your organ as it were on this occasion—is not unconnected will that subject; for it shows that on this day, on this occasion, all personal, all political feelings are quelled; all strife of party is hushed; that we are incapable, whatever be our opinions, of refusing to acknowledge transcendant merit, and of denying that we feel the irresistible impulse of unbounded gratitude; and I am, therefore, asked to do this service, as if to show that no difference of opinion upon subjects, however important; no long course of opposition, however contracted, upon public principles; not even long inveterate habits of public opposition, are able so far to stifle the natural feelings of our heart, so as to obscure our reason, as to prevent us from feeling, as we ought, boundless gratitude for boundless merit. Neither can it pluck from our minds that admiration proportioned to the transcendant genius, in peace and in war, of him who is amongst us to-day; nor can it lighten or alleviate the painful—the deep sense which the untired mind never can get rid of when it is overwhelmed by a debt of gratitude too boundless to be repaid. Party—the spirit of party—may do much; but it cannot operate so far as to make us forget those services; it cannot so far bewild-r the memory, and pervert the judgment, and eradicate from our bosoms those feelings which do us the most honour, and are the most unavoidable, and, as it were, dry up the kindly juices of the heart; and, notwithstanding all its vile and malignant influence on this occasion, it cannot dry up those juices of the heart so as to parch it like very charcoal, and make it almost as black. But what else have I to do? If I had all the eloquence of all the tongues ever attuned to speak, what else could I do? How could a thousand words, or all the names that could be named, speak so powerfully—aye, even if I spoke with the tongue of an angel—as if I were to mention one word—Sir Arthur Wellesley, Duke of Wellington, the hero of a hundred fields, in all of which his banner was waved in triumph; who never—I invoke both hemispheres to witness—bear witness Europe, bear witness Asia—who never advanced but to cover his arms with glory; the Captain who never advanced but to be victorious; the mightier Captain, who never retreated but to eclipse the glory of his advance by the yet harder task of unwearied patience, indomitable to lassitude—the inexhaustible resources of transcendant skill; showing the wonders, the marvels of a moral courage never yet subdued. Despising all, who thwarted him with ill-considered advice, neglecting all hostility, so he knew it to be groundless, laughing to scorn reviling enemies, jealous competitors, lukewarm friends—aye, hardest of all, to neglect despising even a fickle public, he cast his eye forward as a man might, else he deserves not to command men—cast forward his eye to a time when that momentary fickleness of the people would pass away, knowing that in the end the people are always just to merit.

To this oration, the Duke of Wellington thus responded:—

> The noble Lord, who I hope will allow me to call him my noble friend, has stated to you with great truth, that there are times and circumstances in which, and under which, all feelings of party, all party animosity, all description of political feelings, must be laid aside. I must do my noble and learned friend the justice to say, that for years and years there has been nothing of that description in social life as between him and me, notwithstanding which it is certainly true that I have had the misfortune of differing in opinion with my noble and learned friend upon many points of internal and possibly of other descriptions of policy. But I am afraid that, notwithstanding my most anxious wish to co-operate with all of you in the public service in which we have all been employed, I may happen (I know it does happen) to differ with some of you upon subjects of political interest to the country. But my noble and learned friend judges of you correctly when he says that such feelings of difference would not prevent you, as they have not prevented you from doing me the honour of inviting me to this festival, and of bringing here to meet me not only the whole of this interesting county, but persons from all parts of the kingdom, and even from abroad. Therefore, my noble and learned friend does you as well as himself justice, when he states that there are occasions—occasions in relation to individuals as well as in relation to public interests and services—in which all feelings of party politics and opinions must be laid aside, in order to carry on the public service to the greatest point of advantage to the public interest. I have had sufficient experience in public life to know that this must be the case. I am convinced that it is that feeling which has induced you to pay this tribute of respect to the person holding the situation of Lord Warden of the Cinque Ports, in order that you might engage others hereafter to perform their duty honestly and conscientiously in the same honourable office.

In 1841, on the return of Sir Robert Peel to power, the Duke aided him as a kind of consulting member of the Cabinet, supporting him in all his plans of Commercial Reform. When at last the crisis of 1845 arrived, when the combined influence of the Anti-Corn-Law Association and the apprehended famine in Ireland led Sir Robert Peel to resolve on finally abolishing the Protective Duty, the Duke of Wellington remembered the great terrors of 1822 and 1830, and gave him a cordial aid. We need not here enter into the details of those proceedings, inasmuch as the Duke was not the most prominent actor; but his influence in the Upper House gave Mr. Disraeli the occasion to refer to him, in one of his sarcastic attacks on Sir Robert Peel, as having "dragooned" the Peers into obedience. This was scarcely true, because the Duke exercised a moral influence only over the members of the House of Lords. When, in 1848, London was threatened with a Chartist insurrection, the Duke organised the defence of the metropolis with a marvellous celerity. His alacrity and avidity, as the old war-horse springs again at the sound of the trumpet, were much quizzed after the danger was over; but when we consider the peculiar circumstances of Europe at the time, it must be admitted that precaution was at least the better part of valour and wisdom.

Lord Stanley having moved an amendment to the Address, in reply to the Royal Speech delivered on the re-assembling of Parliament in February, 1849, the noble Duke spoke in support of the Address, confining himself principally to foreign affairs. Lord Brougham had made one of his fierce onslaughts upon the Government, and the noble Duke began with a compliment to his noble and learned friend. He greatly admired, he said, the speech of the noble and learned Lord, who was the person in that House most capable of appreciating that state of affairs on the Continent which rendered it exceedingly difficult for this country to give efficient aid in maintaining the peace of Europe. He certainly was not able to estimate those difficulties with the same local knowledge which his noble and learned friend possessed; but he had always been sensible of the extreme delicacy and difficulty attending the situation of public affairs on the Continent of Europe during the whole of the year 1848; and he had always been anxious that nothing should be done to throw the smallest difficulty or impediment in the way of the Government carrying on our foreign relations, or that any steps should be taken which could give occasion for the smallest grounds for the belief that the Government was not supported by the public opinion of this country. . . . . The noble Lord (Beaumont) had expressed a strong opinion respecting Naples and Sicily; and he (the Duke of Wellington) was anxious to move, in that house, for this production of certain documents which he had not found amongst the parliamentary papers connected with that question. He alluded to the declarations made by the King of Naples when he acceded to the Treaty of Vienna. It was true that, at first, he was not *de facto* King of Naples; he was at that time King of the Two Sicilies. Bonaparte had military position of Naples, and had made his brother King of Naples. But he was recognised by this country as King of the Two Sicilies, and it was in that quality that he made his treaty with his late Majesty George III. After his Majesty had obtained possession of his throne of the Two Sicilies, he had accepted of the Treaty of Vienna. Now his Majesty and this country were as much bound by that treaty as they were by any other treaty. The noble Lord (Beaumont) had expressed a strong opinion respecting Naples and Sicily; and he (the Duke of Wellington) was anxious to move, in that house, for this production of certain documents which he had not found amongst the parliamentary papers connected with that question. He alluded to the declarations made by the King of Naples when he acceded to the Treaty of Vienna. It was true that, at first, he was not *de facto* King of Naples; he was at that time King of the Two Sicilies. Bonaparte had military position of Naples, and had made his brother King of Naples. But he was recognised by this country as King of the Two Sicilies, and it was in that quality that he made his treaty with his late Majesty George III. After his Majesty had obtained possession of his throne of the Two Sicilies, he had accepted of the Treaty of Vienna. Now his Majesty and this country were as much bound by that treaty as they were by any other treaty. The noble Lord (Beaumont) had not think it desirable to discuss these questions in the absence of the necessary documents; and the noble Duke, with an eye to the prejudicial effect which such a proceeding would produce, entreated their Lordships not to let it go forth to the people of this country, and to the people of foreign countries, that an amendment and a division had taken place in the House of Lords on the subject of our foreign relations. On the 6th of March following, the noble Duke repeated his views with respect to the obligation resting on the King of Naples to observe the Treaty of Vienna.

The Marquis of Lansdowne's motion for a public vote of thanks to the Governor-General of India (Lord Dalhousie), the Commander-in-Chief, and the officers of the army of India, on account of the military operations in the Punjaub, gave the noble Duke an opportunity for graphically sketching the siege of Mooltan, for bearing his personal testimony to the perils attending Indian warfare, and for eulogising the skill and courage evinced by the British army during the late war. "My Lords," he said, "it has fallen to my lot to know, and to have to consider, the great difficulties under which this war has been conducted. And, my Lords, I must say that in no case have I seen stronger instances of good conduct than in carrying on the operations of which it is now proposed to your Lordships to pronounce your approbation. My Lords, this war originated in the dishonour, perfidy, and faithlessness of the servants and officers of the native Government of Lahore. The Governor-General, being, under the articles of the treaty, the guardian of the infant Maharajah of the Punjaub, was bound by this treaty to control the acts of his Government, and to give his assistance in carrying it into its operations. My Lords, all the officers of the Lahore Government betrayed their trust. As the noble Lord has stated, Dewan Mooltraj, the Governor of Mooltan and of the country under the subjection of that fortress, betrayed his trust, and refused to deliver the command to the officers sent to relieve him, and murdered the two gentlemen sent by the British Resident in order to superintend the delivery of the fortress to the officers selected by the Maharajah, under the superintendence of the British Resident, to take the command. This act of treachery and in-

subordination was followed by the revolt of the whole country in the neighbourhood of Mooltan; and, my Lords, it was followed, by degrees, one after another, by the treacherous revolt and insurrection of all parts of that country—by the revolt of no less than three other fortresses, all of which refused to obey the orders of this Government, the troops being in a state of mutiny and insurrection; all of which had to be got the better of at the same moment. And all this, my Lords, occurred at a season of the year during which it was utterly impossible to put in the field any European troops; it was, indeed, scarcely possible to keep the native troops in the field. But, my Lords, by the care and attention of the Governor-General and the officers of the British Government, and of the Commander-in-Chief and officers of the army, a body of men was by degrees collected; and that force was attended and assisted by a body of artillery, and sent to Mooltan, which place had been previously invested. Another force was sent to the Punjaub, to aid and support the garrisoned place of Lahore and the other places within the Sikh territory under treaty. My Lords, the siege of Mooltan could not be commenced until the month of September, notwithstanding that the original atrocities of the murder of the two officers mentioned by the noble Marquis occurred on the 19th of April. But the ground was broken on the 7th September. On the 14th of September, after a good deal of progress had been made in the siege, after a gallant attack made in order to lodge the troops in a certain portion of the town, which it was necessary for them to occupy in order to carry on the siege with advantage; it was found necessary to raise the siege and withdraw the army to a certain distance until reinforcements could be received, because the Sikh army, under the chief who has been since combatting with the Indian army, had revolted and gone over to the enemy. It was on the 14th of September when the siege was raised; but the care of the Governor-General, and the generals and officers in command of the troops in the different portions of the country, had provided measures for bringing troops from all parts to the great undertaking of pacifying the country under these circumstances. A force was sent up from Bombay, and arrived at Mooltan on the 26th of September. On the very next day the city of Mooltan was attacked by General Whish, and the troops who had arrived under the command of General Dundas, and these Bombay troops carried some of the works that defended the city, and took possession of parts of that town. * * * While this siege was going on the Governor-General and the Commander-in-Chief had formed a force to cover the besieging army, and keep the country in tranquility, which was generally in a state of insurrection; and also to meet those moments of those large bodies of troops which were collected on the frontier, and prevent them from disturbing the operations of the siege. The Commander-in-Chief, my Lord Gough, put himself at the head of the covering army, and had to fight those actions to which the noble Marquis has adverted, and which he did with uniform success in each of them; though, no doubt, loss was sustained in some of those actions. But, with regard to Mooltan, when it is recollected that the strong place was provided with arms, and that, without conditions, a surrendered on capitulation when the breaches were opened, and the storming parties were preparing to attack those breaches; and that this place fell into our hands without loss, I think it may be set down that, as a whole, the service was effected with smaller loss than could have been expected under any circumstances." The noble Duke took this opportunity of extenuating the temporary retreat of the 14th Dragoons. He did so in these words:—"My Lords, it is impossible to describe to you the variety of circumstances which may occasion mistake or disarrangement during an engagement in the operations of particular bodies of any extent of country. An inquiry into these circumstances has been instituted, and I have seen the report of that inquiry. It happens that these cavalry had to conduct their operations over a country much broken by ravines and rough jungles, which rendered it impossible for the troops to move in their usual regular order. It happened that the officer commanding the brigade of which this corps formed a part, was wounded in the head during the advance, and was obliged to quit the field. The officer next in command, being at a distance from me, was not aware that his command had devolved; officer was obliged to withdraw from the field. Under these circumstances, the word of command was given by some person not authorised, and of whom no trace can be found; and some confusion took place, which, from the ardent desire to pursue the enemy, could not be easily be remedied. But it was removed at last, and all were got in order, and the corps successfully performed its duty, as I and other noble Lords around me have seen them perform it on other occasions. My Lords, these things happen to any troops; but the whose fortune it has been to see similar engagements in the field, feel what must be felt by all your Lordships—that the character of a corps must not be taken from them from scraps in the newspapers, but the fair mode to be sought in the report of the Commander-in-Chief, and in the inquiry made by the proper parties; an inquiry very different to that made by the publishers of newspapers. The order was made; and it needs no one to be informed that a movement in retreat is not a matter of martial law, but your Lordships may be convinced, as I myself am, that the movement in retreat was one of those accidents which must occur occasionally, and that the corps to which it happened are as worthy of confidence then as they have been since, as they were before, and as I hope they always will be." His Grace, in the course of this speech, which he delivered with that peculiar energy which characterised him when dealing with military exploits, complimented Major Edwardes and other officers upon the services rendered to her Majesty.

On the 23rd of July following, the noble Duke moved the second reading of the Regimental Benefit Societies Bill, briefly explaining its provisions; and two days afterwards we find him opposing the Railways Abandonment Bill, on the ground that it would in effect repeal that vast number of Acts of Parliament which had been passed during the last few sessions, which involved the outlay of millions of money, and the interests of millions of persons; and that it would wipe away the whole of the property which had been invested on the faith of those Acts of Parliament. It may be remembered that the object of this bill was to enable railway companies to abandon any portion of their undertaking by means of a cheaper proce s than that which at that time existed. On the same day as Grace, speaking in his capacity of Lord Warden of the Cinque Ports, opposed at some length the Pilotage Bill on its second reading being moved by Lord Granville, principally on the ground that it was calculated to put down the fellowship of pilots, who had hitherto contributed to the safety and usefulness of our navigation.

A grant, proposed by the Duke of Richmond to the Government, on Feb 21, 1850, relative to the further extension of medals to the army and navy, elicited from the Duke of Wellington his views as to the principle on which the proposed distinctions should be conferred. It had been decided, he said, that the army in the Peninsula had not been treated in the same manner as the army in Flanders, and as other armies which had served in China, and in the East Indies, and elsewhere. It appeared to him that the plan which would be most in conformity with the wishes of those who made the former applications, and which would be most calculated to gratify all parties, was to grant a medal to all those engaged in those great actions and achievements, which, by order of the Sovereign, had been commemorated by the grant of medals to the principal officers engaged in those battles. On that ground he had recommended the principle which was subsequently adopted, and which, he believed, had given general satisfaction. Whether that principle should be extended further was for the consideration of her Majesty's Government. He could say was, that whenever he should receive her Majesty's orders for such an extension, he would set to work to carry it into execution with the utmost diligence. In the following March his Grace opposed the Party Processions (Ireland) Bill, on the ground that it was not sufficiently stringent, and he urged upon the Government the adoption of a clause empowering the local magistrates to apprehend those persons who should appear with fire-arms at funeral processions in Ireland. The clause, which it had been arranged should be brought up on the third reading, was not subsequently pressed; the noble Duke alleging as a reason that he did not wish to delay the passage of the bill in the Lower House.

Lord Brougham having addressed a question to the Marquis of Lansdowne with reference to the proposed commission to inquire into the state of the University of Oxford and Cambridge, in the course of which he said he believed that his noble friend (the Duke of Wellington), the Chancellor of Oxford, and his noble and learned friend (Lord Lyndhurst), the High Steward of Cambridge, both concurred with him in deprecating any rash and inconsiderate interference with the Universities; the Duke of Wellington rose, and declared that the University of Oxford was most anxious to introduce every improvement which was desirable into the system of education adopted in that ancient seat of learning. * * * But that which the University of Oxford could not do, and which it would not be induced by any consideration to do, was this—it would not repeal the statutes by which the different colleges of that University were governed. Various portions of the inhabitants of this country came living in its towns and others in its rural districts; various young persons, now receiving their education in different schools, enjoyed important rights under the separate statutes of the separate colleges. The body to which he had the honour to belong namely the Chancellor, Masters, and Scholars of the University of Oxford, and the governing bodies of the several colleges—was bound to respect, and maintain, and carry into execution the statutes of the several colleges, and he expressed a hope that those bodies would not be required to submit to an inquiry directly tending to the repeal of those statutes, which the law of the land desired them to carry into execution for the benefit of the individuals who claimed rights and privileges under them. There appeared to him to be a tendency to institute an inquiry of the nature which he had described—an inquiry which, if instituted, would seriously affect some of the most loyal subjects of her Majesty, who might be placed in a situation of the greatest difficulty, as they would have to decide between their duty of obedience to her Majesty's commands, and the duty and respect which they owed to the execution of the law.

His Grace raised a warning voice on the subject of the abolition of the Lord-Lieutenancy of Ireland, and pithily exposed the inconvenience to which, in troubled periods, the military power of the central authority would give rise. Having dwelt upon the intimate relations which in recent times have been kept up between the civil and military authorities, his Grace remarked, "Withdraw the Lord-Lieutenant from Ireland, and who becomes the chief civil authorities in different parts of the country, in Dublin, the chief civil authority would be the Lord Mayor. Now, I think that in less than three months after the adoption of the measure to put down the monster meetings in Ireland, I had the honour of attending her Majesty at Court, and there I saw Mr. O'Connell, as Lord Mayor of Dublin, followed by some of his suite, presenting an address to her Majesty on the throne. Now, will any one say that the military authorities would have ventured to concert any military operations with the then Lord Mayor, elected by the democratic corporation, created by a recent act of Parliament? I will not say whether one I had afterwards to provide against barricades in the streets of Dublin, to take measures for attacking them, if they should be formed, and to secure the free passage of the streets. For this purpose it was necessary to have confidential communications with the Secretary of State here, and with the Lord-Lieutenant of Ireland. Could I have ventured to do so with the Lord Mayor of Dublin? Could I have written a line on the subject without ordering the Commander-in-Chief on the spot in Dublin to arrest Mr. O'Connell and the gentlemen of the corporation of Dublin should know nothing about the matter? I will give you another instance. * * * It was necessary, some time ago, to carry on military operations in the neighbourhood of Kilkenny. Who was the elected Mayor there at that time? Dr. Cane. And what became of Dr. Cane? Why, before the operations at Kilkenny were over, he was in prison, under the provisions of the Habeas Corpus Suspension Act. And yet such was the gentlemen with whom the general officer, carrying on his operations with his troops, must have consulted, in the absence of the Lord-Lieutenant of Ireland?"

Of the many eulogies which the character of the late Sir Robert Peel received within the walls of Parliament, on the receipt of the tidings of his death, the shortest, but most poignant testimony borne to his worth by the Duke of Wellington was not the least remarkable. The Marquis of Lansdowne and Lords Stanley and Brougham had paid eloquent and touching tributes to the memory of the deceased statesman, when the noble and gallant Duke rose to take his share in the mournful ceremony. His feelings so overcame him, that it was some time ere he could acquire the command of speech, and the words he now quote were uttered at such lengthened intervals that the effort to articulate was painfully apparent. "My Lords," at last grasped the old warrior, "I rise to give expression to the satisfaction with which I have heard this conversation on the part of your Lordships, both on the part of those noble Lords who were opposed to Sir Robert Peel during the whole course of their political lives, and on the part of those noble friends of mine who have been opposed to him only lately. Your Lordships must all feel the high and honorable character of the late Sir Robert Peel. I was long connected with him in public life. We were both in the councils of our Sovereign together, and I had long the honour to enjoy his private friendship. In all the course of my acquaintance with Sir Robert Peel, I never knew a man in whose truth and justice I had a more lively confidence, or in whom I saw a more invariable desire to promote the public service. In the whole course of my communication with him, I never knew an instance in which he did not show the strongest attachment to truth: and I never saw in the whole course of my life the smallest reason for suspecting that he stated anything which he did not sincerely believe to be the fact. My Lords, I could not let this conversation close without stating that which I believe to have been the strongest characteristic feature of his character. I again repeat to you, my Lords, my satisfaction at hearing the sentiments of regret which you have expressed for his loss." This speech produced a marked sensation amongst the Peers.

In the brief debate originated by Lord Torrington on the affairs of Ceylon, the Duke of Wellington made a few remarks upon the subject of martial law. "Martial law, he contended, was nothing more or less than the will of the general who commands the army. In fact, martial law meant no law at all. Therefore, the general who declared martial law, and commanded that it should be carried into execution, was bound distinctly to lay down the rules and regulations according to which his will was to be carried out. Now he had in another country carried out martial law; that was to say, that he had governed a large portion of the population of a country by his own will. But then what did he do? He declared that the country should be governed according to its own national laws, and he carried into execution that will. He governed the country strictly by the laws of the country; and he governed it with such moderation, he must say, that political servants or judges who had at first fled or had been expelled, afterwards consented to act under his directions

We next find the illustrious Duke supporting the Ecclesiastical Titles Assumption Bill. In the course of his speech he expressed his regret at the failure of the Catholic Relief Bill, which he had himself pressed upon the adoption of Parliament. "My Lords," he said, "I cannot conceive the proposition of my noble friend (Aberdeen), that the bill shall be read a second time this day six months. Circumstances have occurred which render it impossible for you to return to the position in which you stood before this act of the Pope was committed. The object of the passing of the Relief Act was to repeal all the laws adopted against the Roman Catholics, first at the Reformation; next, at the time of what was called the Popish Plot; and, thirdly, in consequence of the Popish reign of James II. and the war of success-ion in Ireland, out of which, and its consequences, grew all the penal enactments against Catholics in that country. It was, I say, the object of the Relief Act to get rid of these altogether. But those who brought forward that act—those who urged your Lordships and the other House to support it—repeatedly stated that nothing therein touched the laws on which the Reformation was founded. This was cautiously avoided. Now we, the authors and promoters of the Relief Act, were charged with having touched the Reformation, we distinctly proved the contrary, and showed that we had done nothing to affect the laws by which the Reformation was established in this country. In 1846, however, in the reign of the present Queen, certain old statutes were repealed, and among them one relating to the introduction of bulls into this country If the law had not been repealed, it would have been impossible that the act of the Pope could have taken effect: and, consequently, all fresh legislation would have been unnecessary. Cardinal Wiseman would not have dared to have come to England and published the Pope's bull or rescript establishing the new hierarchy. The thing was impossible; it could not have happened. Under these circumstances, I say you cannot return to the position in which you stood when the Relief Act was passed, or before the act of 1846 passed, which repealed the penalties attaching to all the acts with which we dealt, but left the acts themselves standing as misdemeanours. The legislation on this subject stands in this state—that misdemeanours may be committed, but cannot be punished. Under these circumstances, I say you cannot stand on the Relief Act, but must pass a measure to meet the particular act of the Pope complained of, and to prevent the repetition of such acts in future. I have no desire to infringe the religious privileges of the Roman Catholics; on the contrary, I wish them to enjoy every means of following their religion with perfect freedom. I would wish to make no alteration in the Relief Act, but I do see how this measure can be avoided. I think that even without apprehension the effect which this measure may have in Ireland. We have had a good deal of experience of the effect produced in Ireland by measures passed by the Legislature. There was the Relief Act. A great deal was expected from that, and it was said that it would put an end to agitation in Ireland for ever. But in the very year, May, I [illegible] became the law of the land, [illegible] has the Crown, [illegible] Ireland. [illegible] the Crown come to de[illegible] for the purpose of putting down the agitation, or was the agitation existing in that country, the Relief Act notwithstanding? My advice to your Lordships is to do that which is just and necessary to maintain the power and prerogative of the Crown, and to protect the subjects of this country, and no more; and you may rely on it you will have the support and good wishes of the loyal people of Ireland, as well as of this country."

In the ensuing session, in February, upon the motion that the Address in answer to the Royal Speech should be inserted upon the Lords' Journals, the noble Duke took the opportunity of expressing his sense of the services of General Sir Harry Smith, lately in command at the Cape. The question of the fitness or unfitness of Sir Harry for command in such irregular and savage warfare, had long been made the subject of angry dispute; but the noble Duke at once pronounced in favour of the tactics employed by Sir Harry, and spoke with more than his wonted energy in his defence. "Sir Harry Smith," he said, "is an officer who, from his high reputation in the service, ought not to require any commendation from me; but having filled a high command in several important military operations long before carried on under his direction, and having now been recalled by her Majesty's Government, it is but just that I should say that I, who am his commanding officer, though at a great distance, entirely approve of all his operations, of the orders which he has given to his troops, and of the arrangements which he has made for their success. * * My firm belief is that everything has been done by the commanding general of the forces and the other officers, in order to carry into execution the instructions of her Majesty's Government."

The projectile inventions of Captain Warner having been made the subject of a motion by Earl Talbot in the House of Lords, the Duke of Wellington, who was of opinion that the matter had already been sufficiently investigated, or, at all events, that a committee of lay Peers could elicit nothing beyond the facts brought out by the inquiries of the Board of Ordnance, moved, on the 21st of May, that an humble address be presented to her Majesty, praying that her Majesty would be pleased to give directions that there be laid before the House of Lords copies or extracts of any report made to the Master-General of the Ordnance on the subject of Mr. Warner's inventions, and supported the motion on the grounds we have set forth.

Almost the last speech of the venerable Duke was in support of the Militia Bill. His Grace spoke with difficulty, and the long pauses between his sentences, and sometimes between the very words, betrayed the effort he required to proceed. But, as ever, his remarks were fully to the point. He asserted that the addition of the militia now proposed to be enrolled, would not swell our peace establishment to more than its fair constitutional proportions, and that our peace establishment ought to have been augmented long before. "We have never," he observed "up to this moment, maintained a peace establishment—that is the real truth. And I say that we are now in that situation that it is necessary for us to form an establishment such as this country always has had up to this moment, a regular peace establishment founded upon a militia. * * * The noble Marquis (Lansdowne) states that he would prefer an army of reserve. An army of reserve! what is an army of reserve? Is it an army that costs less than £40 a man all round? If the noble Marquis thinks that it is possible, I tell him it is impossible. He can have no such thing." After expressing approval of the services performed by the volunteer corps during the last European war, his Grace thus concluded:—"My Lords, I say, however much I admire disciplined troops, and more especially British troops, I must tell you, you must not suppose that others cannot compete with them. And I have no doubt that if you commence the formation of a corps under this Act of Parliament, it will in time become what the former militia was; and if it ever become what your former militia was, you may rely upon it for performing all the service that they will ever be required to perform for the safety of the country. My Lords, I recommend you to adopt this measure as a commencement for the completion of your peace establishment. It will give you a constitutional force it will give you a force that may not do all you desire at once, but by degrees it will become what you want—an auxiliary force to your army."

On the 23rd June his Grace moved an humble address to her Majesty for a copy of an order with respect to the transmission of reinforcements to the Cape, &c. This was his final public act within the walls of the House of Lords, if we except his attendance (and as was his custom he was among the "sentinels of the arrival") at the ceremony of the prorogation of Parliament on the 2d July.

In reviewing the main events of the Duke of Wellington's career as a politician, the conclusion is almost forced upon us that, although his name is associated with two of the greatest legislative changes in our era, it was never as a voluntary agent that he made concessions to the popular wishes. He imported into the peaceful struggles of Parliament the tactics of war; always fighting to the last in defence of every position, and only abandoning it when he found it no longer tenable. In the instances of Catholic Emancipation, this was avowedly the case; in the repeal of the Corn Laws we may infer that he pursued the same course, because up to a very recent period before the passing of that measure he had emphatically declared his belief that "the Corn Laws could not be repealed without peril to the country." On the other hand, he conferred one great benefit on the English nation by teaching the privileged aristocracy when to yield. It is scarcely too much to say, that, without the sanction of his high authority, the foresight of sir Robert Peel would not have sufficed to carry the Catholic question; indeed, there is proof of this in the care and anxiety of the distinguished commoner to set before the Duke, in a full and confidential correspondence, all the reasons for a settlement, during the autumn of 1845, before he could his arguments have prevailed with a less practical mind than that of the Duke. If, in the case of Corn-law Repeal, the Premier of 1845 again took the initiative in proposing a change, it was, perhaps, less on account of the right attaching to his station than that he felt the necessity of offering to the Duke solid inducements or statesmanship ere he could expect him to abandon the existing law. Accustomed as we now are to find public opinion immediately responded to by statesmen, we must, in doing justice to the Duke of Wellington, remember that he was by temperament and ingrained habit a Tory, and constitutionally indisposed to yield. We must also bear in mind the character of the Tory aristocracy a quarter of a century ago, and the difficulty of inducing them to listen to any views which were not enforced by all the apprehensions of danger, and their respect for authority. On the other hand, the extreme positiveness of the Duke's character, his inflexibility, his common-sense, much augmented his authority; because it was felt that, if he called on his friends to yield, it must be that there was no longer any hope of successful resistance. Thus the very defects of his character became turned into benefits so soon as he was put in motion for great popular or national purposes.

It has been well remarked that he always knew what was best to be done at the right moment. This was an advantage derived from his military habits. While in command of armies he had often added to his military duties a civil administration; or, if not an administration, an imperious necessity to interfere, with advice and authority, in the political affairs of foreign nations; thus he was half a statesman ere he became a Minister; and if, in subsequent years, domestic government at home he sometimes too easily remembered his habits of military command, his errors were more than atoned for by the qualities of the statesman and the civil administrator, developed during his career in India, in the Peninsula, and even in France. To foreigners generally, our admiration of his character seems excessive; but it is because foreigners rarely are competent to appreciate the patience, self-denial, probity, and almost plodding perseverance which were the great agents of his success. They will at least admit that there has seldom been a great Captain who has exhibited less of the arrogance of the conqueror, or who more rigidly observed the laws of justice and moderation in the hour of victory. In his political career similar influences revealed in his conduct. From the moment that he had abandoned a legislative principle, or carried a measure, he forgot the asperities of the strife, and accepted the [illegible] with the same frankness of loyalty that had led him to hold on by the old. If he saved the nation by his military triumphs, he still [illegible] signally served it, and saved its institutions, by teaching a press [illegible] the public wants, and the necessity of conceding to [illegible]

THE DUKE'S LAST MOMENTS, AT WALMER CASTLE.

Our Artist in the subjoined View of Walmer Castle, has represented, with spirit, the actual and poetic character of an edifice which will in all future time be celebrated as the spot where the illustrious warrior breathed his last. The scene was sketched at sunset a few days after the Duke's decease. The turret window to the left of the flag is that of the little room where the Duke always slept, on his visit to Walmer, and where his body now lies, awaiting the magnificent public funeral which the respect and affection of the nation has demanded. Some erroneous statements in reference to the Duke's last moments having been circulated, it may be as well to repeat the following authentic facts in relation to the event. The Duke having sat up rather later than usual on the previous night, Mr. Kendall, his valet, a confidential servant of the Duke, who has been his Grace's constant attendant for nearly thirty years, allowed him an extra quarter of an hour on Tuesday morning, and did not call him until a quarter after six o'clock. The Duke replied to his valet's summons in his customary manner, but appeared to wake up with unusual difficulty. Mr. Kendall remarked that his breathing appeared to be much heavier than usual, but the symptoms he observed were in no degree calculated to occasion alarm and after remaining in the room about 20 minutes, he left, determining to allow his noble master an extra hour's rest. About half-past seven o'clock, one of the housemaids, being engaged near the Duke's room, heard some unusual sounds proceeding from the apartment. She immediately ran to Mr. Kendall's room, and exclaimed, "Oh, Sir, I am afraid something is the matter with the Duke: he is making such a strange noise." The valet, alarmed, ran directly to the Duke's room, but, on arriving there, found all much as when he had left it an hour previously, with one exception, that the Duke was now lying upon his right side instead of his back, and still breathing with apparent difficulty. Approaching his bedside, the valet informed the Duke of the hour. "It is a quarter to eight o'clock, your Grace." The Duke opened his eyes slowly, and said, "Thank you." After a few moments he inquired, still in the same calm and collected voice, "Where does the apothecary live?" Kendall replied, "In Deal, close by, your Grace." Pausing for a moment, the Duke presently remarked—"I should like to see him, Kendall." The valet immediately wrote a note to Mr. Hulke, requesting his immediate presence at the Castle. Remaining with his noble master while the messenger was gone to Deal, Kendall failed to discover or suspect that any serious ailment affecting the Duke. He certainly breathed with unusual difficulty, but this was attributed to the probable fact of his having caught a slight cold on the previous day. His Grace always "woke hard," as the expression runs, and the occasional uneasiness which

WALMER CASTLE, KENT.

he exhibited was not considered remarkable. When Mr. Hulke arrived, and was introduced to the Duke, he inquired whether his Grace felt any uneasiness in the chest or abdomen. The Duke replied in a somewhat indistinct manner, and it was difficult to know whether he meant his answer to be understood as an affirmative or negative one. Mr. Hulke promised to send a draught, and asked the Duke's permission to call again in the middle of the day, which his Grace appeared to assent to. Mr. Kendall informed Mr. Hulke that the Duke's dinner on the previous day had consisted of mock turtle soup, turbot, and a venison chop, and Mr. Hulke, imagining that his patient was suffering from an attack of indigestion, prescribed accordingly, and before leaving the Castle, at Mr. Kendall's request, saw Lord Charles Wellesley, and gave it as his opinion that no danger was to be apprehended. After the surgeon had left the Castle, Mr. Kendall having previously obtained Mr. Hulke's sanction, prepared some tea, and pouring three or four table-spoonfuls into a saucer, asked the Duke if he would take a little. The Duke replied, "Yes, if you please." These were the last words he ever spoke. He had some difficulty in raising himself to take the tea. Mr. Kendall, observing this, placed his hand behind him, and assisted him. After drinking the tea, he again reclined on the bed, and it was observed that his difficulty of breathing appeared to increase. Mr. Kendall now became anxious; and watching his noble master very closely, he at length observed a peculiar muscular action of the lower jaw—a sort of twitching of the lips and surrounding parts. He had hardly time to notice this when the Duke was seized with a strong convulsive fit, and every muscle in his body was in violent action for some minutes. Mr Kendall instantly rang the bell with some violence, and Lord Charles Wellesley, with several of the domestics, were on the spot immediately. Mustard poultices were applied to the chest, an emetic was administered, and medical assistance was again sent for. The Duke remained insensible for some time, but at length recovered consciousness, though he did not speak. A succession of fits followed, and the death of this great man occurred, as has been already described, from exhaustion consequent on these repeated attacks.

The Duke of Wellington was a most diligent and indefatigable reader of the newspapers. Nothing was too minute to escape his notice, but the advertisement columns had his special attention; and if, in glancing over them, he found an announcement of a new patent pen, to which were assigned some peculiar

THE DUKE'S CHAMBER IN WALMER CASTLE.

I.

TREAD lightly! the spot shall be hallowed in story;
Speak not his name but with blessings or sighs.
He sleeps in his lone simple turret in glory:
So great as he was, and so low as he lies.

II.

High were his aims and untarnished his honour;
Danger he scorned in the pathways of right.
England shall miss, when the cloud is upon her,
The spirit that led her through darkness to light.

III.

Tread lightly! To this lonely shore of the ocean
The eyes of the world are directed with grief;
And the voice of the people, with heartfelt emotion,
Makes wail for the loss of their mightiest Chief.

IV.

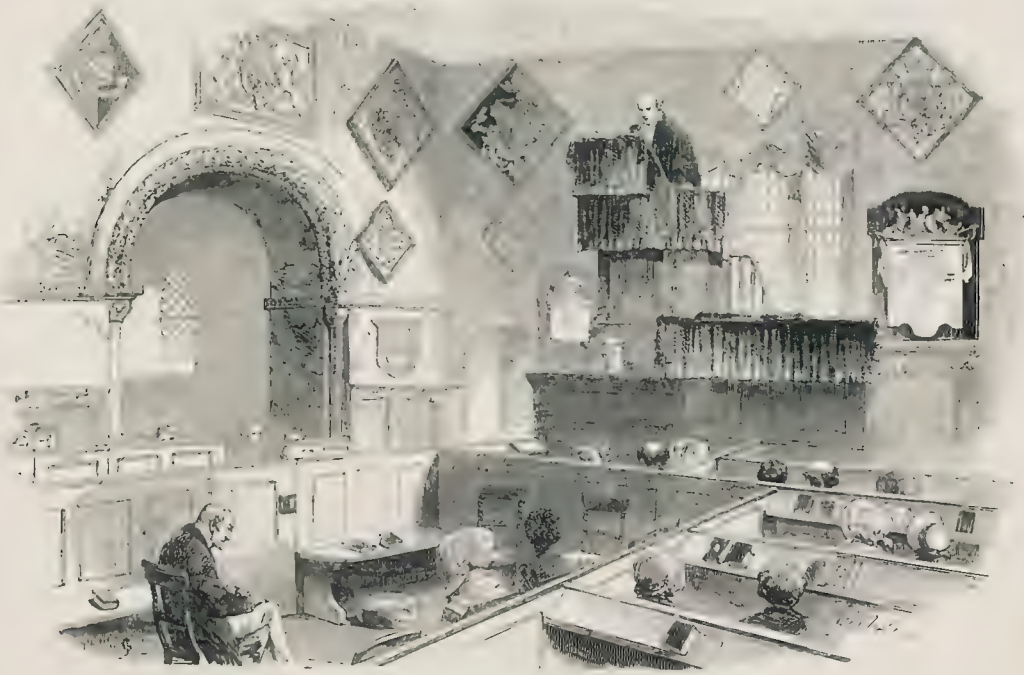
Weep, England!—weep for the Spirit departed!
Write his pure name on thy worthiest page;
The stoic, the hero, high-souled, and true-hearted,
Who moulded to justice the mind of his age.

ST. MARY'S CHURCH, WALMER.

virtues, or anything else which struck his fancy, forthwith a despatch was sent off for the article.

His great mental activity has often been a theme of conversation. Shortly before his decease he was engaged in the task of reading a ponderous document, which has excited a good deal of public attention, being no other than the report of the Royal Commission appointed to examine into the management and condition of Oxford University. This he doubtless did with the view of mastering the details, so as to be able to form a sound judgment on a question of so much national interest, and possibly to take part in the discussion of the subject in the next session. He was, in fact, like the late Sir Robert Peel, one who would take no opinion second-hand, and in this instance he laboured hard to understand the subject in all its bearings. It is a striking, and, all things considered, a most interesting fact, that before his death he had nearly concluded his gigantic task, and, up to a certain point, it is believed, had read every word of the report.

The Duke's bodily system remained sound to the last. His fine nervous energies were wonderfully preserved. For example, he always shaved himself: and the only change in this respect that was observable as years accumulated was, that a rather longer time was occupied in the process. He also wrote a good firm hand, and, until within a very



INTERIOR OF ST. MARY'S CHURCH, WALMER.—THE DUKE OF WELLINGTON ATTENDING DIVINE SERVICE.

few years before his death, would not unfrequently indite three or four letters before breakfast. There is another fact of the same character. In his 84th year, and half a century after many of his greatest victories, the Duke could raise to his lips a glass of water, filled to the brim, steadily, and without spilling a drop!

Of all his peculiarities, none, perhaps, was more remarkable than the tenacity and accuracy of his memory. He had a clear recollection of many minute facts connected with Mr. Pitt and his times. Some allusion being made one day to an approaching Lord Mayor's dinner, the Duke remarked that the last public dinner attended by Mr. Pitt was on such an occasion, and that he happened to be present, and heard Mr. Pitt make an excellent speech. A speaker at the dinner, in proposing Mr Pitt's health, spoke of that statesman as "the saviour of his country;" and in his reply to the toast, Mr. Pitt denied that he was the saviour of his country, observing, "The country saved itself by its own exertions, and other countries would be equally fortunate if they would follow its example." This speech the Duke greatly admired; it was after his own heart.

The Duke had many aphoristic rules for his guidance in the common affairs of life. One of his maxims was, that "He who wishes to have anything done well must do it himself."

The plainness of the Duke's diet has been already mentioned. Equally plain was his bed. It consisted of what may be termed a horse-hair mattress—the hard couch of a veteran soldier—covered with wash-leather. A bed of this description he had at each residence; but there was only one pillow, which migrated from place to place with its owner. It is no exaggeration to say of that pillow, that, henceforward, it will be a national heir-loom.

On the very morning of his fatal attack it was much feared that he would persist in going to meet Lady Westmoreland at Dover; and not long ago, when suffering from a severe cold, he could not be persuaded to keep his room, but joined the dinner circle in his great-coat.

A pleasing trait in the Duke's character is the long period during which a large proportion of his dependants have been connected with or served him, and the unvarying testimony which they bear to his good and kind qualities as an employer, a landlord, and a master. Exact and punctual in the management of his private affairs, up to the last moment his weekly bills were discharged by him as usual; and this precision, which he carried into everything, made him easily dealt with.

Amid the splendour of his public achievements his conduct as a landed proprietor is apt to be forgotten. Yet was he one of the most liberal and improving landlords in the country. The estate of Strathfieldsaye, which he used to say would have ruined any man but himself, has had more done for it in the shape of permanent improvements—of draining, of chalking, of substantial farm premises, and such like than perhaps any other single property in the south of England. It was a wretched investment of the public money; but the Duke, true to his usual maxim, did the best he could with it, and the annual income for a long series of years has been regularly laid out upon it.

A general and very erroneous impression has existed in the public mind, that the Duke of Wellington was extremely parsimonious in his contributions to the different benevolent institutions with which London abounds. Such was not the case; but when he gave donations he always requested that it might not be blazoned before the public; and that his private benevolence was extensive we have only to instance the late prosecution of the female Stanley and her male accomplice, who obtained from the Duke above £500 at various periods extending over seven years. He was president of the Royal Westminster Ophthalmic Hospital, President of the Royal Maternity Charity, President of the Eastern Dispensary (Great Ale-street) Patron of the St. George's and St. James's Dispensary, Patron of the Royal Society of Musicians, President of the Society of Friends of Foreigners in Distress, besides being a liberal though unostentatious supporter of many of the charitable institutions of the metropolis. He was also the oldest governor of the Charterhouse (excepting the Duke of Buccleuch), a governor of King's College, a trustee of the Hunterian Collection, and President of the United Service Institution.

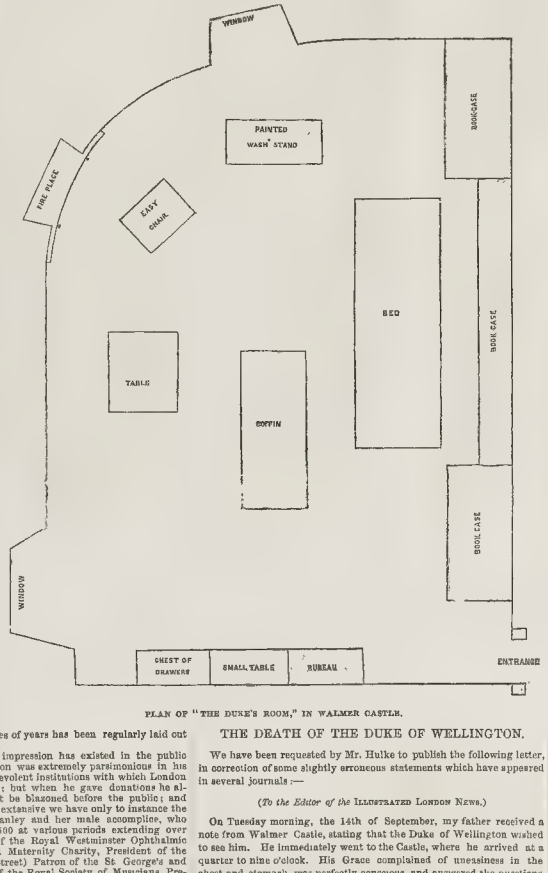
A few days before he died, his Grace, while standing on the platform of the Folkestone station, met with an old pensioner, and at once entered into conversation with him. His Grace questioned the veteran as to what regiment he had served in, and so on, and after hearing the replies, terminated the affair by quietly putting his hand in his pocket and giving the man a sovereign. On this occasion, as on others, the Duke was unattended by a single servant.

WALMER CHURCH.

ST. MARY'S, at Walmer, of which we have Engraved two Views upon the preceding page, has acquired considerable interest from being the village church in which the Duke of Wellington, when sojourning at Walmer Castle, regularly attended divine service; when his Grace was usually seated, as represented in the Illustration.

St. Mary's is a structure of antiquarian character; it exhibits some curious specimens of Norman architecture in its doorways, and on the face of the arch which separates the nave and chancel. Upon the walls are several monuments; particularly of the family of De l'Isle, who held high official appointments in the reigns of Elizabeth and the Stuarts, and were descended from the Lords De l'Isle and Rougemont. Others commemorate the daring of British naval commanders: one to Captain Vincent, of the sloop *Arrow*, who died in 1832; another to Admiral Sir Henry Harvey, who distinguished himself in the memorable engagement of the 1st of June, 1794; and one to Admiral Sir Richard Lee. (See the "Handbook of Travel Round the Southern Coast of England.") The edifice has been surrounded by a deep fosse, and various remains of entrenchments may be found in the neighbourhood.

The exterior of the Church is interesting: the porch, with its Norman doorway; the windows of various periods; the low bell-tower; and the ivy clinging to the roof and side walls, render the old edifice very picturesque: and the two aged yews have stood here, for centuries, the guardians of the venerable structure.



PLAN OF "THE DUKE'S ROOM," IN WALMER CASTLE.

THE DEATH OF THE DUKE OF WELLINGTON.

We have been requested by Mr. Hulke to publish the following letter, in correction of some slightly erroneous statements which have appeared in several journals:—

(*To the Editor of the* ILLUSTRATED LONDON NEWS.)

On Tuesday morning, the 14th of September, my father received a note from Walmer Castle, stating that the Duke of Wellington wished to see him. He immediately went to the Castle, where he arrived at a quarter to nine o'clock. His Grace complained of uneasiness in the chest and stomach, was perfectly conscious, and answered the questions put to him correctly. Some medicine was ordered, and during its preparation he took some tea and dry toast.

At this time there were no symptoms indicative of danger, and my father came home. Shortly he received another communication, stating his Grace was much worse; he had had fits similar to those he was subject to. My father and I directly went to the Castle. His Grace was in bed, unconscious, breathing laboriously. Remedial measures which in former attacks had been useful were now of no avail. Dr. M'Arthur soon arrived, and advised an emetic to be given, as this had been very serviceable on a former occasion.

Soon after one o'clock his Grace became very restless—the eye glassy. He tried to turn on the left side—there was, occasionally, twitching of the left arm. Respiration was extremely difficult, but easier when his Grace was raised. This induced us to place his Grace in an easy chair, and his breathing became immediately much more free, but the pulse sank; he was now brought into a more horizontal posture; the pulse rallied for a short time, and then gradually declined. Respiration became very feeble, and, at twenty-five minutes past three o'clock P.M., his Grace expired. So easy and gentle was the transition that, for the moment, it was doubted. I held a mirror before his Grace's mouth, it remained bright, and he was, indeed, no more.

JOHN WHITAKER HULKE.

The following copy of the Certificate of the Duke's Death will be referred to with interest:—

1852.—DEATH IN THE DISTRICT OF DEAL, IN THE COUNTY OF KENT.

No.	When Died.	Name and Surname.	Sex.	Age.	Rank or Profession.	Cause of Death.	Signature, Description, and Residence of Informant.	When Registered.	Signature of Registrar
224	Fourteenth September, 1852. Walmer Castle, Walmer.	ARTHUR WELLESLEY.	Male.	83 Years.	Field-Marshal Duke of Wellington, K.G., G.C.B., G.C.H.	Epilepsy certified.	J. W. Hulke, surgeon, Present at the death, 155, Lower-street, Deal.	Fifteenth September, 1852.	Thos V. Cavell, Registrar.

I certify that the above written is a true copy of an entry in the Register Book of Deaths in the district of Deal, county of Kent.
Book No. 6.—Extracted this 18th day of September, 1852. THOMAS VINCENT CAVELL, Registrar.

THE FATHER OF THE DUKE OF WELLINGTON.

GARRETT COLLEY-WESLEY, 2nd Lord Mornington, the Duke's father, was born 19th July, 1735 (just thirteen years after the death of the great Duke of Marlborough), and took his seat in the Irish House of Peers 13th February, 1758. His advance to an Earldom was one of the last acts of King George II.

The musical taste of the family—remarkable in the Duke of Wellington and in his grandfather, the 1st Lord Mornington—was still more developed in the nobleman of whom we are speaking. Even in early infancy it was apparent. Long before he could speak, the child delighted in his father's playing on the violin, not merely from a love, common to other children, of a sprightly noise, but from a certain appreciation of harmony, as proved by the following anecdote:—Dubourg, the famous violin player, happening to be at Lord Mornington's on a visit, chanced, on one occasion, to take the violin from his Lordship, which so irritated the child, accustomed to his father playing, that his little hands were obliged to be held. Once, however, the great musician had performed, the case was altered; and it is related that it was then more difficult to persuade the child to let Dubourg return the instrument to his father.

At the same early period of life, he beat correct time to all measures of music: the most rapid changes producing no rapid an alteration in the child's hands. Though thus innately a musician, he never attempted, from indolence, to play any instrument till he was nine years old. At that time, an old portrait-painter, devoted to the sister art, came to Dangan, and under his and his father's tuition, the youthful heir acquired his first rudiments of musical knowledge. He soon learned sufficient to enable him to accompany his preceptors and to play the second violin in Corelli's Sonatas. Not long after he attempted composition, and produced a beautiful Serenata. At this time he had never heard any music but from his father, sisters, and the old painter. When he was about fourteen, the old Lord Mornington determined on having an organ for his chapel, and promised to make his son his organist, if he would learn to play on the instrument. This he accomplished as soon as the organ was completed. It is well known that this grand instrument is more likely to form a composer than any other; and his Lordship, in the course of time, became a great proficient. Rengrave and Geminni were then the leading musical composers, and to them his Lordship applied for further instruction, as he had never previously been aided in his studies; but, after an examination of his compositions, they both agreed that he had already investigated all the established rules, and had rendered their instruction unnecessary. Church music and full harmony had, at all periods, the greatest charm for Lord Mornington; in those he made his first compositions, and, to the end, took his chief delight. His Lordship had eventually conferred on him, by the University of Dublin, the degree of Doctor and Professor of Music.

He died 22d May, 1781, at the early age of forty-six.

A FRENCH WRITER'S ESTIMATE OF THE DUKE'S CHARACTER.

We have much pleasure in quoting the following excellent article on the life and character of the Duke of Wellington, from the *Assemblée Nationale*. It is seldom that such sober and just writing issues in our days from the other side of the Channel:—

Great men disappear, and every day witnesses the fall of the last illustrious personages who have been on the stage since the commencement of the present century. By the death of the Duke of Wellington, M. de Metternich is the sole survivor of the political celebrities who remodelled the map of Europe at the Congress of Vienna. We have already spoken of the Duke of Wellington, and have retraced the principal circumstances of his glorious career. If we now return to this subject, it is to protest against the bad taste of some journals, who, in order to flatter the cause which now triumphs, draw comparisons between the Duke of Wellington and Napoleon Bonaparte. We know nothing more odious than the judgments passed on illustrious contemporaries in the point of view of a narrow and unjust patriotism. This low rhetoric is of a nature to degrade us in the eyes of foreigners, who read our journals, and who take them for the expression of public opinion. Every great nation, we know, is animated with a national spirit, which has its inevitable prejudices. France and England will never agree on the manner of judging Napoleon and the Duke of Wellington. Is it, therefore, impossible, by rising above those passions of circumstance, to arrive at the truth with regard to these two illustrious rivals? The year 1769 witnessed several glorious births; but certainly there was nothing more remarkable in that year than the simultaneous appearance on the stage of the world of the two men who were to meet at Waterloo. It appears that Providence proposed to balance one by the other—to oppose to a great genius of a quite contrary character—and to bring in contact qualities and gifts of the most dissimilar kind. The principal characteristics of the genius of Napoleon were a prodigious and insatiable imagination, sapping to the impossible—the most vast and flexible faculties, but also a singular mobility of ideas and impressions. A solid judgment, a cool reason, a wonderful justness of perception, both on the field of battle and in the cabinet; the most penetrating good sense, amounting to a power which became genius; a perseverance which nothing could tire or turn aside; and the most unshakeable firmness in great dangers—such are some of the points which give the Duke of Wellington such a prominent figure in the history of the 19th century. It was at a giant's pace that Napoleon ran through a career which was to lead him for a moment to the head of human beings. By the rapidity of his accession he dazzled the world, and everything with him took the character of a magic improvisation. His rival, on the contrary, rose with patient and modest slowness, by courageous reflection. He never drew back, however; he always went forward, and his glory followed a progression which escaped all reverses. To speak warmly to the imagination of men, to fascinate them, to excite their enthusiasm, and to labour by every means to inspire them with an admiration, mingled with a little terror, was the constant study of Napoleon, who was far from disdaining artifice to effect his purpose. The Duke of Wellington never thought but of speaking to the reason; he was never seen to do anything in a theatrical manner. Duty was the only rule which he admitted, and which he imposed on others. He had a horror of charlatanism and foolhood. He never sought to excite his soldiers, but sometimes he reminded them that they had to shed their blood because it was their duty. No astonishment will therefore be felt at the difference in the eloquence and the style of the two generals in the proclamations of Napoleon, particularly in those of the campaigns of Italy, as to be found a powerful orator, who, in the manner of the ancients, engraves great images in the minds of those to whom he addresses himself. The orders of the day, the despatches, and the regrets of the Duke of Wellington were written with a cold and austere simplicity. Nothing is given for effect—everything is positive and true. The Emperor Napoleon and the Duke of Wellington were not only great captains, they have also been both called on to play great political parts. History will perhaps decide that in Bonaparte, the organizer was equal to the conqueror. It must not, however, be forgotten that the possession and the use of the sovereign power smoothed down many obstacles. With despotism great things are often easy. It was in a free country that during thirty-seven years, from 1815 to 1852, the Duke of Wellington enjoyed an unequalled influence and authority. Placed by his birth, and more particularly by his glory, at the head of the English aristocracy, he belonged, truly speaking, to no party. It may be said that, in the bosom of the constitutional liberty of his country, the Duke of Wellington exercised a kind of moral dictatorship. The personal force which he was able to give or to withhold from the Government was immense. Although naturally Conservative by his principles and the nature of his genius, the Duke of Wellington was not, however, hesitate to propose to the Crown and to the Parliament the emancipation of the Catholics. In his eyes that reform was politic, just, and necessary. But his opinion was very different with regard to Parliamentary Reform which appeared to him to change the political constitution of old England, and to threaten her with serious dangers. Was he mistaken? The future alone can decide. We only now witness the first consequences of Parliamentary Reform, and twenty years have scarcely passed since the Duke of Wellington opposed it in the House of Lords. We must wait for a longer trial; remaining, however, that the symptoms already seen are far from impeaching the foresight of the illustrious statesman. If at any future period England should find herself exposed to any great danger, either at home or abroad, her ideas would certainly revert to the man who for sixty years served and defended her. She will appreciate still more that wise, firm, and sober genius, who never allowed himself either to be intimidated or to be excited, and whose moderation was rewarded by such a fine destiny. The end and fall of the Emperor Napoleon are the last point of contrast which we pointed out at the outset. The Emperor fell, the scaffolding crumbled away, and he who raised it with heroic temerity only survived his irreparable shipwreck for a few years in exile. His fortunate rival, after a day by which the face of Europe was changed, saw open before him another career, which procured for him a new glory between peace and liberty, and which has only just finished in the midst of the unanimous regret and the gratitude of a great country. Is not such a lesson a striking proof of the final ascendancy of reason and of good sense over all the boldness and the flights of imagination and of genius? The contrast of these two destinies, and these two great historical figures, has appeared to us too instructive not to be rapidly sketched; and, in drawing the comparison, we have set passion aside, and have only sought for truth.

THE "DUKE" AS A MUSICAL AMATEUR.

THE Duke was born of a musical family. His grandfather was an excellent performer on the violin, whose playing excited in the mind of his son (the Earl of Mornington) his early predilections for art. It is Daines Barrington who relates the anecdote of the famed Dubourg's visit to the family seat, when the father of the "Duke," with an acute ear to distinguish between the amateur and the artist, would take the violin from the hands of the paternal connoisseur and insist on the playing of the professor. The Duke's father, as a youth, mastered Corelli's sonatas, at that period considered the climax of violin playing, although in this age the same passages are executed, even on the contra-basso. Totally ignorant, whilst a youth, of the canons of composition, the Earl of Mornington wrote, after his own fashion, pieces that he styled serenatas His father, having ordered an organ to be built in the chapel, laughingly told him he might be the organist, if he could qualify himself. The son was not dismayed at the sneer, but immediately began to study, and, in a short time, astonished his father by a masterly display on the instrument. It will be recollected by accomplished amateurs, that the University of Dublin conferred on the Earl of Mornington the degree of Doctor and Professor of Music; and there is not a glee-singer in the country who is not familiar with the Earl of Mornington's name, by the "Here in cool grot" for four voices. A volume of the noble Earl's glees was edited by Sir Henry R. Bishop. The Duke, like his father, had a great love for music, and resembled him in the strong liking for massive harmony, as developed in the works of Handel. The career of his Grace probably prevented him from his being, like his ancestors in the two degrees, a practical amateur; but he was consistently a supporter both of opera and oratorio. There is a wealthy commoner living who could give to the world some curious anecdotes respecting the first appearance of Arthur Wellesley behind the scenes of the King's Theatre (Italian Opera). The young soldier never lost an occasion in his Continental campaigns, of sending a *prima donna* of note or a *danseuse* of distinction to this country; and in troubled times, when travelling was not quite so facile as at present, *cantatrices* found their way here with an aide-de-camp's despatches, or with a diplomatist's luggage, on the Duke's interest and kind recommendation. Strange, that amidst the din of war, the warrior should have been looking forward to the operatic delights of London! Since the peace, there has been no more constant patron and visitor at the Italian Opera-house than the "Duke." Where is the fashionable house list without his Grace's name, and what frequenter can recollect an opera night throughout the season, without the remembrance of the Duke's presence in his well-know pit box. He survived many dynasties, he outlived myriads of Ministers, and he also was a spectator of the rise and fall of innumerable opera speculators, with their "stars" of the day. The Duke was as regular in his opera attendance, as he was in his Parliamentary duties. The "House," whether legislative or operatic, would, in fact, have been a barren waste without the presence of the "Duke." He was one of the Presidents of the Royal Festival at Westminster Abbey in 1834; and for some years was one of the Royal and Noble Directors of the Concerts of Ancient Music, which were established in 1776. The conductors of the performances were, Josh Bates, until his death, in 1799; Mr. Greatorex, up to 1831; and Mr. Knyvett, down to 1839. In 1840, the directors came to the resolution of each choosing his own conductor; and Sir George Smart, Sir Henry Bishop, Mr. Lucas, and Mr. Turle officiated in turn. This system worked ill, and Sir Henry Bishop was nominated in 1843, until the dissolution of the Ancient Concerts, in 1848. The last directors were the King of Hanover, Prince Albert, the Duke of Cambridge, the Archbishop of York, the Duke of Wellington, the Earl of Westmoreland, the Earl Howe, and the Earl of Cawdor. As the Sacred Harmonic Society advanced in reputation, the subscribers to the Ancient Concerts gradually fell off, to the great regret of Prince Albert, the Duke of Wellington, and the Earl of Westmoreland, who took great pains to preserve the ancient institution. In the selection of the programme for his particular concert, the "Duke" was opposed to innovation. He liked the received works of the great choral masters, particularly of Handel. The director did not conduct, *bâton* in hand, as some of our provincial amateurs might suppose; but he had the choice of the engagements of the principal singers and of the music for the evening. Avison's trio and chorus. "Sound the last timbrel," with its "Praise to the Conqueror," whose "word was our arrow, and whose breath was our sword," generally found its way to the Duke's programme,—probably a delicate compliment from the conductor, rather than his own naming. As at the opera, his Grace never missed one of the series of eight concerts; but, as advanced age stole on him, the music seemed to cause a somniferous influence on him, and the Duke's nap at an Ancient Concert became a byword, significant of its soothing or dreary consequence.

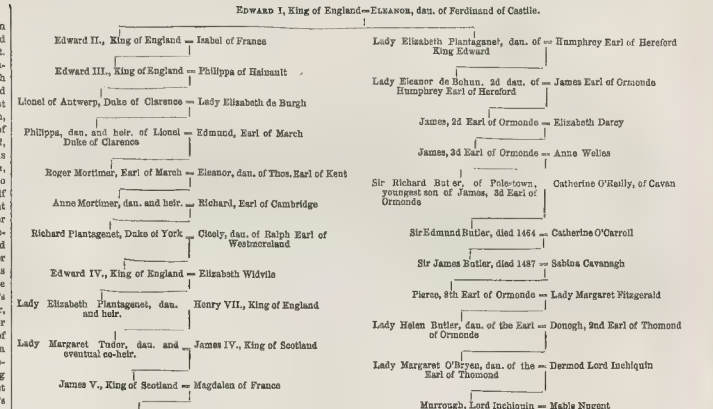
For many years, both at his town and country residences, the Duke of Wellington gave musical *soirées*, at which the most distinguished *artistes*, native and foreign, were engaged. His niece, the Countess of Westmoreland, besides being an excellent painter, is an accomplished amateur. The Marchioness of Douro, now Duchess of Wellington, is equally fond of music, and the present Duke is one of the most constant opera *habitués*. The Duke took especial interest in the compositions and musical parties of the Earl of Westmoreland—a composer in every school, sacred and secular, who has given to the world works of no ordinary talent, vocal and instrumental. At the performances of the noble Earl's opera, "Catharina," at Her Majesty's Theatre, and of "Il Torneo," at the St. James's Theatre, the Duke of Wellington took an active part in displaying his interest for the amateur composer's success; and it may be recollected by those who were present at "Il Torneo," that his Grace was one of the most animated in his calls for the Earl, then Lord Burghersh, to appear on the stage at the conclusion of the opera, in obedience to the general call of the house. The Duke was much interested in the success of the Royal Academy of Music, founded by Lord Burghersh. His Grace and the Duchess gave to the institution, in donations and subscriptions upwards of £200. Let it be added to the memory of the great warrior, and statesman, that his purse was always open to the distressed musician, and that there are innumerable *artistes* living who can relate anecdotes of his kind consideration.

ROYAL DESCENT
OF
FIELD-MARSHAL ARTHUR, DUKE OF WELLINGTON
FROM KING EDWARD I. AND THE PLANTAGENET SOVEREIGNS.

ONE of the most interesting facts connected with the Duke of Wellington's ancestry is, that his Grace descended, in an unbroken line, from the Royal house of Plantagenet, and was consequently of kin, though remotely, to Queen Victoria. This Royal descent may be thus explained:—

EDWARD I, King of England, had by his Queen, Eleanor of Castile, several children, of whom the eldest son was King EDWARD II., and the youngest daughter, the Lady ELIZABETH PLANTAGENET, wife of Humphrey De Bohun, Earl of Hereford and Essex, Constable of England. King EDWARD II., as is of course well known, was direct ancestor of the subsequent Royal Plantagenets, whose eventual heiress, the Princess ELIZABETH of York, daughter of King Edward IV., married King HENRY VII., and was mother of Margaret, Queen of Scots and, from whom Queen VICTORIA is eleventh in descent.

Reverting to the Lady Elizabeth Plantagenet, daughter of King Edward I., and wife of Humphrey de Bohun, Earl of Hereford and Essex, we find that she was mother of a daughter, Lady Eleanor de Bohun, who married James, Earl of Ormonde, and was ancestress of the subsequent Peers of that line, namely, Piers, the 8th Earl of Ormonde (6th in descent from the Lady Elizabeth Plantagenet), left, with other issue, a daughter, Lady Helen Butler, who married Donogh, 3d Earl of Thomond, and was mother of Lady Margaret O'Bryen, wife of Dermod, 1st Lord Inchiquin, and ancestress of the later Barons of that title. The Hon. Mary O'Bryen, daughter of Dermod, 5th Lord Inchiquin, married Michael Boyle Archbishop of Armagh, and Lord Chancellor of Ireland, and had by him a daughter, Eleanor Boyle, who became the wife of the Right Hon. William Hill, M.P., and grandmother of Arthur Hill, 1st Viscount Dungannon, whose fifth heir, Arthur, Duke of Wellington, was, in 1852, in a direct unbroken line from King Edward I.



EDWARD I, King of England — ELEANOR, dau. of Ferdinand of Castile.
Edward II., King of England — Isabel of France
Edward III., King of England — Philippa of Hainault
Lionel of Antwerp, Duke of Clarence — Lady Elizabeth de Burgh
Philippa, dau. and heir. of Lionel — Edmund, Earl of March
Duke of Clarence
Roger Mortimer, Earl of March — Eleanor, dau. of Thos. Earl of Kent
Anne Mortimer, dau. and heir. — Richard, Earl of Cambridge
Richard Plantagenet, Duke of York — Cicely, dau. of Ralph Earl of Westmoreland
Edward IV., King of England — Elizabeth Widville
Lady Elizabeth Plantagenet, dau. and heir. — Henry VII., King of England
Lady Margaret Tudor, dau. and eventual co-heir. — James IV., King of Scotland
James V., King of Scotland — Magdalen of France
Mary, Queen of Scots — Henry, Lord Darnley
James VI., King of Scotland, and James I. of England. — Anne of Denmark
The Princess Elizabeth, dau. of King James I. — Frederick, King of Bohemia
The Princess Sophia, youngest dau. — Ernest Augustus, Elector of Hanover
George I., King of England — Sophia Dorothea, of Zell
George II., King of England — Caroline of Brandenburg
Frederick Lewis, Prince of Wales — Augusta of Saxe-Gotha
George III., King of England — Charlotte of Mecklenburg
Edward, Duke of Kent — Victoria Mary of Saxe-Coburg-Saalfield
VICTORIA Queen of Great Britain and Ireland, 21st in a direct descent from King EDWARD I.
Lady Elizabeth Plantagenet, dau. of King Edward — Humphrey Earl of Hereford
Lady Eleanor de Bohun, 2d dau. of Humphrey Earl of Hereford — James Earl of Ormonde
James, 2d Earl of Ormonde — Elizabeth Darcy
James, 3d Earl of Ormonde — Anne Welles
Sir Richard Butler, of Polestown, youngest son of James, 3d Earl of Ormonde — Catherine O'Reilly, of Cavan
Sir Edmund Butler, died 1464 — Catherine O'Carroll
Sir James Butler, died 1487 — Sabina Cavanagh
Piers, 8th Earl of Ormonde — Lady Margaret Fitzgerald
Lady Helen Butler, dau. of the Earl of Ormonde — Donogh, 2nd Earl of Thomond
Lady Margaret O'Bryen, dau. of the Earl of Thomond — Dermod Lord Inchiquin
Murrough, Lord Inchiquin — Mable Nugent
Murrough, Lord Inchiquin — Margaret Cusack
Dermod, 5th Lord Inchiquin — Ellen Fitzgerald
Hon. Mary O'Bryen, daughter of Dermod, Lord Inchiquin — Michael Boyle, Archbishop of Armagh
Eleanor Boyle, dau. of the Archbishop — Right Hon. William Hill, M.P.
Right Hon. Michael Hill, M.P. — Anne Trevor, of Brynkinalt
Arthur Hill, 1st Viscount Dungannon — Anne Stafford
Hon. Anne Hill Trevor, eldest dau. — Garrett, 1st Earl of Mornington
ARTHUR, Duke of Wellington, Field-Marshal, K.G., 19th in a direct descent from King EDWARD I.

The curious in matters of pedigree may be still further pleased to learn that his Grace was 23d in a direct descent from ALFRED the GREAT, and 25th from WILLIAM the CONQUEROR, his Grace's lineage from those famous warriors coming to him through King EDWARD I., who was great-great-great great-grandson of the latter, and a descendant in the 13th degree of the former.

I.

Mourn for the mighty dead,
Mourn for the spirit fled,
Mourn for the lofty head
Low in the grave.
Tears such as nations weep
Hallow the hero's sleep;
Calm be his rest, and deep,—
Arthur the brave!

II.

Nobly his work was done—
England's most glorious son,
True-hearted Wellington,
Shield of our laws!
Ever in peril's night
Heaven send such arm of might!
Guardian of truth and right;—
Raised in their cause.

III.

Dried be the tears that fall;
Love bears the warrior's pall;—
Fame shall his deeds recall—
Britain's right hand!
Bright shall his memory be!
Star of supremacy!
Banner of victory!
Pride of our land!

FUNERAL OF LORD NELSON.

IT is the 9th of January, 1806. The dim grey light of a winter's morning slowly pierces the fog which hangs over the metropolis like a funeral pall. St. Paul's has just struck seven, and the roll of muffled drums is heard in every part of the city, summoning the volunteer corps to take their melancholy part in the funeral obsequies of the greatest naval conqueror that ever lived. The citizens thus aroused, awake from their slumbers with a dull and heavy sense of some calamity, the precise nature of which the mind had not yet realised Every one attires himself in the garb of deep mourning. The shops are unopened, and business, by universal consent, is suspended.

At the Horse Guards 10,000 regular troops are in motion. They consist chiefly of the regiments that fought and conquered in Egypt, and participated with the deceased hero in delivering that country from the power of the French. Cavalry, infantry, and horse artillery take part in the procession, leaving the various volunteer corps of the metropolis to keep the way. The colours of the regiments are hung with crape, the officers wear crape on the left arm, and the infantry walk with arms reversed. The procession is headed by the Duke of York, the commander-in-chief, and his staff. After the carriages of the nobility and grand officers of state, follow all the Dukes of the blood Royal, and the Prince of Wales. The funeral car, containing the coffin under a heavy black canopy, is saluted by every corps as it passes. The volunteers present arms, the muffled drums roll, and the trumpets play solemn dirges. Whitehall, the Strand, and Fleet-street are lined with a dense throng of mourners, who regard the coffin with reverential respect. The Lord Mayor and Corporation are waiting at Temple-bar to receive the procession; a few words of form pass between the Lord Mayor and the Duke of York, in which permission is asked, and given, to the funeral *cortège* to enter the city. The Aldermen fall into the procession after the Masters in Chancery, but an especial distinction has been reserved for the Lord Mayor. By warrant, under the sign manual of his Majesty, the Lord Mayor's place in the procession was that which *the King himself would have filled*, had he been present; namely, between the Prince of Wales and the Herald of Arms, who preceded the Great Banner. Into this distinguished place in the procession the Lord Mayor's state carriage is led, and the melancholy *cortège* duly wends its way to St. Paul's, which it enters by the great western door.

What language can describe the sombre magnificence of this noblest of Protestant temples! Space is left in the central aisle for the procession to pass to the choir; and thus the finest architectural vista in Europe, save one, awaits the gaze of the mourners, who are to enter at the West door. On each side of the vacant space left for the procession are high stages of seats, containing thousands of spectators of both sexes, all attired in the deepest mourning. But it is under the vast proportions of the dome that the spectacle reaches its climax of grandeur. The stages of seats, which here reach to a vast height, take an amphitheatrical arrangement similar to that of the cupola itself. This immense expanse is densely filled with spectators, the majority of whom are ladies. Women of the highest rank and fashion are here to do honour to their gallant defender, and to look for the last time upon his remains. The fronts of all the stages in the Cathedral, and of the marble pillars supporting the orchestra, are hung with black cloth. The choir is, also, heavily hung with black, and is remarkable for its solemn funereal aspect. A temporary orchestra has been erected over the entrance to the choir, immediately underneath and in front of the organ, and this also is hung with black. All eyes are directed to a large octagonal platform, in the central space under the dome, enclosed and covered with black cloth, in the centre of which the grave has opened to receive the mortal remains of Horatio Viscount Nelson. At the head of the grave are seen the desks for the officiating prelates—the Bishops of Lincoln and Chester. But they, with the prebendaries, minor canons, and choristers, are still at the great west door, waiting to fall into the procession. At the east and west sides of the enclosed platform are folding-doors, which are thrown open to admit the procession as it wends its way in a straight line under the cupola from the west to the east end of the church. At that central spot we shall see the Prince of Wales pause, and look around with a feeling of awe and admiration at the countless thousands who, with tearful eyes, and hearts throbbing with patriotism and gratitude, persuade themselves that the Prince, also, is grateful to the man who had poured out his heart's blood like water in defence of his father's throne and kingdom. We shall also see the Dukes of Kent and Sussex interchange exclamations of surprise and awe upon this funeral platform.

But these countless thousands who fill every possible seat in the great Cathedral Church, it is time we spoke of them. What are they thinking of? What are the ideas most generally present to their minds? Do they think much of the war? Do they love the memory of Nelson? Needless questions. The war is still raging. Napoleon is overrunning the Continent. The continental mails have brought tidings that morning that a new crown has been ordered to be made by the Paris jewellers;

PLAN OF THE PLATFORM, AND DISPOSITION OF THE BANNEROLS, TROPHIES, ETC., AROUND THE COFFIN, AT THE FUNERAL OF LORD NELSON, UNDER THE DOME OF ST. PAUL'S CATHEDRAL, ON THE 9TH OF JANUARY, 1806.

and the city quidnuncs, who are waiting under the cupola the arrival of the procession, by no means agree who is to wear it. Some think Bavaria is to be created into a kingdom; others that Napoleon intends to be crowned Emperor of Germany. War, accursed war, is the universal theme among that vast assemblage. Old and young, the gentle and the rougher sex, are alike familiar with tales of direst carnage. Every *Gazette* brings its naval engagement, or its capture of peaceful merchantmen. The talk in drawing-rooms, and at the tea-table, is of tremendous broadsides—of crashing splinters—of masts falling by the board—of the lee-scuppers running with blood—of sharpshooters in the enemy's rigging picking out the English officers with deadly aim—of amputations in the cockpit, where the scenes of the shambles are paralleled—of men shot through the spine like Nelson, or losing their heads or limbs by chain-shot—of hundreds of human beings blown into the air by the ignition of the powder-magazine. An English man-of-war, or frigate, is spoken of as a sort of bull-dog that will fly at anything, and retain its hold with indescribable tenacity and valour. An English captain had a feverish anxiety to get alongside his enemy—not so much that he might disable him by a broadside, as that he might board him, and drive him from his guns with cutlass and pistol, until the main-deck was his own. If in that huge building you had asked the youngest City miss what an English frigate would do alongside a French man-of-war, she would have answered, without the smallest hesitation, "Why, lay and board." These were Nelson's tactics; and they became those of his captains. The women of fifty years ago knew the infinite personal bravery displayed by their gallant defenders in these encounters; and a sailor was always sure of a grateful smile wherever he appeared. Nelson was the god of war among these heroes When he struck, it was with the thunderbolt. He had snatched the most glorious naval victory ever gained by England. The combined fleets of France and Spain, under Villeneuve and two Spanish Admirals, had struck to him at Trafalgar

Then Nelson's character, emotional and impulsive as it was, made him the darling of the people. His domestic life had been unhappy; he had "loved not wisely but too well," he had done foolish things under the spell of a beautiful enchantress; and he was tumultuously sensitive to the applause of his countrymen. If his greatness lifted him above his contemporaries, his weaknesses did not seem so much to debase him as to elevate them. If we might travel out of the art of war for Nelson's parallel, we might find one in the loving and gifted Mozart. He had, like Mozart, a child-like need of love; and entire self-reliance in action, wherever his own art was concerned, was linked, as in Mozart, with an intense desire for sympathy in the affections. What Beethoven was to Mozart, the Great Duke is to Nelson; but a prouder self-respect, and a colder and perhaps more rugged grandeur, also speak of the godlike on earth, and satisfy the need of man for hero-worship. "Kiss me, Hardy!" Thousands of bright eyes had dropped tears of womanly pity, like rain, at these simple words; for, victory won, the hero had thought

Of England, home, and beauty,

and in his dying hour felt the need of that love and tenderness, which he craved even from the rough and gallant sailor. Carrying a banner in the closest attendance upon the corpse, these fair mourners were now to see Captain Hardy, in whose favour such a manifestation of feeling breaks out, that before the ceremony is over, the cits receive peremptory instructions from their female friends to invite the gallant captain to a public dinner, which accordingly takes place a few days afterwards.

A piercing dirge from trumpets at the western entrance, causes every face in the nave to be turned to the great west door The funeral *cortège* has arrived. The cavalry, who head it, are drawn off, and return to their barracks. The Scotch regiments remain at the west gate. Forty-eight Greenwich pensioners, with forty-eight seamen and marines from the *Victory*, enter the west gate, ascend the steps, and divide in a line on each side under the great west portico. The various members of the procession, as they arrive, enter the church, and divide on each side, those of inferior rank remaining nearest the door. Mr. Pitt is unable to attend from illness, but Charles James Fox is there; and the vast assemblage are spared the pain of foreknowing that before the present year is out, the grave will open to receive both these great statesmen. Lord Henry Petty is there; and few, indeed, of that hushed crowd will live, as he will do, to take a part, half a century afterwards (as the Marquis of Lansdowne) in the next great ceremonial of this kind. Sheridan and Dermey, and Windham are recognised by the crowd, as are the Earl of Moira, Lord Sidmouth, and Lord Castlereagh. The great officers of State come next, and after them follow all the sons of the Sovereign to wit, their Royal Highnesses the Prince of Wales, the Duke of York, the Duke of Clarence, the Duke of Kent, the Duke of Cumberland, the Duke of Sussex, and the Duke of Cambridge. A fine family of Royal brothers they are, and their dignified port and personal presence are not entirely concealed by their mourning-cloaks. A halt takes place while the body is taken from the funeral car, and covered by the pall. It is borne by twelve seamen of the *Victory* with staggering gait up the steps, and there, within the gate, is received by the supporters and pall-bearers. Near the entrance of the Cathedral are the Dean and Prebendaries, who, attended by the choir, fall into the procession immediately after the Great Banner, and before the herald who bears the trophies. Thus the sad procession advances along the nave, four Admirals on each side of the coffin supporting the pall, and six Admirals on each side of the coffin, supporting the black canopy over the coffin. The musical service is by Dr. Croft; and the vicars choral of St. Paul's are assisted by those of Westminster Abbey and the Chapel Royal.

As the coffin slowly advances on the central aisle, tears and sobs burst forth on both sides. Grief is infectious, and the manliest are not ashamed to feel the "luxury of woe." There lay the cold inanimate corpse of the man who in that supreme hour of national peril, when every other country was polluted by the tread of the invader, preserved our national honour intact, and shattered the fleets of France. The national jealousy of Spain was a bequest of the great Armada; and here lay all that was mortal of the Great Captain who had put his heel upon the navy of Spain, and reduced that ancient enemy of England to the level of a fourth-rate power. Mutilated and mangled as was that helpless body—deprived of an eye and of a right arm, with the scars of a dozen hurts, "the least, a death to nature," and that hideous gaping wound still unstanched, which had cruelly struck down the Great Admiral in the moment of victory—who could look upon it without the liveliest emotion? When the coffin emerges in sight of the vast concourse beneath the dome, a feeling of hysterical grief is displayed by not a few, and none looked on unmoved.

And now the pealing organ sends its waves of sound throughout the vast building, and reverberations like distant thunder roll around the lofty dome. Voices are then heard mingling with the music; and, as the programme is in every one's hands, it is known that the choir are singing the beautiful 39th Psalm, "Behold, thou hast made my days as it were a span long, and mine age is nothing in respect of thee: and verily every man living is altogether vanity." A pause, and then again the organ and vicars choral break out into the 90th Psalm, "Lord, thou hast been our refuge from one generation to another," in which pious ascription the immense congregation fervently join in spirit. This psalm contains that well-remembered verse—"The days of our age are three-score years and ten; and though men be so strong that they come to four-score years, yet is their strength then but labour and sorrow: so soon passeth it away, and we are gone." Lord Nelson was cut off in the prime of life; but for the venerable warrior, whose remains are not yet entombed, this verse possesses a beautiful appropriateness. The *Magnificat* follows; and after the anthem, "Lord, let me know mine end," the banners and plumes near the door of the choir begin to wave. The process on returns from the choir to the platform around the grave, and the subsequent proceedings are regarded with breathless interest.

The scene presented to the Royal Dukes and chief mourners on their return from the choir was one of magical sublimity While the funeral service was being performed the shades of evening began to fall upon the cathedral. If the possibility of this circumstance had not been at the last moment foreseen, the lowering of the coffin into the tomb would have been almost invisible, and the spectacle would have lost its grandest element. A great number of torches were lit in the choir, both below and in the galleries. But the happiest feature in this extemporised illumination was a gigantic octagonal framing of wood boarded on the outside, and finished at the top by eight angles, and at the bottom by a smaller octagon. This wooden frame was painted black, and on it were disposed about 130 patent lamps of the greatest illuminating power known in those days. This gigantic lantern (the idea of which was no doubt borrowed from the immense cross, thickly studded with brilliant lamps, by which the interior of St Peter's at Rome used to be lighted on Holy Thursday) was suspended under the centre of the dome, and when drawn up gave a sufficiency of light for all artistic purposes. The pencil of Rembrandt would fail to depict the brilliancy of this central focus of light, the gradations of light and darkness, the vast, deep, and sombre perspective when the eye attempted to pierce the gloom of the nave, the projection of fixed or moving shadows, and the myriads of faces which were rendered visible.

The evening service being ended, the organ played a solemn dirge, and the corpse was brought back from the choir to the place of interment Here was sung, "Man that is born of a woman hath but a short time to live." Then, while the officiating minister said, "Forasmuch as it hath pleased Almighty God of his great mercy to take unto himself the soul of our dear brother here departed," the coffin was gradually lowered, amid the breathless silence of the assemblage, by invisible machinery. Some earth was thrown upon the body, and the whole of the choir sang, "I heard a voice from heaven." The concluding anthem was, "His body is buried in peace; but his name liveth evermore."

Before the body was lowered, the grand funeral canopy of state borne over it was removed, in order that the spectators might take one last look at the coffin The bier upon which the coffin was placed sank into the oblong aperture by invisible means, the apparatus being totally concealed below the pavement of the church. Thus gradually, and almost imperceptibly, the coffin sank out of view, and strained eyes that thought they saw it still, saw it not. In a few minutes the nearest the grave had taken their last look. A deep silence prevailed, broken only by a few sobs. Garter King-at-Arms here advanced to the grave, and in a solemn voice proclaimed the titles of the deceased Peer. The officers of Nelson's household broke their staves, and gave the pieces to Garter, who threw into the grave; in which also the flags of the *Victory* were deposited, having been first furled up with heavy hearts by the tars of that immortal ship. The trophies of the deceased, with the standards, banners, and bannerrols, having been previously deposited on a table behind the chief mourner, the solemn procession slowly departed from the Cathedral, in pretty nearly the same order in which it had arrived.

Thus terminated a funeral, "the greatest, most grand, and solemn that ever took place in England."

The entire population of the metropolis were enabled in one way and another to participate in the obsequies. Nor was the sombre pageant we have described the only mode adopted of paying respect to the hero's remains. The funeral took place on Thursday; but the ceremonies commenced on the Sunday previous, on which day Nelson's corpse lay in state, in the Painted Hall, Greenwich. All London flocked to this sight; and, for three days, the road to Greenwich was choked with horses, pedestrians, and carriages. Those were not the days of Mr. Commissioner Mayne and efficient police arrangements, and the consequence was, in the struggle to obtain admission into the Painted Hall, the rush was frightful, and many persons, especially ladies, were severely injured. So great was the confusion, that a detachment of guards was sent from London to assist in restoring order. It is calculated that on Sunday, Monday, and Tuesday, 20,000 persons were unable to obtain admission. A wish has been expressed in some quarters that the remains of the Duke of Wellington should lie in state; and, if it should be thought desirable to grat fy this desire, it is to be hoped the authorities will extend the time to at least a week. Nor was the body lying in state at Greenwich all, for Nelson's remains were brought up the river to Whitehall-stairs in state on Wednesday, with great pomp and circumstance. The coffin was placed upon a high bier, in a state barge, in order that it might be seen by the countless thousands who thronged the river banks. The procession by water was very imposing, from the number of state barges and great officers engaged in it. Minute guns were fired from the time of departure from Greenwich until the arrival of the procession at Whitehall. The body lay in state on Wednesday night in the Captains' room at the Admiralty. The room was brilliantly lighted all night with wax candles placed near the coffin, on the top of which were the coronet and cushion. The Rev. Mr. Scott, the chaplain to Lord Nelson, who had sat up every night with the corpse since it had lain in state, also sat by the coffin all Wednesday night. But, although the body thus lay in state at the Admiralty, the public were not admitted into the room, which was a severe disappointment to the thousands who besieged the Admiralty.

Upon review of the entire ceremonial connected with the funeral of Nelson, it would appear that a generous desire existed on the part of his Majesty George the Third that all his subjects should be invited and encouraged to participate in the solemnities, and to evince their respect for Lord Nelson's memory in the way most suitable to their rank and station. We trust that no churlish arrangements on the part of the authorities may come between Queen Victoria and her gracious wish that all possible honour should be paid by *all* her subjects to the memory of the great Duke of Wellington.

AMUSEMENTS, &c.

ROYAL PRINCESS THEATRE, Oxford-street. Last Nights but Two. On MONDAY, September 27th, will be performed (for the FIRMA LUNNA, the OASICAN DANCERS and a GRAND BALLET DIVERTISSEMENT, by the Prima Donna, the Corps de Ballet, and a Grand Set of Scenes, illustrative of Wednesday, 29th, the Prima Donna, the Corps de Ballet, and a Roland for an Oliver. Thursday, 30th, the Prima Donna, the Corps de Ballet, and a Roland for an Oliver. Friday, October 1st, the Prima Donna, the Corps de Ballet, and a Roland for an Oliver. Saturday, October 2nd, the Prima Donna, the Corps de Ballet, and a Roland for an Oliver. Monday, 4th, the Prima Donna, the Corps de Ballet, and a Roland for an Oliver. Tuesday, 5th, the Prima Donna, the Corps de Ballet, and a Roland for an Oliver. Wednesday, 6th, the Prima Donna, the Corps de Ballet, and a Roland for an Oliver. Thursday, 7th, the Prima Donna, the Corps de Ballet, and a Roland for an Oliver. Friday, 8th, the Prima Donna, the Corps de Ballet, and a Roland for an Oliver. Saturday, 9th, the Prima Donna, the Corps de Ballet, and a Roland for an Oliver. Monday, 11th, the Prima Donna, the Corps de Ballet, and a Roland for an Oliver. Tuesday, 12th, the Prima Donna, the Corps de Ballet, and a Roland for an Oliver. Wednesday, 13th, the Prima Donna, the Corps de Ballet, and a Roland for an Oliver. Thursday, 14th, the Prima Donna, the Corps de Ballet, and a Roland for an Oliver. Friday, 15th, the Prima Donna, the Corps de Ballet, and a Roland for an Oliver. Saturday, 16th, the Prima Donna, the Corps de Ballet, and a Roland for an Oliver.

MR. JOHN PARRY'S PORTFOLIO for CHILDREN OF ALL AGES.—Mr. John Parry will give the above Entertainment on MONDAY EVENING next, Sept. 27, at GRESHWL-II, Tuesday, at Croydon, Thursday, at Canterbury, Friday, October 1st, at Reigate, 4th, at Lewes, 5th and 7th at Brighton; 8th, at Southampton, 11th, at Salisbury; 13th, at Weymouth; 14th, at Guildford; and Friday, October 15, at Chertsey. Doors open at 7, to commence at 8. Stalls, 3s.; Second Seats, 2s.; Gallery, 1s. Tickets and Programmes to be had at the Royal Library, 28, Old Bond-street; Ollivier's, 19, Old Bond-street; Keith, Prowse, and Co.'s, 48, Cheapside; and at the Hall.

DISTIN'S CONCERTS.—Mr. DISTIN and his SONS will perform in LEEK, SKIPTON, Burton, 29th to the 30th, Liverpool, October 2d. Vocalist Mrs T. Distin. Pianist Mrs Wiby.—Letters to be addressed to Henry Distin, Victory Musical Instrument Manufactory, 31, Cranbourne-street, Leicester-square, London.

THE LATE DUKE of WELLINGTON'S CAMPAIGNS.—Honoured by the presence and approval of her Majesty, the Royal Family, and the late Duke.—The nobility and public are respectfully informed that in consequence of forthcoming novelties, the period has become limited during which they can inspect this the only DIORAMA of his Grace's career now exhibited Daily, at Three and Eight. Admission, 1s, 2s 6d and 3s.—GALLERY of ILLUSTRATION, 14, Regent-street.

THE ZOOLOGICAL GARDENS, Regent's Park, are OPEN DAILY. The first living specimen of CHIMO-OTAMUS ever seen in Europe is now added to the Collection. Visitors are admitted to Mr. Gould's new Museum of Humming Birds without extra charge. Admission 1s; Mondays, 6d.

BUILDERS' BENEVOLENT INSTITUTION.—The FIFTH ANNIVERSARY DINNER will take place at the LONDON TAVERN, Bishops-gate-street, on THURSDAY, the 30th inst., at HALF-PAST FOUR PRECISELY, by Sir Benj. Hall, Bart., M.P. The unwearied exertions of the honorary Stewards will be required to forward their names to the Secretary, Mr. A. G. HARRIS, at the Office, 476, New Oxford-street.

THE FRIEND of the CLERGY. Founded December 26, 1840.—Supported by Voluntary Contributions.—For the Widows of Clergymen. Pensions of 40 per annum are granted to the Widows and Orphan Unmarried Daughters of Clergymen of the Establ.shed Church, and for affording temporary assistance to Clergymen and their families in distress. Subscriptions and Donations are earnestly solicited, and will be thankfully received by the Treasurer, Sir Richard F. Slater, a.m. the directors, 6, Liverpool-road, Islington.

SCARBOROUGH, Queen of British Watering Places.—The Proprietors of the Scarborough Gazette have the honour to announce that the Publication of the above Journal will be discontinued after the 27th inst., and that the Business will be carried on at the Office, No. 1, Cross-street, Scarborough, by Mr. Thomas Bayley Potter, M.P., to whom all Communications for the Paper and Business must be addressed.—Scarborough, Sept. 20, 1852.

LIVERPOOL WHITE STAR LINE of AUSTRALIAN PACKETS for PORT PHILIP and SYDNEY.—The New Screw Clipper Ships

Shamrock, new	2000	Melbourne	Sept. 10
Hindostan, new	2000	Melbourne	To follow
Blanche	2000	Sydney	To follow

The above ships are of first-class build, and have been selected and fitted expressly for the Australian trade, and carry a surgeon. For freight or passage apply to HOUGHTON and WILSON, 7, Commercial-buildings, Liverpool; or to Grant, Lindsay, and Co. 9, Gracechurch-st., City.

CHESTER and HOLYHEAD RAILWAY and STEAM-PACKET COMPANY.—The arrangements for this year's express mail service between Ireland and England via Holyhead, are now complete.

From the 27th inst., a Steamer will leave the North Wall Dock, every evening, and arrive there every morning with guests and cattle.

Particulars of the through rates between London and the principal stations in Ireland may be known on application at the Company's Offices, North Wall, Dublin; or the Goods Manager's Office, Grand Railway Station, Chester; or Right-street, Holyhead.

By order, J. HAMILTON, Secretary. 7, Sept. 1852.

COUNTY FIRE OFFICE, 50, REGENT-STREET, and 3, ROYAL EXCHANGE BUILDINGS, LONDON. Established 1807.

It is requested that all Notices of Meetings to be held at this Office, the rooms are, when required, duly set apart, that the same will not be paid over, as directed by the Act 14 & 15 Vict. cap. 99, sec. 16. The Company is also empowered to invest in the funds of the several assurance funds under the management of the Directors, and to lend money on mortgage of Real and Leasehold Property, and generally to carry on the business of Fire Insurance with prompitude and liberality. Full particulars of the above and all the powers of the Company may be had at the Office, or of any of the Company's Agents.

By order of the Board, JOHN KNOWLES, Secretary.

CLERICAL, MEDICAL, and GENERAL LIFE ASSURANCE SOCIETY.—Persons of all ages, and in every station, may assure with this Society, and participate in four-fifths of its profits, without the risk of partnership liability. Policies effected on the Lives of Residents in any part of Europe, India, Egypt, Madeira, the Cape, Australia, New Zealand, and other parts of North and South America.

FIFTH DIVISION OF PROFITS.

The Fifth Bonus was declared in January last, and the amount varied with the duration of each policy. Seventy-five per cent on the Premiums paid during the Five Years, or from £1 to £7 10s per cent, per annum on the sums assured.

The same share of Profits will be allotted in future among the Shareholders and Assurers participating in the Bonus. Every information may be obtained on application at the Society's Offices, 26, Essex-street, Strand, London, W.C.

A copy of the last Report, containing the Tables, with a Prospectus, can now be obtained on any of the Society's Agents, or by sending a letter to GEO. H. PINHARD, Esq., Secretary.

99, Great Russell-street, Bloomsbury, London.

THE COSTA-RICA COMPANY, for the Purchase and Sale of Lands and Family Property in Costa-Rica, through the existing Mining Districts of Gold, Silver Copper, Iron, and Coal.

Capital £100,000, in 10,000 Shares of £10 each.

Shareholders are liable only to the extent of their Shares.

COUNCIL OF DIRECTION IN LONDON.

Captain [illegible], R.N

A STREET REMINISCENCE OF THE DUKE.

STREET REMINISCENCE OF THE DUKE.

THE *vraisemblance* of this Sketch will be acknowledged by any one who has seen the Duke in a leading street of the west end of the town; his Grace having alighted from his horse, which is led by his groom, while the Duke takes the arm of a friend upon the footpath, to make a morning call. In Piccadilly we have often witnessed such a scene as this Sketch represents.

THE DUKE'S HORSE AT WALMER.

AT page 261, we have Sketched the Stables at Walmer, visited by the Duke on the Monday preceding his death. We here Engrave a portrait of the Horse, dark brown, which the Duke had ridden for two years past: upon the further horse is the Duke's groom.

BUST OF THE DUKE, AND TENURE-FLAG, IN WINDSOR CASTLE.

THE visitor to Windsor Castle will, doubtless, recollect, among the Curiosities and Works of Art in the Guard Chamber, two busts, each with a banner suspended over it, to the right and left of the doors which flank the fire-place of the apartment. The bust on the left is that of the Duke of Marlborough, copied from Rysbrach, by Sievier; and the bust on the left is that of the Duke of Wellington, by Chantrey. Above each bust is suspended a small banner: that over the Marlborough bust being the tenure-flag, by presenting which yearly, the estate of Blenheim is held; and that over Wellington is, in like manner, the tenure-flag by which Strathfieldsaye is held. The banners are renewed yearly; the former on the 2d of August, the anniversary of the battle of Blenheim; and the latter on June 18th, the anniversary of the battle of Waterloo. We shall merely describe the latter, which, with Chantrey's bust, we have Engraved as a Wellington memorial. The flag is a small tri-coloured one, with a staff surmounted by an eagle, and is the *least* one presented.

The Blenheim banner was formerly kept in another part of the Castle, namely in Queen Anne's closet, which commanded a fine view over the northern terrace; for in this closet the Queen was seated when she received the news of the victory of Blenheim. It was afterwards kept in

THE WATERLOO FLAG, AND BUST OF THE DUKE, IN WINDSOR CASTLE.

the Queen's presence-chamber, on an elegant buhl table. But it now hangs over the bust of the hero, in the guard-chamber, as we have explained. It is the banner of France—white sarcenet, embroidered with three *fleurs-de-lis*.

THE DUKE'S HORSE, AT WALMER.

London: Printed and Published at the Office, 198, Strand, in the Parish of St. Clement Danes, in the County of Middlesex, by WILLIAM LITTLE, 198, Strand, aforesaid.—SATURDAY, SEPTEMBER 25, 1852.—SUPPLEMENT.

THE ILLUSTRATED LONDON NEWS.

No. 583.—VOL. XXI.] SATURDAY, OCTOBER 2, 1852. [SIXPENCE {WITH SUPPLEMENT, GRATIS.

THE OFFICES OF WELLINGTON.

THE death of a man so great as the Duke of Wellington affects the public interests and the course of public business in a variety of ways. That illustrious person occupied so many and such high positions in the service of the State, that the mere distribution of his offices, and their emoluments, must of necessity cause considerable discussion and difference of opinion. As regards himself, his services, and his virtues, there is no sensible difference in the minds of the people. With a unanimity never yet witnessed in history, but justly due to the truthfulness and honesty of his character, the Sovereign and her subjects, and all ranks and classes of men, are agreed that, if ever an individual merited, in death as in life, the highest and most solemn recognition in the power of a great and a free people to bestow, that man was Arthur, Duke of Wellington. Even the French, amongst whom some degree of hostile criticism upon his military life and public character might not unreasonably have been anticipated, have, with a generosity that looks almost heroic, paid his memory the tribute of respectful and honourable, if not of cordial, mention. If they do not raise him on so high a pedestal as the English do, they place him at an elevation not far short of that at which his country has enshrined him; and certainly not the least affecting of the many expressions of homage and sympathy that his name has received since his death, are those which have come from France.

But this is a digression. The unanimity of English feeling upon the subject of the Duke does not extend to the acts of those in whose hands lies the re-distribution of his high offices and the arrangements of his funeral. It is not pleasant that the name of England's great warrior—who yet lies untombed in the solitary turret by the sea-shore where his last breath was drawn—should be associated, even remotely, with the semblance of a trick or manœuvre on the part of those who survive him. We should be loth to accuse the Derby Ministry of any selfish and unworthy management, or any want of feeling in this respect; but, as recorders of the events of the time, we cannot omit to notice the very general impression which prevails, that the funeral has been unnecessarily delayed; and that it has been delayed for a party purpose. It is highly appropriate and right, as the eloquent and feeling letter of Lord Derby expressed, that the sanction of Parliament to the day and to the mode of that great ceremonial should be secured; and that all the solemnity derivable from the official presence of the Legislature should be secured on so affecting and rare an occasion. But if so, would not the respect and honour to the memory of the warrior and statesman have been still greater if, instead of allowing his cold remains to await the day originally fixed for the assembling of Parliament, Parliament had been convened a few weeks earlier for the especial purpose of entombing them? England's most illustrious son deserved such a recognition of his fame. If Mr. Disraeli or Lord Derby desire, above all things, to adjourn that inevitable hour when they must explain their policy to the country and to the Protectionist friends whom they have abandoned and deluded, they ought to have found some better pretext for delay than can be afforded by the funeral of Wellington. If it be impossible to arrange the details of so magnificent a funeral before the middle or end of November, there is, of course, no more to be said. The Ministry will, in that case, be absolved from the imputation that seems at present to attach to it; but the sooner the country is made to understand that this is the reason of the delay the more satisfied it will be, and the greater the confidence it will entertain in the public spirit of the Administration.

Several of the high offices held by the Duke have been filled up. The public approval of the military appointments that have been made is unqualified. Lord Hardinge is in every respect the fittest person that could have been selected for the office of Commander-in-Chief. His name was in all minds as the Duke's successor. The public voice designated him to the office from the first; and it was impossible to name another man who could have rivalled him, if rivalry in such a matter had been possible. And not only is the appointment unexceptionable in itself, but the mode in which it has been conferred—or perhaps the manner in which Lord Hardinge himself has chosen to exercise it—is dignified and delicate in the highest degree. Lord Hardinge is not yet COMMANDER-in-Chief, but he is the Lieutenant-General *Commanding*-in-Chief. This appears to be a nice but it is a respectful distinction. There will be no Commander-in-Chief while the honoured remains of the Duke are still unsepultured; but as the office is one that requires immediate hard work and daily care, it is filled up by the worthiest, lest the public service should suffer—the worthiest, in the interval, assuming a temporary and provisional designation. This is chivalrous and noble, and a touching tribute to the memory of the dead.

The other military appointments that have been made are also satisfactory. That the Prince Consort should have received the Colonelcy of the Grenadier Guards was natural and proper; and that the Duke of Cambridge, who makes the profession of arms his study, and promises to become a first-rate soldier, should have been appointed to the Colonelcy vacated by his Royal Highness Prince Albert, was also a tribute to his rank and his merit, which will be as popular among military men as among civilians. And while these appointments have been conferred upon members of the Royal family, the claims of personal merit and actual military achievement have not been overlooked. Lord Combermere has been made Constable of the Tower; General Viscount Beresford succeeds Prince Albert in the Colonelcy of the 60th Foot; and Lieutenant-General T. W. Taylor takes the place vacated by the Duke of Cambridge, as Colonel of the 17th Light Dragoons.

The Wardenship of the Cinque Ports is an office that is usually conferred upon the Prime Minister. Whether this custom be a proper one is a fair subject for inquiry. If the Cinque Ports be indeed the "keys of the kingdom," and if their defence be a reality, or likely to become one, it seems more proper that a soldier should be appointed to the office than a civilian. Lord Derby may be a "Rupert in debate," but he is not a Rupert in the defence of kingdoms; nor is he, that the world is aware of

THE ROOM IN WHICH THE DUKE OF WELLINGTON DIED, AT WALMER CASTLE.—(SEE NEXT PAGE.)

skilled in the science of warfare, expert in the construction of fortresses, or fit to be entrusted with the defence of our coasts, if by any contingency they were assaulted or invaded. It is because the late Duke of Wellington was so entirely the man for such an office that the country will be inclined to insist upon the necessity of selecting his successor upon the ground of efficiency, and upon no other. The post is not merely ornamental and honorary. If it be not at the present moment, it may unfortunately become hereafter, a post of responsibility, if not of danger. Eminent as may be the civil talents of Lord Derby, he is deficient in the quality required. He is not a soldier; and the country will not be satisfied if any other than a soldier be made Warden of the Cinque Ports.

There is but one more of the high offices lately held by the Duke to which it seems necessary to refer—that of Chancellor of the University of Oxford. We see with regret that a premature agitation has sprung up upon the subject, and that, if not a canvass, a state of affairs very nearly approaching it, has already commenced on behalf of the pretensions of the Earl of Derby. We do not disparage those pretensions in the slightest degree. On the contrary, we think the Earl of Derby to be a man deserving of such an honour. Whether his personal claims—irrespective of his position as Prime Minister—would have secured him the support of the hebdomadal board, is at all events doubtful. But, as the Chancellor has, in reality, nothing to do; as his office is merely nominal; as the Vice-Chancellor does all the work; and as no public injury of the slightest and most shadowy degree could result even from the abolition of the office, much less from its temporary suspension; it does seem to us that it would be more graceful if the claims of all candidates were, as far as the University is concerned, left in abeyance until the body of the late Chancellor be laid in the tomb. Public opinion would, we think, approve of such an act of self-denial on the part of Lord Derby and of his friends at Oxford.

"THE DUKE'S ROOM," IN WALMER CASTLE.

In our account of the Duke's Last Moments, in the Illustrated London News for September 18 and 25, we described the chamber in which the great warrior breathed his last. This was his library, his study, and his bed-room. We now engrave this apartment; and it would be difficult to point to any place hallowed by association with the illustrious dead, which possesses so much interest as this lonely chamber. Its plainness is in accordance with the simplicity of the Duke's habits. The bedstead is a small one, three feet wide, with a mattress about three inches thick, and a slight covering, no blankets. Facing the bed are bookcases filled with modern works. A wash-stand, of ordinary make; a chair and writing-table, and the chair into which the Duke was lifted from his bed, and in which he expired, are the other articles of furniture shown in the Illustration. Upon the wall are three prints and a chimney-glass, upon the mantelpiece is the statuette of Napoleon and the cast of Jenny Lind, named at page 213; and the fireplace is enclosed by a curtain-screen. On the window is shown, and is that seen in the large exterior view in our Journal of last week. The places of the other windows, the entrance, a chest of drawers, small table, and bureau, are shown in the plan of the chamber given at page 260.

Among the many recorded traits of the Duke's habits are the following (from the *United Service Magazine*), which will not be out of place here; —He slept little, and, whether from old military associations or for health sake, used a hard mattress and a camp bed. He even denied himself the luxury of a feather pillow, and his head rested on a pillow of hair covered with chamois leather, which was always carried for his use wherever he went from home. He appeared to avoid display in his dress, equipage, and attendants, preferring horse exercise to the state and luxury of a carriage; and even when increasing weakness rendered it a task of some difficulty to sit erect on horseback, day after day he was still to be seen ambling slowly down to the House of Lords, touching his hat to the crowds assembled round the entrance to catch a glimpse of the veteran warrior.

Since our Artist's sketch of the Duke's room at Walmer was taken, the aspect of the room is changed. "The Duke's body," says a late account, "still lies in Walmer Castle, and will probably remain there for some time to come. The little room wherein the death took place is that still used, but its scanty furniture has been removed, the floor laid with black cloth, and a frame constructed upon which the coffin rests. The family and household, except one confidential domestic, have left, and the illustrious dead remains in solitary state under the protection of a Guard of Honour from his own regiment—the Rifle Brigade. A few strangers are attracted by curiosity to the spot, but no one is admitted; and the deserted, silent, and mournful aspect of the old seaside keep is sufficiently appropriate to the presence of death within its walls. This striker one even during the daytime, when the veteran appearance of the place is unrelieved by any sign of cheerful bustle, and the sentinels are seen carefully posted around. Night, however, increases the impression, for then the trees on the landward side of the Castle overshadow it with a mournful gloom, and the melancholy roll of the sea fills the air, and from the battlements and ramparts are heard the voices of the guard at intervals calling the rounds."

THE LATE DUKE OF WELLINGTON.

Nothing further has transpired since our last publication relative to the funeral of the late distinguished Commander-in-Chief.

In the meantime, two of the principal cities of the empire, London and Manchester, have taken steps to show their respect for the memory of the late Duke. On Wednesday, at the Court of Aldermen of the City of London, held for the purpose of participating with the Livery assembled in Common Hall in the election of a Lord Mayor for the ensuing year, the following resolution, on the motion of Sir Peter Laurie, was unanimously adopted:—

That a committee of the whole court be appointed to co-operate with that appointed at the last Court of Common Council to consider and report upon the best means of testifying the respect of the corporation of the City of London for the memory of Field Marshal the Duke of Welling on.

In Manchester, on Tuesday, a meeting summoned by circular was held in the Mayor's parlour, for the purpose of adopting measures for raising a fund to commemorate the services of the late illustrious chieftain of Waterloo. Sir John Potter, in the absence of the Mayor, presided. On the spot twenty-five gentlemen put down their names for £100 each, and smaller sums brought the total to nearly £2500. A committee was appointed to collect additional subscriptions.

In foreign countries, also, the honours due to his memory are not forgotten, as we find by the accounts this week from Madrid, that her Majesty the Queen of Spain has ordered that all the honours due to a Marshal of the Spanish army shall be paid to the memory of the late Duke.

In several of the churches, both of London and the leading provincial towns, the recent bereavement of the country in the death of the Duke formed the subject of sermons and addresses from the pulpit on Sunday last, and the Sunday preceding.

Original Letter of the Duke of Wellington.—The following characteristic letter of the deceased Duke will (says a Belfast paper) be read with interest in the present crisis. It is a veritable document, and was addressed to a gentleman in this neighbourhood, who at the time was not a little annoyed at the reply. He has kindly forwarded it to us for insertion:—

FIELD-MARSHAL THE DUKE OF WELLINGTON.

Belfast, 17th June, 185..

May it please your Grace,—I have taken the liberty of requesting your opinion. Was Napoleon guilty or not of the murder of his prisoners at Jaffa, and if there is any military law or circumstances which would justify the deed?

Yours respectfully, J. H.

(Reply.)

London, 23d June, 1851.

F.M. the Duke of Wellington presents his compliments to Mr. H. He has also received Mr. H.'s letter, and begs leave to inform him he is not the historian of the wars of the French Republic in Egypt and Syria.

Monument to the Duke of Wellington at Wynyard.—The column commenced at Wynyard, in honour of the Duke of Wellington, on the occasion of his Grace's visit to Wynyard in 1827, was only finished on Saturday week, and the scaffolding was taken down the very day on which the illustrious Captain died. It was the intention of the Marquis of Londonderry to give a grand entertainment to the illustrious Duke and the veterans of the late war in Wynyard, upon the inauguration of the monument, but the lamented death of his Grace has, of course, prevented the accomplishment of that intention.

FOREIGN AND COLONIAL NEWS.

BELGIUM.

From Brussels, under date the 29th ult. (Wednesday last), we learn that the Belgian Ministry has resigned, and the Chambers have been adjourned to the 26th of October. The cause of this event was the election of the Opposition candidate (M. Delehaye) as President of the Chamber of Representatives over the Government candidate (M. Verhagen) by eight votes.

UNITED STATES, &c.

The latest advices from New York this week are to the 16th ult.

According to the newspapers the vexed question of the Fisheries was by no means set at rest, the British Admiral, Seymour, having, it is alleged, received express orders, sent through Mr. Crampton, the British Minister at Washington, since Congress adjourned, to seize every United States' vessel found within three miles of the colonial shores. It is added that Mr. Crampton had received despatches from the British Government intimating that an arrangement had been made; whilst the despatches from London of the United States' Minister there (Mr. Abbott Lawrence) are quite at variance with those received by Mr. Crampton on the subject. The natural inference is, that there is great bungling or misunderstanding in some quarter.

On the 16th ult. a dinner was given at the Revere House, Boston, to Mr. Thomas Baring, at which the Mayor, Mr. Seaver, presided. Mr. Baring made a speech complimentary to the enterprise of Boston, and the character of the New Englanders. The Hon. Edward Everett responded in a happy manner. The affair partook of a private character.

There had been 319 deaths by cholera in Buffalo, from the commencement up to the 13th. The epidemic is said to have entirely disappeared from Cincinnati.

In consequence of the prevalence of the yellow fever in Charleston, which has greatly abated, the Mayor of that place requested the citizens to observe the 17th as a day of humiliation and prayer

In the United States District Court, a true bill of indictment for manslaughter had been found against the captain and officers of the *Henry Clay*—the accident to which we noticed some weeks ago.

Nearly the whole of the business portion of Ravenna, Ohio, was burned down on the morning of the 15th. The loss, it is estimated, will be from forty to sixty thousand dollars.

During the last year 320 steam-boats were built on the western rivers.

The steamboat *Reindeer* (on board of which upwards of 30 persons were killed, as we noticed last week, by the bursting of the steam-pipes) was destroyed by fire on the 10th ult., and the persons on board had a narrow escape with their lives.

From Canada we learn that the Toronto papers of the 15th September had received a telegraphic despatch from Quebec, announcing that Lord Elgin had been recalled, and that the office of Governor-General of British North America had been offered to Lord Harris.

From Mexico the accounts are deplorable. Insurrection against the existing Government in almost all the provinces, and general confusion, outrage, and bloodshed are the predominating features of the news received by the present arrival, the latest date being Vera Cruz, September 4. It was understood that an offer of surrender had been made by one of the rebel chiefs, Rebolledo, on condition of his life and those of his companions being spared, but the Vera Cruz Parliament demanded an unconditional surrender.

From Central America the intelligence received is to the 1st ult. from Nicaragua, and is to the effect that the Mexican adventurer Munoz, with a large number of French and Americans, had taken Leon, and marched on Realejo.

From Lima, under date the 10th of August, we learn that the whole of Peru was up in arms in consequence of the advices from the United States respecting Lobos. The Government were making extensive preparations for their protection.

WEST INDIES.

The advices received this week by the usual monthly mail steam communication range from the 8th to the 15th of September; but in the British West India islands nothing of interest had occurred since our last accounts.

From Havannah, in the Spanish island of Cuba, the latest dates are to the 11th of September, when tranquility generally prevailed; but the excitement and vigilance of the authorities, on account of the designs of the revolutionary society of "the Lone Star," in the United States, and their apprehensions of an armed expedition from that quarter against the island continued unabated. The Government regulations against all newspapers arriving from the United States were still maintained. They were considered very obnoxious to the American people. A French steamer-of-war, the *Ardent*, was in Havannah, for the protection of French interests. Several others were expected, and two or three English vessels were cruising on the coast.

Important to Lodging-House Keepers.—On Wednesday the following notice was issued from the General Board of Health:—"That the keeper of every common lodging-house shall cause the windows of every sleeping-room in such lodging-house to be kept open to the full width thereof from nine to eleven o'clock in the morning, and from two till five o'clock in the afternoon, unless prevented by tempestuous weather, or by the illness of any inmate; and the bed-clothes of every bed turned down. The floors of every room shall be swept before the hour of ten o'clock in the morning, and well scoured every Friday. The blankets, bed-clothes, and covers, used in the house shall be thoroughly cleansed and scoured at least four times a year, that is to say, on the first week of each of the several months of March, June, September, and December. Any person infringing any of the above by-laws or rules, or wilfully obstructing any officer in the performance of his duty, shall, for every such offence, forfeit a sum not exceeding £5, and a further penalty of 10s. for every day during the continuance of the offence."

The Inundations in France and Switzerland.—The reports of the inundations in Switzerland, and the Upper as well as the Lower Rhine, continue deplorable. Even as low down as Dusseldorf the waters had risen 15 feet, and coal must to rise at the rate of two feet in the 24 hours. From Strasburg (France) the latest advices state that while the waters of the Rhone and the Ill are falling gradually, other disasters are announced. The water which entered by the breach made near Artzenheim, in the Haut-Rhin, has established a fresh current in front of Rhinau. The losses caused by this last flood are enormous. There have been 8 houses swept away at Richtolsheim, 12 at Sasnheim, 25 at Rhinau, 12 at Benfeldein, and 10 at Osenheim. There are several other buildings so seriously damaged that it will become necessary to repair them before they can be inhabited. The returns of the losses sustained at Artolsheim, Sibenau, Dachs-heim, and Friesenheim had not been received at Strasburg, but it is known that the inhabitants of Oberhein have suffered enormously, having been for a long time exposed to the fury of the torrent rushing in from the breach made in the embankment at Rhinau. It is to be mentioned to the honour of the inhabitants of Baden, that, when they were apprised of the melancholy position of Rhinau, they sent there several boats laden with provisions for the sustenance of the neighbouring villages which were likewise rendered all the assistance in their power. The commune of Marsenheim, which contains only a population of 700, has taxed charge of 50 children, who are lodged and fed until their parents can care for them. According to the accounts from the Haut-Rhin, the overflowing of the Rhine and the Ill has caused terrific disasters in that department. A subscription has been opened throughout Alsace for the sufferers, and the Bas Rhin has already raised 200,000 francs towards the charitable work. The *Ordre*, of Dijon, states that the Saône, near that town has overflowed its banks, and caused great damage. The inundation took place so suddenly that the farmers, who were employed in getting in their crops, had barely time to save themselves and their horses. All the second crops of hay have been lost.

Yarmouth Poultry Show.—In our report of this exhibition last week it was omitted to be stated that the first prize for Cochin Chinese Fowls was awarded to John Henry Sams, Esq., Clare, Suffolk, for the best full-grown light-coloured cock and two hens of the above breed.

NAVAL AND MILITARY INTELLIGENCE.

THE NEW MILITARY APPOINTMENTS.

In the *Gazette* of Tuesday, the following appointments, consequent upon the death of the Duke of Wellington, have been duly confirmed:—

Lieutenant-General Viscount Hardinge, G.C.B., to have the rank of General so long as he is in command of her Majesty's army.

1st or Grenadier Regiment of Foot Guards.—Field-Marshal his Royal Highness Prince Albert, K.G., from the Scots' Fusilier Guards, to be Colonel, vice Field-Marshal his Grace the Duke of Wellington, K.G., deceased.

Scots' Fusilier Guards.—Major-General his Royal Highness the Duke of Cambridge, K.G., from the 17th Light Dragoons (Lancers), to be Colonel, vice his Royal Highness Prince Albert, K.G., appointed to the Grenadier Guards.

17th Light Dragoons (Lancers).—Major-General Thomas William Taylor, C.B., to be Colonel, vice his Royal Highness the Duke of Cambridge, K.G., appointed to the Scots' Fusilier Guards

Rifle Brigade.—Field Marshal his Royal Highness Prince Albert, K.G., to be Colonel-in-Chief, vice Field-Marshal his Grace the Duke of Wellington, K.G., deceased

60th Foot.—General Viscount Beresford, G.C.B., to be Colonel-in-Chief, vice His Royal Highness Prince Albert, K.G., appointed

The General Commanding in Chief has been pleased to appoint Colonel Richard Airey to be his Military Secretary.

The Fleet at Queenstown, County Cork.—Rear-Admiral Corry's fleet, the Channel squadron, arrived at two o'clock on Sunday at Queenstown. It consists of her Majesty's ship *Prince Regent*, 90 guns, Captain Hutton, bearing the Admiral's flag, blue at the main; the *Rodney*, 80, Captain Graham, brother to Sir James Graham; and the *Leander*, 50, Captain King; in twenty days from Lisbon, all well. The fleet experienced boisterous weather during the voyage, and for seven or eight days were under close-reefed topsails.

The Colonelcy of the 61st Regiment has become vacant by the death of General Hastings Fraser, C.B., which took place on Wednesday.

The Militia.—Out of nearly 100 volunteers required from Woolwich alone, the authorities will not be able to raise a dozen, on account of its being a military garrison.

The Cost of the Militia now raising, for the year ending March 31, 1853, is setting at at £388,715. In the present year the number to be raised is 50,000, and £160,000 is put down as "bounty and recruiting charges, payable within the year, taken at the rate of £2 per man, payable partly on enrolment and partly at the termination of the training and exercise, or by monthly allowance."

Fortifications.—The Master-General of the Ordnance has desired that the Isle of Wight shall be put in a proper state of defence, and strongly fortified. This undertaking will cost the country at least £60,000

Royal Military Academy.—Major-General G. G. Lewis, Lieut.-Governor of the Royal Military Academy, Woolwich, and Captain Eardley Wilmot, sanction and encourage the amusements of the gentlemen cadets, and with that view a number of prizes are annually awarded to the first and second winners in a series of athletic games. The games for the present year took place last week on the parade ground and barrack field of the Academy, in the presence of the Lieutenant-Governor and Captain Wilmot, with a great number of the officers of the garrison with their families, and many of the relatives and friends of the gentlemen cadets. Lieutenant Fitzhugh and Messrs. Lempriere and Langley, acting as umpires, awarded the several prizes.

The Goldner Preserved Meat Contracts.—The report of the select committee appointed to inquire into the Goldner preserved meat contracts has been made public, from which it appears that the total value of condemnations on board ships and in store up to Feb. 4, 1852, amounts to £20118 7s. 1d.; and between that period and the 6th of April to a further sum of £573 2s. 8d., making in the aggregate £20691 9s. 9d. The amount stopped from the contractor, together with the sum obtained from the sureties, amounts to £7070 7s. 3d., showing a balance in favour of the public of £13e3 14s. 8d. There still remain in the supplies of these provisions which no special survey has taken place, but the contents of such canisters as have been indiscriminately opened have been found sweet and fit for issue.

Trial of Anchors.—The fourth series of experiments on the steam trials, plan, which have been going on for some days at Sheerness, terminated on Saturday last. In accordance with the suggestions of the committee of naval officers and shipowners the four trial plans have thus been fully carried out, whereby the holding properties, quickness in taking the ground, tripping, &c., of the competing anchors, as well as adaptation to every available test that the means at disposal would admit. The results cannot fail to afford many valuable hints for the future improvement of this instrument, which ought to be the most perfect within the powers of human invention, more especially with reference to its peculiar and important uses, as on the anchor mainly depends the safety of those ships and their crews when riding in furious gales. A most important property appertaining to the new

COUNTRY NEWS.

LORD JOHN RUSSELL AT PERTH.—DINNER TO LORD PANMURE.—In our last week's Number we noticed the fact of the freedom of the Royal burgh of Stirling having been conferred upon Lord John Russell. We have now to record the circumstance of a similar honour conferred upon the noble Lord by the inhabitants of another important town in Scotland. On Friday se'nnight Lord John Russell was presented with the freedom of the ancient city of Perth. The compliment was paid to his Lordship with all that pomp and ceremonial befitting such an occasion. In the evening the ex-Premier attended at a banquet in the City-hall, given to Lord Panmure by 400 or 500 of that nobleman's former constituents. The Lord Provost of Perth presided. There were also present Lord Kinnaird, Sir Charles Adam, Colonel Lauderdale Maule, M.P., Mr Fergus, M P , Hon A Kinnaird, M P , Mr. Duncan, M P., the Provost of Dundee, Mr. Mercrief, M.P., Sir W. Gibson Craig, and Mr. A. Hastie, M.P. The health of Lord Panmure, the guest of the evening, having been duly honoured and responded to, the chairman proved "Lord John Russell, and the cause of civil and religious liberty all over the world;" which toast was drunk amid great enthusiasm. Lord John Russell returned thanks, and in the course of a lengthened speech took a review of his political life since he entered Parliament in the year 1817. He denied that he had ever deviated from those principles of civil and religious liberty with which his name had been associated.

GREAT FREE-TRADE BANQUET AT MANCHESTER.—At an influential meeting of the Anti-Corn-Law League, held at Manchester on Tuesday, it was resolved that a great banquet shall be held in the Free-Trade Hall on Tuesday, the 9th of November next, to which Mr Cobden, Mr. Bright, and all the leading Free Trade members of the House of Commons shall be invited. The guests are to include Anglis... Irish, and Scotch members of the House.

SOUTH-WEST MIDDLESEX AGRICULTURAL SOCIETY.—This society held its sixteenth annual meeting on Tuesday, at Mr. John Elmore's farm, Kenton-lane, Harrow. The association has been established for "the encouragement of good ploughing, and other agricultural improvements, and for giving rewards to servants for long and faithful service." The annual meeting of the meeting opened with a ploughing match between men of different ages and pretensions. Some twenty or thirty ploughs were put in motion, and were resolutely and eagerly driven through the dense crowded sward until about one o'clock, when the work performed by the different men was left for the decision of the judges. A vast number of prizes, in the shape of sums varying from 10 s to £3 10s, for good conduct and length of service, were delivered to labourers, married and unmarried, to male and female servants, to shepherds for rearing the greatest number of lambs and to hay-bodders for the largest quantity of work performed. Short y be.ore four o'clock about seventy members of the society sat down to a well-supplied dinner; Mr. H. Pownall, the patron of the institution, in the chair

CONSERVATIVE BANQUET IN OXFORDSHIRE.—On Tuesday a public banquet was given in Banbury, in honour of the Right Hon J. W. Henley, M.P., the President of the Board of Trade; Colonel North, M.P., Captain Wyndham, M.P., and Mr Knight-ley, M.P. The chair was occupied by Mr. J Loveday, of Williamscote. About 400 gentlemen were present. Mr. Henley's was the speech of the evening, and, in returning thanks for the toast, "The Right Hon. J. W. Henley, M.P., Colonel North, M.P., and the members for Oxfordshire," the President of the Board of Trade addressed his admirers at considerable length, commenting with some severity upon the past policy of the Whigs, and upholding the principles of his own party, dwelling upon the alleged sufferings of the agricultural and shipping interests; but remarkably taciturn as to the future intentions of the Government.

HERTS AGRICULTURAL ASSOCIATION.—On Tuesday the annual ploughing match and show of live stock of this association took place on the grange of Mr. Delme Radcliffe, at Hitchin, in the presence of a large number of spectators. The number of cattle exhibited, though not so extensive as on former seasons, were of excellent breed, and called forth the approbation of the judges. As soon as the prizes were awarded, the company assembled in the large room at the Sun Inn, to partake of an excellent dinner which was provided for the occasion. The Hon. W. Cowper took the chair, and was supported by Mr. Halsey, M.P., Mr. Bosanquet (recently a candidate for the county), Mr. Charles Dimsdale, and several other gentlemen of influence.

SOMERSETSHIRE ARCHÆOLOGICAL AND NATURAL HISTORY SOCIETY. —The fourth annual meeting of the members of the above society commenced at the Assembly-rooms, Bath, on Tuesday, under the presidency of Mr. W. G Langton, M.P., of Newton Park. After the disposal of the ord nary business, papers were read during the morning by Mr Falconer, from the Rev. H. G. Knight, on the Necrology of Egypt, which was illustrated by drawings from the paintings in the mummy case of the museum of the Bath Royal Literary and Scientific Institution; by Mr Watts, on the Perpendicular Towers of Somersetshire, which he described as the ornament and the pride of the county; by Mr C E. Davis, on Church Restoration; by the Rev. H. M. Scarth, from Captain Chapman, upon a tomb lately discovered at Shockerwick, near Bath; and by Mr. Scarth, upon some ancient remains discovered in the lower part of the county. A very excellent museum, to which a large number of interesting specimens in natural history, illustrative of archæological subjects, have been contributed, has been opened in connection with the present session of the society, and proved very interesting to the spectators and the members at the close of the meeting for reading papers, on Tuesday morning. In a subsequent part of the day the members proceeded on an excursion to Hinton Abbey, Farleigh, and the neighneighbourhood. [Next week we shall illustrate this interesting meeting]

SOUTH WALES RAILWAY.—The operation of mooring the second tube for the Menai Straits, at Conway, was successfully completed on Tuesday morning. Immediately on reaching its destination, the tube was made fast by chains and as the tide receded the pontoons were floated from beneath, and it was left suspended by the chains, preparatory to its being raised to its place. Mr. Brunel and his assistant, Mr. Brereton, directed the operation

THE ISLE OF MAN.—About £9000 have already been subscribed in the Isle of Man for placing a steam-boat on the Liverpool and Ramsey station next summer, and a gentleman was in Liverpool last week in order to enlist friends in that side the water in favour of the movement.

THE STEAMER "WAVE QUEEN" ON SHORE.—A private letter from Newhaven states that the steamer *Wave Queen*, from Dieppe, after beating about for some time in the gale of Tuesday night, being unable to enter the harbour was driven ashore. The passengers were landed in boats, without any injury beyond the loss of hats, bonnets, shawls, cloaks, &c. It is added that the steamer on Wednesday morning was lying "high and dry."

SINGULAR ACCIDENT AT LIVERPOOL.—On Tuesday at noon the screw steam ship *Tiber* was steaming down the river, outward-bound for Gibraltar. A Mr. Francis Pier head she fired a gun, and was so close to the wal. that the charge blew off the arm of a poor woman who was witnessing her departure. The sufferer was taken to one of the hospitals, where she still remains.

DREADFUL ACCIDENT AND LOSS OF LIFE.—Eight lives have just been lost in Aberayron, near Aberystwith (Cardigan). A schooner named the *Glynaeron*, having just been completed, set out on her first voyage for Cardiff. A party consisting of the master and owners, and their friends, went in the vessel for a brief trip, taking with them, among other articles, a barrel of beer. After being out for some time they all left the schooner and entered their boats. One of these which carried a sail was occupied by eight persons, principally servants of those in the other boats. In tacking for the harbour of Aberayron some water entered the boat, which frightening some on board, they made a rush towards the mast. In a few minutes the boat capsized and sank, when the whole party, with the exception of a young lad named David Evans, were drowned. The names of the deceased are:—Lewis Lewis, of Aberayron; Evan Evans, son of Mr. John Evans, of Clifforn; Mary Jones and John Davies, servants at Clifforn, and David Jones and two female servants from Llywenu mill. Six of the bodies have been recovered.

DISCOVERY OF NATIVE GOLD IN THE ALMOND.—One day last week two persons from Perth, on a country excursion, were about to cross the Almond by wading near Cromwell Park, to Methvin Wood, when one of them discovered something glittering in the bed of the river, which was then very low. On picking it up, it had all the appearance of one of the nuggets found in California and Australia—one side rough, as if it had adhered to stone or minera. substance. When brought into Perth, it was taken to several jewellers, all of whom, after testing, pronounced it to be virgin gold, and so pure that it would not work, unless mixed with alloy. The specimen weighed about 4½ dwts. —*North British Daily Mail.*

BOILER EXPLOSION.—On Tuesday morning a violent boiler explosion took place at Walker-mill, by the side of the Newcastle and Shields Railway, and about three miles from the former town, which totally destroyed the boiler-house, warehouse, and engine-house, threw the fireman and one-half of the boiler over a hedge into an adjoining meadow, and injured, more or less, three other men. The fireman, who was much scalded, now lies in a precarious state in the Newcastle infirmary. The destruction of property is considerable. The cause of the explosion has not been ascertained

EXTENSIVE FIRE AT BRIGHTON.—Very early on Wednesday, a fire broke out in the King's-road, Brighton, which ultimately destroyed four shops with their contents, namely, Mr Beakforde's (jewel er), Mr. Darby's (optician), the Misses Newton's (dressmakers), and Mr. Gay's (toy merchant). Mr. Beakford had, in addition to his stock, a pocket-book burned, which contained £280 in notes. Mr. Gay lost £48 in notes. Mr. Dixey alone was insured.

FALL OF PART OF THE CLIFF NEAR ST. LAWRENCE, ISLE OF WIGHT.—On Sunday last, at Old Park Farm, at Bonchurch, a portion of the road along the undercliff between Ventnor and Sandrock. The tour-horse coach that runs from Cowes to Blackgang Chine and Ventnor was obliged on Monday to make a road through the meadows, and only road along the undercliff being blocked up by the stone and chalk wh ch had fallen.

THE CHOLERA.—The *Lancet* says :—"Communications on the subject of cholera have passed between the Board of Health, the College of Physicians, and the Secretary of State for the Home Department. It is now arranged that all medical questions relating to cholera and other epidemics are to be referred to the College of Physicians. The cholera committee is again holding its meetings, and was summoned for the second time yesterday. A report was presented for approval; it is intended, we understand, for publication.

MUSIC.

CLIFTON CLASSICAL HARMONISTS' SOCIETY.

(From our own Correspondent.)

CLIFTON, Tuesday.

Rough and rugged as was the performance last night of Mendelssohn's "Elijah" at the Victoria Rooms, in its *ensemble*, the very fact that an oratorio of such vast proportions and elaborate details could be at all executed in a provincial town, chiefly by amateurs, is too remarkable not to be referred to specially in our weekly record of "things musical." Coming immediately after the three great festivals the exhausted amateur might be disposed for undue severity; but, the time, place, and resources fairly taken into consideration it would be churlish, indeed, to refuse to the Classical Harmonists' Society every praise for their spirit, zeal, and earnestness of intention. The hall for music at Clifton may be classed amongst the most elegant saloons in the kingdom. Indeed, after Birmingham, Liverpool, and Norwich, it may be questioned whether a more elegant and commodious concert-room could be named. It is admirably adapted for sound; the ceiling is simply but elegantly decorated, and its form proves that the architect has mastered acoustics. It is to be hoped that the amateurs here will subscribe for an organ, to complete the interior for their grand performances. With the exception of Mr. Cooper, the first violin of the Sacred Harmonic Society (Costa); Mr. Howell, the first double-bass of the Royal Italian Opera, and of Mr. Nicholson, the oboeist, all the players were from Bath, Bristol, and Clifton—a mixture of amateurs and artists of ability, numbering some fifty amateurs, under the *bâton* of Mr. F. Smith, a local professor. The necessity of having the brass from the military band is to be regretted—as open-air players, unless they have much experience, are generally too boisterous. The principal vocalists were Madame Fiorentini, Mrs. P. J. Smith, Miss M. Williams, Mr. Lockey, Mr. Cross, and Herr Formès. Madame Fiorentini's first appearance as an oratorio singer must be designated as an event. The want of a resident in soprano in London, for the sacred school, has been of late severely felt. Madame Ciara Novello had to sustain, almost singly, the Sacred Harmonic Society performances last season; but she departed for her Spanish engagement, and the advent, therefore, of Mdme. Fiorentini will be of great value and importance—possessing, as she does, a voice of unrivalled richness, volume, and brilliancy, truly sympathetic in its fluence. She sang the music with great rehearsal with her usual energy; and, despite of the nervousness attendant on such an ordeal, her readings were conscientious, classical, and correct. Her intonation is always sure; and if a little more decision in taking up the points be desired, and if she can continue to sing without having the music copy always up to her face, objections are exhausted. In the scene of the miracle of the widow's son she evinced more feeling and dramatic passion than she ever displayed on the stage The tone of the angel's air, "I call thee near," was perhaps too subdued; but it was dignified and devotional. In the trio, "Lift thine eyes," which was re-demanded, she sang deliciously; and her high notes in the quartet "Holy! holy!" were sustained truthfully and powerfully. As an Englishwoman, Mdlle. Fiorentini's accession to the English school will be doubly welcome. Miss Williams was encored fervently in the air "I rest in the world." She is progressing rapidly to the highest order of singing. Her voice was always superb; but she is now unparalleled in taste and intelligence. Mr. Lockey and Herr Formès sustained their high reputation in the tenor and bass parts. The air of the latter, "Is not His word like a fire?" was re-demanded; as was the quartet. "Cast thy burden upon the Lord," sung by Mrs. P. J Smith, Miss M. Williams Mr. Lockey, and Mr. Cross (the secretary of the society), an amateur with a fine bass voice, who sings artistically.

The hall, with the exception of a few of the high-priced seats, was filled in every part. The company listened with the deepest attention, and applauded and encored vigorously whatever delighted them, without being disturbed by the sacred character of the composition they were listening to. If London should propose, one of these days, to have a music hall worthy of the musical metropolis, the architect ought certainly to look at the Victoria Rooms as a model.

WELSH EISTEDDFOD.

(From our own Correspondent.)

NEWPORT, Wednesday.

What unlucky star could have directed an amateur, who has just been emancipated from listening to three weeks' music of the grand gathering at Birmingham, Hereford, and Norwich, to the Monmouthshire Eisteddfod, it is unnecessary to indicate. Let it suffice that, after hearing the "Elijah" at Clifton, the Correspondent of the ILLUSTRATED LONDON NEWS found himself last night in the Town Hall listening to Welsh bards and minstrels, and witnessing the honours conferred on successful competitors for prizes, given by various persons, for poetry, essays, harp-playing, drawing, glee-sing.ng, vocalisation (comic and serious), woodcarving, Penillion singing, six-pinion playing, wax-flower making, antiquities, penmanship, needlework, archæology, biography, &c. The Hall was appropriately decorated for the occasion. The chair of the president was surmounted by the Prince of Wales' feathers; the inscription of "God save the Queen" was on the secretary's platform, which was filled by the Monmouthshire beauties, who, in turn, presented to the victors their laurels—a brass band blowing a grand flourish as the conqueror was invested with his decoration. The Mayor presided in the evening; and Sir Thomas Phillips, who was his pure so gallantly for his bravery at the Frost insurrection, officiated at the morning's display. The details of the prizes are matters of local interest, but the musical portion exacts a word of commentary. After the demonstration in North Wales, at the Rhuddlan Castle Eisteddfod, after the hearing of Handel's "Messiah" within the castellated ruin, it was anticipated that a musical movement would have been made in Wales generally. But it appears that the example of the North has not operated on the south of last night's Welsh musical execution, vocal and instrumental, must be characterised as proving, beyond a doubt, that art-progress has not penetrated, like the railroad, into the land of the mountain and flood. It is really to be lamented that in these Eisteddfods, or assemblages of bards, at which so much earnestness of purpose and enthusiastic nationality are displayed, music should be a century behindhand. Commerce is making rapid strides at Newport; agriculture is to be seen in its vicinity in its best-developed form; the mining is carried on with the highest amount of geological science; even in the very programmes of the Athenæum and Mechanics' Institute progress may be clearly traced; but, as regards "sweet sounds," the population of the Usk may be compared only with the Caffres in the rudeness and savageness of their music. We had a bard who delivered Dryden's "Ode to Cecilia's Day" with the Penillion style of singing. From the sublime to the ridiculous there is but one grade. Conceive this fiery ode drawled forth with a nasal twang, to the tinkling of a triple harp, and then to be told that such Penillion singing was the perfection of art! The force of absurdity could no further go; it was too much even for the Newport amateurs. It was enough to rouse the ancient Anglo-Normans from the ruined castle, to know that Bardism was in the ascendant over the minstrelsy of the Troubadours even in its infancy state, so replete with poetry. As a relic of the past, the Penillion singing and the Welsh harp-playing may be preserved; but Wales must awake from a long lethargy, and watch what is passing across the Border; and, with innovation and improvement, the Eisteddfods may be rendered really worthy of patronage.

THE NORWICH MUSICAL FESTIVAL.—The returns of the performances exhibit a diminution on those of the previous meeting in 1845, at which 7173 persons paid. At the present festival, the numbers were 6609. It is proposed to have the next gathering in 1856, so as not to come the same year as the Birmingham Festival—a very excellent resolution on the part of the Committee of management, of which Messrs. Simpson and Kerrison have been such zealous, and courteous honorary secretaries. Mr. Benedict, the conductor, claims the highest praise for the musical arrangements. He took especial pains with all the works that were presented.

MADAME VIARDOT.—After the Norwich festival this gifted *artiste* sang at a concert in Liverpool on Tuesday night, with Herr Formès. She has since left for Paris, and will shortly make a tour in Holland.

HEREFORD MUSICAL FESTIVAL.—The donations to the diocesan charities, in addition to the collections, already exceed £800. The receipts have been £1320 4s.; in 1849 they were £1164 1s. 6d.

MADAME OURY'S CONCERT.—Mdlle. Oury, the *pianiste*, will give a concert in Brighton next Monday, at which selections from Mozart's "Requiem" will be performed as a tribute to the memory of the "Duke." The vocalists will be Madame Fiorentini, Madame E. Garcia (Dennuck), Madame F. Labiache, Signor Gardoni, Brizzi, and Belletti.

HERR FORMES.—This basso has entered into an engagement for three years, with the French Grand Opera in Paris, he will sang with Mdlle. Wagner, in Meyerbeer's new opera. The composer is now at Bologna with Scribe, preparing the work.

THE THEATRES, &c.

SADLER'S WELLS.

The tragedy of "King Lear," contrary to the experience of former seasons, has proved to be the most successful of the late revivals at this theatre. Much of this is doubtless due to the improvement that has taken place in the company since the recess, and which enabled the management to cast this great drama "excellent well." To add nothing to what we have already said of the admirable pathos with which the part of King is enacted by Mr. Phelps himself, we may select Mr. Barrett's *Gloster*, Mr. Bennett's *Kent*, and Mr. Robinson's *Edmund*, for especial commendation. Mr. Marston's *Edgar* deserves a place by itself. A more graceful, picturesque, and feeling portraiture of the part was never accomplished. It merits to take rank among the best works of high art. Miss Cooper's *Cordelia*, and Mrs. Ternan's *Goneril*, are both good. A similar attempt at this house to revive a stern old tragedy of the domestic kind has not been equally happy. Lillo's "Arden of Feversham," long held to be a remarkable curiosity by the dramatic *virtuoso*, was revived on Friday week. The reputation enjoyed by this play justifies its production, though unprosperous as an expedient. The drama, nevertheless, always appears to have been an unfortunate one. Our readers will recollect there is an older play on the same theme, and under the same title, ascribed to Shakspeare. The present tragedy, nominally by Lillo, was left imperfect by him, and finished by Dr. John Hoadly. On its first performance, Drury-lane was opened only for the one night (12th July, 1759). The drama was illperformed, the part of *Alicia*, it is stated, being given to a raw young actress, who appeared under the name of "a young gentlewoman," though *Arden* himself was well represented by Havard. The fact is that domestic tragedy does not admit of the classic style in which this drama is written; and, understood as the diction really is, it is nevertheless out of harmony with the manners portrayed in the scenes. A romantic argument will bear this kind of elevation well enough, but not the domestic; although the character, as in the case of Knowles' "Virginius," will sometimes gain in popularity by being domestically treated. The reasons for all this are obvious enough. Mr. Marston, as the injured husband, performed admirably; and Mr. Bennett, as the adulterous murderer, was cool and calculating in his villainy. *Black Will*, in the hands of Mr. Barrett, proved to be a decided character; rose, in fact, to be almost the hero of the play. We regret to add that Mrs. Ternan was unequal to *Alicia*. Indeed, we think, that if her *rôle* had been more boldly pronounced, the revival would have proved satisfactory to those who are interested in the more curious specimens of our old drama. But a part like *Alicia* must needs prove dull, unless lifted up by the impulse of genius. No mere stage mechanist can hope to succeed in such a portraiture.

On Wednesday "The City Madam" was produced, in which Mr. Phelps played *Luke* as pointedly as ever; and this fine old play was throughout well cast. It will no doubt perform the "limited service" for which it is required.

THACKERAY IN AMERICA.—Mr. Thackeray has accepted the invitation of the New York Mercantile Library Association, to deliver before that institution, during the coming winter, his course of Six Lectures on the Comic Writers of England.

MISS WAGNER.—We read in a letter from Breslau, dated the 17th ult. "The celebrated singer, Miss Johanni Wagner, has had two lawsuits in our city. She had entered into a engagement for eight nights at the Grand Theatre of Breslau, and has written to the porter of the theatre, desiring him to engage for her a furnished apartment. The porter executed the order; but when Miss Wagner arrived she found that the lodging which he had hired was too glorious, and refused to receive it at her own cost. The porter, being compelled to pay for the lodging, brought an action against the lady, but the tribunal gave judgment in her favour, on the ground that the porter had not explicitly followed her instructions The sentence was confirmed by the Royal court of Breslau. Miss Wagner, in virtue of the judgment, demanded payment of her costs, including the fee of the counsel; but the fee the porter resisted. The demand of the lady was rejected by the tribunal, and appealed to the Royal Court from the decision of the civil tribuna , and produced a certificate from the Minister of the Interior, showing that she was engaged at the Royal Opera of Berlin, and that she must, therefore, be regarded as one of the public functionaries, who have the privilege of appearing in courts of law by counsel, and are therefore entitled to the reimbursement of the fee from the adversary, if the judgment is pronounced in the suit. The Royal Court, on the production of this certificate, ordered the porter of the theatre to pay the fee of Miss Wagner's advocate."

LAW AND POLICE INTELLIGENCE.

FRAUDULENT EMIGRATION AGENTS.—In the Mansion-House police-office, on Saturday, the emigrants who had been victimised by Tripe and Montague, charged with the offence of unlawfully procuring the advance of the Emigration Commissioners to the application of Sir R. W. Carden in their behalf. The following communication was then read. "Colonial Land and Emigration Office, Park-street, Westminster, Sept. 30. Sir,—I am directed by the Colonial Land and Emigration Commissioners to acknowledge your letter of the 24th inst., requesting the Commissioners so far to remit their rules as to furnish passage out to Australia to certain intending emigrants who have suffered from the hands of Tripe and Montague, and have incurred much inconvenience in bringing them to justice. The Commissioners have great satisfaction in acknowledging the assistance which their officer has received from the city authorities in carrying on the prosecution, and they would have great pleasure in giving the sufferers any assistance which could properly be given them from any funds at their disposal. It would not, indeed, be possible for them to depart in this case from the principle on which they are bound to administer their funds, that—namely, of consulting in all respects the wants and interests of the colony from which those funds are derived. But they think it possible that some or all of the applicants may belong to classes to whom a certain amount of Government assistance could properly be given, and, with the view of ascertaining this point, would request them to fill up certain forms of application, with which Captain Lean will supply them, in order that the Commissioners may have a full opportunity of examining their cases.—I have the honour to be, Sir, your obedient servant, S. WALCOTT, Secretary.—Sir R. W Carden." Sir Robert Carden then divided among the poor men, in accordance with the scale drawn up by Captain Lean, the money which had been transmitted to the alderman for their assistance, and they then took their leave most gratefully in order to prepare to take their berths in a Government ship.

CONFLICT BETWEEN A BURGLAR AND A POLICEMAN.—About half-past ten o'clock on Saturday night last, as constable 233 S was proceeding along the road near Highgate, he observed a powerful-looking man approaching him, carrying a sack. The constable suspected that the man carried stolen goods, a gun under his arm asked him some questions. The answers given not being satisfactory, the officer desired him to proceed to the police-station. The man refusing to go, the officer seized both the prisoner and the individual's property, when a conflict of a most serious character took place. The burglar getting hold of the constable's head, made the most determined attempt to gouge out his eyes by forcing his fingers into the sockets. Fortunately the latter was assisted by a by a truncheon into use, and struck his murderous assailant over the arm with such force as to paralyse him for the moment. Some assistance having arrived, the burglar was conveyed to the station-house at Highgate, where it was found that the property that had been in his possession consisted of wearing apparel, and other articles, while the gun was found to be charged with heavy shot. It has since been ascertained that the property had been stolen from a gentleman's house in the neighbourhood that very evening. Both the policeman and the burglar have suffered severely by the conflict, and are under medical treatment. Information has been given to Charles Johnson, and forty years of age, and he says he came from Manchester. It is thought by the police that he is one of the gang recently known as the "northern bandits," consisting of seven armed men, four of whom were apprehended last week, one each in the towns of Bradford, Liverpool, and Manchester. He is in rather a precarious state from the blows of the policeman's staff about his head.

THE LANCASHIRE MAGISTRACY.—From a list of the county magistrates, just published, it appears that 479 gentlemen are qualified as justices of the peace for this county; viz., 23 in the Duchy of Lancaster, 62 in Lancaster, 33 in Blackburn, 21 in Leyland, 121 in West Derby, and 160 in Salford. The list comprises the names of three Earls, one eldest son of an Earl, two younger sons of an Earl, one Viscount, one younger son of a Baron, one right honourable, nine baronets, six knights, 23 members of Parliament, and 25 clergymen.

BEALE AND CHAPMAN.—CATHERINE HAYES, DEFENDANT.—In the Lord Mayor's Court on Tuesday, this case was called on. It was an attachment under the statute of London, against Catherine Hayes, the celebrated singer, to recover the sum of £3000, due to Thomas Frederick Beale. The attachment was made of money belonging to the defendant, in the hands of the Union Bank of London. Mr. Byland and Mr. Lewis appeared for the plaintiff, and said Richard Houghton, assistant manager of the bank, who proved that they had upwards of £3000 in their hands, the property of the lady. Neither the garnishee nor the defendant appeared by counsel, and a verdict was found for the plaintiff for £3000.

THE CITY SMALL DEBTS ACT.—On Wednesday the City of London Small Debts Extension Act, passed in the late session, came into force. By this statute the jurisdiction of the sheriff's Court or the City of London will be extended from £20 to £50. As the law now stands, actions throughout England and Wales can be brought in County Courts for sums not exceeding £50, and for larger sums in cases where the parties agree to abide by the decision of the Court In the act of the City of London, as in the County Courts Act, there is an appeal given on points of law, and on the admission and rejection of evide.e.

FRANCE.

THE PRESIDENT'S PROGRESS.

The progress of Louis Napoleon through the southern provinces of France appears to be a veritable march of triumph, even when allowance is made for the exaggerated descriptions which the official accounts—and they are almost the only accounts that are furnished—present of the enthusiastic receptions which he obtains at every resting-point of his tour from the masses of the population of all ranks and orders. As this festive progress through the most densely-peopled, the fairest, and most fertile districts of France is universally considered the last act of the drama which is to close with the proclamation of the Empire, it assumes an importance which would not otherwise attach to it; and forms, at the same time, one of the most curious chapters in the history of the present day. Other nations have hailed with shouts of triumph their deliverers from the arbitrary caprices and oppressive control of irresponsible power: France exhibits the anomalous and humiliating spectacle of a great and powerful people greeting with joyous and even enthusiastic acclamations the man who, having trampled on her free institutions, proclaims himself the sole depository of despotic sovereign authority. The scenes enacted at the present moment in France, when traced by the pen of future history, might well elicit incredulity if some such testimony as that which the "pictured page" of our illustrated record of passing events furnishes did not serve to fix the character of the movement which bears Louis Napoleon onward to the goal of his fondest aspirations—the Imperial throne of France.

In our last two Numbers we noticed the more marked features of the Presidential tour, so far as it had then extended; we now resume our "brief chronicle," accompanying the account with Illustrations of the more striking occurrences of the route.

On the 18th ult., Louis Napoleon, and the Ministers and high functionaries accompanying him, made his entry from Roanne into St. Etienne, amidst the most enthusiastic display of devotion to his person and Government. At the entrance of the town was raised a magnificent triumphal arch *(see Illustration)*, at which the Mayor, M. Quentin, and the Municipal Council received the Prince, the former addressing him in the following terms:—

ARRIVAL OF THE PRESIDENT AT THE TRIUMPHAL ARCH, AT ST. ETIENNE.

"The town of St. Etienne is happy to receive within its walls the illustrious Prince, who is the worthy heir of the name of Napoleon, and to whom France is indebted for peace and security. Be pleased, Monseigneur, to receive the sincere homage of this innumerable population, which presses on your footsteps, anxious to testify, by its acclamations, the gratitude of all to the man who has saved the country, and firmly fixed it honour and prosperity on an immovable basis.

The Prince replied in a few words of thanks, which were lost in the midst of cries of "*Vive l'Empereur!*" The *cortège* then moved on to the Hôtel de Ville, General de St. Arnaud being in the Prince's carriage, whilst behind came M. de Persigny, General de Castellane, General de Richepanse, and M. Ponsard. All along the streets to the Hôtel de Ville might be seen tri-coloured flags floating from the lofty masts. The twenty-four steps to the Hôtel de Ville were covered with rich carpets, and the pillars were hung with flowers. Inside the building was prepared an exhibition of all the articles manufactured in the town. When the Prince alighted from his carriage, he ascended the steps, and, turning round, was greeted with redoubled cries. He then entered the crowd and entered the building. At seven o'clock he gave a grand dinner to the principal persons of the town, and afterwards proceeded to the ball, where he was received with the greatest enthusiasm.

The next morning (Sunday, the 19th), the Prince visited the manufactory of fire-arms, and then returned to the Hôtel de Ville, in front of which he passed the troops of the garrison in review. He distributed some crosses and medals, and the filing off took place amidst great acclamation. At ten o'clock, the Prince went to the church of St. Etienne and heard mass. From the church he proceeded to the railway, and at eleven o'clock took his departure for Lyons. The whole town seemed to be on foot at the moment of his leaving, and the only cry to be heard was "*Vive l'Empereur!*"

The Prince stopped for a moment, on his way to Lyons, at St. Chamond, Rive de Gier, and Givors, where the enthusiasm was as great as at St. Etienne.

The arrival of the President at Lyons took place at two o'clock, P.M. He experienced a reception which is described as still more enthusiastic than any preceding it on the tour. The sole cries from both troops and people, were "*Vive Napoleon III.!*" "*Vive l'Empereur!*"

The crowd assembled at the railway terminus was enormous. The Prince, on alighting, received the keys of the city from the hands of the Prefect, who presented them to him in the name of the Municipal Council. He then mounted on horseback and entered the city, followed by a numerous staff, by the Prefect, and a great number of distinguished personages.

It is impossible (says the official account) to describe the enthusiasm with which his Highness was received, and the admirable spectacle offered by the quays of the Rhone. On one side the troops were drawn up, and on the other crowded an immense population, having before them the deputations of the rural districts and the children of the schools of Lyons. Along the entire line there was but one cry, that of "*Vive l'Empereur!*" which was also repeated in the square of Bellecour, and in the street of St. Dominique, to the hotel of the Prefecture, where the Prince was received by the constituted bodies, the authorities, the Mayors, and the officers of the garrison. After the reception the Prince drove in a carriage to the Archiepiscopal Palace, where he assisted at the repasta. 200,000 spectators lined the banks of the Sadne. On his arrival at the Palace, and on his return, the same enthusiasm manifested itself, and the same cries of "*Vive l'Empereur!*" were heard. At half-past five o'clock the Prince returned to the Prefecture. Never did a finer day gladden a more splendid *fête*.

At six o'clock (we learn from the same source) the Prince admitted to his table the Cardinal Archbishop of Lyons, Count de la Marmora, Minister of War of Sardinia, sent by the King to congratulate him on his passage; M. Paleocape, Minister of Public Works, of Sardinia; and a great number of functionaries and notable inhabitants of Lyons. At eight o'clock fireworks, imitating a volcanic eruption, were let off on the heights of Fourvieres; after which an immense star was seen resplendent in the air. At half-past nine the Prince repaired, amidst an immense crowd, who saluted him with cries of "*Vive l'Empereur!*" to the ball given him in the Grand Theatre by the city. On entering the hall he was loudly cheered. He opened the ball with Mademoiselle Bret, who had for a vis-à-vis her father, the Prefect, dancing with Madame Morris, the wife of General Morris. The Prince afterwards went round the hall, saluted as he passed with acclamations of "*Vive l'Empereur!*" He retired at eleven o'clock."

So far the official report of the Government functionaries.

The preparations for the reception and the arrival of Louis Napoleon

PRESENTATION OF THE KEYS OF GRENOBLE TO THE PRESIDENT.

INAUGURATION OF THE STATUE OF NAPOLEON, AT LYONS.

At the second city of France, are thus described by an unofficial hand:—The city of Lyons presented a most animated appearance on the arrival of Louis Napoleon. The entire population, estimated at 500,000 souls, was on foot, and was proceeding to the Prefecture. The garrison, consisting of 15,000 men, was drawn up in order of battle on the Place de la Charité and the Quai du Rhone, the cavalry resting on the Place de la Prefecture, the artillery with their guns on the Place Bellecour, the engineers in the streets opposite the Place, the infantry and the Chasseurs of Vincennes in double files in the streets through which the President had to pass. Deputations from the towns and villages in the department with banners, indicating the name of each commune, and the pupils of the religious and communal schools were stationed in front of the troops, and an immense assemblage of the population in the rear.

A triumphal arch, painted in the Prince's colours, was raised in the middle of the quay near the slaughter-house. On the top was placed an eagle, with the following inscriptions at each side: "Reduction of the Town Dues—Military Medal—Pensions—Suppression of the Bagne – Reduction of the interest on the National Debt—Agricultural Bank—Reduction of the Rate of Discount—20th December, 1851, and 10th December, 1848.

The public buildings on the line of march and several private houses were decorated with flags. There were assembled round the terminus General Farey, Inspector-General; the Generals Herbillon, Mauris, Desorties, Dumontet, Mellinet, Gado, and Grafton, with a brilliant staff; whilst a splendid military band performed several national airs. A*(Continued on page 278.)*

PARIS FASHIONS FOR OCTOBER.

Autumn is come at last; but not with it any great variety in the fashions for the season—the same stuffs and the same dresses being worn as in the spring. The Talma cloaks, made of cloth, velvet, silk, and thick flannel, with or without hoods, are much in favour. Plain cloth, or embroidered, are worn in evening walks at watering places. When made of velvet, a little shorter, and trimmed, or not, with lace, the Talma cloak is very elegant. It can also be cut out with very pointed teeth, trimmed with lace, or covered with lace embroidery. Black is most worn; next to it, chestnut and dark blue; to which are added embroideries and black velvet bands; but it is better that the velvet be of the same shade as the cloak. By young persons, lighter shades are worn: as nut-brown and grey, with black velvet—which is very fashionable and elegant. We have also seen a cloak of the common Talma shape, over which was another cape shorter, making a second cloak—a warm and comfortable innovation for the cold weather.

Dresses are not changed as to shape; the bodies are skirted, open in front or high; or cut square, or in a point to the extremity of the body. The stuffs most worn are taffeta popeline; for *négligé* and morning dress, we have Valencias and woollen popeline. These are almost the same stuffs as last month; but the shades are deeper as the season advances. The petticoat is still trimmed with numbers of flounces, at pleasure; the Albanese trimmings are also continued, but the most *distingué* is the plain petticoat.

A fashion much worn this year for summer dress was coloured petticoats, separate, worn with a white caraco of muslin nansouk, more or less trimmed with embroidery and lace. It seems this fashion will last during winter; and that a velvet caraco, trimmed with rich embroidery, will be worn instead of the light summer garment. White waistcoats may, therefore, probably be kept in fashion.

A new ornament has just made its appearance for collars and sleeves, caps, and everything where lace is used as trimming—this is thread guipure, a substitute for Valenciennes. This revived kind of lace is always sought after; but the kinds which have lately been received from the north seem much superior in fineness and in richness of pattern. Though English embroidery still keeps in vogue, yet there is a tendency to resume tambouring embroidery. Jet will be much worn as an ornament for manteleta, and a great deal is worn on bonnets for the present season. The shape, to this time, has not varied much. Velvet will be, as heretofore, the most *recherché* for winter.

THE ILLUSTRATIONS.

Walking Costume.—Plain taffeta dress, with five flounces, and canezou or piqué; the stuff festooned; trimmed with buttons down the front; pockets figured in the embroidery; demi-pagoda sleeves; taffeta bonnet, trimmed with flowers.

Capote of dark violet taffeta, trimmed with a pattern of embroidered straw, between the puffs, also of straw, as the trimming of the double curtain. *Capote of black lace*, sprinkled with small violets, trimmed merely with a ribbon laid on flat; plaited at the extremity of the crown and curtain, and emerging underneath in the form of strings.

Leghorn Bonnet, trimmed with a wreath of flowers surrounding the top.

Cap with small and very narrow ribbons, and trimming of thread guipure and go-between of wider ribbon, laid on flat, and forming as it were the crown of the cap. *Lace cap*, with bows and ornaments of ribbon. *Cap of fine cambric* with strings on the cheeks, and behind the crown; embroidered and trimmed on the top with a large lappet on both sides.

CAPOTES AND BONNET.

WALKING-DRESS.

CAPS.

PARIS FASHIONS FOR OCTOBER.

half-past two o'clock the approach of the official train was announced, and on its arrival a salute of 101 guns was fired from the forts. This formidable explosion appeared to shake the city to its foundation. The cries of "*Vive l'Empereur!*" burst forth from the Mayors and Municipal Councillors assembled at the terminus. M. Bret, Prefect of the Rhone, at the head of the Mayors, presented the keys of the city on a gold dish to the President, saying

Monseigneur—I have the honour to present the keys of the city to your Imperial Highness, the same which were presented to his Majesty the Emperor. Its inhabitants will be most happy to prove to you their good feelings and their devotion to your cause.

The Prince replied that he was happy to renew his visit to a city which had given so noble and so memorable a reception to the Emperor, and that he was flattered by the demeanour of the population. Having quitted the terminus, Louis Napoleon mounted his horse. He wore the uniform of a lieutenant-general, and was attended by the Minister of War and General Castellane. The *cortège* proceeded towards the Prefecture in the following order:—The march was opened by detachments of mounted gendarmerie and the 1st Dragoons; the Minister of War and General Castellane followed the Prince; Generals Forey, Herbillon, Mauris, Desorties, Dumontet, Mellinet, their staff; the aides-de-camp of the Prince, his orderly officers, and other superior officers; the Ministers of the Interior and of Public Instruction; General de la Hitte, Piedmontese Minister of War; the mayors and deputies. The Prince stopped for a moment under the triumphal arch erected by the butchers, whilst some children greeted him with an offering of flowers. The Master of the Corporation of Butchers presented him with an address expressing the devotedness of the men whom he represented. During the entire long line of march the troops carried arms, and the military bands played warlike airs. There was but one cry amongst the troops and the population, that of "*Vive Napoleon!*" "*Vive l'Empereur!*" which was repeated by the females who filled the windows. Louis Napoleon's entrance, favoured by a brilliant sky, was a triumphal ovation. The receptions commenced at the Prefecture at half-past four o'clock. The Cardinal Archbishop (De Bonald) and his Chapter, the superior functionaries of the Department, the deputies of the Rhone, the mayors of communes, passed in succession before Louis Napoleon. The Prince replied graciously to the addresses. At half-past five o'clock he proceeded to the Archiepiscopal Palace where he was received by his Eminence the Cardinal, who conducted him to the bedroom in which the Emperor slept in March, 1815. It has undergone no change, and nobody has inhabited it ever since. The Cardinal, when introducing the Prince into that chamber, could not withold an emotion, which was shared by all his assistants. He viewed the regatta on the river from the terrace of the Palace. The *cortège* returned to the Prefecture at half-past six, where the Prince gave a dinner of sixty covers to the generals and civic authorities. At nine o'clock Louis Napoleon was present at the fireworks which were magnificent. The people's ball and the concert on the Place de Bellecour attracted an immense multitude.

On Monday, the 20th ult., the Prince reviewed the army of Lyons at eleven o'clock, and afterwards presided at the inauguration on the Place Napoleon of the equestrian statue of the Emperor Napoleon, the work of the sculptor Count de Nieuwerkerke, the Director-General of Museums, who was present on the occasion

The review took place in the Place Bellecour, in the midst of an immense concourse of the population, and with repeated cries of "*Vive Napoleon!*" An estrade was prepared for the authorities, and the filing-off was effected with the most enthusiastic acclamations. The Prince then proceeded to the Place Napoleon, along the Rue Bourbon, all the houses of which were dressed out with garlands and flags, the windows being occupied by ladies, who flung down flowers, and joined their voices to those of the crowd in the cry of "*Vive l'Empereur!*" At the moment when the Prince arrived on the Place, the statue of the Emperor was uncovered to the noise of cannon, military music and the singing of 600 children belonging to the public schools. Colonel Dubarnmel pronounced a short address to his Highness (Louis Napoleon), who replied in a speech interrupted several times by the cheers of the crowd and cries of "*Vive l'Empereur!*" (We gave the speech in full last week.) The Prince then got on horseback, and proceeded to the fort of La Vitriolerie. It is impossible to describe the enthusiasm of the population and the beauty of the spectacle, which was favoured by most delicious weather. No accident is to be deplored.

The following further official despatches exhibit still more clearly the character of the proceedings at Lyons on the 20th ult.

Five in the Evening.

The review of the army was magnificent. The Prince, at the inauguration of the statue of the Emperor, pronounced a speech which produced an immense effect. The siege works at La Vitriolerie interested his Highness, and he charged the General-in-Chief to signify his satisfaction to the troops. The staff greeted his Highness with a cry of "*Vive l'Empereur!*"

Six in the Evening.

The Prince has just returned from the fort of La Vitriolerie. In returning, as in going, the population thronged on his passage, and cheered him loudly. After a conference with the engineers of the Rhone and of the railways, his Highness got into a carriage, and proceeded to the Palace of the Arts, where an exhibition of the horticultural produce of Lyons was laid out. In going through the Rue Centrale, the Prince received from an immense population a reception of the most cordial description. (See *L'Empereur* of the preceding day and following him to the Palace St. Pierre, and being redoubled in the Place des Terreaux. The women flung flowers from the windows, and the carriage of the President was literally covered with them. His Highness went through every part of the exhibition, and addressed to the horticulturists his felicitations on what he beheld. They, in their turn, testified to him the liveliest expression of their gratitude. The Prince returned to the Prefecture by the quays of the Saône, where an innumerable crowd was collected. There, also, the houses were dressed out, flowers were flung down from the windows, and the air resounded with the cry of "*Vive l'Empereur!*"

In the equestrian group (*see Illustration*) referred to, the Emperor Napoleon is represented at the moment when, stopping the charger, and with his hand placed on his heart, he said to the inhabitants of Lyons, "Lyonese, I love you." The pedestal, which has been executed by M. Mangain, is of white marble, and is ornamented with *basso relievi*. In the front, the Imperial eagle, with extended wings, bears palms, with the legend—"*Lyonnais, je vous aime;*" at the back the two genii of the city of Lyons, namely, Industry and Commerce, support an escutcheon, on which is inscribed, "*A Napoleon.*" The sculptures on the sides are divided into four principal parts—the north is represented by branches of fir-tree, Prussian and Russian arms and flags, and shields on which are engraved the greatest feat of arms performed in those parts of the world; the south refers to mind Italy and Austria, by a representation of the Pont d'Arcole and of the passage of Mont St. Bernard; the East is characterised by palm-trees and a crown of lotus, and by shields, on which are exhibited the battle of the Pyramids and the pardon of the rioters at Cairo; and the West is represented by the English trophies. The side fronts are ornamented with reclining figures in bronze, personifying War and the Law. Wreaths of laurel surround the lowest part of the pedestal, and there may be seen engraved the names of the battles in which Napoleon commanded.

The departure from Lyons took place on the morning of the 21st, and on the same day, at six o'clock P.M., the President arrived at Grenoble. The proceedings of the day are thus given by a friendly hand in the pages of the *Moniteur*

The Prince President left Lyons this morning (21st ult.) at eight o'clock. His departure from that city offered a magnificent spectacle The entire population assemble on his passage, and saluted him with the most enthusiastic acclamations. The army of Lyons, which, during the stay of the Prince, had been, by its good appearance and skilful manœuvres, the admiration of the foreign Generals and the pride of our officers, was anxious to surround as long as possible the Prince, whose encomiums they were proud to have deserved. Stationed, according to the orders of General Castellane, along the road which the Chief of the State was to traverse, they paraded with him at the distance of a league from the city, and greeted him with their acclamations and good wishes. On quitting Lyons the Prince found himself amidst the population of the Isère, who still recollect, as if it had occurred yesterday, the magic return from the island of Elba. They collected with affection on the passage of the Prince. It was a continual torrent of people, dressed in their Sunday clothes, decorating from all the declivities of the Alps. Before each house a triumphal arch was erected; at each window ribbons and flags framed the portraits of the Emperor and of Louis Napoleon. The following are some of the inscriptions:—"To the Saviour of France!" "To the Conqueror of Anarchy!" "To the Heir of the Emperor!" "To Napoleon II." "To the Protector of Agriculture!" "To the Saviour of Industry!" &c. Besides, every stage of Napoleon's return from Elba was recalled by inscriptions. "Here the Emperor spent the whole of the 9th of March, 1815." Everywhere the inhabitants yoked themselves to the carriage of the Emperor," &c. In the villages of the Dauphiné, adorned with flowers, orange, and inscriptions, fires of sarments had been lighted, and a little further on the inhabitants had kindled their houses in the broad day. The road was strewed with evergreens, and the houses of the villages were decked out with garlands and flags. The population was everywhere drawn up on the road. The women presented the children to the Prince. Each commune was preceded by its pastor. The Prince President reached Grenoble at six o'clock P.M. The bells rang a merry peal, the artillery of the forts fired salutes, the entire population awaited him at the gate of the city, and the cry of "*Vive l'Empereur!*" repeated by an assemblage of 50,000 voices, shook the echoes of the Valley of the Alps. The Council of the department, the General, and a great number of functionaries had gone out to meet the Prince. It would be impossible to describe the enthusiasm and transports of joy of the inhabitants of Grenoble when the *cortège* appeared at the entrance of the gate of France. The Mayor, M. Arnaud, accompanied by his adjoints and the members of the Municipal Council, presented to the Prince the keys of Grenoble. (*See Illustration.*) There also stood, bearing the insignia of their functions, the Mayors and deputations of the 400 communes of the department. What contributed most to give a peculiar character to the entry of the Prince into Grenoble was the presence of masses of mountaineers, who descended from the steepest summits of the Alps, with drums at their head and knapsacks on their backs, bringing with them their wives and children, and whose feelings exploded at every moment by cries of "*Vive Napoleon!*" "*Vive l'Empereur!*" The Prince proceeded to the Prefecture along the quay, and through the garden of the city, which was filled with an enthusiastic crowd. The long avenue leading to the Prefecture was lined with a double row of young girls, who cast flowers on his passage. The entire city is illuminated, and decorated with flags, triumphal arches, and emblematical initials of Louis Napoleon. Magnificent fireworks representing the attack of the forts of Bastide and Rabot, have just commenced. It is impossible to describe the enthusiasm excited everywhere by the presence of the Prince. Never was the success of any cause so complete. One thing particularly strikes the inhabitants amid that enthusiasm; it is the contrast between the general emotion, and the calmness preserved by the Chief of the State, even when his heart is most keenly affected by the testimonies of love of which he is the object. His usual serenity, however, is then tinged with an air of benevolence which prepossesses in his favour.

On the 23d Louis Napoleon proceeded to Valence, thence to Avignon and Marseilles, at which latter city he arrived on the 24th ult.; and although from some of the reasons it would appear that his reception at those places was not quite so enthusiastic, especially amongst the middle classes, as at the places mentioned above, enough appears to show that he was very warmly greeted by the troops, the working classes of the towns, and the peasantry, especially the mountaineers.

At Marseilles, however, a frightful discovery has revealed a dark back-ground to this bright picture of triumph. An "infernal machine," of a most destructive character, has been found by the police, fitted up in a house on the line of street through which Louis Napoleon was to pass when making his public entry into Marseilles. The seizure of the deadly engine of destruction was effected by the Commissary of Police, at ten o'clock on the night of the 23rd ult., and a man who was in the house, arranging the machine, was taken into custody. Others implicated in the plot have also been arrested; they are said to belong to a secret society, called the "Vengeurs," and will probably be tried by the High Court of Justice. The 250 barrels of the machine were all loaded with ball, and there were seized, in addition to a great quantity of powder and balls, several seditious emblems and writings.

The *Moniteur* gives the following details of the conspiracy:—

The Minister of General Police has for some time past been on the track of a secret society, of which the object became every day more manifest. The members had resolved to make an attempt on the life of the President. The city of Marseilles had been chosen for the execution of the plot. M. Sylvain Bot, Inspector-General of the Ministry of Police, carefully followed its development and progress. The construction of an infernal machine having been resolved on, several of the members set to work, and the machine was quickly completed. It is composed of 250 gun barrels and four large blunderbuss barrels, the entire divided into 28 compartments. These 28 pieces were, for greater precaution, deposited in 28 different places until the moment a suitable place could be found to fix and put the machine together. The conspirators then occupied themselves with the choice of a situation, which should naturally be situate on the passage of the Prince President. They first fixed their choice on a first story in a house in the Rue d'Aix, whither they were to remove and raise the machine on the night previous to that in which the President was to arrive at Marseilles. Some suspicions which were excited in the minds of the conspirators caused them to change their sides, and a second locality was chosen. Like the first, it was situate on the passage of the President, being on the high road from Aix. An entire house was hired. It was a small house, composed of two stories, with two windows in front. The infernal machine was to have been placed on the first floor. It was seized on that spot. At the same moment one of the conspirators was in the very house in which the infernal machine was found. The others were in their houses, or in the different places where the police were assured of their presence.

The affair has increased the favourable disposition of the people towards Louis Napoleon; and, as occurrences of the kind were declared by him at the time of the *coup d'etat* to constitute the contingencies which might impose on him the necessity of again changing the form of the Government, it is regarded by all as continuing to the speedy proclamation of the Empire. The statements in circulation on this latter subject, and generally credited, are, that on the arrival of the Prince President at Tours, on his return, which will be about the 15th inst., a decree will be published in the *Moniteur* for the extraordinary convocation of the Senate, with the object of examining the addresses emanating from the departmental Councils, and of either framing a report thereon or passing a Senatus-Consulte inviting the President to assume the Imperial dignity. The reasons on which that important resolve will be founded will not differ much from those alleged on similar occasions, the necessity for stability being amongst the principal. A new plebiscite will be promulgated, and the nation appealed to, as perhaps a similar number of votes had at the 2nd December, to confirm or reject the action of the Senate. The return of the President to Paris from his present tour will, it is added, be attended with ceremonials of the most grand and regal character. Though not crowned Emperor, nor even officially proclaimed, the Imperial purple will be worn, and the seat could be displayed and the Imperial crown been actually on his brow.

The latest despatch relative to his progress states that, on the 27th ult., the President made his entry into Toulon the great naval arsenal of the south—on board the screw ship of the line, *Napoleon*, escorted by the following ships of war:—The *Ville de Paris*, of 120 guns, bearing the flag of Admiral La Susse; *Valmy*, of 120 guns, bearing the flag of Admiral Jacquinot; the screw ship *Montebello*, of 120 guns; *Henry IV.*, 100 guns; *Jena*, 90 guns; *Bayard*, 90; *Jupiter*, 86; *Charlemagne*, 90; steam frigates *Gomer*, *Mogne*, *Orenoque*, *Labrador*, of 450-horse power; corvette, *Reine Hortense*, 400-horse power, *Prony*, 320; *Caton*, 260; *Pluton* and *Chaptal*, 220; with the steam sloops *Eclaireur*, *Rapide*, *Meteore*, *Narval*, *Salamandre*, *Chacal*, *Pingouin*. Upon landing, the President was greeted with cries of "*Vive l'Empereur!*" from countless voices. The same cry was frequently repeated on his way to the residence of the Maritime Prefect. Such an animated spectacle was scarcely ever before witnessed at Toulon.

The Prince has given orders for the Cathedral at Marseilles to be rebuilt on its present site. The Minister of Public Worship, has obtained a credit of 2,500,000f. to meet the expenses, which sum is to be paid off in ten years.

The inhabitants of Bordeaux have determined to place in one of the museums of the town the carriage in which the Prince President shall enter the city.

MM. Thibaud, Jappy, and Cabias, supporters of the Government, have been elected Parliamentary representatives, the two former for the 3d and 4th electoral divisions of Paris, in the room of Cavaignac and Carnot, resigned; and the latter for Lyons. One-half of the electors abstained from voting.

RAILWAY ENTERPRISE IN DENMARK.—The concession of the Danish Government for the construction of the Schleswig railroad by Mr. Peto has been officially published. It confers on the contractor an exclusive right in the line for the conveyance of goods and passengers for 100 years from the date of the opening of the road. During that period no other concession will be granted for a line in the same direction, under the condition that the road shall be completed within three years. It will run from Flensburg, over Husum to Tonningen, and from Husum to Randsburg; the tract from Flensburg to Tonningen (40 miles) to be completed first. It will open up a rapid communication with the Baltic, and, in conjunction with the contemplated operations of the North of Europe Steam Company, give a powerful impulse to the already important trade of that district. The road will pass over a dead level, and its cost is estimated not to exceed £10,000 a mile.

A SHIP AND CREW DESTROYED BY LIGHTNING.—Intelligence has been received at Lloyd's of the total destruction of the ship *Muse*, of Queenstown, Pearson master, by lightning, on the 3rd of August last, when off the island of Man. The ship, being on her passage from Cardiff to Queenstown, was overtaken by a violent thunderstorm. At half-past 10 P.M., the vessel was struck by lightning, which passed down her mainmast, and striking the hull, separated the timbers, fore and aft. The ship instantly went down with the crew, fourteen in number, and two passengers. Captain Pearson, on rising, caught a floating spar from the wreck, on which he continued to buoy himself up, and for seventeen hours after wards, he kept himself above water, when he was happily descried by a Maltese coasting vessel, and landed at Queenstown, Ireland, the whole of the crew and passengers having perished.

CALIFORNIA.—The following is an extract from a letter received by Lieut. Palmer, R.N., from Mr. Kinnon, who lately left Sago for San Francisco:—"Heard at Valparaiso a horrible transaction had taken place; the convicts had risen, conspired with some of the officers, murdered the governor, and whosoever was opposed to them; seized two vessels, murdered every one on board, and sailed off. While I am speaking of this matter, I may as well tell you that one of the vessels was called the *John Elias*, in which William Kernaghan, of Sligo, was going home with a large sum of money. The ruffians murdered and burned him, and took all his money."

CALENDAR FOR THE WEEK.

SUNDAY, October 3.—Seventeenth Sunday after Trinity.
MONDAY, 4.—Old St. Matthew
TUESDAY, 5.—Horace Walpole born, 1717.
WEDNESDAY, 6.—Louis Philippe, late King of the French, born, 1773.
THURSDAY, 7.—Christophe, Emperor of Hayti, died, 1820.
FRIDAY, 8.—Eddystone Lighthouse finished, 1759.
SATURDAY, 9.—St. Denys.

TO CORRESPONDENTS.

A, A CONSTANT SUBSCRIBER is anxious to obtain particulars of the ancestry of the late Martha, wife of the Reverend Francis Wollaston, who died at Frankwell, near Shrewsbury, in the month of January, 1800. She was [illegible] Hanson, and was styled by [illegible] the learned Gentleman, Dodd." Was she of the ancient Northumbrian family, resident formerly at Dalley Castle and Throckenbarn Hall? Can any of our readers assist our correspondent's inquiries?

S W—Arms of Cannon, of Herts and Essex: "Arg on a fesse sa. between three crosses, pates gu. as many martlets of the first." Margaret, daughter and heir of George Canon, Esq., of Wyddial Hall, Herts, married, in the reign of Henry VIII., John Gyll, Esq., ancestor by her, of the Gyls of Wyddial, and the Gyls now of Wyzardsburg, Bucks

CAPTAIN ARDEN, Barton, Lichfield, will furnish A P with details of the family of Arden, if applied to

A CONSTANT SUBSCRIBER, who is desirous of ascertaining particulars of the son of the celebrated Admiral Sir George Rooke, is requested to send his name and address to the Editor, when he may obtain the information he requires.

F J J, Derby—We have no doubt that the fragment of one of the flags of the *Victory* described by our correspondent is a genuine relic. His upon record, that when the sailors of the *Victory* furled up the flags at Lord Nelson's funeral, and deposited them in the hero's grave, they tore off a considerable part of the largest flag, which they divided among themselves. Attempts were made by many of the gentlemen around the coffin to obtain portions of this cherished relic, but without success, the gallant tars appearing to place too high a value upon their acquisitions to be willing to dispose of them.

DRAMATICUS, New York—We shall be glad to hear from our correspondent.

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, OCTOBER 2, 1852.

SOME curious facts, showing the influence of cheap bread in the diminution of pauperism, may be gleaned from a Parliamentary document which has just been published. It is a return ordered by the House of Commons, on the motion of Mr. Milner Gibson, showing "the number of paupers receiving in and out-door relief in six hundred and seven unions and single parishes in England and Wales during the half years ending at Lady-day, 1850 and 1851 respectively, together with the average prices of provisions contracted for by the boards of guardians for the different counties." In some of the agricultural counties there is an increase of in-door, and a decrease of out-door, pauperism during the period; in other agricultural counties there is a decrease under both heads. In counties, parishes, and districts, where both agriculture and manufactures give employment to the people, the decrease is still more marked. The average price of bread did not differ during both periods, being stated at 1.11 of a penny per lb. The difference in the price of flour was scarcely perceptible, being 1.32 of a penny per lb. in 1850, and 1.31 of a penny in 1851. In oatmeal and in beef the difference was a trifle greater; oatmeal being at an average of 1.61 per lb. in 1850, and 1.55 of a penny in 1851; and beef being 4.38 of a penny per lb. in the former, and 4.11 of a penny in the latter period. The total number of in-door paupers relieved in 1850 was 289,960, while in 1851 it was 276,395, showing a diminution of 13,565. The total number of out-door paupers in 1850 was 1,519,348; in 1851 it was 1,313,934; being a diminution of 205,404; or, both kinds of pauperism included, of nearly a quarter of a million of human beings. All of these, we may reasonably suppose, in ceasing to be paupers, either emigrated to increase the general wealth of the world, or staid at home to increase the wealth of their native country, by gaining their own bread by their honest industry. The English counties in which there was a slight increase of in-door pauperism were Cambridge, Chester, Essex, Hertford, Lancaster, Lincoln, Norfolk, Northampton, and Suffolk; the numbers for these nine exceptional counties being 81,011 in 1850, and 91,705 in 1851; showing an increase of the public burdens equal to the subsistence of 10,694 persons. But even in these counties there was a very handsome per centra, which was more than an equivalent, in the diminution of out-door pauperism to the extent of 71,158 persons—the numbers amounting in 1850 to 480,886 persons, and in 1851 to 409,728. The only county in England in which there was an increase under both heads was Suffolk—an exception to which the Parliamentary return affords no clue, and upon which we are unable to offer an explanation. The returns for 1852, from all we know of what is happening around us, will exhibit results still more satisfactory. How Mr. Disraeli and his colleagues will reconcile these facts with their former theory of the public ruin under the system of Free Trade, is a matter for very legitimate curiosity.

We hear no more of the Reciprocity Treaty of Commerce between Great Britain and France, which, as the public was lately informed on authority that appeared to be sufficient, was in the contemplation of one or both Governments. The trading classes in France—whose numbers, whose enterprise, and whose hatred and dread of political convulsions have within the last ten or twelve years very greatly increased—would look with favour on any attempt to establish more intimate commercial relations with this country. The mortgagees, owners, and cultivators of the vineyards are especially anxious on the subject. These form a large and important class, shut out, by the mutual folly of their own country and of ours, from the nearest and best market in the world. The President of the Republic is probably desirous to bring about a better commercial understanding between the two nations, not only as regards the wine duties, but as regards all other impediments to the natural development of trade. Such an understanding could not but prove advantageous to France, and would be popular as well as advantageous in England. He has the credit of possessing a mathematical mind for facts, and must have studied, and perhaps appreciated, the benefits which Great Britain has derived, and is daily deriving, from the wise commercial policy of the late Sir Robert Peel. We must own, however, that our faith in his commercial wisdom has been greatly shaken by the conduct he has pursued within the last few days towards the kingdom of Belgium, and that we are not inclined to place as much reliance as before on the overtures which he is reported to have made through M. Persigny to Lord Malmesbury. Belgium, as all the world knows,

is a thorn in the side of the future Emperor. Whether it be that he longs to round the territories of France by its annexation; whether he envies it its dearly-purchased popular liberty and national independence; or whether he regards it with an evil eye for no better reason than the intimate connexion of its peaceable Sovereign with the Royal Orleans family, it cannot be denied that the tendency of many of his recent public acts and speeches is to create a belief that Belgium has no friend in the President. But that, to punish Belgium, he should resort to a measure which punishes France still more severely, almost passes belief. To be avenged upon Belgium, for refusing to accede to the terms of a proposed treaty, the details of which were fairly open to question, if not to objection, Louis Napoleon has largely increased the duty upon Belgian coal. If there be one thing that manufacturing and industrial France requires above all others it is coal. Of that article she is wofully deficient, and it should be the business of a clear-sighted ruler to favour its importation. Belgium possesses extensive coal mines, and should have been specially encouraged to supply so essential a commodity. The English coal trade, for the same reason, should have been made perfectly free in France. An impost, so injurious to her manufactures should have been abolished, or reduced to a minimum, if it were required for the purposes of revenue. The President, wishing to wound Belgium, has taken a different course, and France will be the principal sufferer. Only three months ago the President determined to establish an Excise duty on the manufacture of paper, with a view to raise revenue, because he found a similar impost existing in England. He was, however, met by so unqualified an opposition from the paper-makers of France, that it was found impossible to persist in the measure, and he prudently abandoned the intention. It is to be hoped, not so much for the sake of Belgium as for that of France, that the President will be equally open to receive advice and warning upon this subject, and to retrace a false step. If he do not, the world will draw its own conclusions; and many will probably think as we do, that, being determined to quarrel with Belgium, one pretext is as good as another, and that, possibly, he wishes to have on Belgian coal ultimately, if not proximately, by the simple process of the annexation of Belgium *en bloc*, coal-fields included.

THE COURT.

BALMORAL.

There has been little to diversify the usual routine of Court life during the past week. The weather, generally unsettled at this season in the northern districts, seems to have set in with unusual severity this year—interfering not a little with the out-door amusements of her Majesty and her Royal Consort; and the circumstance, taken in connexion with the death of the Duke of Wellington, induces a belief that the sojourn of the Court in the Highlands will not be prolonged over next week.

The only movements chronicled by the *Court Newsman* since our last are the following:—

On Thursday week her Majesty and his Royal Highness Prince Albert drove in an open carriage to Invercauld. On that day dined with her Majesty and the Prince Consort, her Royal Highness the Duchess of Kent, her Serene Highness Princess Hohenlohe Langenburg, her Serene Highness Princess Adelaide of Hohenlohe Langenburg, and the Earl of Aberdeen.

On Friday the Queen drove out in an open carriage, accompanied by the Princess Helena. The Prince Consort went out deer-stalking. In the evening Sir John Pakington arrived to remain as Secretary of State in attendance upon her Majesty.

On Saturday her Majesty and the Prince Consort went to the top of Morven, a high hill in the neighbourhood of Balmoral. The Prince of Wales and Prince Alfred left Balmoral for the Sheriff Ait by Gulnach, attended by Mr. Gibbs. The Princess Royal, the Princess Alice, and the Princess Helena drove to Invercauld, and passed the afternoon with the daughters of Mr. and Mrs. Farquharson. The Earl of Aberdeen left Balmoral on the same day.

The inclemency of the weather prevented her Majesty from attending divine service on Sunday.

On Monday the Queen drove towards Gairndon Shiel, attended by the Honourable Joseph Byng. The Prince Consort went out deer-stalking; a sport which his Royal Highness resumed on the following day.

Viscount Hardinge, the new Commander of the Forces, arrived on a visit to her Majesty on Wednesday, and had a long interview with the Queen in reference to the army.

His Royal Highness the Duke of Cambridge honoured Sir George Wombell with his company at dinner on Friday, the 24th ult. On Monday, his Royal Highness received the Duchess of Cambridge and the Princess Mary at dinner at his apartments, in St. James's Palace. A select circle met the Royal party.

His Excellency the Sardinian Minister is shortly expected to return to this country, to resume his diplomatic functions.

The Duke and Duchess of Norfolk are entertaining the American Minister, Mrs. Lawrence, and a distinguished circle of visitors, at Arundel Castle, Sussex.

The Countess of Westmoreland and Lady Rosa Fane, have arrived at Brussels from Paris.

The Earl of Pembroke has arrived in town from Paris.

Lord Milford has arrived in town from Paris.

The mortal remains of the late Major the Hon. Charles Weld Forrester have been interred in the family vault at Willey Park, county of Salop.

BIELA'S COMET.—The *second* part of Biela's Comet, which separated under the eyes of the astronomers, in 1846, into two distinct bodies, has just been observed by Professor Secchi, of Rome, not far (apparently) from the larger comet; a fact which will, doubtless, be regarded as one of extraordinary astronomical interest.

THE HENSMAN CUP engraved at page 256, was presented to Mr. Hensman in testimony of the active part he took in arranging and working the machinery in the Great Exhibition; and not in distributing the medals, as stated last week.

THE PAUPERISATION ST. MARTIN'S WORKHOUSE.—It appears that some of the emigrants for whom such exertions were made by the parish authorities of St. Martin's-le-the-Fields, in order to enable them to emigrate to Australia, were quite unworthy of the kindness bestowed upon them. On the arrival at Plymouth of the ship *Calcutta*, in which they had sailed from London, the Captain found it necessary to bring a complaint before the magistrates at Saltash, against Charles, Adam, and Henry Young, three of the paupers, for mutiny and threats of violence against the Captain. The charge was satisfactorily proved, and the prisoners were ordered to be imprisoned for seven days, which order was carried into effect. It has been supposed, it was, on the intercession of the Captain, permitted to proceed on the voyage.

AN AGED AND DISTINGUISHED VETERAN.—The Madrid journals of the 24th ult. officially announce the death of the Duke of Bayley, already known by telegraph. The bells of all the churches were tolled, and the minute guns were fired. The Queen, who greatly esteemed the old Duke, has given orders that he shall have a public funeral, and that the Court shall go into mourning for three days. Her Majesty has also intimated that she will attend the funeral, which will take place at Leganitos, at Madrid. The precise age of the distinguished soldier was ninety-five and a half years.

FOREIGN CATTLE.—The importations of cattle from the continental states of Europe have for several weeks past been of a very extensive character. The total arrivals of foreign cattle into the port of London alone, independently of those at the outports, amounted last week to considerably more than 13,000 head of stock of all kinds. Of these there were about 11,000 sheep, besides about 2000 head of neat cattle. A considerable number of the latter were sent into the country alive. The remainder were killed at Islington, which adjoins the cattle market, and sent to the metropolitan shops. The principal supplies of foreign cattle have been received from Holland, which also exports large numbers of sheep, and from France, from whence immense numbers of corn and cows being caused by the large and important arrivals from Denmark and the Hanseatic states.

CONVICTS FOR VAN DIEMEN'S LAND.—The *Lord Auckland* transport, having on board 250 convicts, taken from the Spike Island convict *depôt*, near Cork, is about to sail for Van Diemen's Land. These men have been presented with tickets of leave for good character, and, on arrival in that colony, are to be permitted to turn their attention to any pursuit they please—for instance, gold digging. The expense of sending out these men will fall little short of £20,000!

POSTSCRIPT.

THE SHERIFFS' DINNER.

On Thursday evening the newly elected Sheriffs of London and Middlesex, Mr Alderman Carter and Mr Cubitt, gave the usual dinner in the Egyptian Hall, Mansion-house-street. Among those present were Lord Denman, Sir Stafford Northcote, M.P., the Solicitor-General, Mr. Alderman Challis, M.P., and Lord Mayor elect Mr. Masterman, M.P., the Queen's Remembrancer, Alderman Sir John Key, Alderman Sidney, Alderman Moon, Alderman Finnis, Alderman Lawrence, Alderman Sir Walter Carden, the Governor and Deputy-governor of the Bank of England, Mr. Edwin James, Q.C.; Messrs. ex-Sheriffs Cotterell and Swift, M.P., &c.

The usual loyal toasts having been disposed of, "Sir Fitzroy Kelly and her Majesty's Ministers" was drunk amid considerable enthusiasm.

Sir Fitzroy Kelly expressed his regret that he was the only member of her Majesty's Ministers present. In returning thanks for the honour conferred upon him, he felt it a duty to advocate the claims of the legal profession. He thought, however, that he might claim for the Ministry of which he had the honour to be a member credit for a sincere and firm determination to do their duty towards their country. Having paid a high compliment to the gallant nobleman who was recently appointed at the head of the army, and who was well qualified to discharge the important duties intrusted to him, he would say one word as to the noble and gallant officer at the head of the navy, the honourable and learned gentleman resumed his seat amid great cheering.

The remaining toasts and speeches were of the ordinary character.

BARON ROTHSCHILD.—It is the determination of Baron Lionel de Rothschild to take his seat in the House of Commons, as one of the representatives of the City of London. The necessary writ has been delivered to the Clerk of the Crown.—*Jewish Chronicle*

NEW COLLEGE, ST. JOHN'S WOOD.—On Thursday the winter session of this college was opened by the usual devotions, which were conducted by the Rev. Dr. Harris, the principal, and other professors; after which Professor Godwin delivered an inaugural oration. There are fifty students at present in the college, and amongst the new admissions are six lay students.

ST. GEORGE'S CHURCH, ISLINGTON.—The ceremony of laying the foundation-stone of St George's Church, Thornhill-square, was on Thursday performed by the Right Hon. Lord Bishop of London, in the presence of a considerable number of ladies and gentlemen. At the conclusion of the ceremony a collection was made in aid of the building fund.

NEW MASONIC HALL AT LIVERPOOL.—On Thursday the foundation-stone of a new hall for the brotherhood of Liverpool was laid by the Mayor (Mr. Littledale), in the presence of a numerous assemblage. It is being built on the site of the old hay-market, adjoining the Queen's Hotel, and opposite to the north end of St. George's Hall.

SANITARY STATE OF LEEDS.—The Leeds Town Council, at a special meeting on Thursday, determined to devote a sum of £600 for promoting the sanitary state of the borough, as a check against cholera, should that town be again visited by that scourge.

SHOCKING ACCIDENT.—Between three and four o'clock on Thursday afternoon, George Bradshaw, one of the workmen employed in repairing the roof of a house in Carey-street, Lincoln's-inn, in proceeding up a ladder, carrying a pot of boiling lead, slipped, and fell to the ground from a height of twenty feet. He was taken up perfectly insensible, and conveyed to the hospital. The unfortunate man, besides having received many contusions, was dreadfully scalded by the splashes from the boiling lead. His recovery is almost hopeless.

EXTENSIVE FIRE AT DOCKHEAD.—The spacious range of premises belonging to Mr. Reece, a hatter, dyer and silk-mercer, of No. 9, Thornton-street, Dockhead, were almost entire y destroyed, together with the stock and trade. The alarm was given by a fire which broke out about two o'clock yesterday morning, and by half-past six the premises were reduced to ashes.

ACCIDENT AT THE OPENING OF THE BIRMINGHAM AND OXFORD RAILWAY.—Preparatory to the opening of this line to the public yesterday (Friday), a special train left Paddington on Thursday morning at nine o'clock, propelled by the magnificent engine the "Lord of the Isles," which formed a feature in its department in the Great Exhibition. The directors and a large party of friends, with the band of the Life Guards, travelled by the train, for the purpose of being present at the opening. At about several miles and a-half down the line the train unexpectedly came into collision with the ordinary passenger train, which about six miles of Banbury. The crash was very great, and many of the passengers in the second-class carriages were much cut and bruised. The trucks at the end of the train were smashed, and some of the second class carriages were injured. The "Lord of the Isles" went of the line, and is somewhat damaged. Another engine conveyed the special train to Leamington. A *déjeûner*, attended by about 180 ladies and gentlemen, presided over by Mr. Simmonds, one of the directors, afterwards took place at the Regent's Hotel, and the special train left Leamington for London about half-past seven, reaching the Paddington station yesterday (Friday) morning at a few minutes past one.

LATEST FOREIGN NEWS.

FRANCE.

Our advices of yesterday (Friday) from Paris state that the Prince President left Toulon for Aix on the 29th ult.

Gaillard, principal author of the infernal machine seized at Marseilles, as noticed in another place, has been arrested at St. Etienne, and has made a full confession. A man named Loriot has also been taken into custody at Tours. The Court of Aix has been fixed upon for the trial of the conspirators, and not the High Court of Justice. Addresses of congratulation to the Prince upon his escape are generally preparing.

The Government candidate for the Herault, M. Doumet, has been elected. Out of 49,000 only 14,000 voted.

The *Moniteur* contains a considerable number of names of persons decorated with the Legion of Honour and military medals. The same paper contains a great many addresses in favour of the restoration of the Empire.

INDIA.

A telegraphic despatch from Trieste, received yesterday (Friday) announces the arrival there of the Overland Mail, with advices to Sept. 1, from Bombay.

The only news of interest which they contain refers to the Burmese war, for the further energetic prosecution of which great preparations were being made. A general advance of our troops up the country was expected as soon as four or five fresh regiments had reached Rangoon.

Commodore Lambert, accompanied by Captain Rundall, of the Engineers, had gone up to Prome in the *Phlegethon* steamer to reconnoitre, and it was understood that she would be speedily followed by other vessels, and that Prome would be occupied by an advanced force, consisting of the 18th Royal Irish and 40th Native Infantry.

ROYAL PANOPTICON OF SCIENCE AND ART.—On Thursday the annual meeting of this company was held at the Sublimine House, Leicester-square, G. N. Hoare, Esq., in the chair. The report stated that, owing to the engineers' strike, and other circumstances, the building was not yet completed, but there could be no doubt that a dividend of 25 per cent. would be left on the estimates. The whole was now in an advanced state, and would shortly be opened to the public. The report was adopted.

AGE ASSURANCE COMPANY.—On Thursday the first annual meeting of this company was held at the offices, in Chancery-lane; J. Bell, Esq., in the chair. The report stated that from the circumstances of the case the directors had not deemed it prudent to declare a bonus, but had confined their operations to obtaining and working the company, to the extent of £360 10s. 8d. which, however, could only be realised by the future working of the company, the business of which was gradually on the increase. The balance of assets over liabilities available for the security of the assured was £391,901 10s. 8d. The report was adopted, and some formal business transacted.

DEPARTURE OF GOVERNMENT EMIGRANTS.—On Tuesday morning the *Sir Robert*, a Dutch vessel, chartered by the Government, was towed down the river from Deptford to Gravesend, whence it sailed with upwards of 400 emigrants for Geelong, Port Philip. The vessel was accompanied by a chaplain (the Rev. Thomas Fownall Bourbee, M.A., Fellow of St. John's College, Cambridge, and late curate of Cheltenham), a surgeon-superintendent (James Lenman, Esq.), a schoolmaster, matron, &c.

INQUEST ON THE HON. MAJOR FORRESTER.—This gentleman having died rather suddenly, and under somewhat mysterious circumstances, a post-mortem examination was made, and all the parts were found in a healthy state, but there appeared several bruises on the body. Mr. Lewis, however, in reporting the result of the examination of several medical men and other witnesses, the jury returning the following verdict:—"Deceased died from the effects of opium incautiously administered by himself, in the absence of a written instruction by his medical attendant."

NORTHUMBERLAND HOUSE.—The court-yard of this old and historical ducal mansion is about to be extended during the ensuing year. The houses on the west side of Northumberland-court, an isolated clump as it were, facetiously known to expectants and half-pay officers as the Scotch Barracks, are to be pulled down to admit of the extension. His Grace proposes to give ample remuneration to the out-going tenants. The "Scotch Barracks" at one period afforded a residence to the immortal Nelson.

METROPOLITAN NEWS.

ELECTION OF LORD MAYOR.—On Wednesday (Michaelmas Day) the usual proceedings were taken by the Common Hall of the Livery, held at Guildhall, for the election of a Lord Mayor for the ensuing year. Ten names were put in nomination, viz. Aldermen Challis, Carter, Lawrence, Moon, Sidney, Masterman, Finnis, Hawkins, and Carden, who were severally proposed by Messrs. Deputies Hunter, Lott, Lucas, Hall, Hodgkinson, Hunter, Wire, Hall, Hodgkinson, and Hunter. The show of hands was declared by the Sheriffs to be in favour of Alderman Challis and Sidney, the Lord Mayor and Alderman returned to their private Court, and shortly after resumed their seats, and were declared duly elected. Mr. Deputy Hodgkinson, Esq., Alderman and Butcher (Cheers.) A vote of thanks was then passed to the late Sheriffs, and the proceedings terminated.

SWEARING-IN OF THE NEW SHERIFFS.—On Tuesday Alderman Carter and Mr. Cubitt, the new Sheriffs, were sworn in at Guildhall. They were accompanied from the Court of Aldermen to the hustings by the Lord Mayor, several of the Aldermen, Mr. Swift and Mr. Cotterell (the late Sheriffs), and attended by the usual [illegible]. The new carriages and liveries were present in attendance upon the Sheriffs. The Sheriffs-elect were attended at the Court of Exchequer, and were presented in due form, according to ancient usage, by Mr. Baskes, the Cursitor Baron of the City. [illegible] there a section. After the presentation [illegible] of the Recorder, the learned Cursitor Baron pronounced her Majesty's approval of the choice of the citizens in the election of the present Sheriffs, and the customary oaths were administered. The Recorder then, in the name of the Sheriffs, invited the Cursitor Baron to their inaugural banquet in the evening, after which the procession returned to the City in the same order.

CITY REGISTRATION.—The revision of the lists for the city of London commenced on Saturday last, when Mr. Serjeant Wilkins, the barrister for the Liberal side, attended at the Court, and Mr. Lott on the conservative side. Notice and objections upon the whole of the lists stood as follows:—Claims by the Liberals allowed, 3; claims disallowed, 1; claims by the Conservatives allowed, 1; disallowed, 3. Objections by the Liberals: sustained, 477; failed, 10. Objections by the Conservatives: sustained, 443; failed, 137. Objections by both parties: sustained, 24; failed, 4. Upon a comparison with previous years, it appears that in 1851 the Liberal claims allowed amounted to 43; disallowed, 24. The Conservative claims allowed 1, and failed 6. The Liberal objections sustained were 1,040; failed, 1. Conservative objections: sustained, 623; failed, 119. Objections by both parties: sustained, 340; failed, 3. In 1851 the Liberal claims sustained were 42; failed, 18. Conservative claims: allowed, 1; failed, 3. Objections by the Liberals: sustained, 538; failed, 83. Objections by the Conservatives: sustained, 52; failed, 1,121. Objections by both parties: sustained, 183; failed, 3. It would be seen by this comparison that the number of claims and objections had gradually diminished. In 1850 the claims and objections, by both sides amounted to 1779; in 1851, to 1911; and in the present year to 1378 only.

CITY SEWERS COMMISSION.—At a Court held on Tuesday, Deputy Peacock in the chair, amongst other business, the propriety of closing the Courts held in the City was discussed. It was ultimately agreed upon that an application should be made to the Government for a copy of the evidence on the state of the City churchyards already collected by the official authorities, with a view of referring the matter to the Improvement Committee.

ROYAL EAR DISPENSARY, DEAN-STREET, SOHO.—The thirty-fifth annual report of the Committee of the Royal Dispensary for Diseases of the Ear, Dean-street, Soho, has been issued, from which it appears that during the past year 1939 patients were admitted on the books; 338 were discharged cured, 192 were discharged relieved, and 302 remain in the list of attendance at the institution. From the able report of Mr Harvey, the eminent surgeon to the institution, it would appear that the parties to whom the gratuitous benefits of his successful treatment in aural surgery as thus shown are extended, consist of clerks, needlewomen, domestic servants, artizans, soldiers, sailors, distressed governesses, and others of the poor industrious classes, who have not the means to obtain out of their own resources that skilful and scientific professional treatment which their respective cases demand. It is therefore a matter of gratulation that such an institution has been in general well supported by the contributions of the public during the past year. Among the donors and subscribers are his Majesty the King of the Belgians, her Royal Highness the Duchess of Kent, his Grace the Archbishop of Canterbury, &c.

FAMILY DINING.—On Tuesday evening the annual *réunion* of the members and friends of the Early Closing Association was held at the Exeter Hall Hotel, Strand, Mr W Cash, the treasurer of the Royal British Bank, in the chair. The speakers were the chairman, Mr. A. King, the Rev J Branch, and others. The secretary detailed the progress of the early closing during the past year. Mr. Hitchcock, of St. Pan's Churchyard, had promised to give as much to their funds as they could collect in the year. They had raised £406, which, after being duplicated by Mr. Hitchcock, they had been enabled to pay off £300, and after defraying all the expenses of the year, they had £500 left in hand. They had held a great number of meetings, not only in London, but in the provinces, and thirty sermons had been preached in the provinces against late shopping. One of the most important correspondents of the early closing movement in the ensuing year is to be a "woman's league" against late shopping as a practice which entails upon her misery and evil.

CLERKENWELL BATHS AND WASHHOUSES.—Monday night a special vestry meeting, convened in compliance with a requisition numerously signed, took place at the vestry-room of St. James's Church, and was very numerously attended. Mr. Charles Hill, one of the churchwardens, presided. A resolution was adopted in favour of the establishment of baths and washhouses in the district. The resolution of the meeting will be forwarded in due course to Mr. Tidd Pratt, the Home Secretary. On his approval being signified, another vestry will be convened for the election of commissioners under the act.

FALL OF TWO HOUSES IN SEVEN DIALS.—SEVERAL PERSONS SERIOUSLY INJURED.—On Monday morning, between the hours of two and three o'clock, two houses near the angle of Queen-street and Great St. Andrew-street, suddenly fell in with a tremendous crash, crushing a great number of the inmates, and burying them in the *débris*. One of the houses was a lofty building, which was let out as a cheap lodging-house, having a frontage in Queen-street of upwards of 40 feet, extending as far as the houses in Great St. Andrew street; and the other was a building belonging to Mr. Levy, in which an old and extensive business was carried on. The confusion and consternation occasioned by the accident were very great. Considerable exertion, having, however, been used by a body of workmen in the neighbourhood, the whole of the sufferers were dug out from the ruins, providentially without any loss of life. The following are the names of those known to have been injured:—In St. Giles' Infirmary: Wm. Kalbhecker, aged 61; John Shaft, aged 48; and John Forest, aged 39. In Charing-cross Hospital: Charles Regan, aged 30; Joseph Holmes, aged 64; James Hayes, aged 36; and Hannah Levy, age not known.

THE NEW PARK AT KENNINGTON COMMON.—Her Majesty's Commissioners of Woods, Works, and Public Buildings have taken formal possession of Kennington-common, and entered into contracts for carrying out the design of the act of Parliament converting it into a park and recreation. The intended pleasure-grounds comprise an area of twelve acres, and will be laid out in a series of miniature grass-plots, circular walks, and shaded pathways, ornamented at each angle with clusters of shrubs and evergreens; and inclosed with an iron palisading six feet high.

FATAL ACCIDENT AT PUTNEY BRIDGE.—On Sunday, between the hours of eleven and twelve o'clock, an outrigger boat, with four persons in her, was in the act of passing through the centre arch of Putney-bridge, when, from some cause unexplained at present, the boat got athwart one of the wooden piers, and was instantly capsized. Three of the party, being good swimmers, were enabled to save themselves; but William Butts, aged 25, who was described as a remarkably fine young man, and a block-maker by trade, was unfortunately drowned.

FIRE IN BERMONDSEY.—On Thursday morning, about one o'clock, a fire broke out on the premises of Mr. Williams, ginger-beer manufacturer, Grange-road, which totally destroyed the stock and other property, and damaged the adjoining houses.

METROPOLITAN COMMISSION OF SEWERS.—On Tuesday a special court of Commissioners was held at the Guildhall, Mr. Deputy Peacock in the chair, when there were present Sir J. Duntze, Major Hanson, Mr. R. D. B. Gordon, Mr. G. S. Smith, Mr. W. Hosking, Mr. T. Hawes, and Mr. W. Hawkshaw. The secretary reported the available balance of cash to be £24,428 10s. 10d.; and payments were then ordered to the amount of upwards of £9,000. Drainage rates, at the rate of 1s. in the pound, were ordered upon the Upper and Stockwell, the Greenwich, and the Ravensbourne districts. The ordinary business was then disposed of.

GENERAL SCREW STEAM-SHIPPING COMPANY.—At the ordinary half-yearly meeting of this company, held on Wednesday, at the London Tavern (J. W. Ellis, Esq.), in the chair, the report read was adopted; and a dividend, at the rate of 5 per cent. per annum, to be paid for the half-year ending the 30th June last, free of income-tax, was resolved upon.

BIRTHS AND DEATHS.—Births registered in the metropolis for the week ending Saturday, September 25, were:—Males, 847; females, 793; total, 1640. The deaths during the same period were:—Males, 589; females, 484; total, 1073. Average of the corresponding week of the preceding ten years, 1042. The difference between the total number of births and deaths is 567, which is 54 more than the increase of the previous week. The deaths registered in the week to since July in the corresponding weeks were:—38, 47, 49, 51, 53, 58, 67, and 83. Diarrhœa, which continues to decline, was fatal last week to 61 children and 11 adults; cholera, to 7 persons; typhus, remittent fever, &c., to 45.

METEOROLOGICAL OBSERVATIONS.—At the Royal Observatory, Greenwich, the mean height of the barometer in the week was 29·373 in. The mean daily reading was above 30 in. on Wednesday, Thursday, Friday, and Saturday. The mean temperature of the week was 54·3 deg., the same as in the previous week. On Tuesday the mean daily temperature was only 49 deg., which is 6·9 deg. below the average of the same day in ten years. The wind was for the most part in the south-west.

STRATHFIELDSAY, THE SEAT OF THE DUKE OF WELLINGTON.

SKETCHES OF STRATHFIELDSAY.

To this unostentatious country-house, so soon as business, rather than the conventional usages of the world, set him free, the late Duke of Wellington was in the habit of retiring, that he might relax both in body and mind, and enjoy, as he heartily did, the society of his most intimate friends. Strathfieldsay belongs to the title, and as such is hereditary in the family of Wellesley; it is a fine estate, but would scarcely attract much of the tourist's notice, were he not informed that it had been the seat of the most illustrious man of his age.

Strathfieldsay, originally the seat of the Earls Rivers, lies upon one of the edges of the county of Berks; being distant from Reading about eight or ten miles, and from London not more that fifty. The readiest means of access to it is from the Farnborough station of the South-Western Railway, whence a drive of an hour and a half will carry you to the park paling, and by-and-by to one of the gates. The surrounding country has on the London side many miles of waste heath, and multitudes of firs; with hamlets and detached cottages at wide intervals, and here and there patches of pretty scenery.

Everything in and around the family seat of the house of Wellington is unpretending in the extreme. You enter the park by an avenue, a mile in length, of elms, of a broader-leaved kind than the common English elm, and forming a tree of less altitude. The surface over which this avenue passes is undulating, but has no particular point of attraction. The grounds have, indeed, a few slopes or falls, the most extensive of which ends in a sort of valley, through which runs the river Lodden, widened, and otherwise heightened in effect, passing close, in its onward progress, to the mansion. The park is well wooded with trees of all ages and sizes, but chiefly with old oaks and elms, and ancient thorns; and there are groves, thickets, and plantations. The avenue of elms terminates at a short distance from the house, where the pleasure-ground commences on the left, and a plantation continues to the kitchen-garden and stable-offices to the right. The approach road is still continued in a straight line between them till it terminates in a circular road round a piece of turf, to the left of which is the entrance-front of the house. It lies very low; and a clump of tall trees screens, and in some sort embowers, it on the flank. The house itself, which was built in the reign of Queen Anne, is long, and has very tall chimneys; but its whitened walls and grey slate roof lack the dignity of the Elizabethan era. It presents two rows of main windows along its front; the hall-door has pillars on each side, and a flat roof. We shall say little of the interior: after passing through the entrance-hall, which contains several good pictures—two of them masterpieces by Fuseli—the visitor wanders through the comfortable dining, drawing, and bed-rooms, &c., of the ground-floor, the only part of the house shown to strangers. The late Duke's own room is one of the suite. All the rooms are alike characteristic of their late owner, in their extreme neatness, order, and unostentatious attention to comfort.

STRATHFIELDSAY.—THE DUKE'S FAVOURITE TREE.

VIEW IN THE PLEASURE-GROUNDS OF STRATHFIELDSAY.

was open to the innumerable claims upon his time of county business and he made a point of being at home to entertain the Judges as often as they passed on the circuit. We may here mention one of the last acts of the Duke's Lieutenancy of Hants, namely, the writing of a letter to Thomas Woodham, Esq., Deputy Clerk of the Peace at Winchester. This communication related to militia matters, and reached Mr. Woodham at Winchester on Wednesday afternoon, the 15th ult., twenty-four hours after his Grace's death, the letter having been mis-sent to Manchester.

At Strathfieldsay the Duke entertained George IV.; here King William and Queen Adelaide spent some pleasant days; and here Queen Victoria and Prince Albert were guests early in 1845. When such matters did not interfere with his purely domestic arrangements, the habits of the noble Duke at Strathfieldsay were quiet, unostentatious and philosophic. He breakfasted with his company at ten, retired to his own room afterwards, devoted several hours to his endless correspondence, except on hunting days, and went out, either to ride or walk, about two. Seven was his dinner hour; and often after tea he formed one of a quiet rubber of whist, when the stakes played for never exceeded five shillings.

Another peculiarity, attributable, it is said, to the taste of the late Lord Rivers, is remarked in the apartments: the walls are almost covered with engravings, most of them of the British school. There are several splendid pictures, particularly a series of portraits of the Spanish monarchs; and a noble portrait of the late Duke of York, by Sir Thomas Lawrence.

At Strathfieldsay, the Duke of Wellington was not able to divest himself of his public character. As Lord-Lieutenant of the county, he

The grounds about Strathfieldsay are neat and well kept; and a tortuous path, which leads through the shrubbery, is a charming retreat. Our Artist has sketched two of the most interesting points in the grounds—one of them, "the Duke's Tree," from being that under which his Grace loved to sit and enjoy the unbroken quiet of the scene.

The house and grounds occupy about 40 acres; the park, 1000 acres. The pleasure-grounds and gardens are tastefully disposed, and reflect much credit upon Mr. Johnson, the head gardener.

We shall resume our Illustrations of Strathfieldsay in a week or two.

THE LATE MR. PUGIN.

THE LATE A. WELBY PUGIN, ARCHITECT.—FROM THE PORTRAIT PAINTED AND ENGRAVED BY J. R. HERBERT, R.A.; THE PRINT PUBLISHED BY MESSRS. HERING AND REMINGTON, 137, REGENT-STREET, LONDON.

UNDER the gloom of the great death which now overshadows the land, less notice, than otherwise would have been the case, has been taken of the demise of one whose career forms a memorable era in the annals of British architecture. This was Welby Pugin, whose genius soared back to those times of religious enthusiasm, when England built up some of the most beautiful ecclesiastical edifices in the world—Welby Pugin, whose lessons and examples pointed out the true form and spirit of the Gothic school, and revived its graces and magnificence amongst us. This great architect was, in every respect, a wonderful man: his too brief course of life is marked with consummate energy and ability.

Augustus Northmore Welby Pugin was born in 1811; he was the only child of Augustus Pugin by his marriage with Miss Katherine Welby, a member of the Welby family, in Lincolnshire, now represented by Sir William Earle Welby, Bart., of Denton Hall, near Grantham, in that county.

Augustus Pugin, the father, a native of France, though settled in England, was by profession an architectural draughtsman, and was much distinguished for his advocacy and activity in aiding towards that revival of pointed architecture, which has characterised this century. He produced various valuable and elaborately illustrated works, descriptive of mediæval architecture, brought out in concert with Mr Britton and Mr. Le Keux. His chief books were "Specimens of Gothic Architecture," "Architectural Antiquities of Normandy," "Gothic Ornaments," and "Examples of Gothic Architecture"—which last was finished by his son, Mr. Welby Pugin. Though the father never practised as a constructive architect, he was an able master in the theory and elucidation of his art; several well-known proficients were trained in his office, of whom his own more eminent son stood foremost. Thus trained in the daily study of those forms in whose manipulation he was to become so great an adept, young Pugin made rapid and wonderful progress. For his general education he was first indebted to the instructions of his mother; during some after years, he was a private pupil at Christ's Hospital. In architecture his youthful spirit was still further warmed by his travelling in England and Normandy with his father, then in search of materials for his publications. One opportunity of exercising his taste was afforded him by being called in to aid the Grieves, in the delineation of their beautiful architectural scenery at Her Majesty's Theatre, and at Covent Garden. In this occupation he was occasionally engaged for two years. His first more public employments were designing the furniture for Windsor Castle, and making working drawings for Rundell and Bridges' plate, in the style of the middle ages. On the death of his father and mother, in 1833, Mr. Pugin went to reside at Ramsgate. In 1834, he seceded from the Protestant church, and joined the religion of his fathers. In 1835 his book on "Gothic Furniture," and "Ironwork," brought his talents before the world, and formed the foundation of his fame. Other writings, equally popular, quickly followed. Their author building a house for himself—St. Marie's Grange, at Salisbury, there entered enthusiastically and energetically on the duties of his profession—on those labours of which his country has gathered and enjoyed the fruits. In 1836 appeared his famous volume, called "Contrasts; or, a Parallel between the Noble Edifices of the Fourteenth and Fifteenth Centuries, and similar buildings of the present day; showing the present decay of taste; accompanied by an appropriate text." This publication took his own profession and the public by surprise, from its originality and earnestness. Its tenets and strictures, as might be expected, gave rise to a perfect storm of opposition; but the sentiments he then so plainly and boldly expressed, have long since triumphed, and been admitted as truths.

Just at this period, the communion to which Mr. Pugin had allied himself evinced considerable energy in church building, and his constructive and literary abilities soon found extensive employment. He began with that graceful little Gothic chapel so conspicuous from the railway at Reading. Then came his first great work, the church at Derby, built from his plans, by the justly-reputed Mr. Myers, for the Rev. Thomas Sing, a gentleman of ardent piety and taste, who was among the earliest to encourage this new movement in religious architecture, and who has since devoted much time and money to the erection of very handsome ecclesiastical edifices within the town of Derby. As to the church there, by Mr. Pugin, and the other buildings elsewhere, from his designs, which rapidly followed, it would require a volume to describe their peculiarities and beauties. Suffice it here to enumerate the principal of them, from the *Builder*, which were—St. Chad's Church, Birmingham; St. Edward's, St. Mary's, and two other churches at Liverpool; the church and convent at Edge Hill; St. Wilfred's, Manchester; churches at Kenilworth, Oxford, Cambridge, Stockton-on-Tees, Newcastle-upon-Tyne, Preston, Ushaw, Keighley, Yorkshire; Sheepshead, Warwick Rugby, Northampton, Stoke-upon-Trent, Brewood, Woolwich, Hammersmith, Pontefract, and Pulham; St. Edward's, near Ware; St. Martin's, Buckingham; St. Wilfred, near Alton; St. Barnabas, Nottingham, with a convent and chapel in the same town; St. Bernard's Church and monastery, Leicester; the Convents of the Sisters of Mercy at Birmingham, Liverpool, and London; St. Gregory's Priory, Downside, near Bath; colleges at Radcliffe and Rugby, and improvements at Maynooth, Ireland (on the latter he was engaged by the Government of the day); the Roman Catholic cathedrals of Killarney, Enniscorthy, and St. George's, Southwark, with the schools, priests' houses, and other buildings connected therewith; and Sibthorpe's Almshouses, Lincoln. His works for his friend and patron, the Earl of Shrewsbury, were the extensive additions and alterations to Alton Towers, which had been in hand for years: the chapel, monastery, school-house, St. John's Hospital, Alton; and the richest of his designs in point of ornament and colour, the church at Cheadle. He received some commissions for buildings and alterations to mansions. Bilton Grange, Warwick; Lord Dunraven's, at Adaire, Ireland; Mr. Drummond's house; and a few others, on a small scale, were done by him. He designed the new gateway at Magdalen College, Oxford.

He was of late employed on the churches St. Mary's, Beverley, and St. Mary's, Wymeswold. His last work, which remains unfinished, is a church for Mr. Scott Murray, at Danesfield, Bucks. While assiduously plying his pencil, Pugin did not suffer his pen to rest in idleness. His "Contrasts" were, after an interval of a few years, followed by his two lectures on the true principles of Christian architecture, to which a smaller volume, called "An Apology for Christian Architecture," formed a sequel. In 1841 and 1842 two articles on the revival of Church architecture in the Catholic communion in England, written by Pugin, and profusely adorned with illustrations of his works, appeared in the *Dublin*

WRECK OF THE ENGLISH BRIG "HEBE," IN THE COLOMBO ROADS, CEYLON.—(SEE NEXT PAGE.)

Review, and were subsequently republished in a volume. His "Glossary of Ecclesiastical Ornament" showed considerable research, and is beautifully illustrated; and at a much later period (1849) he produced a most graceful volume of "Floriated Ornament," in chromo-lithograph, being illustrations of how the form of living flowers can be adapted to the symmetrical shapes required in ecclesiastical ornaments.

Pugin was equally zealous and successful in his cultivation of the arts subordinate to architecture. He devoted particular attention to painted glass and mediæval ornament; and under his directing care Mr. Hardman, of Birmingham, established his beautiful *atelier* in these two branches of art. Mr. Pugin had an interest in the concern. Among the numerous sources of the royal Palace he attracted much attention and gave more delight than Pugin's "Mediæval Court," rich in these departments

His skill as an artist was remarkable. The public are pretty well aware of his powers as an architectural draughtsman; but as a landscape sketcher and a colourist, his talents were most striking; his portfolios of water-colour drawings, done with master rapidity, charmingly embody many a picturesque nook of his favourite Kentish fields, and seize skilfully the transitory effects of light and shade. Another feature of Pugin's character was his love of the sea. At one time he owned, and sometimes commanded, a merchant smack trading with Holland. The proximity of the sea was one great inducement which led him to fix his permanent abode at Ramsgate. Among the peculiarities of his mediæval dwelling there was a large cutter, with which he was always prepared to push off to the rescue of any vessel in distress on the Goodwins. His short figure, dark complexion, and habitual attire had always more about them of the sailor than the artist. "There is nothing worth living for," has Pugin been heard to say, "but Christian architecture and a boat."

Pugin was thrice married, and leaves seven children: his third wife, who survives him, was a Miss Knill. His eldest daughter is married to Mr. Powell, a relative of her father's talented partner, Mr. Hardman. Pugin's eldest son, of the same profession as the father and grandfather, promises to walk with credit in their footsteps, and prolong the utility and fame of the family.

Little more than forty years of Mr. Pugin's brilliant career had passed, when, in the midst of his wondrous energies and occupations, in the very heyday of his renown, an awful calamity suddenly arrested his course. A sad darkness of the intellect fell upon him, from which he recovered but to pass into the shadow of death. We willingly avoid further detail of his afflictions, and mention only that he came to his loved abode at Ramsgate, restored in mind, on Saturday the 11th ult; the following Tuesday the 14th, he was seized with a fit, and expired before the evening closed; yielding up his life somewhat in the same way, near upon the same hour, and not far from the same locality, as the Duke of Welling on.

Pugin's funeral was attended by numerous friends and admirers: he was buried in the vault he built in his own church.

We understand that her Majesty has been graciously pleased to confer a pension of £100 a year on the widow of Mr. Pugin.

The Portrait upon the preceding page is from the picture painted and engraved by Mr. Herbert, R.A; the Print published by Messrs. Hering and Remington, to whose courtesy we are indebted for permission to copy the same.

WRECK OF THE BRIG "HEBE," IN THE COLOMBO ROADS, CEYLON.

We find in the *Colombo Observer*, just received, the following account of a gale at that port, which nearly equalled in violence and destructiveness that of May, last year. "On Sunday, July 11, when the *Agrippina* anchored in the roadstead, the sea ran so high that a boat of eight tons burden, bringing some of her passengers on shore, was nearly destroyed in crossing the bar. She was thrown so completely on her beam-ends, that two of the rowers were washed out; but these men being perfectly at home in the wildest surf, ran no risk. The wind and sea continued rising until Thursday night, the 15th, when a strong north-west wind set in; and during the night, the English brig *Hebe*, partially laden with oil and plumbago, began to drift shorewards, in the direction of the spot where the unfortunate *Colombo* went to pieces last year. In the course of the night, one of the sailors volunteered to carry a line ashore with a rope. He was allowed to make the attempt, but was not again seen or heard of. By daylight the *Hebe* had struck, and standing side on, the doubling planks on the weather side soon started, and the sea began to dash over her. The master and crew got safely on shore by means of a hawser stretched from the ship. It was feared at one time that the masts would come down, and that the vessel would go entirely to pieces; but the weather subsequently moderated, and on Saturday morning persons were able to go on board and take means to lower the spars

"We were glad to observe that Master-attendant Steuart was present at the scene of the wreck, and active in saving the lives of the people on board. He was accompanied by Mr. Saunders, collector, and Mr. Halliley, the head clerk, Customs department. The captain was the last to leave the vessel."

On Saturday the body of the seaman who was drowned was washed on shore, and a coroner's inquest held upon it. From the evidence adduced, it appeared that, when the vessel struck, about one A.M., those on board held a consultation as to what was best to be done, when the general opinion was that they should remain by the ship till day-light.

The captain, however, suggested that if they had a line from the shore, those who could not swim might escape to a place of safety, when a young Prussian, named Garkse, volunteered to swim ashore. He accordingly lowered himself into the sea with the lead-line, which the captain payed out after him, till he came to the end; when, supposing that the sailor must have been on shore (which was only a few yards from the side of the vessel) but had let go the line, which appeared to have been carried seaward round the vessel, he (the captain) threw away his end also. This the captain subsequently explained, as follows:—He could see nothing, but when all the rope was payed out, he concluded that if the man were still struggling in the water, he would be drowned before he (the captain) could draw back the hundred fathoms of line; or, if it were made fast to the ship, or even held, the man could not get on shore, and would therefore be lost. The bend to which the vessel refers for the sailor if the line were fastened to him, was to let it go, as he might still possibly get on shore. The captain, therefore, concluded that he ought to let the line go; and, certainly, under the circumstances, it appeared the most reasonable conclusion. The coroner returned a verdict "That the deceased William Garkke was accidentally drowned, while endeavouring to reach the shore with a line, in order to save the lives of those on board of the vessel wrecked *Hebe*."

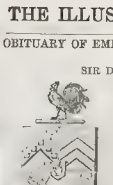
The accompanying illustration of the wreck is from a sketch by Napoleon Hyppolite Silva, a young French artist, residing at Colombo

As the roadstead of Colombo takes a semi-circular sweep, the View includes Custom-House Point, with the Lighthouse, and flag-staff, all within the walls of the Fort. The town, which is large and scattered (embracing an area of nine miles, with about 45,000 inhabitants), extends considerably beyond the scene of the wreck; its limit in that direction being the Kelany Ganga, the second river, in point of size, in Ceylon, and the principal one as regards inland navigation. From a constantly shifting sand bar at its mouth, it does not, unfortunately, admit of the entrance of large vessels. This bar extends to the Custom House, forming a harbour for vessels of small tonnage, such as carry on the trade with the opposite continent of India. There is no harbour at Colombo for large vessels (above 200 tons); but the roadstead is, with due caution, even in the height of the south-west monsoon, that events of the kind now recorded are exceedingly rare. From the position of Ceylon, it feels the influence merely of the fag end of any cyclone which may sweep the Indian seas. The *Colombo*, which was wrecked here last year, was an old vessel; and, as already stated, the *Hebe* had, before the height of the present gale, got on the bar. Previously to the date of the *Colombo*, last year, an interval of more than fifteen years had occurred without a single wreck of any consequence.

Fortunately, the coffee crop ripens in the best season for shipping; and a good class of boats being lately introduced, and much care taken, the proportion of sea-damaged coffee is now very small. Coffee, in the Ceylon trade, has rapidly taken the position once occupied by cinnamon and pearls. In 1830, only 60,000 cwt. of coffee were exported from Ceylon. The crop of this year will exceed 400,000 cwt. The resort of shipping has increased in proportion. In 1836, there cleared out from all the ports of Ceylon, 1391 vessels of all sizes, with an aggregate tonnage of 71,232: entered inwards, in the same year, 1200 vessels, tonnage, 68,463. In 1850, no fewer than 2388 vessels cleared out, with a total tonnage of 242,264: inwards, 2327; tonnage, 248,398. The value of exports in 1836, was £208,705; in 1850, the value was £1,246,566. The value of imports in 1836, was £411,167; in 1850, the value had increased to £1,458,673.—Communicated by Mr. FERGUSON, of the *Colombo Observer*.

OBITUARY OF EMINENT PERSONS RECENTLY DECEASED.

SIR DIGBY MACKWORTH, BART.



The decease of this lamented Baronet occurred on the 23d ult., at his seat, Glen Usk, in Monmouthshire. He was born 13th June, 1781, the eldest son of Sir Digby Mackworth, the third Baronet, by Penelope, his wife, sister of General Sir James Affleck, Bart. His family was of great antiquity in the county of Derby, the name having been derived from the township of Mackworth, in that shire, at a very early period. At the battle of Poictiers, a Mackworth was one of the four Esquires attendant on the Black Prince; and it is curious to find that in the last war the representatives of these four esquires all served together as aides-de-camp to Lord Hill. The estates of the Mackworth family were very considerable, and their seat was Gnoll Castle, Glamorganshire; but, at the death of Sir Robert Humphrey Mackworth, that fine mansion, and the principal landed property, passed by bequest to his widow, who became afterwards the wife of Capel Hanbury Leigh, Esq., of Pontypool.

Sir Digby, whose death we record, was a Colonel in the army, and served throughout the Peninsular and Waterloo campaigns. He had the Waterloo Medal, and was a Knight of the Guelphic Order. He married, first, 16th September, 1814, Marie-Alexandrine Julie de Richepance, only daughter of General and the Baroness de Richepance, niece of the Duc de Dames Crux; and by her (who died 16th March, 1818) had one son, now Sir Digby Francis, the 6th Baronet. His second wife, whom he married 3d April, 1823, was Sophia Noel, daughter of James Mann, Esq., of London House, Kent, and granddaughter of Sir Horace Mann, and by her he has left surviving one son and one daughter.

SIR JOHN WEBB.

Sir John Webb, a magistrate and Deputy-Lieutenant of Kent, died at his residence, Chatham Lodge, Wocliwich-common, on the 16th ult. This old and distinguished medical officer was descended from the family of Webb, formerly of Woodland Hall, Staffordshire, and subsequently of the city of Dublin. He entered the service (in the 63d Regiment) in March, 1794; served under the Duke of York, in Flanders, where he was actively employed till the close of the campaign in 1795, and in the expedition to St. Lucia, the expulsion of the Charibs from St. Vincent's, the capture of Trinidad, and the descent on Porto Rico; being frequently in presence of the enemy: at the bridge in 1795, and the capture of the Texel fleet, on the coast of Spain, in 1800, throughout the Egyptian campaign in 1801, at the siege of Copenhagen and the capture of the Danish fleet in 1807, and in the expedition to the Scheldt in 1809. For his services he received the honour of knighthood from George IV., the second class of the Order of Hanover from William IV., and the third class of the Bath, in 1850, from her present Majesty. Sir John had the war medal, and also the sultan's gold medal for "Egypt." In 1809 he was appointed to the Royal Artillery by Lord Chatham, and, in 1813, made Director-General of the Ordnance Medical Department, in which capacity he served until April, 1850.

Sir John Webb was born 26th October, 1777, and was, consequently nearly eighty at the time of his decease. He married, in 1814, Jane Theodosia, daughter of Samuel Brandram, Esq., of Lee Grove, Kent, and had by her three children. His remains were interred on the 22d September, at St. Thomas's, Woolwich, with ample testimony to the worth and excellence was afforded in the number of persons, both civil and military, who assembled to pay this last tribute of respect.

REV. T. F. MORE, LINLEY HALL, SHREWSBURY.

ROBERT BRIDGMAN MORE, of Linley Hall, Shropshire, whose decease was lately announced, was the representative of an ancient and honourable family.

Richard de More, the founder of this family, seems to have been a person of some consideration, and follower of William of Normandy, at the time of the Conquest, and to have received an early grant of lands from that Prince. He is found in 1070 in co-operation with Roger de Montgomery, in erecting the castles of Lydham and the More, so as to face the beautiful valley of Montgomery, and thus presenting a formidable defence against the incursions of the Welsh.

In 1294, the extensive manor and castle of Linley and its castle was annexed to the lordship of More, by the marriage of Roger De la More with Alice, the heiress of that property. In the words of the instrument, which illustrates the ancient mode of conveyance, "he came to the said tenements and so sin thereof Roger and Alice he delivered, to be holden by the form of a certain chart, which to them he had made, and which to them he then delivered."

About a mile to the right of the More Castle runs a deep mountain pass, which enabled the Welsh to push their predatory bands in the rear of the two castles. To strengthen this position, a grant was made by Henry III of the Linley to the Lord of the More, and which are held upon the condition that the said Lord shall furnish 100 men, an horse-and-bearer to the King when engaged in war with the Welsh in that part of the Principality. This beautiful valley, three miles in length, forms part of the domain to the present residence, and still retains its ancient beacons, shooting butts, and entrenched grounds, showing the once active scenes of contention the fate of these border lands.

By a curious deed, Robert de la More, returning from Palestine and the holy wars seems to have rescued considerable lands from a religious house, seized in his absence for the good of his soul. Different members of this family obtained lands and fame for military services in different parts of the kingdom, so as to have obtained the appellation of the knightly family of the Mores. In later times, Steven More settled in Ireland, which branch is now represented by the Earl of Mountcashel. In the reign of Charles I. events had nearly proved fatal both to the property and lives of the family: the former was confiscated, and its late proprietor, Colonel Samuel More, lay in the dungeons of Ludlow Castle.

The father of S. More was member in the long and fatal Parliament of Charles I: the part that he took was decidedly anti-monarchical; and he appears early among the most active partisans of the Parliament within the county; but, dying in 1643, his son, Colonel Samuel More, influenced by his father's principles, took a leading part in the commotions of Shropshire. While yet but heir-apparent he was a member of what was called the Committee of the Parliament of Shropshire, to serve the cause. He had scarcely paid the last rites to his father when he was called upon to take the command of Ludlow Castle, one of the fortresses in Shropshire, which were, at that time, in the interest of Parliament, the owner being one of the fiercest of the Republican faction. The situation of this castle, in a singularly sequestered valley, entirely commanded by the surrounding hills, seemed to render the defence of it hopeless, yet, such was the spirit and vigilance, and so great were the resources of Mr. More's military talent, that, with but a handful of men, he was able to hold out this little fastness for more than a month against all the forces, which the Royalists could now bring against it, though these were sometimes not fewer than five hundred men, horse and foot; and it was only surrendered, seeing that their last hold in an hour would have been blown into the air. For this stubborn resistance, however, the man, with the exception of their commander, paid the forfeit of their lives.

Colonel More was released from his dungeon in Ludlow Castle, his party at this time having the command of the county, and his estates were restored. He then engaged in the subjugation of Montgomery Castle, of which he was made its governor. He was afterwards Governor of Caus and Hereford Castles, and received twice the thanks of the House of Commons for his military services. Subsequent events crowned with success the party espoused by Colonel More, and he took a leading part throughout the interregnum in the internal regulations of Shropshire, which he was returned one of the four representatives to the Parliament summoned by Cromwell for September, 1656. Usurpers are invariably found to infringe that liberty which they were raised to guard, and the Protector upon this occasion adopted the extraordinary expedient of excluding by force from his House of Commons all those who were disapproved by him. Colonel More had the honour of being one of this number; and having witnessed the tyranny of unlawful sway, he was disposed the better to sequence in the restoration of the Monarchy, which he survived two years

The family continued down to a late period to be much engaged in military service and Parliamentary pursuits. Major More, of Millichope Park, was killed at the taking of the Manillas; his brother, Captain Moore, lost his life in the naval service; and Henry More, of the 25th Rifles, and brother to R. Bridgman More, with many of his Eton schoolfellows, found an honourable grave in the Peninsular war. The late possessor of the estates not having married, is succeeded by his only surviving brother, the Rev. T. Frederick More, rector of More, who has one son and one daughter.

The gentleman whose death has been so much lamented, was a character of a very high order, passing through life without an enemy; his distinguished kindness to his neighbours, his unbounded generosity and encouragement to his tenantry, and the public works he effected for the good of all at a large pecuniary sacrifice, has left him a name for real worth, which will be treasured by the present generation; and the fruit of his munificence and noble generosity will be felt for many generations to come.

CHURCH, UNIVERSITIES, &c.

The Venerable Archdeacon Thorp has presented a new stone font to Herrington church. The design of the font, by Mr. Norman: it bears the name of the donor, and is enriched with chaste ornaments. It has been executed by Mr. Gainford; and, as a piece of workmanship, is highly creditable

APPOINTMENTS AND PREFERMENTS.—The following appointments and preferments have recently taken place:—*Archdeaconry:* The Rev. W. Gunning, to Bath. *Honorary Canonry:* The Hon. Cyril George Hutchinson, to the Cathedral Church of Gloucester. *Rectories:* The Rev. F. A. Foster, to Sandy, near Ashton-upon-Humber; the Rev. Barton Lodge, to St. Mary Magdalene, Colchester; the Rev. W. Lake, to St. Martin's, Colchester. *Vicarages:* The Rev. J. Evans, to Llangurig, Montgomeryshire; the Rev. Charles Spackman, to Long Itchington, Warwickshire.

WHITEHALL PREACHER.—The Bishop of London has appointed the Rev. G. H. Johnson, M.A., F.R.S., Fellow of Queen's College, Oxford, preacher at the Chapel Royal, Whitehall.

TESTIMONIALS.—The following clergymen have recently received testimonials of esteem and affection:—The Rev. W. Fry, of Leicester, from his pupils; the Rev. R. M. Master, incumbent of Burnley, from the teachers in his Sunday-school; the Rev. F. S. Aldrich, from the parishioners of Pulborough, Sussex.

THE LATE DR. THACKERAY.—A neat and particularly unostentatious mural tablet of white marble has recently been erected to the memory of late Provost, in the first chapel on the southern side of the College chapel. It was executed by Mr. Swinton, of Cambridge.

IRISH CHURCH MISSIONS.—The Lord Bishop of London on Sunday preached an eloquent sermon at All Saints, Fulham, in aid of the funds of the Irish Church Mission Society, for missions to the Roman Catholics of Ireland.

BRITISH SOCIETY FOR THE PROPAGATION OF THE GOSPEL AMONG THE JEWS.—On Monday night a meeting of the friends of this society was held in the Craven Chapel, Great Marlborough-street, to hear from the Rev. Ben Oliel, a convert to Christianity, a statement of the condition of the Jew population of North Africa; the Rev. Dr. Leefchild in the chair. The Rev. Ben Oliel, in describing his former brethren, assured the meeting that they were strict observers of the Talmud and of all Rabbinical rites, and best described as Pharisees. They numbered nearly 800,000 souls—a spacious field for missionary labours. They had, however, in a district which had been sadly overlooked by Christendom. The British Society had now nineteen agents employed in the north of Africa, and seven under preparation for the same mission. He himself was about to proceed to Tunis, from which he hoped to be able to send home favourable tidings. The proceedings terminated, as they had begun, with prayer.

CONVOCATION OF THE CLERGY.—The Archbishop of Canterbury has issued his precept to the members of Convocation to assemble on Friday, Nov. 12. The most strenuous exertions are being made by the High Church party to be allowed to sit for despatch of business—an event which has not taken place since 1717. There are two Convocations—one for the province of York, and one for Canterbury. In respect to the latter, the assembly is divided into two houses—the upper and the lower. The upper house consists of the Archbishop of Canterbury, the Bishops of London, Winchester, Exeter, Ely, Salisbury, Chichester, Oxford, St. Asaph, Peterborough, Hereford, Lincoln, Gloucester and Bristol, Llandaff, Worcester, Bangor, St. David's, and Bath and Wells. The lower house is composed of all the deans and archdeacons in the province, who are members *ex officio*, and three proctors from each diocese, two of whom are elected by the clergy, and one by the chapter. The lower house is presided over by a prolocutor, who is elected by the general body of the members. The Convocation will meet at the Chapter-house, St. Paul's, at two o'clock.

FOREIGN CHAPLAINS.—It is stated that an arrangement has been concluded between the Bishop of London and the Secretary for Foreign Affairs as regards foreign chaplains. The Foreign Secretary has consented that they should receive the Bishop's license, on condition that there should be inserted in every such license, that it is valid only so long as the chaplain holds her Majesty's appointment, and "no longer." Several chaplains have already been licensed, and amongst them the Rev. Kenworthy Brown, H.B.M. chaplain at Madeira.

THE ABBEY OF ST. ALBAN'S.—A new and beautiful window has been placed in St. Alban's Abbey, on the south side of the nave. The window is a copy of the well-known fresco painting on the wall of the north transept. The work has been executed in a very superior style; the artist, Mr. Clutterbuck, having skilfully preserved the expression of the figures of Our Saviour and St. Thomas. The window is the gift of Thomas Howard, Esq., and is erected by him as a memorial of a deceased relative, near whose grave it is placed.

DEATH OF THE BISHOP OF MEATH.—The most. Rev. Thomas Stewart Townsend, D.D., Lord Bishop of Meath, died in almost the prime of life at Malaga, on the 16th inst., leaving a young and numerous family to lament his irreparable loss to them.

OPENING OF THE NEW CONGREGATIONAL CHURCH AT CLAPHAM.—On Wednesday the Congregational Church at Clapham, just completed at a cost of £10,000, was opened for the celebration of public worship. This splendid edifice, which is one of the most beautiful examples we have of Gothic architecture of the decorated period, has been executed by Mr. George Myers, builder, from the designs and under the superintendence of Mr. John Farring, architect, upon both of whom it reflects the highest credit.

SUNDAY-SCHOOL UNION JUBILEE.—A public meeting of the friends of Sunday schools was held on Tuesday night, at Surrey Chapel, Blackfriars-road, to adopt measures for assisting the Sunday-school Union to celebrate its jubilee in the ensuing year. The Hon. Arthur Kinnaird, M.P., in the chair. The following was the principal resolution adopted:—"That this meeting warmly approves of the objects contemplated as the memorial of the Sunday-school Union Jubilee, in the erection of a building for the following purposes.—1. To provide accommodation for the libraries of circulation and reference, which are now made use of by upwards of 600 teachers, at a nominal subscription of 1s. per annum. 2. To accommodate those classes which are weekly to prepare the lessons to be taught on the following Lord's-day. 3. To enable the teachers of London to meet for occasional conference, or to receive instruction by means of lectures. 4. To afford additional space for the increasing business of the Union. And also to assist in the establishment of Sunday-schools in destitute districts throughout the kingdom."

THE PAUPER LUNATICS IN ST. PANCRAS WORKHOUSE.—On Wednesday, at a vestry meeting of the parish of St. Pancras, the report of the select committee appointed at the previous meeting was brought up. Mr. Lowe's appointment as the second instance of a Scotchman having been selected for this honourable post, the late teacher having been Mr. Thomson, of Glasgow, now deceased.

Mr. Joseph Lowe, of Edinburgh and Inverness, has had the honour of an command from her Majesty to attend the Royal Household, and is now engaged in giving lessons in dancing to the Princes and Princesses. Mr. Lowe's appointment is the second instance of a Scotchman having been selected for this honourable post, the late teacher having been Mr. Thomson, of Glasgow, now deceased.

Elizabeth Thomas, a dressmaker, aged 49, residing in Sydenham, having alighted from a railway carriage on Sunday morning on the platform at Sydenham, on the London and Croydon Railway, staggered back towards the train, which was then in motion, and her dress having caught in the steps of one of the carriages, she was in a moment whirled beneath, when four carriages passed over her body and killed her on the spot.

The *Memphis Eagle* says that Mr. David G. Campbell, a very worthy mechanic of that city, who is now over sixty years of age, and has been married only five or six years, is already the father of six children. Mrs. Campbell has given birth to three pairs of twin children in succession—four sons and two daughters. It is proposed by the citizens of Memphis to petition Congress for a section of land for Mrs. Campbell, and also one for each of the children.

EPITOME OF NEWS—FOREIGN AND DOMESTIC.

The Queen, by her warrant of the 6th of August last, has granted to Caroline Southey, the widow of the late poet laureate, a yearly pension of £200, "in consideration," as the warrant is set forth, "of her late husband's eminent literary merits." A like warrant, of the 8th of the same month, confers a pension of £75 a year on Miss Louisa Stuart Costello, "in consideration of her merits as an authoress, and her inability, from the state of her ill health, to continue her exertions for a livelihood."

The Hon. I. R. Ingersol, the new American Minister to England, and Mr Lawrence's successor, has arrived this week from New York.

The treaties for the protection of literary property concluded between France and the Sardinian States, have just received their first rigorous application. At the request of some publishers of Paris, the shops of several booksellers of Chambery were a few days since visited by the police to search for pirated copies of the Geography of the Abbé Gaultier, printed at Annecy by M. Burdet. Seventy-seven volumes were seized, which were handed over to the avocat fiscal to await the proceedings which are to be instituted against the printer.

Benjamin Gaunt, aged 81, now living at Pudsey, near Leeds, was in the 33d in India, under Colonel Welles sy (late Duke of Wellington), and on the night previous to the siege of Seringapatam, the old veteran bore the Duke on his back about a quarter of a mile, he being slightly wounded in the knee or thigh. He was one of the orderlies in the 33d.

A non-commissioned officer of the 1st Dragoon Guards, now stationed in Dublin garrison, has, during his leisure hours, invented an engine, whose motive power is condensed atmospheric air. It is proposed to exhibit a model of this atmospheric engine at the Dublin Exhibition for 1853.

Crucibles for melting gold have been imported into Southampton in great numbers from Havre lately. They are destined for the gold regions, and are formed of a kind of iron stone, very hard and infusable.

The supplies granted by Parliament for the year 1806, include the following items under the head "miscellaneous services":—For the funeral of Viscount Nelson, £4,698 11s. 6d. For the funeral of Mr. Pitt, £5045 2s. 6d.

Mr. Clarke, the Secretary of the Electric Telegraph Company, is taking steps for the erection of a small station and an electric clock of ornamental character at the Regent's-circus, Oxford-street, of a similar character to that in the Strand, facing Hungerford market.

A few days ago, Mr. J. D. Brown, surgeon, of Haverfordwest, performed a most successful surgical operation on a child four months old, by tapping the brain, and removing therefrom more than a pint of water. The child is now doing well, and in a fair way of recovery.

It is astonishing the extent of ignorance frequently met with even on matters of current history. A good dame, the wife of a well-to-do tradesman at a certain favourite watering-place, being informed of the death of the Duke of Wellington, innocently asked the question, "Is that, sir, the man who wanted to go to war with England?"

On Sunday morning a fire broke out in the Tyne soap and alkali works of Messrs. Christian and Co, near Newcastle. The works are so extensive as to give employment to nearly 1000 persons, and the damage done is estimated at more than £5,000.

The deliveries of tea in London last week were 612,104lb., being rather more than in the preceding week.

The Chancellor of the Exchequer acknowledges the receipt of the remaining half of a bank-note for £500, in farther payment of a debt long due to the nation.

The *Sheffield Times*, in speaking of the prosperity of the agricultural districts, says that the Thorne Union, containing about 20,000 inhabitants, and situate in a purely agricultural district, has at the present time the exceedingly small number of 49 inmates in the union workhouse.

On Monday evening Madame Poitevin made her last descent for the season in a parachute, in the grounds of Twyford Abbey. The balloon, with which it ascended from Cremorne Gardens, was piloted by M. Poitevin. This gentleman also descended as a boy about two miles from Acton.

Frederick Stubbing, aged two years, died last week in consequence, as it is alleged, of improper treatment by an herbal at and a mesmerist, named Harding, living in the neighbourhood of St Pancras Church, who prescribed for it. The jury, in their verdict, expressed their disapprobation of the conduct of Mr. Hardinge.

Government has just issued a commission to visit all the market towns in Ireland, and report on the local regulations as to buying and selling market produce, with a view to a uniform system, under a general Act of Parliament.

A man named Thomas Mears, aged 38, met his death lately from an inhalation of common gas, whilst at work on a lamp, at Higher-terrace, Torquay. The deceased has left a wife and four children to lament his death.

The long expected trial for political offences—in which the poet Freiligrath (fugitive), and seven others, among whom are Doctors Klein, Daniels, and Becker, are charged with complicity in the revolution of 1848 in Prussia—is to come before the jury of Cologne on the 4th inst., and will probably end in acquittal, or condemnation to minimum punishment.

The passion for obtaining titles as a preamble to names in Germany is proverbial. Kotzebue, in his *Kien Stadter*, ridiculed this mania in a pleasant manner. His satirica. fancy went far, but it has been outdone by the reality in the person of a Silesian lawyer, who signs the receipts for his labours, "Lowering-down Councillor" (Versenkungs-Rath).

The *Medaway* has arrived from Port Philip, whence she sailed on the 30th of May, with 65,051 ounces of gold, valued at £260,000. The *Ganges* has also arrived in the Channel, from New South Wales, with 17,859 ounces, valued at £71,400. The intelligence by these vessels has long been anticipated, the last advices ed India having been to the 1st of July.

Intelligence has just been received from Hong-Kong, in China, of the execution in that place, on the 1st of May last, of a French missionary named Bonnard. No details are given.

The Austrian journals state that the importation of English iron and steel is rapidly increasing in Austria, especially in Bohemia. The duty on those articles is less when imported by land than when sent by the ports of the Adriatic.

Sir Charles Lyell, the geologist, has arrived at St. John's, from England, for the purpose of visiting the mining districts of that province, and to ascertain the nature of the soil and geological formations in the eastern part of New Brunswick.

On Saturday afternoon last a boy named Barlow, aged fourteen years, was scalded to death in consequence of having fallen into a vat containing about ten feet of a boiling drug, at the works of Messrs Dewhurst and Son, the Adelphi dye-works, at Salford.

A few days ago three children, of the respective ages of one, three, and five years, were all burnt to death in the absence of their mother, a poor woman, residing at Pistill, North Wales, who, on leaving home, unfortunately locked them inside.

A young girl, named Anne Hoe, of Barton, while in care of the house of Mr. Jones, silversmith, Bottle-lane, Birmingham, was burnt to death last week in consequence of her clothes catching fire.

The *Journal du Havre* says:—"An influential company is now being formed at Paris for the purpose of proposing to the Government the establishment of a line of steamers between Havre and Rio Janeiro. This company has among its subscribers almost all the firms which have commercial relations with the Brazils.

A letter from Vienna of the 23d, in the *Prussian Gazette* of Berlin, states that a treaty has been concluded between the Pontifical and Austrian Governments, in virtue of which a la latter will receive an annual indemnity for the occupation of the Papal provinces by its troops.

The *Official Sawoy Gazette* quotes a letter from Turin, of the 24th, in which it is stated that the coolness between Sardinia and Rome is far from being mitigated, and that the Sacred College has addressed remonstrances to Monsignor Riccardi, Bishop of Savona, for not showing himself direct y hostile to the Civil Marriage Bill.

Her Majesty has been graciously pleased to appoint Sir William Yardley, the second Judge of the Supreme Court at Bombay, to be Chief Justice, in the room of Sir Erskine Perry, who returns.

There has been recently discovered in the wall of an old house at L'Isle (Vaucluse), a cross in wood very delicately carved. In the interior of the cross is a Christ and the three Marys; at the feet of the Saviour are five statues of the finest carvings; on the other side is to be seen the Virgin carrying the infant Jesus; and four fine statuettes as remarkable for their workmanship as the former. This work bears the date of 1091.

It is not generally known that the late Duke of Wellington, at the general election in 1807, under the Portland Administration, was returned as Sir Arthur Wel esley, in conjunction with another honourable and talented statesman, Lord Palmerston, as the member for Newport, by the corporation of that day, who alone possessed the elective power. The late Duke then held the office of Chief Irish Secretary.

The *Springfield* (Illinois) *Register* relates the following:—"In March last three men agreed to drink themselves to death. The first died in April, the second in May. The survivor, on the happening of the last event, showed signs of breaking the compact, and he kept sober two or three days afterwards, but rumour revived, and he died in June. This is literally true."

CHESS.

TO CORRESPONDENTS.

SOUTHAMPTON CHESS CLUB.—We are gratified to hear that a new Chess Club has just been formed at Southampton, under the presidency of James Duncan, Esq. M.A, and we sincerely hope that new energies has taken root in Hampshire. It will not be permitted to languish, but that we shall shortly hear of the progress it is being followed by clubs at Winchester, and other places in the county, where ability to it appears to have had no local habitation, of a name.

B W F, of Farwick.—White can mate on the fourth move by taking the Q B Pawn. You must recopy this flaw.

SOPHIA. It appears to us an easy mate in two moves. 1. Q to Q Kt 5th If Black then moves 1. B to Q 3d, White follows with R Q to Q B 6th—mate. Is it not so?

COTTONIA, Manchester.—We shall be disappointed if the amateurs of Lancashire do not lend the powerful support of their presence at the forthcoming assemblage at Hull

D C, Salford.—Stalemate is a drawn game. Your letter dated June has only just come to hand.

B, Lincoln.—The proper person to apply to for tickets for the YORKSHIRE CHESS FESTIVAL we presume to be the honorary secretary of the Hull C ub, Mr S W Kirke

J. M H, Hull.—Your last shall appear in the next week.

ONIAS.—We had not space for the article but it was transferred as requested (See the November Number of the *Chess-player's Chronicle*)

SOLUTIONS OF PROBLEM No 453, by Annabella. Phiz, M P, Rev T J H, of Hamworth; B W F, of Farwick, Sirona, Isle of Man, are correct.

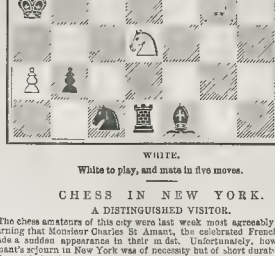
SOLUTIONS of PROBLEM No 451, by Stevens, B R of Ashford, Equus, Torquay Athenæum, J K, of Shoreham, B W F of Farwick, are correct

SOLUTIONS OF ENIGMAS by A E, M P, R R of Ashford, Mazeppa, Fop, A B, J C B, Devoron, J P of Lisbon, are correct. All others are wrong

PROBLEM No. 453.

By W. GILBY, Esq.

BLACK.



WHITE.

White to play, and mate in five moves.

CHESS IN NEW YORK.

A DISTINGUISHED VISITOR.

The chess amateurs of this city were last week most agreeably surprised by learning that Monsieur Charles St Amant, the celebrated French player, had made a sudden appearance in their midst. Unfortunately, however, M. St Amant's sojourn in New York was of necessity but of short duration, extending only until the departure of the steam-ship *Asia*, in which vessel he sailed from here for Liverpool. Notwithstanding the limited period of his visit, M. St. Amant yet found time to gratify the laudable ambition of several of our best players, by affording them practical evidence of his unsurpassed skill, at the Chess-board; and was likewise enabled to comply with the wishes of his friends and admirers by devoting to them one of the few days at his disposal in accordance, therefore, with a hastily concerted arrangement, on Tuesday afternoon, at about two o'clock, M. St. Amant joined a party at Delmonico's, consisting of some thirteen or fourteen gentlemen, to whose amusement and gratification he greatly contributed by contesting two games of Chess with Mr. Stanley. After which, at the punctuality, the company adjourned to an adjoining room; where, after a short grace from the Rev. Dr. Walton, ample justice was done to such a dinner as few caterers but Delmonico could provide. On the removal of the cloth, the health of M St. Amant was proposed by the Chairman (Mr. Stanley); which toast being most cordial y received by all present, was very happily responded to by the gentleman to whom the compliment was rendered. Several other toasts were subsequently given, and appropriately acknowledged. During the evening some remarks were made by the chairman expressive of a hope that, on occasion of the World's Fair, which is contemplated to be held in 1853, a gathering of foreign, as well as we.l as resident Che s-players, might take place in New York; suggesting, at the same time, the feasibility of making proper arrangements for the tendering of suitable inducements for universal competition. At an early hour in the evening Chess play was resumed; the game now becoming more general. Among the company present were Messrs. Compton, Meade, O'Sullivan, Young, Erlit, Ferrin, Hawes, Seton, Stanley, the Rev. Dr. Walton, Captain Vanderbilt, Colonel De Peyster, &c. The result of the two games played between Messrs. St. Amant and Stanley was similar to that of two played the previous evening, between the same parties each player winning and losing a game.—(*New York Albion.*)

GAME THE FIRST.

(Sicilian Opening.)

WHITE (Mr. Stanley.)	BLACK (Mr. St. A.)	WHITE (Mr. S.)	BLACK (M. St. A.)
1. P to K 4th	P to Q B 4th	13. P to Q 4th	Q to K 2d
2. P to Q B 4th	Kt to Q B 3d	14. P takes K P	B takes B
3. Kt to Q B 3d	P to K 4th	15. Q to Q R 4th (ch) (c)	K to Q sq
4. P to Q 3d	P to Q 3d	16. Q R takes B	P takes P
5. Kt to Q 5th	Kt to K B 3d	17. P to K B 4th	P to Q Kt 4th
6. Kt to K 2d	Kt takes Kt	18. Kt takes Q Kt P (d)	Kt takes Kt
7. Q B P takes Kt	P to Q 5th	19. Q takes Kt	Q takes Q R
8. B to Q Kt sq	P to K B 4th (a)	20. Q to Q Kt 7th	K to Q B sq
9. P to Q R 3d	Kt to Q R 3d	21. P to K B 5th (e)	B to K 3d
10. P takes P	Kt to B 2d	22. P to Q 6th	B to K B 3d
11. Kt to Q B 3d	Q to K Kt 4th	23. B to Q 2d	
12. Castles (b)	B takes P	And Black surrendered.	

(a) This was evidently a good without due consideration.

(b) White obtains the first attacking move by giving up the Pawn, but he won d have had an obvious advantage without making any sacrifice if he had merely moved his Queen to K B 3d.

(c) Well played. By thus compelling his opponent to move the K-ng. White improves his own advantageous situation.

(d) This, again, is cleverly played, and leads to a very pretty termination.

(e) Threatening to gain the Queen, at least.

GAME THE SECOND, BETWEEN THE SAME PLAYERS.

(The Centre Gambit.)

BLACK (M. St. A.)	WHITE (Mr. S.)	BLACK (M. St. A.)	WHITE (Mr. S.)
1. P to K 4th	P to K 4th	20. Kt to K 4th	K to Q 2d
2. P to Q 4th	P takes P	21. B to K B 4th	K to K sq (ch)
3. Kt to K B 3d	P to Q 4th		
4. P to K 5th	Kt to Q B 3d	22. B to K Kt 3d	K to K Kt sq
5. B to Q Kt 5th	B to Q Kt 5th (ch)	23. B to K B 5th (ch)	K to his 3d
6. P to Q B 3d	P takes P	24. Q to K 4th	Q to K B 4th
7. Castles	P to Q B 7 h	25. Q to Q 6th (ch)	K to his 2d
8. Q takes Q B P	K Kt to Q 2d	26. P to K 6th	P to K 4th
9. P to Q R 3d	Q B to K B 4th	27. Q to K B 5th	P to K R 5th
10. Q to Q R 4th	K B to Q B 4th	28. Q to K B 6th	P to Q 6th
11. B to K Kt 5th	B to Q 2d	29. Kt to Q 4th (ch)	K to B sq
12. Q to K R 4th (a)	P to K R 3d (b)	30. Q to K 4 8th (ch)	R to K Kt sq
13. P to Q Kt 4th	B to Q Kt 3d	31. Q to K R 6th (ch)	K to K Kt 2d
14. K B takes Kt	B takes B	32. R takes B	Q R P takes Kt
15. Kt to Q 5 3d	P to Q 5th	33. Q R take s P	Q to K B 4th
16. Q Kt to Q 4th	B takes K Kt	34. K R to Q sq	P takes B
17. P takes B	Q to Q 3d	35. Q R takes P	Q to K B 3d
18. B takes Kt	P to K 5th (c)	36. Q takes Q	K takes Q
19. B takes K Kt P	Q to K B 4th	And, in a few moves, White announced mate.	

(a) The opening of this game is ingeniously p ayed by M St Amant but h pay in these skirmishes afford only a fallacious idea of what his powers were when in full vigour and practice a number of years ago.

(b) This counts for nothing but a lost move.

(c) We think judge from some of Mr Stanley's moves in this encounter that his play like that of his adversary, has shown rusty o. late years the ugh loose. This masterly game has been a cl ar proo

YORKSHIRE CHESS ASSOCIATION.—It is at length definitively announced that the customary festiva. of this excellent society, will be held in the Assembly rooms, at Hull, on Wednesday, the 20th of October. Intimations up to the most lavish scale have been issued, not only to amateurs of note resident in the northern, midland, and eastern counties, but to some of the most distinguished players of London; and, from the number of celebrities who have promised their attendance, the committee confidently anticipate a gather ng which will rival, if it does not eclipse, the memorable assemblage that took place in Hull during the summer of 1842

RUNE-STONE FOUND IN ST. PAUL'S CHURCHYARD.

(To the Editor.) Granville, Sept. 2.

As a tyro in Northern lore, I have been greatly interested by the remarkable stone found in St. Paul's Churchyard, and Engraved in the ILLUSTRATED LONDON NEWS No. 576. After a careful consideration, I am persuaded that it must date from the time of the Danish Kings of England; and that it is in memory of some person deceased.

I must confess that I cannot decipher the inscription altogether satisfactorily (although enough to found my opinion upon), as two of the characters do not agree with those recognised by the modern Scandinavian literati as legitimate Runic; but, as a closer inspection of the stone might lead to a more satisfactory results, I take the liberty of annexing the complete Runic character, with the letters adjoined, which they represent, in the hope that some archæologist may be more successful, having access to the original.

I am, &c., R. M.

(From the Morning Chronicle Correspondent.)

COPENHAGEN, September 10.

The last Number of the ILLUSTRATED LONDON News has excited great interest here. It contains Mr. J. T. Knowles's meritorious description, with an excellent woodcut, of the ancient stone lately found in St. Paul's Churchyard, during the excavations for Messrs. Cook's new warehouses. This invaluable antiquity is a northern Rune-stone, probably Danish, raised over the grave of some chieftain. The fantastic dragon-figure resembles some on other Scandinavian monuments, and is strikingly like the forms recurring on many of the ancient gold bracteates occasionally found in the Northern countries. The Runic inscription, as far as can be decided without inspecting the original slab, would appear to be as follows, in Latin letters:—

EINA LET LEKIA STEN PENSI [THENSI] AUK TUKI.

That is: EINA (ER) LET LAY (piece, erect) THIS STONE, AND TUKI.

If perfect, the construction must be—*eina let lay and tuki* [let lay] *this stone.* If not perfect, the continuation must have stood on another stone placed not far from the first, of which procedure some instances occur. In this case AND TUKI must have been followed by some such words as—BEWED THE RUNES, OVER R N.

This monument is unique in its kind, the only Danish Rune-stone known to exist in England, and owes its preservation to its long inhumation. The style of the Runes, &c., shows that it is not of the very earliest class, and still less of the very latest. I should be inclined to place it in the tenth or eleventh century. Perhaps further diggings would have brought out similar treasures, or at least the contents of the tomb itself. It is to be hoped that the original will immediately be presented to our noble national museum, where it will worthily commence the series of inscribed British grave-monuments. The Danish must have been a powerful element in our old English race, when its chiefs could lie in our metropolis unharmed, and with their native memorials about them. There is nothing in the stone which would lead us to suppose the deceased or his friends to have been Christians. Should the British Museum be refused this magnificent memorial, which I cannot bring myself to believe, it should at least secure a perfect cast before the surface is injured by accident or the action of the air. Mr. Worsaae must not forget this striking find in the next edition of his book.

GRAND ARCHERY MEETING AT BITTON MANOR, TEIGNMOUTH.

A GRAND meeting of the archery societies of Devonshire was held in the grounds of William Mackworth Praed, Esq., on the 17th and 18th ultimo. The lady patronesses were—the Countess of Mount Edgecumbe, the Viscountess Sidmouth, the Lady Forbes, Lady Strachan, Lady Northcote, Lady Fergusson Davie, Lady Wheeler, Lady Duntze, Lady Fyrde Buller, Lady Duckworth, Lady Seale, Lady Rolt, Mrs. Mackworth Praed, Mrs. Cary, and the ladies of the several archery societies of Devon. Patron, W. Mackworth Praed, Esq.

Archery has been a favourite amusement for some years in Devonshire. Several archery clubs and societies have been established in the county. The Devon and Cornwall Society, which holds its meetings every Tuesday during the summer at Manador, the seat of the Rev. J. Hall Parby, is the oldest and most numerous of these corps of archers. The Central Club, we believe, is the youngest in point of seniority. The Bishop-Teignton, though few in number, can boast of some good shots. The Teignmouth Club, which has been more recently established, is, however, distinguished by the excellent style in which its members shoot. The Torquay Club has been established within the last three years, under the patronage of Mrs. Cary, of Torr Abbey.

The North of Devon is, we understand, a good and numerous society, but was not represented at the above meeting.

The present fête was opened with Mr. Mackworth Praed, a member of the Devon and Cornwall Archery Society, who liberally invited all the archers of the west to meet at his beautiful place, Bitton Manor, Teignmouth, there to try their skill against new antagonists.

The morning of the 17th, the archers mustered in great numbers on the ground. On one hand is Bitton Manor, the old seat of Mr. Praed, tastefully decorated for the occasion; opposite is a beautiful view of the picturesque headland called the Ness, and the mouth of the Teign; and at each side a richly-wooded bank, terminating a broad green lawn. A handsome marquee, the first prize, presented by Mr. Praed, was erected on the ground. Various other tents and booths were set apart for the public, who were admitted by tickets to the gay scene. A public luncheon was prepared, and at one o'clock a splendid collation was laid out in a house formerly the residence of the late Lord Exmouth, now the property and seat of Mr. Praed, the grounds of which adjoin those of Old Bitton, where the meeting was held.

The business of the day was thus arranged—the gentlemen shot six dozen arrows at 100 yards, then four dozen arrows at 80 yards, whilst the ladies shot four dozen at 60. After which the gentlemen shot two dozen arrows at 60 yards, whilst the ladies shot two dozen at 50. The wind continued high, and somewhat discomforted the Toxopholites, but the weather luckily remained fine. At half-past six, the work being over, the company retired.

At ten o'clock the scene was changed. The large Assembly Room at Teignmouth was thronged with fair archers, who, with their *beaux*, appeared to receive the reward of their exertions, or to dance away their disappointment. After a waltz or two, the secretary, Mr. Ponsonby Moore, mounted in the orchestra, proclaimed the prizes as follows:—

GENTLEMEN'S PRIZES, FIRST DAY.

The first prize, £5 and a gold medal, for the highest gross score and hits to Captain West, who scored 178.

The second prize, £4 and a gold medal, to the Rev. Fitzroy Taylor, who scored 174.

A prize of £4 and a medal, for the greatest score and hits at 100 yards, was awarded to Mr. Hole.

A prize of £3 and a medal, for the greatest score and hits at 80 yards, to Mr. Glanville, who shot a tie with Captain West, the winner of the first prize.

The greatest score at 60 yards was a tie between Sir Walter Carew and Mr. Divett; the greatest number of golds was a tie between Sir Walter Carew and Mr. C. S. Curtis; and the best gold was a tie between Mr. Ponsonby Moore and Mr. G. F. Gunning.

LADIES' PRIZES, FIRST DAY.

First prize, £5 and a gold medal, for the greatest gross score, 150, to Miss S. Curtis.

Second prize, £4 and a gold medal, to Miss A. H. Curtis, for the next highest gross score, 142.

A prize of £3 and a medal, for the greatest score at 60 yards, to Miss Madan, who shot a tie with Miss S. Curtis, winner of the first prize.

A prize of £3 and a medal, for the greatest score at 80 yards, to Miss Isabella Englano, who scored 56. Miss S. Curtis was scored 68, but was debarred from receiving a second prize by the rules of the meeting.

A prize of £3, for the greatest number of golds, was won by Miss Forman. Miss A. Curtis and Miss I. Englano, shot a tie for the best gold.

The proclaiming the prizes being concluded, dancing was resumed with much spirit, and continued to a late hour.

The second day was ushered in by a heavy gale and deluging rain. At eleven o'clock, however, the weather was brighter, and the gentlemen began to shoot. At three o'clock the day so far improved as to allow the ladies to appear on the ground to renew their contest.

After the shooting was concluded, the ladies and gentlemen of the different Clubs, to the number of about 160, dined in the Assembly-room; after which Mr. Praed awarded the following prizes, which had been presented by him for competition:—

1st prize for gentlemen for the highest gross score of both days, a handsome eight-day Ormolu clock, to Captain West, R.N

2d prize, an inkstand, for the greatest number of hits during both days' shooting, also to Captain West, R.N.

1st prize for ladies, a handsome Honiton lace veil, to Miss Susan Curtis, for the highest gross score of both days.

GRAND MEETING OF THE DEVON AND CORNWALL ARCHERY CLUBS, AT BITTON MANOR, TEIGNMOUTH.

2d prize, a work-box, for the greatest number of hits during both days, to Miss A. Curtis.

CLUB PRIZES.

1st prize, a large marquee, shot for by a deputation from the various Clubs, won by the Devon and Cornwall Society.

The second prize, a set of eight targets, won by the Teignmouth Club.

Prizes were also given by Mr. Praed to each of the ladies of the deputation from the Teignmouth Club.

Towards the conclusion of the evening, Sir J. Yarde Buller proposed the health of Mr. Praed, coupling with it that of his daughter, who had so ably assisted in doing the honors of the occasion. The toast was responded to with general acclamations; and soon after, the company separated, with many grateful feelings towards their hospitable patrons, who had so liberally encouraged the Archers of the West.

OLYMPIC THEATRE.

"Uncle Tom's Cabin" still appeals to the public meral sentiment at this theatre with that power of truth which belongs to the subject. One of the most effective scenes is where the "man of humanity," *Haley*, the slave-trader, feels first a touch of generosity that permits his negro subjects to enjoy a dance, and then is impelled by circumstances to show the true slaveholding resentment and policy, by directing *Tom* to inflict the lash upon *George Harris*, whom, according to the Olympic version of the story, they have taken captive, and tied to a tree to suffer punishment for desertion and contumacy. This portion of the scene our Artist has illustrated. It will be recollected that *Uncle Tom* respectfully declines the unpleasant task which his master would impose upon him, and stands in danger of being himself punished for his refusal. The Olympic version effects the rescue of both victims from the clutches of the tyrant, by the intervention of *Mr. Shelby*, who is enabled to enfranchise the whole of the slaves under the direction of *Haley*, by an exposure of his character, whereby he is convicted of forgery and other crimes. This happy termination will, doubtless, conduce to the popularity of the drama, particularly as the introduced incidents are adroitly managed.

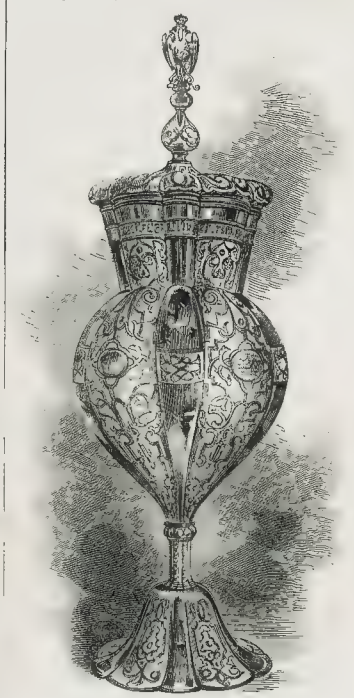
SCENE FROM THE NEW DRAMA OF "UNCLE TOM'S CABIN," AT THE OLYMPIC THEATRE.

THE ST. PETERSBURGH REGATTA PRIZE CUP.

At the commencement of the present season a circular was addressed by the Imperial Yacht Club of St. Petersburgh, inviting the different Yacht Clubs of Great Britain to visit Cronstadt, and contend for two Prize Cups, open to yachts of all nations. One of these prizes was a magnificent Gold Cup, here engraved, for which the following yachts were entered:

Yachts.	Rigged.	Tons.	Owners.	Nations.
1. Tchaika ..	Cutter ..	36	Count A. Bobunski ..	Russian
2. Volna ..	Schooner ..	83	Grand Duke Constantine .	Russian
3. Rurik .	Cutter ..	62	M. A. Abass	Russian
4. War-Eagle	Cutter ..	64	Vice-Commodore Bartlett	English
5. Contest ..	Schooner ..	54	Vice-Commodore Beard .	English

The course was within the River Neva, fifteen miles round; wind very fresh. The starting gun was fired at twelve o'clock (noon). The *Volna* got the start, and went away with squaresail and topsail, followed by the *Rurik* and *War Eagle*. The *Contest* mistook the signal, and went the wrong way. After rounding the first flag-ship, the *War Eagle* gradually drew ahead, and eventually came in a winner by 40 minutes, when she bore down to the Commodore, who was on board a Russian steamer: the gun was fired, the *War Eagle* colour hoisted to the masthead of the steamer, and three cheers were given and responded to by the crew of the *War Eagle*, declared the winner. In the evening, a sumptuous banquet was given by the Yacht Club of St. Petersburgh, at Peterhoff, to the whole of the English yachtsmen and friends, including the English Ambassador, and 150 of the principal nobility of Russia; when the prize was presented to Vice-Commodore Bartlett, R.L.Y.C.,



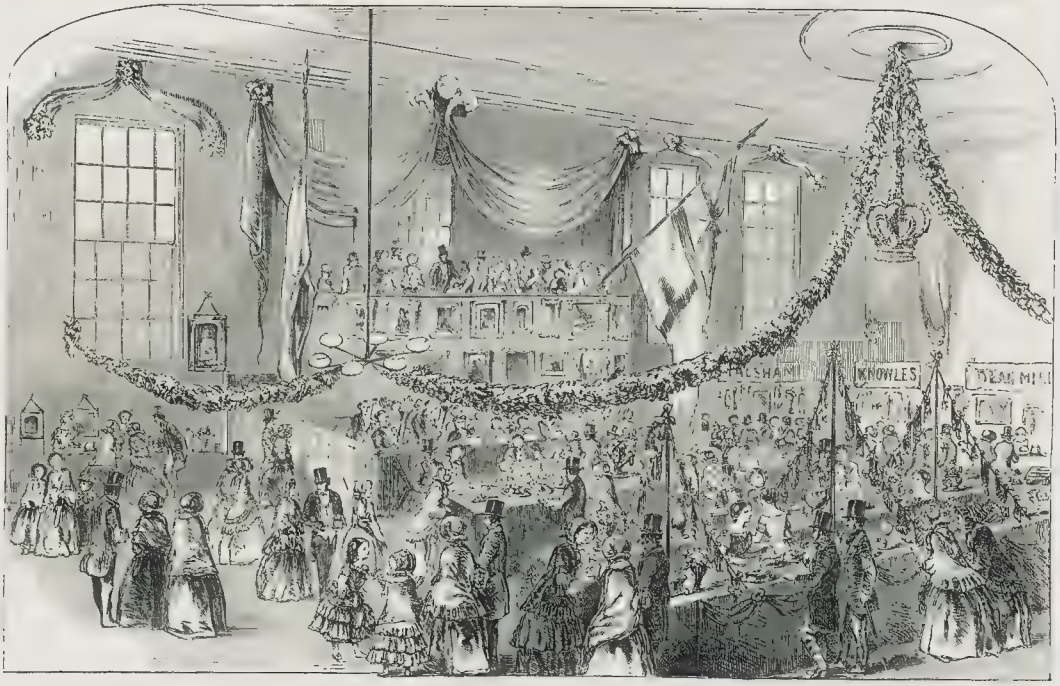
ST. PETERSBURGH IMPERIAL YACHT CLUB GOLD PRIZE CUP.

by Prince Labouuff, the president of the club, in a suitable speech, which the Vice-Commodore appropriately acknowledged.

The Prize, which is a superb specimen of Russian art, bears the following inscriptions:—

Gold Cup, sailed for 24th June, at Cronstadt. Won by the *War Eagle*, property of Thomas Bartlett, Esq., Vice-Commodore of Royal London Yacht Club.

This Cup was presented by the Imperial Yacht Club: St. Petersburgh Prize for Yachts of All Nations, 1852.



FACTORY OPERATIVES' EXHIBITION AND BAZAAR, IN THE TEMPERANCE HALL, BOLTON.

SAILING OF THE "PERU" EMIGRANT-SHIP FOR MELBOURNE, FROM THE PORT OF CORK.

In our Journal of September 18th, we noticed the visit of Mrs. Chisholm to the port of Cork, and her inspection of the emigration arrangements at that port; including her inspection of the *Peru*. This vessel sailed on the 15th ult.; and our Artist has pictured the interesting scene of her leaving the port; which we trust is but a record of many such departures.

The *Peru* is a new ship, and though she presents but few of those beautiful lines so often to be seen in our recent naval structures, is considered a fast ship, from having made her first voyage to India in a shorter time than most of the other ships on the line, and of the same tonnage. This circumstance, coupled with the Captain's promise to the emigrants that, in the event of anything approaching to fine or fair weather, he would land them in ninety days, at Melbourne, greatly cheered the emigrants on commencing their long voyage.

The internal arrangements of the ship are of a superior description; and afforded great satisfaction to the philanthropic Mrs. Chisholm, who inspected the ship both in England and Cork, when she expressed her entire satisfaction with both ship-arrangements and stores laid in for the voyage.

The *Peru* takes out her full complement of emigrants, 250; all of the best description of young man, possessing health, strength and intelligence, calculated to raise themselves to the highest positions in their new homes. We doubt not, judging from the class of young men who have just sailed in the *Peru*, that ere long the entire tide of emigration from Cork, except in the cases of the most destitute, will be diverted from America to Melbourne; which may be regarded as a result of Mrs. Chisholm's visit and group meeting.

"THE PERU" EMIGRANT-SHIP LEAVING CORK FOR MELBOURNE, PORT PHILLIP.

FACTORY OPERATIVES' EXHIBITION AND BAZAAR AT BOLTON.

This very interesting display—which was opened in the Temperance Hall, Bolton, yesterday week—originated in the presentation of a memorial to the Earl of Shaftesbury, in November last, by the Operatives of Bolton, thanking his Lordship for his philanthropic labours in their behalf for twenty years past in shortening their hours of labour. The noble Earl's address upon that occasion was regarded by certain of the more reflective men employed in factories as an expression of doubt whether the leisure bestowed by the Ten Hours Bill was duly improved; and, to show the world that factory workers had taken some advantage of the law lessening the hours of labour, and at the same time to create a desire for further improvement, the idea was started that an Exhibition might be got up of articles made by factory-workers. Shortly after the Earl of Shaftesbury's visit, a meeting took place of a number of persons employed at mills: there were present—James Greenhalgh, overlooker; John Barlow, spinner; John Murray, spinner; and two or three others: and it is primarily to these persons that the proposition for a Bazaar—brought forward in the first instance by James Greenhalgh—has been carried out. The list of subscriptions raised for this purpose shows liberal contributions to have been obtained from mill-owners and many of the other gentry residing in the borough, the total amount being now about £280; including a donation of £5 from the Earl of Shaftesbury, and upward of £40 from the Operative Spinners' Association and the workpeople of three mills (unconnected therewith).

Under the superintendence of a Committee, the following arrangements were adopted:—A stall to be set apart for each mill or firm, for the reception of articles made by the workpeople employed therein. The articles to be exhibited to consist of—1. Plain sewing of all descriptions. 2. Specimens of good mending, patching, and well-darned stockings. 3. Knitting, netting, and crochet work of every variety. 4. Fancy needlework of all descriptions. 5. Specimens of penmanship, arithmetic, &c., on sheets of paper. 6. Drawings, paintings, &c. 7. Miscellaneous articles. 8. Garden produce, such as flowers, fruits, kitchen-garden vegetables, house plants, &c. Garden produce to be exhibited

on a stall, to be divided into sections, for the use of different mills. That even the poorest might contribute to the Bazaar, materials were furnished, out of the funds subscribed, to every factory-worker who applied for the same; and instruction in sewing, knitting, penmanship, &c., was given gratuitously at schools in the town: the scholars varying, at times, from 100 to 900. All produces of articles were to be compensated by tickets to the Bazaar and a ten-party; the produce of the articles sold was to be transferred to the Bazaar fund; the exhibitors, under certain conditions, receiving a portion of the value of their labour.

By this means the most thousand articles were produced for exhibition; for which purpose the Temperance Hall was tastefully fitted up by Mr. W. Hartley, of Bank-street. The stalls ran in ranges along the walls of the building; and several were comprised in a rectangle in the centre; the front of the whole being festooned with small Roman swag drapery: while, from above were suspended a series of small arches, set out with rosettes and artificial flowers. The front of the gallery displayed a long row of paintings and engravings, supplied chiefly by Mr. Menzies, picture-frame manufacturer, of Meathouse-lane. On the opposite side of the hall was large swag drapery and Prince of Wales's feathers; a number of samplers, paintings, &c., being placed below, in front of the orchestra. A large crown (by Samuel Greenhough, of Messrs. Marriott's mill), with cushion, Bible, and sceptre, hung from the centre of the ceiling, from which point also diverged handsome chains of laurel, terminating at the gas-pendants; and there were national flags and banners, and characters attached to the stalls to denote firms of mills. Below the platform was a display of vegetables, plants, and flowers, rendered exquisite in appearance by three garlands. The most pleasing portion of the picture, however, was the contents of the stalls. Here were 6000 articles made by 1800 factory-workers, principally between the ages of fourteen and twenty, but many were children. One of the great attractions was a printing-press, which was worked throughout the *fête*.

The Exhibition was opened on Friday morning week, by the Mayor, members of the council, and other municipal authorities, who walked in procession to the Temperance Hall; where an address was presented to the Mayor, who having replied, the Vicar implored the Divine blessing upon the undertaking. A band then played the National Anthem, and the business of the Bazaar commenced, the room becoming rapidly filled with visitors.

We have not space to specify the articles sent by the different mills. The contributions from the Eagley Mills, which were the most numerous, extended to 1000 articles, including, amongst other things, about 70 shirts, 55 frocks, 30 chemises, 18 frocks of various descriptions, 40 night-dresses, 40 aprons, 65 pinafores, 40 mats of various kinds, 15 purses, 20 specimens of crochet work, 1 umbrella, 40 samplers, specimens of penmanship, drawing, &c. The following also were among the results

		Articles sent	By persons.
Dean Mills	.. .. ..	400	124
Bolling's Mills ..	.. ..	400	140
Martin and Scott's Mill	.. ..	300	80
Thomasson's Mill	.. ..	340	120
Raigh's Mill ..	.. ..	240	120
Knowles's Mill ..	.. ..	200	70
Bayley's Victoria Mill ..	..	130	50
Knowles's, sen., Mill ..	..	200	65
Halshaw's Moor Mills ..	..	600	420

Besides smaller contributions from various other mills.

The Exhibition was thronged for the greater part of the day by visitors. Probably from 1000 to 1100 being in the hall at one time, besides the workpeople of Eagley Mills. Many goods were sold. The receipts at the stalls amounted to £68 11s. 8½d.; at the doors, to £82 13s.: total, £91 6s. 8½d.

The workpeople from the Eagley Park Mills visited the Temperance Hall in procession, with a band of music, and then returned to Eagley, where 900 (including the men's wives) were treated by their employers to a good dinner. The Bazaar continued open throughout Saturday, Monday, and Tuesday.

On Saturday evening the Lord Bishop of Manchester visited the Bazaar, and publicly expressed his gratification and astonishment at the Exhibition; his Lordship at the same time making several purchases.

NATIONAL SPORTS.

Late as the season is, the calendar for next week looks well for sport, no less than six meetings being on the cards. Chester, with a strong bill of fare, commences on Tuesday; the Royal Caledonian Hunt, Yorkshire Union Hunt, and Monmouth, on Tuesday; Wrexham on Wednesday, and Wolverhampton on Thursday. The coursing campaign opens on Monday in Roxburghshire, with the Border Club; the Dorset Club commencing operations on Wednesday in the same week. The aquatic and cricketing seasons have terminated.

TATTERSALL'S.

Monday.—Many of the influentials having started for Newmarket, speculation was dull, all the investments light in amount; transactions, however, were sufficient to warrant a somewhat lengthy quotation.

GRAND DUKE MICHAEL STAKES.—Even on Stockwell.
HOPEFUL FILLIES. 8 to 4 on Syrphlos.
TWO YEAR-OLD TRIENNIAL.
6 to 5 on Polion | 3 to 1 agst Catherine Hayes
THREE YEAR-OLD TRIENNIAL.—5 to 4 agst Hobbie Noble

NEWMARKET FIRST OCTOBER MEETING.—Tuesday.

Buckenham Stakes.—Estrella (Flatman), 1. F. by Touchstone (Charlton), 2.
Sweepstakes of 10 sovs.—Petrel (S. Stagples), 1. The Moor (Rogers), 2
Match, £50 (Flitt (Pettit), 1. Lapidist (Flatman), 2
Hopeful Stakes.—Brocket (Bartholomew), 1. Vaultress (A Day), 2.
Grand Duke Michael Stakes.—Stockwell (Norman), 1. Muscovite (Wells, Rorby), 2.
Third Triennial Produce Stakes.—Aricsto (Flatman), 1. Phlegra (Norman), 2

WEDNESDAY

The weather was remarkably fine on Wednesday, and the attendance good.
Handicap Sweepstakes of 15 sovs. Filly by Touchstone (Flatman), 1. Molasses (G Mann), 2
Match, 100.—Exeter (F. Butler), 1. Herbert (Flatman), 2.
Match, 100.—Hesperus (R Pettit), 1. Lapidist (Flatman) 2
First Year of the Fifth Triennial Produce Stakes.—Pellon (F. Butler), 1. Scandal (Rogers), 2
St. Leger Stakes.—Stockwell (Norman), 1. Frantic (Pia man), 2.
£50.—Garforth (Rogers), 1. Hesse Homberg (Butler) 2.

THURSDAY.

Sweepstakes.—Leybourne, 1. Solyman, 2.
Town Plate.—Foodle, 1. Muscovite, 2.
Match.—Gladiateur beat Nelson.
Post Match.—Jack the Giant Killer beat Berengaria.
Queen's Plate.—Cariboo walked over
Triennial Stakes.—Hobbie Noble, 1. Adine, 2.
Rutland Stakes.—Elmsthorpe, 1. Noisette, 2.

PEDESTRIANISM.

Unprecedented Feat.—The *Liverpool Journal* says that one of the most extraordinary efforts in the way of walking against time has been commenced by Searles, the celebrated pedestrian. At half-past six on Monday evening se'nnight, he entered on the task of walking 2000 miles in 2000 successive half hours; so that, supposing he can accomplish each one in a quarter of an hour, he will be walking one entire half of the time up to the expiration of the compassment of the 1000 hours. The place selected for this amazing display of physical prowess is a field behind the Pine Apple, High Park. Up to the following Friday evening he had accomplished nearly one-sixth of his task, and exhibited no sign of flagging. Professional men say that his powers of endurance are extraordinary. He abstains from intoxicating drinks, but consumes a large share of animal food, as much as eight pounds in four meals.

Fifteen Hundred Miles in a Thousand Hours.—The *Manchester Guardian* of Wednesday states that James Jones has completed this astonishing feat at the Botanic Gardens, Salford. The success of the gardens have paid him the sum which they promised, namely £100. During the six weeks Jones has daily, upon an average, consumed 6 lb. of fresh meat.

Great Walking Match.—Two Thousand Miles in One Thousand Hours.—A young man, named James Yates, commenced, on Saturday last, to walk 2000 miles in 1000 consecutive hours, on the Trent-bridge Cricket Ground, Nottingham. Yates is to receive, if he succeed in this experiment, £100. The task will occupy nearly six weeks, and is one of the greatest pedestrian feats ever attempted.

Another Extraordinary Feat.—A Glasgow paper gives an account of an extraordinary feat of pedestrianism performed by a young gentleman of a slight-built frame, who started from Glasgow on Sunday morning, at a quarter past one o'clock, and arrived in Dundee at fifteen minutes past twelve o'clock on the Monday morning, having thus accomplished the distance—84 miles—in little more than 23 hours!

Great Rowing Matches.—Two excellent rowing matches took place on Tuesday, over the usual regatta course, from Putney to Mortlake. The first of these was for £20, between Williams, a waterman of the Town-mead, and R. Pines, of Whitehall, and was rowed up. The second was between Sinclair and Perry, and rowed down. Williams was the winner in the first match, and Perry in the second.

Funeral Obsequies to Lopez in New Orleans.—The memory of General Lopez, who headed the late disastrous expedition to Cuba, has been honoured, as we learn by the advices from the United States this week, at New Orleans, with a grand funereal procession by torchlight, which we find thus described in the local papers:—"About eight o'clock the procession commenced moving down Royal-street from Canal, when an immense crowd assembled to see it form. First went the different companies of the Washington Regiment, under the command of Colonel Wood, who was surrounded by a numerous staff with brilliant uniforms. Next came the returned Cuban prisoners, with a large illuminated lantern, bearing on one side an inscription designating them, and on the other "Beaten, but not conquered." A hearse, with all the insignia of mourning, and bearing on its sides the names of Lopez, Crittenden, Kerr, and others, was the next and most striking feature of the procession. Three pall-bearers walked at each side. Then came a large body of Cubans who are exiled in this city; and they followed a multitude of firemen and citizens, whose numbers broke line, as they marched past where we stood, seemed interminable. A large number of the members of the Society of the Lone Star and a German association, bearing the flag of Texas, were also present. That gentleman delivered a very spirited address, which was received with applause. All passed off in the most harmonious manner, and we did not hear of an accident or a breach of the peace throughout the procession, although through the day and the meeting that followed. At the close of the procession religious services were held in the cathedral, when speeches were delivered by Lieut. Haynes and others. Interesting ceremonies were also held on board the steamer *Empire*.

New Money-Order Office.—A notice has been issued from the General Post-office, dated September, which states that a major money-order office will be opened at Brough, in the county of York, on the 1st of October. In Scotland minor money-order offices will be opened on the 1st of October at Bridge of Allan, Stirlingshire, and from Stirling; and at Troon, Ayrshire, served from Glasgow. In consequence of al erations in the cirei ation of letters, Bromley, Dawley, Iron-bridge, and Madeley are now served from Wellington, Salop; and Malmsbury from Watchmrh, Salop. The book of money-order offices must be corrected accordingly. Bexley, Carshalton, Hampton, Richmond, Surrey, Southall, and Stanmore are served (as respects money-order advices) from London, instead of from Dartford, Croydon, and Wa ford, respectively; and the column in the list of money-order offices headed "post town from which served," &c., must be corrected accordingly.

The Potato Disease.—Recent accounts from the provinces speak still more unfavourably of the condition of the potato crop. In the northern counties of England the disease has been particularly destructive, especially in Lancashire and Lincolnshire and Newcastle, and it is stated that the farmers are taking them up in all directions. It is also a subject of regret that in many parts of England the onion crop is an entire failure, owing to a disease attacking it similar to that discernible in the potato. Although the accounts from Ireland are somewhat encouraging with regard to the extent of the damage, there is very little doubt that at least one half of the crop is utterly destroyed. It is, however, consolatory to think that the want of this most valuable esculent is likely to be filled up by a good supply of foreign corns. The arrivals daily in Cork and other ports in Ireland, of ships laden with corn, we understand are enormous.

MONETARY TRANSACTIONS OF THE WEEK.

(From our City Correspondent.)

Although there has been an unusually heavy demand for money for commercial purposes, owing to the extensive speculations in corn, there is no change in the rates of discount. the Consol Market has continued firm throughout the week, at very full prices, the Three per Cents. for Money having touched 97¾, the extreme highest quotation since the transfer of the Stock. The arrivals of gold from Australia and California continue to be very large, and, coupled with an import of £320,000 in gold from Port Phillip, has tended to impart confidence to the jobbers. Our advices from Californa are to the effect that the yield of gold continues to be enormous, and that the most sanguine prospect of Consols keeping above par. In addition to the above arriva. about 600,000 dollars have come to hand from New York; and 1,200,000 dollars, towards of 300,000 sovereigns, are on their way from the Mexican Gulf ports. The shipments have been comparatively small; viz. £30 000 in coin to Australia, £27,300 to Constantinople and Smyrna, partly on account of the Turkish loan; and about £60,000 in silver, to the Continent.

An important statement has been issued in reference to the National Debt. Our tota. indebtedness now amounts to £789,869 382, the annual interest upon which is £28,017,197. During the last thirty years the reduction in the principal has been about £50 000,000, and in the amount of interest £3,356,424. We may observe that within seven or eight years from this time the annual expense will experience a further diminution of £3,807,500, of which £2500.000 will take place by the T ree-and-a-Quarter per Cents becoming a Three per Cent. Stock. The nots circulation of the United Kingdom is st l on the increase During the four weeks ending the 4th of September it amounted to £26,800 072, against £52 616,155 last year; showing an improvement of not less than £4,173 917 The stock of bullion in the Bank of England is larger by £7,627,246 than at the same time in 1851. There is a slight increase; viz., £139,911, in the stock held by the Scotch banks, but a decrease of £8017 in Ireland.

Very large advances have been made by the various bankers upon stock and produce, yet there still remains in the hands an immense amount of unemployed capital. It is evident, however, that ample room is yet left to employ it in safe and profitable channels. Good bills have been discounted at from 2½ to 2¾ per cent.

The market for Consols, on Monday, was tolerably firm, at 100 to 100¼ for Money and the Account. No change took place in the prices on the following day; but on Wednesday morning, at one time, marked 100¼. On Thursday very few purchases of stock were reported, and the Three per Cents, Money and the Account, were 100⅛ India Stock was 275¾ India Bonds sold at 8s., 95s., 88s.; and Exchequer Bills, March, 2s. 7s.; June, 2s. 6s. to 7s. pre mium Transactions have taken p.ace in the New Five per Cent. Annuities at 127; South Sea Stock, 111 to 111⅞; and Long Annuities, 6 11-16.

The arrival of fifty packets of 300,000 dollars for the Continent has had very little effect upon the value of Mexican Stock. Most other Foreign Securities have ruled steady, and, in some instances, prices have had an upward tendency We understand that the Mexican Government is raising a Four-and-a-Half per Cent. Loan for £320 000, with a sinking fund of 2 per cent., to commence in 1858 at par. On Tuesday the market was tolerably firm. Grenada Deferred was quoted at 11⅞; Mexican Three per Cents, Money, 26 to 25⅞; Ditto for the Account, 26 to 25⅞; Peruvian, Deferred, 64; Russian Five per Cents, 118; ex div.; Ditto, Four-and-a-Half per Cents, 103; Sardinian Five per Cents, 96; Spanish Three per Cents, 51; Dutch Four per Cents, 99¼; and Turkish Loan, 93 premium. Dutch Four-and-a-Half per Cents have been done at par to 1 premium Actives, 105¾ to 105; Portuguese Converted Four per Cents, 38¾. The present firmness in the value of Peruvian stock may be attributed to the pacific tone of Mr. Wo.ster's last letter in reference to the guano deposits on the Lobos Islands.

Very full prices have been paid for Bank Shares, which have commanded considerable attention. Austria have sold at 78 58; Commercial of London, 29; London Chartered Bank of Australia, 11 to 3½; London Joint-stock, 10½; London and Westminster, 3¼; Imperial Joint Corporation, 3 to 3⅛ few, Provincial of Ireland, New, 17¾; Union of Australia, 31; Union, New, 4; Union van Actives, 105¾ to 105; Portuguese Converted Four per Cents, 38¾. The present firmness in the value of Peruvian stock may be attributed to the pacific tone of Mr. Wo.ster's last letter in reference to the guano deposits on the Lobos Islands.

Very full prices have been paid for Bank Shares, which have commanded considerable attention. Austria have sold at 78 58; Commercial of London, 29; London Chartered Bank of Australia, 11 to 3½; London Joint-stock, 10½; London and Westminster, 3¼; Imperial Joint Corporation, 3 to 3⅛ few, Provincial of Ireland, New, 17¾; Union of Australia, 31; Union, New, 4; Union of London, 17¾. Shares in the English, Scottish, and Australian Bank have been quoted 1 to 1½ premium.

Dock Shares have continued firm. Commercial Stock has realised 105; East and West India, 168; London, 130; St. Katharine, 96; Southampton, 84; Victoria (£2 paid), 6 to 6⅛.

There has been less doing in Steam-boat Shares. Australian Royal Mail have marked 4; General Screw Shipping, 50; General Steam Navigation, 2½; Peninsular and Oriental, 66½; Ditto, New, 35½; Royal Mail, 78½ to 79. Shares in the Royal Mail Steam Packet Company have been done at par to 1 prem. A dividend at the rate of 5 per cent. per annum has been declared by the General Screw Shipping Company.

The amount of business doing in Railway Shares has been comparatively small, nevertheless the quotations have undergone no material change, if we except North Westerns, which have fallen £3 per share. The "calls" for the present month are £742 000, but large payments of that sort—£543,890 in account of foreign companies The total amount called in the ten months of this year is £6,871,027, against £" 89 897 in the corresponding period of 1851; £.6,003,369 in 1850; and £1n,340,954 in 1849. The following are the official closing prices on Thursday

Ordinary Shares and Stocks.—Ambergate, Nottingham, Boston, and Eastern Junction, 6; Birkenhead, Lancashire, and Cheshire Junction, 11; Ditto, Chester and Birkenhe.d, 20⅞; Caledonian, 45¾ ex div.; Eastern Counties, 11⅞; Eastern Union, Class A, 8⅛; Edinburgh and Glasgow, 70; Great Northern Stock, 79¾; Great Southern and Western (Ireland), 93; Great Western, 96; Lancashire and Yorkshire, 84⅝; Leeds Northern, 16⅛; London and Blackwall, 8⅞; London and Brighton, 104⅛; London and North-Western, 117; Ditto, Fifths, 14⅛; Ditto, £10 Shares, 9⅝; London and South-Western, 87⅛; Manchester, Sheffield, and Lincolnshire, 20¼; Midland, 76⅝; North Staffordshire, 13⅛; North and South-Western Junction, 13⅛; Scottish Central, 82½; Shrewsbury and Birmingham, 70⅝; Shropshire Union, 3⅛ ex div.; South-Eastern, 73; South Wales, 40⅛; Thames Haven Dock and Railway, 4½; York, Newcastle, and Berwick, 66½; York and North Midland, 49½

Lines Leased at Fixed Rentals.—Leeds and Bradford, 108; Manchester, Buxton, and Matlock, 3½; Northern and Eastern, 64

Preference Shares.—Caledonian (£10) 10¼, ex div.; Chester and Holyhead (Five-and-a-Half per Cent), 18½; Eastern Union Scrip, 17; Great Northern Five per Cent, 127; Consolidated Bristol and Birmingham Six per Cent, 145½; North British, 93⅛; Shrewsbury and Chester Eight per Cent, 18; South Eastern, 23⅛; York and North Midland H and S. Purchase, 10⅞

Foreign.—Chemins et Embranchmes, 16½; Dutch Rhenish, 7; Luxembourg, 4; Lyons and Avignon, 10½; Namur and Liege (with interest), 8½; Northern of France, 35½; Paris and Lyons, 32½; Paris and Rouen, 35; Paris and Strasbourg, 30½; Sambre and Meuse, 10⅞; Western of France, 12¼

Mining Shares have been in very moderate request. Agua Fria have sold at 1¼; Anglo-Californian, 2; Brazilian, 6⅝ to 7; Ditto, Devons and Gulcha, 2½ to 3; Carson's Creek, 1; Colonial Gold, 1½; Copiago, 5½; English and Australian Copper Smelting Company, 4⅞; Lake Bathurst, 5; Mariquita, 1; New Grenada, 3½; Nouveau Monde, 1⅛; Port Phillip, 1¼; United Mexican, 8½ to 9; and Zuba, 1⅛

Friday Evening.—Scarcely any change has taken place in the value of Consols to-day; the Three per Cents, Money and Account, having marked 100⅛. India Bonds are 8ds to 87s; and Exchequer Bills (June), 67s to 70s premium. Foreign Bonds steady. Portuguese Converted, 39; Russian Four-and-a-Half per Cents, 105. Railway Shares by no means active

THE MARKETS.

Corn Exchange, Friday.—A very limited supply of wheat has been received up to our market this week, and the trade were coerced, chiefly from Essex and Kent. By land carriage the receipts fresh up to-day were small; hence the stands were very barely supplied. On the whole, the demand for most kinds of wheat of home produce was steady, at prices about equal to those paid on Monday last. The transactions for forward delivery were comparatively trifling. Foreign wheat, however, was firm. The imports of foreign wheat have amounted to 8029 quarters. Selected samples moved off steadily, at fully late rates. Low and middling kinds commanded very little attention. Flouring sorts were firm. Barley, the supply of which was small, met a steady sale, at late rates. Malting qualities were firm. The improved sale for oats, and their scarcity, were the turn in favour of sellers. Beans and peas, as well as flour, were held at very full prices

English.—Wheat, Essex and Kent, red, 37s to 40s; ditto, white, 34s to 36s; Norfolk and Suffolk, red, 36s to 38s; ditto, white, 40s to 42s; rye, 30s to 32s; grinding barley, 24s to 26s; malting ditto, 32s to 37s; malting ditto, 38s to 39s; Lincoln and Norfolk malt, 48s to 52s; brown ditto, 44s to 46s; Kingston and Ware, 52s to 54s; Chevalier ditto, 54s to 56s; Yorkshire and Lincolnshire feed oats, 17s to 21s; potato ditto, 22s to 24s; Youghal and Cork ditto, 21s to 23s; Sligo ditto, 21s to 22s; Limerick ditto, 20s to 22s; Galway ditto, 21s to 23s; Tyne, 21s to 23s; Peas, 32s to 37s; white, 36s to 38s; beans, 32s to 36s per quarter. *Flour*—Town made, 36s to 40s; Suffolk, 30s to 32s; Stockton and Yorkshire, 31s to 33s per 280 lb. *Foreign:* American flour, 19s to 21s per barrel; French, 35s to 37s per sack.

The Seed Market.—Upwards of 60,000 quarters of linseed have arrived off the coast: nevertheless, prices are well supported. Winter tares were again lower. In the value of other seeds we have very little change to notice.

The Hop Market.—Kent and Sussex, 80s to 85s: Baltic, crushing, 42s to 46s; Mediterranean and Odessa, 44s to 47s; hempseed, 38s to 40s per quarter. Coriander, 12s to 13s per cwt. Brown mustard, 12s to 13s; white ditto, 8s to 9s; and tares, 5s to 5s 6d per bushel. English rapeseed, new, £21 to £24 per last of ten quarters. Linseed cakes, English, £8 0s to £8 5s; ditto, foreign, £7 5s to £7 10s per ton. Rape cakes £4 5s to £4 10s per ton. Canary, 38s to 42s per quarter. English clover seed, red, 48s to 56s; white ditto, 46s to 48s per cwt

Bread.—The prices of wheaten bread in the metropolis are from 6½d to 7d: of household ditto, 5d to 6d per 4 lb loaf

Imperial Weekly Average.—Wheat, 37s 6d; barley, 27s 5d; oats, 17s 11d; rye, 31s; beans, 33s 8d; peas 32s 10d.

The Six Weeks' Average—Wheat, 42s 6d; barley, 27s 5d; oats, 19s 3d; rye, 30s 4d; beans 31s 2d; peas 30s 8d

Scotland.—Wheat, in bar ey, 1s; oats, 1s; rye, 1s; beans, 1s; peas, 1s

Tea.—The show of samples continues heavy. Although a steady business is doing in most kinds, the purchases are barely support ed. The general consumption is said at 2d to 3d per lb, up to the average last duty was entered for home consumption in 31 968 981 lb., against 30 987,357 duty in 1851. The total stock in the United Kingdom is about 55,000 000 lb., against 53,000,000 last year

Coffee.—The quantity of coffee consumed has been entered for home consumption in 1851 was 4,000 000 lbs. Fine yel ow Barbadoes, 37s 6d to 38s 6d.; good, 36s to 37s; brown 34s 6d to 35s 6d.; Jamaica, 37s 6d to 38s 6d.; fine ordinary, 34s to 35s. Native Ceylon, 37s 6d to 38s. Refined goods steady at from 44s to 45s. The cotta. clearances to the 25th ult., were 4,383 369 cwt., against 4,168 566 cwt. in 1851

Coffee—An plantation kinds continue to move off steadily, but no advance has taken place in the prices. Good ordinary native is dull, at from 45s 6d to 46s 6d per cwt.

Rice.—About 15,000 bags have been taken on speculation, at, in some instances, a further advance of 2d per cwt

Fruit.—The demand is less active, owing to large arrivals.

Provisions.—Irish butter moves off steadily, at no advance in the quotations of from 74s to 78s per cwt. English Dorset, 84s to 86s; and Limerick, 80s to 82s. Fine bacon is in good request, at 52s to 54s per cwt. Hams, 60s to 62s. Lard is dull, at 42s to 45s for Kimbert Waddell, and 35s to 38s for kegs. All other kinds of provisions are a slow sale.

Tallow.—The demand is still active, and prices are on the increase. P Y C. on the spot is selling at from 40s 6d to 41s for old, and 41s 3d to 41s 6d for new Town tallow, 40s to 40s 6d net cash.

Coals (Friday).—Baer's West Hartley, 16s; Holywell, 15s 6d. Tanfield Moor, 14s; Townley, 14s 6d.; Wylam, 14s 9d.; Hedley, 16s; Lawson, 15s 9d.; Eden Main, 16s 6d.; Braddyll, 16s 9d.; Hilton, 17s; Haswell, 17s per ton.

Hops (Friday).—Duri g the large supplies of new hops continue to arrive in good condition in some parts of Sussex and Kent, picking has been concluded and we understand that on the Farnham, 100s to 112s; Country, 93s to 100s; Mid and East Kent, 80s to 132s; Weald of Kent, 72s to 84s, Sussex, 70s to 86s per cwt

Smithfield (Friday).—To-day's market was heavily supplied with beasts as to number, but the general demand was dull at about the currency of last week. Only a few Mid ey Ready beasts had they been on sale, would have produced 3s 4d per 8 lbs; but the trade was in a very depressed state, at late rates Although the supply of sheep was comparatively large, the demand was steady, at nearly stationary prices. The top figure for the best old Downs was 4s 4d per 8lb There was a slight improvement in the veal trade. In some instances the primest calves were 5s per 8 lb dearer. Pigs steadily, but we have no alteration to notice in the quotations. Prime Scots, 4s 2d to 4s 4d; other sorts, 4s to 4s 2d; coarse and inferior, £10 to £19 each, including their small calf.

Per 8lb to sink the offals.—Coarse and inferior beasts, 3s 6d to 3s 8d: second quality ditto, 3s 4d to 3s 10d.; prime large oxen, 3s 6d to 3s 8d.; prime Scots, &c., 3s 8d to 3s 8d.; coarse and inferior sheep, 3s 6d to 4s 0d: second quality ditto, 4s 0d to 4s 2d.; prime coarse-woolled ditto, 4s 10d to 4s 6d.; prime South Downs, 4s 2d to 4s 4d; large coarse calves, 3s 10d to 4s 0d; prime small ditto, 4s 6d to 4s 8d; large hogs, 3s 10d to 4s 0d; neat small porkers, 3s 8d to 4s 0d; suckling calves, 4s to 5s; and quarter-old store pigs, 2s to 2s 6d. Total supplies, beasts, 1261; cows, 150, sheep, 6000; calves, 191, pigs, 270. Foreign: beasts, 800; sheep, 1800, calves, 208.

Newgate and Leadenhall (Friday).—The general demand was in a sluggish state, as follows:—

Per 8lb to the carcass: Inferior beef, 2s 10d to 3s 2d; middling ditto, 3s 4d to 3s 6d; prime large ditto, 3s 8d to 3s 10d.; prime small ditto, 3s 10d to 4s 0d; large pork, 3s 0d to 3s 6d.; inferior mutton, 2s 8d to 3s 10d.; middling ditto 3s 0d to 3s 6d; prime ditto, 3s 8d to 4s 0d; veal, 3s 0d to 4s 0d; small pork, 4s 2d to 4s 6d.

Mrs Richard, of a son.—At Whitehall on the 25th ult. the lady of Othello Colthurst, Esq. of a son.—On the 26th ult. at Bayswater, the wife of Thomas Bowdoin, the countess of Dunmore, of a daughter.—On the 26th ult. the wife of J Simmons, Esq., of a son.—On the 23d ult. at Marston House, Somerset, the wife of J J Simmons, Esq., of a daughter.

MARRIAGES.

On the 28th ult. at St Mary's, Lambeth, by the Rev H Chi olm, of Stockwell, assisted by the Rev W J P ke, of Sligo, rectory Norfolk Richard Hanum, Esq. of Albury-street, Regent's Park, to Ann Elizabeth, eldest daughter of the late Thomas Hall, of Mount Hill House, Clapham-road.—On the 28th ult. at Waterloo-place Cork, Hugh Hill Esq., of Mount Hill House, Clapham-road, to Ann Elizabeth, eldest daughter of the late Thomas Hall, of Cork.—On the 28th ult. at Bishop Hatfield's Hall, Herts, by the Rev Thomas Wesley, of Wolver ampton, Thomas Wesley Hall, of Bishop Hatfield's Hall, Herts, to Mary Ann, eldest daughter of the late Thomas Hall, of Cork.—On the 28th ult. at Over-Compton, the Rev R G Rogers, rector of Yarlington Bom-set, to Elizabeth Hartle daughter of the late Wyndham Goodden, Esq. of Over Compton, Dorset.—On the 28th ult. at St Peter's Church, by the Rev W F Hinxman, the Rev W Jones, to Miss Caroline Jackman, of Haydenyarrow.—On the 28th ult. at Lyndhurst Miss ar, Hants, by the Rev Thomas Hall, Rector of Lyndhurst, Charles Wade, of Lyndhurst, to Mary Ann Thomas, of Buxton, Derbyshire.—On the 29th ult. at the Rectory, the Rev J W Stone, M A, Rector of Ashbury, Berks, to Mary Anne, eldest daughter of the late Rev Andrew Hogg, M A, Rector of Ashbury.—On Tuesday, the 28th ult. at Handsworth, Mr John Pimley, edwards of Birmingham to Ann, eldest daughter of Mr Abraham Kemp, of Greenhouse Villa, Soho-hill, Handsworth

DEATHS

On Friday, the 24th ult. at Ryde, Isle of Wight, Richard Willet Hodges, Esq. of Earlsterrace Kensington, in the 64th year of his age. much respected and lamented.—Sept 1st, at Calne, in the county Leicester, Ireland, Jane, the beloved wife of the Rev Andrew Hogg Lyndhurst, and the affectionate mother of Mary Ann Wakefield.—On the 30th ult. at Cleveland House, Barnes Green, Surrey, aged 35 years, Marianne, the beloved wife of Henry Weedon, Esq., and daughter of the late John Palin, Esq., Lt. D.

AMUSEMENTS, &c.

ROYAL PRINCESS' THEATRE, OXFORD-STREET, under the management of Mr. CHARLES KEAN.—MONDAY and TUESDAY will be performed THE PRIMA DONNA, THE MUSICIAN BROTHERS, and A ROLAND for an OLIVER. Wednesday, the Prima Donna, after which (1st time) a new and original melodrama, entitled "Mont St Michael; or, the Fairy of the Sands," in which Mr Wright will make his first appearance at this Theatre under the present management. Mr Harley will also make his first appearance this season. To conclude with the Farce of the Spiritualists' Weaver, in which Mr Wright will appear. Thursday, Friday, and Saturday, the entertainments of Wednesday will be repeated.

ST. JAMES'S THEATRE.—ORGANO-PHONICS. In consequence of the great entirety, interest, and satisfaction evinced at each of the previous performances, and the crowded audiences, the Director has the honour to announce that the last concerts will be repeated on MONDAY EVENING NEXT, and every Evening during the Week. Doors open at Eight o'Clock, commencing at half-past Eight. Tickets and places may be secured at Mr MITCHELL'S Library, 33, Old Bond-street; the Box-office at the Theatre from Eleven till Five o'Clock; and at the principal Libraries and Musicsellers; where also programmes of the performances may be obtained.

ASTLEY'S ROYAL AMPHITHEATRE.—A Open every Evening for Equestrian Entertainments. The great sensation created by the Extraordinary Performances nightly presented, surpass all expectations. There will be an entire change of the ENTIRE ARENA, embracing the two troupes and long list of artistes, and the wonderful Horsemen SHRIMPTON and DE FREECE, who are nightly hailed with thunders of applause. The Drawing-room Evolutions of the Nicols Family, the Globe Juggler, French Vaulting, and the different acts of Gymnastic Exercise, and the beautifully trained Steeds. Doors open at half-past 6; Box-office daily, 11 to 4.

DISTIN'S CONCERTS.—BURNLEY, OCT. 6th; Clecheaton, 7th; Harrowgate, 8th and 9th. Vocalist, Mrs Theodore Distin; Pianist, Mr John Wilby. The Distins will perform their "Cuckoo Galop" at all their concerts: it is published for the Pianoforte, price 3s. by J. Distin, Military Musical Instrument Maker, 31, Cranbourne-street, Leicester-square, London; where all letters for engagements must be directed.

MR. and MRS. T. H. SEVERN beg most respectfully to inform their Friends and Pupils that they have RETURNED FROM THE COUNTRY, and that they will be happy to receive them as usual. Mr and Mrs SEVERN will also resume their residence to give Lessons in Singing, the Pianoforte, Organ, Thorough-bass, and Composition.

Their Assistance, on the practice of Glees and Choral Classical Music, every MONDAY and THURSDAY Evenings.

October 2nd, 1852.

A SCHOOL ATLAS of GENERAL and DESCRIPTIVE GEOGRAPHY, consisting of 24 Maps, with a special view to the purposes of sound instruction. 12s 6d

A SCHOOL ATLAS of PHYSICAL GEOGRAPHY, in which the subject is treated in a more simple and elementary manner than in the previous works of the same Author. Price 10s 6d each, strongly half-bound.

"I have taught Geography, more or less, in the High School and University of Edinburgh, for the last twenty years, and have no hesitation in saying that your Atlases are by far the best I have ever seen. I have long felt the want of a set of Maps suitable for educational purposes, and your Atlases seem to me admirably adapted for the purpose. Your Maps are clear and full, and your system of colouring and of public instruction which is now being introduced into the High School of Edinburgh, will be found a most valuable assistance. Your Atlases are by far the best I have ever seen. I shall have much pleasure in recommending your Atlases to my pupils."—Professor Wood, Edinburgh.

"

SHOW OF THE MANCHESTER AND LIVERPOOL AGRICULTURAL SOCIETY, IN THE HAYMARKET, GREAT HOMER-STREET, LIVERPOOL.

THE MANCHESTER AND LIVERPOOL AGRICULTURAL SOCIETY.

THE annual show of live stock, implements, seeds, roots, &c., in connexion with the above society, was held on Thursday week, in the Haymarket, Great Homer-street, Liverpool, the use of which (being the most suitable place for the purpose) was granted by the Corporation. The attendance was good. Among the gentlemen present were—Messrs John I. Blackburn, Thomas Townley Parker, M.P.; Llewellyn Lloyd; Thomas Thornely, M.P.; J. B. Neilson, M. Gregson Haigh, Higson, J. E. Brancker, R. C. Lowndes, R. Janion, Heywood, Worrall, Wilson, Clare, Drs. Sillar and Wilson, Capt Hornby, &c. In the prize list are to be found the names of many good farmers and breeders in the neighbourhood. The Society having, for the first time, added poultry prizes to their premium list, this portion of the show proved very attractive, more particularly to the ladies, of whom there was a large attendance.

Our limits will not allow the insertion of the list of prizes; but the following are the results as given in the *Liverpool Mercury*:—

HORNED CATTLE.—The stock exhibited was of a very inferior description, with the exception of Mr J. Lord's prize bull, a superior animal, but too fat for breeding purposes Mr Lowndes also exhibited some fine stock, which was very deserving of the prizes awarded The Earl of Derby sent a fine heifer, of the half-Brahmin breed, which possessed many good points, and was much admired.

HORSES.—The show of entire horses was very good, as also were the two and three-year-old colts; but the brood mares were of a very ordinary description. For draught horses (of which there were only two entries) the Earl of Derby was successful, his opponent showing very poor animals. Two very superior roadsters were exhibited—one by Mr Wilson, and the other by Mr John Mann.

SHEEP.—This was one of the best parts of the show, and some very superior specimens were exhibited, particularly those by Messrs. Janion, Ellison, and Lowndes.

PIGS.—The pigs were, with a few exceptions, of an ordinary class. Mr. Broadhurst Hill sent a very fine boar, of the small breed, as did also Mr. Ancell, of Manchester. Mr. J. Harrison's, jun., boar, with which he has gained so many prizes, was again successful The boars exhibited by the Earls of Sefton and Derby were very inferior. Mr. Solomon Ashton's (of Manchester) sow, of the small breed, obtained the first prize. Mr. Charles L. Clare also exhibited some very pure and finely-bred animals in this class, and was awarded a silver medal. For the best sow of any breed, the prize was awarded to Mr. George Wilson, of Liverpool.

EXTRA STOCK PIGS.—Mr. Townley Parker showed three Berkshire pigs of a very fine description. Mr. Wm. Ancell also sent a very fine young boar.

POULTRY.—The show of poultry was very good, considering it was the first time prizes were given. Capt. Hornby exhibited a fine collection of birds: his black Spanish, Dorking, game, and young fowl were the best in the yard. Mr. H. Worrall had some beautiful ducks, and Mr. Townley Parker some very fine geese and ducklings. Mr. Wilmot's turkeys were much admired, as also were Mr. Latham's pens of poultry, which obtained the silver medal. Mr. Brennan, of St. John's Market, also showed some very fine specimens.

The show of vegetables and seeds was very good, particularly the mangold wurtzel and turnips.

IMPLEMENTS.—The usual quantity was shown, but nothing particularly new, with the exception of the reapers, and Mr. Lambert's Australian tents, &c.

At the termination of the show proceedings, the committee, with a number of other gentlemen, dined at the Adelphi Hotel; the chair being very ably filled by Mr. H. White, secretary to the society. The usual loyal toasts were succeeded by "the healths of the patrons of the society, the Earl of Derby and Wilbraham Egerton, Esq.;" "the health of the Earl of Sefton, the president of the society;" with a variety of other appropriate toasts, and the list of prizes was read to the company.

The Chairman gave "The healths of the judges, who had done their duty most satisfactorily, and had given every satisfaction."

Mr Wolf acknowledged the compliment, and expressed his regret that a larger quantity of stock had not been brought forward at the show.

Dr. Sillar followed with some observations, in which he urged upon farmers the necessity of reducing their expenditure by the adoption of all the improvements of which they could avail themselves.

The toast of "The Mayor and Corporation of Liverpool, and thanks to them for the use of the Haymarket-yard," was acknowledged in an appropriate manner.

The "Memory of the Duke of Wellington" was drunk in solemn silence. Some other toasts followed, after which the company separated at an early hour.

London: Printed and Published at the Office, 198, Strand, in the Parish of St. Clement Danes, in the County of Middlesex, by WILLIAM LITTLER, 198, Strand aforesaid.—SATURDAY, OCTOBER 2, 1852.

ILLUSTRATED LONDON NEWS SUPPLEMENT.

VOL. XXI.] SATURDAY, OCTOBER 2, 1852. [GRATIS.

THE MARBLE QUARRIES OF CARRARA.

OF the exhaustless and important quarries of Carrara, of which we here present a Sketch to our readers, so little is known in this country that a succinct account of their position, extent, and general character will doubtless prove interesting. The magnificent chain of mountains, a portion of which they occupy, lets out in an acute angle from the Appenines, and forms a portion of the Duchy of Massa-Carrara. Nothing more picturesque or romantic can offer itself to the gaze of the traveller than the aspect of these stupendous and "marble-hearted" heights, as seen from the sea-shore, whence they are distant about four miles. Almost destitute of vegetation, they gleam in the sunlight like masses of brass, while at intervals rugged and inaccessible peaks cut sharply against the sky, and appear to pierce into the clouds. In numerous directions, about midway of the heights, the eye is attracted by what seems to be a vast torrent pouring down its resistless volume of seething water into the valley, but which is, in fact, the shoot of the refuse flung out of the quarry immediately above. On the flank of a few of the mountains, and near their base, some stunted vegetation, consisting for the greater part of dwarfed oaks and chesnut trees, may occasionally be seen; while nearer to the summit, in the fissures and gulleys where no human foot can penetrate, a sickly and scanty herbage affords sustenance to troops of goats, the patriarchs of the range. The quarries are almost universally situated about midway of the mountain, and although said to have furnished the ancients with the material for building the Pantheon at Rome; and more recently to have supplied nearly every civilised country throughout the globe with their precious contents, to the extent of an export amounting annually to an average of 40,000 tons, the workmen are still employed upon the surface; and so little effect has the labour of centuries produced upon the general appearance of the mines, that they may be safely affirmed to be inexhaustible.

Of the export above named the United States consumes nearly the whole, the trade with that country being heavy and incessant. Italy, France, and England confine themselves almost entirely to the statuary marbles, of which they fully estimate the excellence; while England, although rarely importing more than 6000 tons annually, is, nevertheless, steadily increasing its demand. Russia, whose rigorous climate peculiarly demands building materials able to resist its ungenial atmosphere, erects with the world-famed marbles of Carrara her majestic palaces and churches. The recent reduction of the import duties, which were formerly very heavy in some countries, cannot fail to increase the demand throughout Europe. There is, however, still a heavy export duty, which has, moreover, most injudiciously been lately increased by the native Government.

The quarries of Carrara contain four varieties of marble, of which the most valuable is that used by sculptors, the white granularly foliated limestone. This has always been the favourite material both of the artists of ancient Greece and of modern Europe, in consequence of its purity of colour, its delicate transparency, and its granular texture, which renders it much more easy to work than compact limestone. The two great sources whence the statuary marble of Europe has been procured are Paros and Carrara. The Parian marble is the most pure, consisting almost entirely of carbonate of lime, and is, consequently, softer, somewhat more transparent, and of a more visibly laminated texture than that of Carrara, which is frequently mingled in considerable proportion with granular quartz. The latter has, however, no other rival as regards either quality or durability. The other three varieties obtained are "the veined" marble, equal as regards texture to that already described, but traversed by coloured lines which render it inappropriate to the chisel; the "*ravascione*" or Sicilian, similar to that produced near Messina; and the "*bardiglio*," which is of a deep blue colour, but in formation precisely similar to the white.

Some of the quarries may be explored with ease and safety, but such is by no means the case with all of them; while, in every instance, the paths by which they are approached are full of peril to the uninitiated. At times almost perpendicular, the way leads along the brinks of stupendous precipices, where no path can be discerned, and the brain reels as the incautious glance seeks to penetrate the gloomy depths of the rocky fissures amid which it winds. The miners are a fine and hardy race, remarkable for their robustness of constitution, reckless courage, and unalterable good-humour; nor do the fatal accidents which occasionally occur tend to lessen their gaiety: and many a snatch of wild but melodious song may be heard amid the clanging of hammers, the report of gunpowder, and the crash of falling stone. The workmen do not derive their supplies from the town of Carrara (which contains only about 8000 inhabitants, and is simply re-

THE MARBLE QUARRIES OF CARRARA.

markable for the fountain in its principal square, which is ornamented by a colossal figure, attributed to Michael Angelo, but left in an unfinished state), the fragility by which they are distinguished enabling the surrounding villages where they reside to satisfy all their wants. Their hours of labour are from eight in the morning to two in the afternoon, all extra work being remunerated according to the time employed; and the difficulty of ascent rendering it essential to the workmen to avoid all unnecessary burthens, they are reduced to drink rain-water, which they obtain by excavating square holes as reservoirs; their diet consists of *polenta*, or bread, and the common cheese of the country; and these simple aliments, with the fruits of the season, compose their whole nourishment. In wine or coffee they never indulge; and yet the amount of labour of which they are capable in many instances exceeds belief, as will be readily understood when the nature of their occupation is fully comprehended.

In working the quarries, the huge blocks are first loosened from the mass by blasting, after which wedges are applied until they are thoroughly detached from the rock, when they are shaped into oblong squares—with the exception of the statuary marble, of which the value is so great that the masses are removed intact—then lowered to the *poggio*, or base of the mountain, whence bullock-cars transport them to the Marina, where they are embarked. When the quarry is situated so perpendicularly that the stones incur risk of breakage from a too rapid descent, they are securely surrounded by strong ropes and placed upon two parallel beams (or *lizze*) of oak, beneath which lesser beams are arranged transversely. A workman stands upon the block throughout its perilous transit, whose duty is to raise each of these so soon as it is passed, and to hand it to another man in front, in order that it may again be placed securely upon the [illegible] of the descent may be [illegible] the most dangerous service performed by the miners, as it occasionally happens that the huge block, in hesitating for an instant upon its wooden support, yields to the impetus of its own weight, and slipping from its oaken cradle, rushes headlong down the declivity, crushing the stout cables by which it is bound like whipcord, and crushing beneath its tremendous mass the unfortunate individuals employed in assisting its descent. When [illegible] and the blocks are allowed to roll down plain, the *lizze* is dispensed with, and the blocks are allowed to roll down unaided: this operation at times produces a most beautiful and thrilling spectacle, and one of so wild a nature, that no description could do it justice.

At the *poggio* (the real subject of our Sketch) the blocks thus collected are [illegible] upon [illegible] consisting of [illegible] three parallel beams of oak, of which the centre one is rather lower than the others; the animals are attached to the carriages in numbers proportioned to the bulk of the stone and the impediments which encumber their pass, and the [illegible] of the [illegible] of a very peculiar character. It is a very common occurrence to see ten yokes of oxen harnessed to one car, each guided by a driver, whose business it is to avoid as much as possible the ponderous masses by which the ground is overstrown; and yet, at the first glance, it is impossible to believe that they can ever hope to accomplish so arduous an undertaking. In vain do the sturdy and patient brutes strain to their task; unwieldy in nature, and only passively intelligent, the couples can seldom or never be compelled to follow the guidance of their leaders, who, by stumbling and straggling over the rocky fragments among which they are impelled by their drivers, partially level the path behind them, as they are now dragged by the horns, now goaded by the iron-shod staff, and now [illegible] by the [illegible] of the men, whose shouts are re-echoed by the rocks in deafening dissonance; but, swerving to the right or left, hew out for themselves a new line of road frequently so impassable that, after having by a supreme effort overcome some apparently unsurmountable [illegible], the animals stagger a few paces further, and then [illegible] at their task. For this evil there exists no remedy, however; the nature of the ground and the constant declivities of stone rendering it impossible to construct a safer means of exit from the *poggio*. The exact extent of this marble range we are unable to state, beyond the fact that it embraces many square leagues; the most productive as well as the most valuable quarries being those of the statuary marble, which do not exceed [illegible] in all, the whole of which are the property of four or five of the principal [illegible] of Carrara, [illegible] [illegible] between forty and fifty are in full work, and produce admirable [illegible] while the number of workmen constantly employed varies from 2000 to 2500. Legends of [illegible] peril are rife among the miners, who, like their fellow-labourers in every land, are imaginative and superstitious; and in the quarry of Fantiscotti a number of names cut into the rock, and some roughly-carved figures hewn upon its surface, are objects of peculiar awe from the fact of their great antiquity, and the absence of all tradition regarding their origin.

From the extraordinary difficulties presented by the approaches to these marble quarries, they are [illegible] [illegible] [illegible] [illegible] which [illegible] [illegible] [illegible] [illegible]

me that it was 'calloused with the knocking down of niggers.' When I left the plantation I drew a long breath, and felt as if I had escaped from an ogre's den." The piety of Uncle Tom opposed a passive resistance to the brutality of this fiend; and he perishes a martyr to the latter's malignant spleen. Such instances, the author tells us, are not rare. On out-of-the-way plantations such cruel murders are of frequent occurrence, accompanied with torture, burning at the stake, and other illustrations [illegible]

The character of "Uncle Tom" is admirably drawn, from his religious ministrations to the female "saint," Emmeline, to the good fortune under St. Clair, to his sufferings on Legree's estate. It is the veritable portrait of a negro [illegible] in Israelite indeed, and without guile"—which no condition of life, no coarseness of manners, no want of learning or skill, no shade of tint can deteriorate. It stands out from the mutual relations of definite in outline, forcible in detail, such as Heaven alone could make it, such as the truly pious would have all men to be, "excepting thyblind."

To [illegible] character is entrusted the vindication of the difference between British poverty and American slavery. His master, previous to his sudden death, is stated to have initiated the legal proceedings for his emancipation. Poor Tom looked upon himself as already free; and could not avoid, to his master's surprise, showing his exultation on the natural occasion. "Why, Tom, don't you think, for your own part, you've been better off than to be free? You couldn't possibly have earned, by your work, such clothes and such living as I have given you." The enlightened African replies, "Known all that, Mas'r St. Clare; mas'r's been too good; but, mas'r, I'd rather have poor clothes, poor house, poor everything, and have 'em *mine*, than have the best, and have 'em any man's else. I had so, mas'r, I think it's natur, mas'r." Poor Tom was, however, doomed to be disappointed. The good work tardily begun was prevented by unexpected death.

Great skill is shown in this book in the delineation of characters. All are sharply drawn, distinct, well placed, whether in light or shade, and admirably coloured. One of the most elaborate, is that of Ophelia, a pious and strict lady, who had been reared in the New England states, and indoctrinated with Abolitionist principles, which she held most conscientiously. When introduced, however, into New Orleans, her benevolence is found to be rather more speculative than practical. She would readily set all the slaves free, but would not willingly some into contact with their persons; she would not touch, if she could help it, a nigger; could not *love* them, and thereby induce them to love her. From this prejudice she has to be delivered, and is: Mrs. Stowe insists on the perfection of Christian charity.

The wife of St. Clare, with her perpetual languor, affected sensitiveness and real heartlessness, is likewise a masterly though unpleasant portrait. The group, the daughter, Eva, however, is by far the most lovely. A childish piety, precocity, and constitutional delicacy. She sheds a pure glory over the entire picture, and her presence makes holy every page on which her name is printed. An image like this were enough to confer immortality on the work; and the spirit of truth with which it is everywhere animated, cannot fail to consecrate it for its intended purpose, and make it successful in its mission. The blessings of the good will be with this book, wherever it shall be found.

OUR IRON ROADS: their History, Construction, and Social Influences. By FREDERICK S. WILLIAMS. London: Ingram, Cooke, and Co.

(SECOND NOTICE.)

We pass over the amusing chapter of the opposition offered to engineers and surveyors by infuriated landed proprietors, the apprehensions excited in certain districts by the appearance of theodolites and levelling parties, the *ruses* adopted to take the necessary levels, and the affrays in which large bodies of navvies were collected for the defence of the surveyors. Your true navvy is ever ready for a fight, and, indeed, eager for the fray; and "the navvies were the more eager to engage in such undertakings because the project, if carried out, afforded them the prospect of increased labour." It was clear that these engineers, surveyors, and navvies, so deeply interested in the object to be attained, and backed by a wealthy and powerful board, were not likely to be diverted from the purpose by the threat of an action for trespass. More legitimate scope for their ingenuity and resources was found when the act was obtained, when rivers had to be spanned, mountains to be pierced through, roads and canals to be crossed, and embankments and deep cuttings had to be constructed. Many of these works will remain imperishable memorials of the grandeur of conception and solidity of execution which distinguish English railway engineering. The Roman roads are still traceable, after 2000 years. But we are not satisfied with antiquity for the sake of antiquity. We do not like those of the engineers whom we nod to in our streets, and shake by the hand in committee-rooms. The embankment across Chat Moss may not be imperishable. The embankment of the Londonderry and Coleraine Railway, which reclaimed 23,000 acres from the sea at Lough Foyle, may be, in the course of ages, swallowed up by the sea. The open cuttings may be filled up and built upon, whenever posterity discover some better, and we may be sure faster, means of locomotion than our railways supply. But the thickness of Penkridge Bank tunnel upon the Chester and Holyhead Line—an excavation cut through the solid basaltic rock? What physical agency can efface the traces of the Sheffield and Manchester Summit tunnel, more than three miles long, which passes through "the backbone of England," and pierces rocks "hard as the nether millstone?" or the Box tunnel upon the Great Western, nearly 3400 feet in length, and which is as durable as freestone rock can make it? or the Kilsby tunnel, of more than a mile and a third in length? The speculative will survey St. Paul's from Primrose Hill, and reflects that he is standing over a tunnel driven through London clay, which the curious antiquary of some distant age will visit and speculate upon when one cause of that magnificent dome is not left upon another. The temples of Paestum are ruins; but the grotto of Posilipo remains unimpaired by the lapse of ages, to attest the skill of the Stephensons and Lockes of hoar antiquity. The traveller who has visited Naples is not likely to forget this subterranean road or tunnel of 2316 feet, made where the narrow ridge of Posilipo separates Naples from the Phlegraan fields. This wonderful tract "exhibits the various action of fire and water upon ground which has been rocked by earthquakes, slashed by lightning, blown up into more than twenty distinct volcanoes, and scorched, bared, shaven, rent by the sea." Yet this tunnel remains in the same state in which it was traversed by the ancient Cumaeans, when they journeyed from Neapolis to Puteoli. Still the traveller passes through this noble grotto of Posilipo on his way to the enchanting shores of Baiæ, where Marius, Sylla, Pompey, and Cæsar had their villas, and men who possessed a province elsewhere, here contended for a single acre of ground. Remembering this grotto of antiquity, we are disposed to predict for the railway tunnels of the nineteenth century an enduring existence. Shall shall shame the Pyramids. Shall not a basaltic rock outlast the tomb of Cheops? If a tunnel through a hill of tufo, where you meet at every step the *solfare fiamme* of a volcanic tract, stands "firm as the everlasting hills," who shall predict the destruction and collapse of those perforations through whinstone, granite, and millstone grit, which modern science has driven through the bowels of our lofty mountains?

Talking of the Pyramids reminds us of some curious calculations relative to the merits of ancient Egyptian and modern British engineering, for which our author acknowledges his obligations to Mr. Leconte. This gentleman avers that the London and Birmingham Railway is the greatest public work ever executed either in ancient or modern time, not even excepting the Great Wall of China, or the great Pyramid of Egypt. The labour expended on the latter was equivalent to lifting 15,735,000,000 cubic feet of stone one foot high. The labour expended in constructing the London and Birmingham Railway, he gives a result of 26,000,000,000 cubic feet of material lifted one foot high; or, 9,267,000,000 cubic feet more than were lifted one foot high in the construction of the Pyramid. The labour of constructing the Great Pyramid was performed, according to Diodorus Siculus, by 360,000 men; according to Herodotus by 100,000 men; and it required for its execution twenty years. The London and Birmingham Railway was made by about 20,000 men in less than five years; and it is only one of a hundred undertakings of a similar kind. If Mr. Leconte has drawn up his materials for pursuing his ingenious calculations, he would have found that the labour involved in the formation of earth-works, bridges, viaducts, &c., for our railways, would have built a thousand pyramids, with another Hall of Kings at Carnac, and another Temple at Dendera, thrown in. Also in magnitude and permanence, how different in their origin and practical results! The Egyptian temples and pyramids, vast memorials of despotism and human suffering. "Our iron roads," the highways of thought, along which winged steeds of Plato now rush, dart, bang, and clatter, with hearts glowing like furnaces, and fiery red eyes; and anon snort and pant and emit puffs of white smoke, with a tide of life at their heels, and all art and commerce in their train.

We devote a great deal of time to an acquaintance with objects of [illegible] world: we not to study more closely those great [illegible] which are to [illegible] to the remotest posterity? It [illegible] to suppose that there is anything dry or uninteresting in the history and progress of a triumph over some great engineering difficulty. A peep into the busy brain of an eminent civil engineer would be of surpassing interest. The autobiography of George Stephenson, or Brindley, or Telford, if it described all the mental processes by which they worked out such astonishing results, would be one of the most fascinating and delightful works ever published. The history of the Britannia Tubular Bridge is well in the volume before us; but what if we could read the mind of the engineer vividly portrayed by himself? Mr. R. Stephenson, we believe, has a theory that the Britannia Bridge across the Menai Straits will last as long as the Colosseum at Rome. If he would leave us such an autobiography as we have supposed, it would probably outlive his tubular bridge. Meanwhile, until some railway engineer finds the compasses of Brindley, and the pen of Gibbon, we must be satisfied with such engineering details and processes as we find in one author, which we must in candour state, are technical enough to satisfy the scientific man, while they are written in a clear and popular style, which renders them abundantly intelligible to the general reader. The cost and method of tunnelling, and the quantity of material excavated, the daring and skill displayed in our great railway viaducts and bridges, the history of great earthworks and embankments, and the unforeseen impediments which tax the resources of the engineer, are matters in which we ought all to take an enlightened interest, and which it would require some ingenuity to rob of their attractiveness.

In the work before us, the pencil of the artist has saved the author from much technical description. It is unnecessary to minutely describe the elliptic arches of this bridge, or the decorative abutments of that viaduct, when the engraver enables you to understand the structure at a glance. At every step arises something susceptible of illustration. Here we have Shakspeare's cliff and the South-Eastern Railway; there, the gigantic proportions of the viaduct across the Dee, in the Vale of Llangollen. The Turentin, Rugby, Congleton, Dryfe Sands viaducts, and the high-level bridge at Newcastle-upon-Tyne, are by turns cited by the author, and illustrated by the artist. A short description of a skew bridge suffices, when we can see it in the next page. The telescope bridge over the Avon would be an incomprehensible contrivance in letter-press alone; but when the engraver is called in to assist, we understand more of the *modus operandi* than we should obtain by a dozen journeys from Brighton to Portsmouth. The floating railway across the Forth, and the New Holland viaduct, are dashed [illegible] upon the mind in Mr. Williams's pages. When it is necessary to talk of the permanent way, the outline of railway chairs, [illegible] and sleepers is of essential help; and so of a dozen things and objects.

The internal economy of a railway, and the activity, regularity, and order with which these great undertakings are conducted, may be gathered from a visit to the Camden-Town goods station of the London and North-Western railway. The Camden Station is at present devoted to goods and cattle traffic, and the reception of locomotives. In ten years after it had been laid out for these purposes, so vast were the requirements of the augmented traffic, that it was necessary to pull down all the original buildings, and to remodel the station entirely. The merchandise received from up and for down trains averages between 800 and 900 tons a-day. During the six months ending August, 1848, 73,782 railway-waggon loads of goods entered and departed from Camden Station. Fifty waggon loads of manufactures are often despatched to the manufacturing districts in two hours. Having described the extent of the Camden station, and the magnitude of its business arrangements, the author reminds us that this is the chief metropolitan terminus of a railway which includes 448 miles open to public traffic, and on which eighteen millions sterling have been expended; while it is interested, by subscription, contribution, or guarantee, in a number of lines, which, with those already finished or in course of construction, form an aggregate of 641 miles, on which more than twenty-five millions will ultimately form the outlay. If no portion of this prodigious sum of money had been wasted, or unnecessarily expended, what pleasant times these would be for shareholders and directors!

Railways, like the knight's shield, have their fair and dark side. Following the example of our author, we have principally concerned ourselves with their claims upon the admiration and gratitude of the [illegible] It may be somewhat ungracious, on the part of the gentle public, to [illegible] to [illegible] opposed to people's minds. If we take a [illegible] [illegible] [illegible] glowing eulogy of the railway [illegible] [illegible] convenience, but a column [illegible] [illegible] accident," with perhaps the grave [illegible] of a coroner's jury, brought home to the mind's understanding in a smart leading article. A terrible instinct of self-preservation impels us to fix the blame somewhere, and not seldom makes us unjust. We begin by invoking tremendous agencies, whose strength bids fair to [illegible] [illegible] forces, and whose velocity rivals the wind. Mr. Williams tells us that a train often has a momentum equal to that of a cannon-ball of some ten or twenty tons weight flying through the air; that an engine has twice gone, without any embarrassment, through the fourteen-inch wall of a London *engine dépôt*; and that, in an ordinary accident happening to a luggage-train at Loughborough, the waggons over-rode each other till the uppermost one was piled 40 feet above the rails! When a speed of 70 miles an hour is attained a space has to be passed over of about 105 feet per second; that is to say 35 yards must be traversed between the tickings of the clock. If two trains proceeding at this speed pass one another, the relative velocity will be doubled; so that if each of them be 70 yards long, it would flash past the other in a single second of time. Now, according to the experiments of Dr. Hutton, it appears that "the flight of a cannon ball, having a range of 2 or 3 feet, is a quarter of a minute, which is at the rate of five miles a hour, or 300 miles an hour; and hence it follows that a train of cars moving at 75 miles an hour, has one-fourth the velocity of a cannon ball." A sleeper left upon the line, a "point" unaltered, anything that could cause two such trains to impinge upon each other and come into collision, our blood freezes with horror to think of. Yet the liability to such accidents is one of the penalties we pay for our desire to annihilate time and space. We harness the steam monsters to our cars, and we expect them to convey from twenty to thirty millions of passengers every year without accident. The steam and iron and horse give way now and then, with all the vigilance exercised in their examination. Poor weak human nature is chargeable with the rest. The engineman and stoker may be watchful and wary; but what if the pointsman, the flagman, or the time and policeman should have a momentary fit of forgetfulness? We all know what a slip of the pen is; the most careful writer makes a dozen a day; and yet if a railway policeman with a couple of flags in his hand, or 300 miles of rolling almost as much, follows that a fly-train

GENOA.—(SEE PAGE 290).

FLORA MACDONAND INTRODUCED TO PRINCE CHARLES EDWARD, AFTER THE BATTLE OF CULLODEN.

THE chivalrous attempt to regain the throne of his ancestors by Prince Charles Stuart; the astounding successes of his band of heroic Highlanders in sanguinary contention with well-appointed and veteran armies; his subsequent sufferings, and almost miraculous escapes, appear more like the creations of romance than matters of historic truth and reality. The final contest took place on the muir of Drumrossie on the estate of Culloden, near Inverness, where, on the 16th April, 1746, the hopes of the Stuarts were for ever destroyed. Charles fled from the field to the house of Fraser, of Gorthleg, where he stopped but one night, pursuing his course, with a few companions, to the west coast. His first interview with Flora Macdonald—whose memory, says Dr. Johnson, will not perish while history survives—is the interesting event represented in the Engraving under notice. She was a kinswoman of the chief of Clan Ranald, who had given refuge to the Prince in a cottage at Corodale, in South Uist, and here she was introduced to him by O'Niel, the only attendant he now had.

The Picture portrays the interior of the shealing and the *dramatis personæ*. Lady Clan Ranald and Flora Macdonald, who was a relative and then a visitor, have slipped out from Captain Ferguson and a party of soldiers who had then actually taken their quarters in the house, accompanied by Mac Eachuin, a faithful follower, afterwards father of Marshal Macdonald, Duke of Tarentum, so distinguished an officer in the service of Napoleon. The Prince is represented as he must have appeared under such untoward circumstances: his clothes are described as having been sadly tattered; his features and position strikingly evince his mental distress and physical prostration from the vicissitudes to which he had been exposed. At his feet lies the Proclamation, offering a reward of £30,000 for him, dead or alive; a bribe which, to the honour of those leal-hearted people, was no temptation for any one of the numerous individuals who were cognisant of his concealment.

"FLORA MACDONALD INTRODUCED TO PRINCE CHARLES EDWARD, AFTER THE BATTLE OF CULLODEN." PAINTED BY ALEXANDER JOHNSTONE.

F I N E A R T S.

THE REFUGE AT THE ALTAR.

FROM A PICTURE BY DAIGE, BERLIN.

THE SANCTUARY WON.

BY MRS. T. K. HERVEY.

Oh, on! The spoiler through our land
Hath tracked us from afar;
How shall our woman's strength withstand
This bitter curse of war?
Where can we turn, or whither flee,
When blood is poured like wine?
Since ruthless man our foe must be,
What help, O God! is Thine?

II.

Thy Temple, Lord, at last is won,
Behold the gift I bring—
My first-born babe—my darling one,
My soul's most precious thing!
They would have torn him from these arms,
They would have quenched alway
The sun whose heat my bosom warms,
The light that makes my day!

III.

The tumult's rage hath scared my boy:
His sweet eyes wandered wild
When in my face he missed the joy
That kept him still a child.
Ransomed by love, he standeth free
Upon Thine altar-stone;
But oh! the voice he lifts to Thee
Hath caught the Angels' tone!

IV.

Girt by Thy Sanctuary's light,
Strange peace his soul doth thrill—
Guide Thou the tender foot aright
That leapeth at thy will!
O, lead him still each deed to shun
That wears a gilded name:
Teach him to do Thy work, or none,
In this red world of shame!

V.

Far better at my feet he fell
A slaughtered lamb this day,
Than live the pomp of war to swell,
And midst its riot say:—
"For this my mother's soul grew strong
When red the rivers ran;
She bore me through that battle's throng
To lead this battle's van!"

VI.

Away, away! such fears are vain;
Pure on God's shrine he lies:
Where love is peace, and guilt is pain,
Each cruel instinct dies.
Heaven set the thorns around his brow
To point a refuge near;
Not Death itself can harm him now—
The sword is broken HERE!

(*Continued from page* 291.)

in these volumes, where the animal spirits are made to do all the work of the under-reading. But "Our Own" is also a ponderous joker. It is wonderful the diligence with which he seems to have accumulated, for the "old original favourites" for these modern pages. We have the Wiltshire "*lolks*" for like, Mr. Braham's "*enthusemmisy*" for enthusiasm, Hibernian mispronunciations of English words, and any bit of vulgar ism that might be picked up any where, from Backstone on the stage to an American "in a fix," to "Our Own." In fact, claims to be one of those merry Irish souls who make themselves at home wherever their lot be cast; but that he stretches the privilege, when, as in the case of claiming relationship to Dan O'Connell, and in other similar instances, he condescends to tell untruths, or to allow them to pass as truths, to cog, and forswear himself, we think will be readily granted; and when he sets forth all these unscrupulous subterfuges as so many heroic exploits, there cannot be a doubt that he is holding forth, in the most attractive colours he can command, not only a bad but a pernicious example.

In relating stories of this kind, Mr. Honan speaks in scorn of "the would-be fine gentleman," who would not stoop to these shifts, in order, "whilst others had neither bed nor board, to find a good roof over his head, a clean bed, and abundance of *grub* (hear *every* day during the campaign." Would-be fine gentleman, forsooth! No gentleman would utter an untruth, or procure accommodation under false pretences; but Mr. Honan does not seem to be aware of the fact. Here, then, we join issue with Mr. Honan entirely, and insist on the man of letters—foreign correspondent of the *Times*, or other—making it a rule to himself that he should always, at least, not the gentleman; and even the "fine gentleman," in the true sense of the term, when he can. The professional fine gentleman, indeed, should be the gentleman *par excellence*, the nonest teacher by example as well as precept, of the latter indispensably. Mr. Honan claims a character for a class; that which he has drawn is not representative; it is no more like "the gentlemen of the press" than it is like an honest or honorable man; it dwells apart, not "like a star," but an outcast, an alien from every spot on earth, except Coventry.

We repeat that we take Mr. Honan on his own showing. It is probable that, in himself, he is a reputable person, and not so much of "the Wild Irishman" as he has represented himself to be: from some few indications, indeed, we should adjudge him to be clever, diligent, and generous; but an exceedingly conceited, vain, and affected old gentleman (by the tale we find in the early part of the book)—who would, in the maudlin humour in which this book is written, "fight all his battles," whether of war or gallantry, "o'er again;" and not thrice only, but many times, "slay the slain"—the number of ladies he has "cut out" in the matter is on the last account. Of such absurd folly, at his years, he ought to be made to repent.

Journal of a Voyage in Baffin's Bay and Barrow Straits in the Years 1850-51, performed by her Majesty's ships *Lady Franklin* and *Sophia*, under the command of Mr. William Penny, in Search of the Missing Crews of her Majesty's ships *Erebus* and *Terror*; with a Narrative of Sledge Excursions on the Ice of Wellington Channel, and Observations on the Natural History and Physical Features of the Countries and Frozen Seas Visited. By Peter Sutherland, M.D., M.R.C.S.E., Surgeon to the Expedition. 2 vols. With Maps, Plates, and Wood-Engravings. Longman.

This ample title-page sets forth at large the purpose of the important book to which it appertains. The efforts made and instigated by Lady Franklin, in search of her husband and his mates, rank her name with that of classical heroines remarkable for their fidelity and perseverance. The frequent voyages undertaken for this object are calculated to increase our knowledge of the Arctic regions. Not only English but American enterprise has been stimulated; and the genius of two great countries has been awakened to the same work of benevolence and scientific research. Advantage has been properly taken of these expeditions to extend our acquaintance with the botany, the zoology, and the geology of the North Pole. The plants collected on the present occasion were numerous; and, in particular, some highly important notes have been contributed by Dr. Dickie on the Arctic algæ, of which Dr. Sutherland had collected abundant and various specimens. There are also a list of mollusca; and valuable remarks on fossils, the geological places of many of which have been first determined by the results of this voyage.

The attempt to effect a north-west passage has, accordingly, at least resulted in much knowledge being made available to us respecting the physical features of Arctic America. "To Parry, Beechey, Ross, Lyon, and Sabine, by navigation; and to Franklin, Richardson, Back, Dease, and Simpson, by perilous journeys overland, we are chiefly indebted for what we know of the Arctic regions of the North American Zone, and their names will ever adorn the pages of Arctic history. But the return of both navigators and travellers still left the great and perplexing question unsolved." In May, 1845, Sir John Franklin renewed the search—proceeding in the ships *Erebus* and *Terror*, with a crew of 138 gallant and enterprising officers and men; and the last intelligence received from them was dated in Baffin's Bay two months after they had left the Thames. In 1848, it will be recollected, three expeditions were fitted out in search of the missing ships. Other efforts were subsequently made, and at length the whalers were put in requisition, and signal service was expected from them. In this new line of adventure the name of Mr. William Penny, of Aberdeen, the commander of the *Advice*, of Dundee, became especially prominent. That gentleman had been engaged in the Arctic seas from his twelfth year, and in command of a whaling ship for sixteen years. He had also done much in his whaling career, to extend our geographical knowledge of the polar regions.

Though not holding a commission under the seal of the Admiralty, Mr. Penny received directions from that office to fit out two vessels, which he named *Sophia* and *Lady Franklin*—the first after Miss Sophia Cracroft, the niece of Sir John Franklin, who had laboured with his wife in promoting voyages of discovery in search of him whose long absence was to them so painful. Both of these ships were equipped at Aberdeen, and their crews were appointed chiefly from among the whalers. The Admiralty instructions under which Captain Penny was to act are dated April 11, 1850. The most hopeful supposition seems to have been that Sir John Franklin went through Wellington Channel. The work before us contains a voluminous detail of the proceedings of the ships during the whole voyage. In fact, it presents a log-book compiled with labour and precision. It is a diary in which confidence may be placed, because evidently made at the time. Some of the circumstances are trivial, and many of the descriptions already well-known; nevertheless, they are the actual facts of the voyage, such as occurred day by day. Reading them, we are enabled to sympathise with the adventurers in their cares and their anxieties, and in the great purpose of their persevering travail.

The crew were disappointed with the first sight of the icebergs—masses which did not appear to be more than forty feet above the surface of the water. Shipwrecks caused by these are daily occurrences; there is danger of running foul of them in dark nights, and navigation here always partakes of the intrepid character. Art or survey directs the voyager; nothing but his own experience can save him, and here Captain Penny's previous knowledge was of infinite service. As they proceeded northward, they came in with more towering icebergs—hundreds of them with their tops and overhanging cliffs, while streams of ice much broken up, and the impenetrable "pack" in the middle of Davis' Strait, could be seen all moving imperceptibly into a warmer climate. Meantime, large flocks of loons and eider-ducks were led by instinct to set their faces upon high northern latitudes, into which they were attracted by the "swelling curve" of the returning sun. Cod-fishing is carried on in the Strait to a considerable extent; but curing and drying stations have not yet been established along the coast, though some of the islands are well adapted for the purpose. Within two miles of Leively, a Danish settlement, a number of Esquimaux came off to them. Their dresses were filthy, and they seemed to pay little regard to cleanliness; but they were a lot of hearty-looking fellows, and well conducted. In Disco, our adventurers saw icebergs 200 to 300 feet in height, drifting into Davis' Strait, on either side of the Whale-fish Islands. In the Malegat and Waigat whole clusters of these floating islands are frequent, from 100 to 200 fathoms, moving to and fro with every return and recession of the tides.

To be early enough in the season is vitally important to such expeditions as the present. It was clear to Captain Penny that even two or three days earlier would have made a great difference to them, and that the land should be followed right round it, making a circuitous passage of 1,000 miles, instead of not more than fifty, which might have been easily accomplished while the ice was still unbroken. Great difficulties were accordingly encountered. Their arrival in the midst of the ice was evidently full a week too late, and the broken state of the ice caused innumerable inconveniences. Under such circumstances, days and nights passed wearily and anxiously. Labour and skill were both in constant requisition. Sometimes the ships' crews were glad to be assisted by the Esquimaux; though the love of home, which is a disease of these people, prevented them from joining the expedition. Mr. Peterson, a Dane, however, joined it, and became extremely useful. Dr. Sutherland dwells on some descriptions of Esquimaux life, which nothing but their length precludes us from citing. To their piety and morality he pays due homage; but upon the subject of their superstition, their belief in necromancy, and their cruelty to animals, in which infants are early trained. Of these faults the Lutheran creed has not yet divested its wild converts.

The perils of the navigation continuing, progress was very slow, notwithstanding the severity of the labour undergone to accelerate it. At length the drifting ice favoured our voyagers by its partial separation. A great change went on around them, huge icebergs in convulsive struggles, and the snow upon the land rapidly disappearing. The whalers could now send away their boats in quest of eggs among some of the smaller islands: and many of them soon returned with thousands of dozens of ducks' and loons' eggs. "What a luxury," exclaims Dr. Sutherland, "to the seamen! as many eggs, and often far more than they could use, over and above their usual allowances of provisions." A few miles from the spot where they were lying, there is a place called "Tussoosak," or "Upperavik," which, says Dr. Sutherland, is probably the limits of the discoveries of the Northmen. But in spite of the clearness which seems to have been thrown upon the settlements of the Northmen in Greenland, and the extent of their discoveries, by Humboldt, in his "Cosmos," the opinions and observations of Rafn, Brynjulfsen, and Gravé still need to be corroborated and confirmed by subsequent observers. The place is almost entirely deserted by the natives; although, from the number of ruins, our travellers could see that it was once a favourite resort. Here, too, Captain Penny's vessels came into communication with those of Captain Austin's expedition.

The prospects of a speedy passage were soon brought to a stand, and Melville Bay, which they desired to reach, was still inaccessible. They were, however, joined by Captain Austin's squadron, consisting of twelve sail. "The presence," says our author, "of so many ships, in regular order at the edge of the ice, was really a splendid sight, embellished as it was by the glory of England, the British flag waving in the breeze." In another place, he relates that "the ice, impelled by the southerly wind, came in around the ships, and around the Arctic navigators into activity. Hundreds of men could be seen planted along the edge of the fixed ice, with their saws and triangles, busily employed cutting docks for the safety of their ships, in case the pressure should become violent. Their work was very laborious indeed; but it was enlivened by hearty songs, in which one often recognised 'Britannia, Britannia, Britannia rules the waves,' issuing from one hundred voices, in good time, and with better effect."

A passage having been effected through Melville Bay to Cape York, they found that they had been five weeks in doing what, at an earlier part of the season might have been done in as many days. Their course was subsequently shaped for the west side of Baffin's Bay, with the view of exploring it if possible, and of passing through it into Wellington Channel. The passage was at last effected, but with considerable difficulty.

Previous to doing so the voyagers had heard of traces of Sir John Franklin, and at length witnessed some. About six miles north of Cape Spencer, the site of an encampment was discovered, with a hut made of stones, and several articles and utensils connected with cookery, soup-canisters, and pickle-casks, and many other things, including pieces of oak such as might have been fragments from a ship, observed at the hut as if they had been in the fire. The track of a sledge was also detected, and the marks of the runners, which were very distinct, were found to be two feet apart. These traces were followed up, and innumerable corroborations were met with, including a finger-post, and epitaphs to some of the crew, both of the *Erebus* and the *Terror*, dated in 1848. There were, in fact, abundant and unequivocal proofs that the missing ships had spent their first winter in the immediate vicinity of Beechy Island.

Captain Penny's party wintered in Assistance Bay. They formed into sledge-sections, and travelled over the ice. The sports and adventures attending these excursions, however, were unconnected with the desired discoveries. The different divisions met on the ice in Wellington Channel, but no further traces of the missing ships were detected. All returned to the Bay except Captain Penny and seven companions. Their absence was indeed prolonged; but the only fruit of their extraordinary was the finding of a bit of wood, which might have belonged to the missing ships. This fragment, however, was not sufficient to justify Captain Penny in remaining another winter to pursue further researches; and, after considering the matter in all ways, he determined on returning to England. His duties seem to have been fulfilled to the utmost limit that could be required, and their names will ever adorn the pages of Arctic history. But the return of both navigators and travellers still left the great and perplexing question unsolved." In May, 1845, Sir John Franklin renewed the search—proceeding in the ships *Erebus* and *Terror*, with a crew of 138 gallant and enterprising officers and men; and the last intelligence received from them was dated in Baffin's Bay two months after they had left the Thames. In 1848, it will be recollected, three expeditions were fitted out in search of the missing ships. Other efforts were subsequently made, and at length the whalers were put in requisition, and signal service was expected from them. In this new line of adventure the name of Mr. William Penny, of Aberdeen, the commander of the *Advice*, of Dundee, became especially prominent. That gentleman had been engaged in the Arctic seas from his twelfth year, and in command of a whaling ship for sixteen years. He had also done much in his whaling career, to extend our geographical knowledge of the polar regions.

Though not holding a commission under the seal of the Admiralty, Mr. Penny received directions from that office to fit out two vessels, which he named *Sophia* and *Lady Franklin*—the first after Miss Sophia Cracroft, the niece of Sir John Franklin, who had laboured with his wife in promoting voyages of discovery in search of him whose long absence was to them so painful. Both of these ships were equipped at Aberdeen, and their crews were appointed chiefly from among the whalers. The Admiralty instructions under which Captain Penny was to act are dated April 11, 1850. The most hopeful supposition seems to have been that Sir John Franklin went through Wellington Channel. The work before us contains a voluminous detail of the proceedings of the ships during the whole voyage. In fact, it presents a log-book compiled with labour and precision. It is a diary in which confidence may be placed, because evidently made at the time. Some of the circumstances are trivial, and many of the descriptions already well-known; nevertheless, they are the actual facts of the voyage, such as occurred day by day. Great difficulties were accordingly encountered. Their arrival in the midst of the

The literary relations of France with the East are of some standing So far back as the beginning of the 17th century, Savary de Brèves erected an Arabic press at Paris. Even the great Encyclopædia of d'Herbelot, although mostly written at Florence (long the chief seat of Arabic letters in Europe), yet belongs to the literature of France; while the observations of D'Arvieux Chardin, and other French travellers, are even now far from extinct with those who make a special study of the Levant. Nevertheless, in no country was there a greater amount of nonsense written on the East, than by the French "Men of Letters" of the eighteenth century. In their zeal to turn into ridicule the social and political institutions of France, they drew largely on the popular ignorance of the East; in order to accomplish the ends of their polemy, Orientals were turned into profound eighteenth-century philosophers, familiar with Locke and Newton, reprehending the abuses of Courts and convents, and laughing at the follies of Paris. If we turn from gay to grave and valuable works, such as Montesquieu's "Esprit des Lois," the misapprehension and misapplication of Oriental information is a serious disturbance of the confidence that the reader acquainted with the East feels in his conclusions after his gigantic effort to unroll the annals of all times and countries; but this great writer is readily pardoned on seeing the still greater absurdities Voltaire falls into in his envious zeal to reprove and correct him.

No sooner was the revolution succeeded by the war, than we find the arrangements of the French expedition to Egypt to indicate the combination of a warlike spirit with a revival of the same tendencies that sent forth Bernier, Tavernier and La Roque. It was discovery as well as conquest—it was a study of the phenomena of the East instead of those of the Pacific. It was also intended to be a colonization, in which science should supply the place of numbers, and overcome the obstacles interposed by soil, by climate, by disease, by religion.

It were superfluous to recount the subsequent adventures of this Encyclopedic armada: the victory of Nelson and the valour of Smith—Bonaparte's abandonment of Syria, and the instinctive presentiment of greater disasters that prompted his return to France. The tragic fate of the brave and more prudent Kleber—and the final victory and death of Abercromby, are all events familiar to the reader. But if this expedition of Bonaparte was not successful, it was the most splendid and illustrious of all his failures.

When this great conqueror was still at Passeriano, Talleyrand discovered in the archives of the Ministry of Foreign Affairs the plans, maps, and charts that had been secretly prepared in the time of Louis XV., by the ambitious Choiseul, Minister, in order to retrieve the disasters of the seven years' war by an occupation of Egypt, with a view to counteract the English designs on India. With this rude embryo of information, the expedition was formed, and, however disappointing to the national pride the military results of such exertions may have been, a large and most valuable addition was made to our knowledge of Egypt. The Ecole Normale formed on the breaking up of the ecclesiastical institutions, sent forth her most eminent professors and pupils—the nursery, it is true, too much with that cold sensational philosophy which a Holbach and a Helvetius had carried downwards to Atheism, but all eminent in the technical parts of their specialities, and full of a zeal that defied every obstacle thrown in their way by the social and physical conditions of a land differing so completely from that of their birth.

It was in the bay of Alexandria before ever he had set foot in Egypt that Nouet led the way by his astronomical observations. Amid danger and deficiency, the researches of his other members of the expedition were continued. When no military operations were intended the Arabs of the Desert attacked the weak, and kept even the strongly-escorted on the alert. But in spite of death and disease the work went forward, and Le Père, first established, by trigonometrical survey, the relative levels of the Mediterranean and Red Seas, and produced that standard memoir, which, until the age of railway locomotion, was the great fountain of all that has since been written on the means of connecting the two seas. Berthollet, the most eminent chemist of his day, was also of the expedition. Amiable in intercourse with others, he was imperturbable as a stoic in the midst of danger, which even the soldier but half feels in the ardour of combat. When, on board the flotilla attacked in the Nile, he was asked why he filled his pockets with stones from the ballast of the boat, he answered, "That I may sink the more readily to the bottom of the Nile if we are taken prisoners."

The accomplished Denon, who began life in the *coulisses* adventures of a domestic nature, contemporary with Beaumarchais, who had served the diplomacy of Vergennes, and had been saved from the guillotine only by the protection of David, was the expert draughtsman and ready observer of the expedition. Following on the footsteps of Dessaix, he reconnoitred the encampments of the Mamelukes; and although the antiquarian portion of the French description of Egypt has been a great resource superseded by the labours of subsequent travellers and artists, yet allowance must be made for the difficulties under which he laboured; while the peace of the European domestic circumstances, and the aspect of the towns and villages as they then appeared—the scenes of the soldiers and civilians of the Republic, with Arab still life for a back-ground, have a value which can scarcely be over-estimated by the students either of the antecedents or character of Bonaparte or of the modern history of Egypt.

It was in Cairo, in the house and garden of Cassim Bey, that the institute of Egypt pursued its labours and classified the phenomena as they were successively collected by its individual members. Monge, the creator of descriptive geometry, and the founder of the Polytechnic School of Paris, was the first President of the Institute of Egypt. He had ably seconded Carnot with his technical knowledge, in the gigantic efforts made in the arsenals of France during the first years of the revolutionary war: he followed in the wake of Bonaparte to select and transfer to the French capital the masterpieces of Italian art; and here, on the banks of the Nile, turned his ingenuity to supplying the wants of the army, and replacing the diminishing stores from the resources offered by the native productions of Egypt.—*Arma cedant toge.* Bonaparte contented himself with being First Vice-President; and in these sittings in discussion with his physician, Des guettes, or with the wooden-legged Caffarelli, who turned his military engineering knowledge to civic purposes, the ingenuity and many-sidedness of his intellect fully appeared. Even the sufferings of the army came to the account of science; and Larrey, his surgeon, was the first to describe, to account for, and cure the singular diseases peculiar to the climate.

Two objects were set forth as the objects of the scientific part of the expedition; first, the collection of information on Egypt; secondly, the introduction of European civilisation into Egypt. In the first, the expedition was eminently successful—the second was a most signal failure. Most conspicuous did M. Estève, M. Jaubert, and the other financial, legal, and political members of the commission, inquire into the resources of Egypt, and the mode of taxation under the Mamelukes; and industriously did Bonaparte heap up *reglement* on *ordonnance* and *ordonnance* on *reglement* for the taxation and civilisation of Egypt on French and philosophic principles. Not only would the people not take to the new forms, but even what was for their actual benefit and improvement, such as the lighting and cleansing of Cairo they resented as an oppression; so that the abstract optimism of the European administration was as unconformable and irksome to the Egyptians as buckskin breeches and top-boots *à la Directoire* would have been to an Effendi. When Egypt, therefore, was evacuated by the French, they left no more impression on the civilisation of Egypt than the vessels that carried home Menou left on the waters of the Mediterranean.

But the political results were great and important. It was Bonaparte who broke down that formidable Mameluke militia—that, regulated by Islam and governed by Solomon de Caus, ever since dashed the Poet, and deprived her of the revenue of her richest province. It was a mere feeble remnant of the old Mameluke party that Mohammed Ali subsequently caused to be massacred in 1809, and this bold captain could never in his old age have shaken the Ottoman Empire if his way had not been made straight by the Battle of the Pyramids. We say this from no disposition to deny the merits of Mohammed Ali; for it was by great sagacity, cool dogged valour, most fascinating manners, and a substantial generosity and nobility of character, that he subdued his opponents and multiplied his friends as he did.

Mohammed Ali was too much a man of the world not to be always civil to the English, but his sympathies were really French. India always was in his thoughts, and he has often supposed that we would seek to possess ourselves of Egypt, and he never could see that it would be impossible for us to carry out a conquest or military protectorate of Egypt, and at the same time maintain the principle of the integrity of the Ottoman Empire, to which we had pledged, since all our sympathy with Christian and classical Greece did not prevent our most eminent statesmen from regarding the Battle of Navarino as a most "untoward event." The consequence of this predilection of Mohammed Ali, was that a large number of Frenchmen went to Egypt, and were employed by him in the organization of his military, naval, financial, and educational administrations; and in our next we propose to give some account of them, and of the relation in which French and British interests stand to each other at the present time.

REGULAR SUBSCRIBERS from SEPTEMBER 18 will receive LARGE SHEETS of the PROCESSION and PUBLIC FUNERAL, GRATIS! A Lasting Memorial of the National Mourning.

THE LIFE, the DEATH, and PUBLIC FUNERAL of the DUKE of WELLINGTON. See the ILLUSTRATED LONDON NEWS, SATURDAY, SEPTEMBER 18, And following weeks, to the week of the Funeral. Price Sixpence each week. (Double Numbers extra.) Orders received by all Newsmen throughout the kingdom.

Office, 198, Strand, London.

ECONOMICAL APPLICATIONS OF ELECTRICITY.

With the progress of civilisation and the improved social position of the more enlightened nations, philosophy has also advanced, and, by making us acquainted with the practical use of the mighty powers of nature, has contributed her share to the pleasures and comforts of humanity. Within the space of but a few short years, and, in truth, within the present reign, a power of operation has been attained from a knowledge of the phenomena which amused us when amber was made to attract little bits of paper, and when shook the stoutest hearts when the storm-cloud covered the sky, and appeared to wreak its vengeance by shivering the stately oak, overthrowing the lofty steeple, firing the palace, and destroying with a seeming caprice any living creature exposed to its influence.

It is not our intention to inquire by whose mental power we have been enabled to render electricity subservient to our will; but there is reason to fear that history will discover, when it seeks for those who have been ennobled for conferring such novel and extraordinary benefits upon the human species, that in this glorious period for the development of science, crowned heads and potentates have been so insensible of the advantages which have been given to them, that they have be stowed neither pecuniary rewards nor State dignities upon the discoverers, but have restricted their Royal favours to the successful destroyer in the battle-field, the well-paid judge, and the wealthy vendors of wares and dealers in money.

On the present occasion we shall consider the nature of the forces which has effected such changes in our social position. We shall then call the attention of our readers to the results which have been already effected, and endeavour to prognosticate in what direction more extensive advantages may hereafter be obtained.

NATURE OF ELECTRICITY.

Of the nature of electricity a diversity of opinions exists amongst philosophers who have studied the subject. Some have held that the effects are due to one or more ethereal fluids, which are set in motion under various circumstances. Others have thought that it is an affection of matter. Professor Faraday considers it to be a force having relations to magnetism, heat, light, and all the other forces of matter; and Mr. Smee regards electricity as a designation for certain effects which are observed when matter is acted upon by some new attraction in a particular manner; but he does not believe that electricity is a fluid, essence, ether, or other imponderable attached to matter.

SOURCES OF ELECTRICITY.

For all practical purposes the electric power is generated by some motion of matter; for, although electric tension commonly exists in the atmosphere, yet it is by no means a constant occurrence, and, as a rule, cannot be conveniently applied to useful purposes. Our means for obtaining this electric power differ in respect to the results which we desire to produce. In cases where electricity of great quantity is required, the galvanic battery is employed. In cases where high intensity is sought, the electrifying machine or hydro-electric apparatus is used. Where both intensity and quantity are desired, the magneto-electric machine is convenient; and very feeble currents may be set in motion by the stereo-electric combinations. In all these cases it is necessary for the manifestation of electrical phenomena that, for the amount of electricity evolved, a corresponding quantity of matter should be set in motion, or undergo change. We can no more produce electricity than we can heat or light without a change, which Mr. Smee has resolved in every case into the occurrence of some new attraction; and hence, as in our first we inquire as to the price of the fuel, so with electricity we count the cost of the matter changing.

In the galvanic battery the power arises from the zinc of the positive pole forming a new attraction or combination with the oxygen of the water to form oxide of zinc, which, being dissolved in sulphuric acid, gives rise to sulphate of zinc. This is a product which should be sold to lessen the cost of electricity, wherever a market can be found for the salt. As, unfortunately, sulphate of zinc is not an article of much demand in the arts, some investigators have tried other metals, and a tin positive pole has lately been much extolled, the investigator thinking that the compound of tin formed in the battery might be rendered a marketable commodity. For equal quantities of electricity 32 parts of zinc would be equal to 54 of tin, and from practical experience we should prefer the use of zinc with the waste of the products, to that of tin, with the subsequent formation of the stannate of soda. Supposing, then, that it would be desirable to use carbon in the place of zinc, as a ton of coke, could it be applied, would probably be as effective as 10 tons of zinc, or 18 tons of tin. Practically, the cost of working galvanic batteries is very considerable, and in our humble way we have consumed at least a hundred weight of zinc within the last few months, the products of which we have good reason to fear have passed to the Thames to increase its impurity, though, perhaps, to diminish its pestiferous exhalations.

We have ourselves a very high opinion of the electro-magnet for producing electricity. At Birmingham, Elkington gilds and silver-plates by this machine. The principle upon which the machine is formed is due to a knowledge of the fact, that, if the magnetic curves are cut transversely by any conductor of electricity, a current is set in motion, or if a magnet surrounded by a wire is alternately made and unmade, electrical force is exhibited. Elkington employs a series of magnets arranged in a circle, and by the revolution occasioned by a steam-engine, a constant current of electricity is manifested. This plan seems economical and convenient for the reduction of gold and silver, but, at present, does not appear to answer as well for copper as the voltaic battery. Mr. Henley has patented the application of the electro-magnetic power for telegraphic purposes; and, from a careful consideration of the subject, we would venture to assert that this form of instrument will be found most convenient and economical for all telegraphic purposes, and will eventually supersede the ordinary batteries now in use. In this case the change of matter or new attraction takes place in the fire of the boiler of the steam-engine, and the combustion of the coals leads to the evolution of the electricity. At present, neither the electrical machine, the steam electrical machine, the photo nor the thermo-electric pile, has been used practically for the evolution of electricity in the arts.

When once the electrical power is generated, then we have the means of producing magnetism, heat, light, motion, according as it acts upon matter; and we shall now briefly consider to what purposes in the arts, &c., these properties have been at present applied.

ELECTRIC TELEGRAPH.

The license of the poet, soaring in imagination in regions where fact gives way to fancy, usually enables us to indulge in verse with a description of that which cannot be realised in prose; the electric telegraph has reversed the case; and the transmission of the messages which are forwarded every hour to every part of Europe, greatly surpass in wonderful fact the conception of most poetic romance. Shakespeare was satisfied that his fairy should girt the world in forty minutes—

> "I'll put a girdle round about the earth
> In forty minutes."

Cook and Wheatstone can traverse the earth in less than the twinkling of the eye, by substituting electricity for the fanciful power of the fairy.

By what principle is this glorious triumph accomplished? Why should a feeble electric current bestow on us the power of communicating with remote distances at an inappreciable interval of time? The electric force acts in a circle, and we have the power of extending that circle to any distance by means of telegraphic wires. Through these wires the electric force acts, and though in its action it neither adds to, nor subtracts from, the weight of the wires, yet its presence compels a magnetic needle to stand across the wires; or, if the circuit be opened or narrowed, chemical combinations or decompositions may arise, or heat and light may be generated. We have no limit to this circle, and if a wire be passed round the globe, and an electric current traversed in, indications of the current would be given during its whole course.

To have an electric telegraph we must establish a circle through which the electricity acts, and practically an insulated wire is carried from the battery to the extreme distance, and then the electricity traverses the earth to complete the circuit. Ordinarily the wire is hung upon posts by the side of railways; sometimes, however, it is imbedded in gutta percha, and laid under ground; and for the submarine telegraphs it is encased with gutta percha and firmly covered with galvanised iron to resist mechanical injuries, or the ravages of animals. We have now carried the wire from Dover to Calais, and from England to Ireland; and the only difficulty which prevents us from having an electric telegraph between England and America is the engineering difficulty of depositing a perfectly insulated wire at the bottom of the sea between the two continents. In an age when Stephenson has given us the Britannia Bridge and Brunel the Thames Tunnel, he must be a bold philosopher who can imagine that he may not one day, not remotely distant, wake up and find that he has the power in London of holding instantaneous communication with Brother Jonathan in New York. Will the Old World or New World first attempt a solution of this mighty problem? The difficulties to the operation are mechanical, not electrical. The philosopher declares that electricity is competent to effect the object, and it is left to the engineer to devise means to deposit the wire between the two continents.

We have already stated that in all electric telegraphs the first difficulty is to lay the wire, and then the signals to be used are arranged. As a rule, it is by that signals are transmitted most rapidly by the movements of a needle; and, by certain letters being assigned to certain movements, long sentences are rapidly communicated from the remotest parts of the country. We can not only signal, but we can even print. Of late the electric telegraph has been applied to domestic purposes. At the Bank of England a telegraph communicates from the Governor's room to that of the chief accountant, chief cashier, secretary, and engineer; and soon can be transmitted as occasion requires. We are inclined to think, however, that for domestic purposes the gutta percha tube and whistle are preferable, because they are more simple to use; and the tube can be carried over the largest manufactory.

Connected with electro-telegraphy the invention of the gutta percha covering for wire deserves attention. The gutta percha itself is strained by a hydraulic pump of great power through a fine sieve. The wire is then covered with two layers of gutta percha, to insure perfect insulation; and finally, the gutta percha-covered wire is twisted round a rope. When the ends of the wire are joined, a fine wire is attached to the two ends, and the small wire is wound round the larger to act as a spring. By this plan, if the wire be stretched, a little yielding is allowed before the contact is broken, a fact of great practical importance when the wire is subjected to much strain.

An electro-alarm against fire, may conveniently be adopted in some instances, for as soon as the temperature rises to a certain point the circuit may be broken, a bell may be furiously rung, and the inmates aroused to a sense of their danger. In a former Number of this Journal we gave a figure of an instrument for indicating whether the temperature in a hothouse or green-house had varied prejudicially to the plant. In these cases we have examples of great perfection in mechanical contrivances, as the action is made according to circumstances, and a spontaneity is shown bearing a feeble analogy to the instinct of animals.

Sentences by the electric telegraph. But, perhaps, the most curious contrivance is that by Bakewell, by which we are enabled to transmit the identical hand-writing. By his instrument a kind of prolonged arm is made, by which a person in London can sign a document in Paris, provided the paper previously undergoes certain chemical preparation. Chemical and electrical signals may be mixed extensively; bells may be rung, clocks may be transmitted, and, by arrangement, their meaning would be thoroughly comprehended.

Electro-telegraphy is still in its rudest infancy. Its success should rather be hailed as an accomplishment of what may be done hereafter, rather than as denoting a perfect system. The extension of this important invention must lead the mind to many curious thoughts; for when we observe the central government of a kingdom to be enabled every moment to hold intercourse with every part, governing every province, and, at the same time, to be able to transmit directions according to the exigences of the case, the body politic may be likened to man himself, who receives by his various organs of sensation - knowledge of the external world, transmits that knowledge to the brain through the media of the nerves, and sends back the forces which determines the movements of the body according to the sensual impressions. The limit to the use of the electric telegraph consists in the cost entailed by the interest of the capital required in its first establishment, the expense of maintaining the wires and apparatus, the time and labour required for actually making the signals and delivering them at the termini to the persons destined to receive them.

ELECTRIC LIGHT.

Attempts within the last few years, which we have recorded in former numbers of this Journal, have been made to produce light by electricity. For purposes of artificial illumination the cost is so great, that it cannot be used with any chance of profit, or even success. For extraordinary effects it might be occasionally employed; but a high series of batteries, and great consumption of materials, is required to render it effective; and then we can hardly hope for any advance in this direction until the source of power is materially cheapened by the invention of some battery totally different from any form now in use.

Lately, experiments have been made with the electric flash in photography, and by its aid it is not impossible that hereafter we may be enabled to catch the exact impress of an object in the most rapid motion. The pictures which we have seen exhibit curious blotches; but there can be very little doubt that a careful experimenter might render it applicable to the photographer.

The statements which have been put forward in the American papers of the generation of gas by electricity are well known to be entirely fabulous. It is a chemical law that for one gram of hydrogen eliminated by the battery thirty-two grams of zinc are dissolved; which would render the cost of gas twenty or thirty times more than produced by electricity than when it is made with coals.

ARTIFICIAL SILICEOUS STONE.

NOTWITHSTANDING the abundance and excellent quality of many kinds of stone obtained in this country, either from our own quarries, or by importation from abroad; the comparatively high cost of skilled labour, and the consequent expense of all sculptured and decorative work, has long operated as a serious obstacle to its use; while many of these stones themselves are very ill adapted, both in composition and texture, to stand exposure to the alternate damp and cold of our climate. The latter stone is especially liable to injury in this way, as may be seen in our cathedrals and other buildings, in the west of England, and even in Westminster Abbey; while even Portland, the most compact and finest of the lime stones, does not resist long exposure, even when, as in St. Paul's Cathedral, the style of architecture is more favourable to the preservation of the stone.

By far the most durable of the building materials, especially when exposed to the ordinary atmosphere, are those constantly present in the metropolis—large masses, that is, of the varieties of a climate like that of London, where sudden changes of weather, which have a silicious cement, and are free from marl and limestone. Such are the Craigleith stone, much used in Edinburgh, and deservedly celebrated; the Darley Dale stone, from near the Ambergate station, in Derbyshire, on the Midland Railway; the Bramley Fall (or Yorkshire) stone, and some others. In the composition of these there is from 98 to 98 per cent. of silica; the absorbent power of the stone is very small (not half that of some limestones), and the quantity lost in experiments imitating as far as possible the action of severe weather, is scarcely perceptible. In the limestones which, when long exposed, are found to be a larger proportion of impurities (especially in the condition of alumina), the decomposition is many times greater; the small crystalline portions break off, especially where the grain is unequal, and expose the stone to further attack; and ultimately all traces of the original surface are obliterated. The moist climate of England, and the partial frosts, more than counterbalance the great part of the year, are said as

which render the exposure of stone more trying with us than elsewhere in Europe.

It is long since material has been constructed under the name of artificial stone, which, being plastic at one part of the process of manufacture, admits of being moulded into any required form at comparatively small cost. The kinds at present most in use are two, one being a cement and the other more resembling bricks; but intermediate in its nature between bricks and pottery-ware.

In the former lime is the chief ingredient; in the latter, clay. Both admit of moulding cheaply, and both stand exposure tolerably well, but the latter is subject to contraction and distortion of form during the baking or kiln-drying, to which it is absolutely necessary that it should be exposed, in order to stand well as artificial stone. The cement, especially that called Portland cement, does not require baking, but is very apt to become discoloured, and crack, on exposure to winter temperature. It is also very irregular in its texture. Terra-cottæ, as the other material is usually called, labours under the disadvantage of shrinking and distortion to a very serious extent, and wherever the thickness of the substances varies greatly and rapidly, as in most ornamental work, such as vases and Gothic decoration, this is especially seen. Many of our readers will remember the numerous and very beautiful specimens of terra-cottæ in the Great Exhibition last year, and the model of a church actually composed of this material. The warping and distortion in some of these was but too evident, in spite of every care; and it is so common a result, when any clay fabric is exposed to an intense heat, that the price is greatly increased by the large number of accidents that occur.

There has been introduced of late years a new kind of artificial stone, which, although perfectly plastic at one stage of the manufacture, is of perfectly uniform composition, entirely free from all shrinking and contortion during the process of kiln-drying, and bears exposure to winter temperatures and a moist atmosphere without any deterioration. This important immunity from so serious an evil is owing to the fact that no part of the material used in the construction consists either of lime or clay. It is, in fact, a siliceous or flinty stone, the particles of which it is made up (fine pure sand) being united together by a fluid which, after exposure to the kiln, becomes changed into a kind of glass. By the very nature of the case, therefore, this stone is secured from all injury from soot, acid, or other vapours, or disintegration by weather; and, in many cases where it has been actually exposed for several winters, it retains all its sharpness and surface perfectly. This material is called "Ransome's Patent Siliceous Stone;" and is tolerably well known by most architects and builders, as well as those engaged in ornamental stone-work; although, having hitherto been made only at Ipswich, where the patentee resides, it has not yet entered so much into general use as its properties well deserve. Some of our readers may recollect a specimen of considerable magnitude exhibited in Class 27, at the Crystal Palace, in what was called the Mineral Court; and it is satisfactory to find that this obtained a prize medal from the jury as presenting a material calculated for extensive use. It is worth while to devote a few lines to explain the process of manufacture, which is equally simple and ingenious.

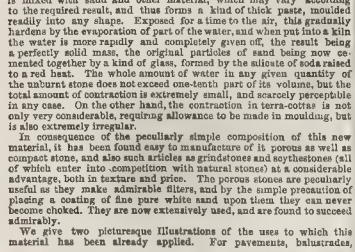
ARTIFICIAL SILICEOUS STONE CHIMNEY JAMB.

The chemical fact on which the discovery of this stone is based is the perfect solubility of flint, or any siliceous material, when subjected to the action of caustic alkali (soda or potash) at a high temperature in a steam boiler, or in cylinders communicating with such boilers. Flint, or silica, is a combination of oxygen gas with a peculiar base (silicium or silicon), and is technically an acid, though without the ordinary properties of acids. On being heated with caustic soda to a very high temperature, there is formed a thick jelly-like transparent fluid of pale straw colour, which is a hydrated silicate of soda, containing 50 per cent. of water; and which, if exposed to the air for a time, or heated, loses a part of its water and solidifies into a substance capable of scratching glass

The history of the siliceous stone will now be readily understood. The fluid silicate of soda having been obtained as described above, it is mixed with sand and other material, which may vary according to the required result, and thus forms a kind of thick paste, moulded readily into any shape. Exposed for a time to the air, this gradually hardens by the evaporation of part of the water, and when put into a kiln the water is more rapidly and completely given off, the result being a perfectly solid mass, the original particles of sand being now cemented together by a kind of glass, formed by the silicate of soda raised to a red heat. The whole amount of water in any given quantity of the unburnt stone does not exceed one-tenth part of its volume, but the total amount of contraction is extremely small, and scarcely perceptible in any case. On the other hand, the contraction in terra-cottæ is not only very considerable, requiring allowance to be made in moulding, but is also extremely irregular.

In consequence of the peculiarly simple composition of this new material, it has been found easy to manufacture of it porous as well as compact stone, and also such articles as grindstones and scythestones (all of whiter into competition with natural stones) at a considerable advantage, both in texture and price. The porous stones are peculiarly useful as they make admirable filters, and by the simple precaution of placing a coating of fine pure white sand upon them they can never become choked. They are now extensively used, and are found to succeed admirably.

We give two picturesque illustrations of the uses to which this material has been already applied. For pavements, balustrades,



ARTIFICIAL SILICEOUS STONE.

terrace works, vases, and generally for all purposes of garden decoration, it is admirably adapted by its cleanliness, sharpness of outline, colour, durability, and cheapness. For ornamental flooring in halls, churches, and public buildings, it possesses many advantages, and could be put down at little more than half the price of encaustic tiles of similar patterns, and is of a healthier character than chimney-pots, and many other building purposes, it seems equally well adapted; while for filters it is invaluable, and might be used to any extent in preference to any known natural filter stones.

Mr. Ransome's works at Ipswich, where this material has been hitherto exclusively made, have not admitted that extension which the simplicity and ingenuity of the method deserves, while the distance from the metropolis has rendered the cost of transport a great obstacle to its general use. It is likely that when the works have been extended and removed to London, which is now contemplated, there will be a very considerable development of the manufacture.

LITERARY MISCELLANIES.—No. II.

A LONDON SUNDAY A CENTURY AGO.

VERY nearly one hundred years ago a small octavo was published, dedicated to the "ingenious and ingenuous Mr. Hogarth," and entitled "Low life; or, one half the world know not how the other half live: being a critical account of what is transacted by people of almost all religions, nations, circumstances, and sizes of understanding in the twenty-four hours between Saturday night and Monday morning, in the true description of a Sunday as it usually spent within the bills of mortality. Calculated for the twenty-first of June." This very voluminously named work having accidentally come under our notice, we propose to sketch from it, principally in its own words, a picture of metropolitan Sunday life a century ago. For the accuracy of all the touches we do not of course pretend to vouch, but the greater number are no doubt more or less founded in fact. The manner of the book is peculiar. It consists of a series of unconnected sentences, each giving a statement of a separate fact, without any attempt at continuous narrative. The effect of this singular style is certainly not to produce pleasant reading, but the ideas are conveyed with force and distinctness, and we cannot but notice the singular and indefatigable powers of observation which filled a volume with isolated social and characteristic statements, without the slightest help from remark or the requirements of continued narrative. Many of the observations are of a generally satiric class, and hold more or less good with reference to almost any age or social condition. These we shall not meddle with, but attempt instead to convey to the reader, by selecting only the entries characteristic of the time, some notion of a London Sunday a century ago, as it was painted certainly by a most indefatigable observer, and one, too, who must have been most thoroughly intimate with London.

We begin, then, at twelve o'clock on Saturday night, and learn how "the watchmen are now taking fees from housebreakers for liberty to commit burglaries within their beats," and how gangs of robbers divide themselves—some of them going to the watch-houses and making the constables drunk, while the others ply their crowbars. By the river side a curious scene is being enacted. "Darkhouse-lane, near Billingsgate, is in an uproar with custom-house officers, sailors' wives, smugglers, and City 'prentices waiting to hear the high-water bell rung, to go in a tilt-boat to Gravesend," while many watermen who have been turned out of their lodgings for short-comings in the matter of rent are described as sleeping in their boats. We are at a loss whether to understand as literal truth the following item, but it is not unlikely:—"More drunken than sober people walking about the streets." As the night wanes we are introduced to hospitals, and see the "women called watchers" picking the patients' pockets; and to the parks, where we are informed that the sentries shelter thieves and pickpockets in their boxes; to the alleys of St. Giles, to Long-acre, and Drury-lane, "in an uproar with Irish Roman Catholicks, who, being mad with drink, are fighting for the precedence of their families"—a thoroughly characteristic item; and to the taverns, where clubs, called "Anti-Gallicans," "Bucks," and "Georges," are breaking up, and seizures are being made of the "leathern aprons, wigs, tobacco-boxes, and clasp-knives" of such brethren as cannot pay their reckoning. Later still we read of "pawnbrokers sifting up, altering the dates of duties under tribulation." But this may probably be understood in a general satiric sense, as also the item of sextons digging up and sending to the houses of surgeons the bodies of such people as were buried the preceding night, and ripping the velvet and tearing off the brass plates from coffins, to sell for canvas, snuff, and tobacco. The constables, who would appear to have been something like our inspectors, are again and again exposed. About three in the morning they are represented as being led home from the watch-houses drunk by the watchmen, the prisoners and prisoners' friends having paid for the liquor.

With the approach of dawn we see symptoms of commencing suburban sports. Crowds of half-intoxicated people are flocking into the fields with ducks and dogs, "that they may have a morning's diversion at the cruel and cowardly sport of worrying one another." This is one of our ancient manly pastimes which is now, happily, extinct—except, we believe, in certain districts of the Warwickshire and South Staffordshire coal and iron regions. The watchmen are now represented as crying "Past four," at half-past three; no doubt considering their tender consciences, by this ingenious device, for going off duty an hour before the time; and we are assured that thieving diorists are busy stealing their neighbours' best roots and flowers, to transplant to their own gardens—a not very creditable diversion of fools and enthusiasm. A curious item informs us that now, about sunrise, "poor people carry their dead children, nailed up in small deal boxes, into the fields, to bury them privately, and save the extravagant charge of parish dues." After gleaning in the fields, we have a foretaste of Billingsgate, and the practice of thieves sounding the pockets of drunken men asleep on bulks, we are told how beggars resort to parish nurses, to borrow poor, helpless infants at fourpence a day each, for the purpose, of course, of provoking charity. The water supply in London a century ago may be conceived when we read of the wives and daughters of mechanics in neighbourhoods where one cock serves the whole locality, coming before sunrise to fill every available utensil "with a sufficiency to serve them for the ensuing several days." The melancholy idea rises as we read—how much better off, in many parts of town, are the poorer classes to this good day? Morning brightens, however, and we have consumptive people flocking to the "cow-houses to drink warm milk with rum and sugar"—a delectable morning's draught for an invalid. The habits of the interior class of clergy, and the manner in which these poor drudges are spoken of, is what might be expected from our knowledge of the fictitious literature of the period. Early in the morning we hear of "journeymen clergymen cutting their beat hands and cassocks to preach sermons for a trifle each at morning lectures;" while in the afternoon they are described as officiating for fat old rectors, whose after-dinner potations render their public appearance impossible. "A bird's-nest fair," attended specially by fiddlers and admirers of singsongs, was one of the amusements of the morning. It was held on Dulwich-common. Next we have a hit at Wesley, and the crowds who flock to his "bantering booth" on Windmill-hill, Upper Moorfields. An odd piece of industry is thus pursued by "writers for chandlers," making the round of the coachmen and footmen in the service of the principal physicians to know who are on the "death list;" and another and characteristic entry connected with the faculty is the mention of "common people going to quack doctors and barbers, in order to be bled (and perhaps have their arms lamed) for three pence." The mania for bleeding was one of the staunchest of English medical superstitions. As church time approaches pew openers are described as "laying out clean surplices and stealing the sacrament wine," and servants to ladies of quality as "waiting and combing such lap dogs as are to go to church with their mistresses." The whole tribe of adventurers and vagabonds are brushing up for the day; the "Munster cracks, Connaught peers, Ulster swags, Leinster fortune-hunters, Welch gentlemen, Scotch mercenaries, French refugees, German jewellers, and London pettifoggers." Certain national scandals are not ill, hit off in this list. As for the French, we have them also characteristically changing their "great woollen caps and flannel shirts" to cut a dash with "swords and ruffles in St. James' Park," while a certain "new breakfasting but near Sadler's Wells" is crowded with "young fellows and their sweethearts." Returning to ecclesiastical matters, we are informed of clergymen, having double duty to do, hurrying over the ser.non at one church to run away to another; while the prayer-reader at the latter is drawling out the service, in order to give his confrère time to arrive "and drink his two jills of wine in the vestry." Much business is meantime being done" on the Custom-house quays; the Temple piazzas, and the porch of Bow church, since the nave of St. Paul's has been kept clear by order of the Bishop of London;" and fashionable ladies who do patronise church, are described as "wrangling for the hassocks and the upper end of the pews."

Upon whose unhappy chins juvenile barbers acquired the rudiments of their profession, has long been a mooted point. A hundred years ago the prisons were the schools for young shavers, "barbers sending their apprentices into the Fleet, Marshalsea, Bridewell, and other prisons, during the time of Divine service, in order to shave poor prisoners gratis, that they may improve their hands at the same time." One almost wonders that the "humours" of such a scene were not transmitted to us by Hogarth. They would have suited his pencil marvellously. We have seen the French national taste for showy dress: they appear to have been equally constant in matters appertaining to the national cuisine, as we find "Poor French people about the Seven Dials and Spittal Fields (silk-weavers, no doubt), picking dandelion (by which is probably meant succory), to make a sallad for dinner." Meantime, in the churches there are, as a rather smartly put sentence denotes, "many excellent stolen sermons preached by such ministers who will not take the trouble to write worse of their own." We cannot but pronounce such an act of freebooting as committed under very extenuating circumstances. "Old women in churches employed while the sermon is going on in borrowing each other's bibles to find where the text was," and wives of genteel mechanics taking a nap and a dram in private, under pretence of being at church, and then "chewing lemon-peel to prevent being smelt," are respectively two hits which are probably more generally satiric than actually descriptive of local and temporary usages. Amid all this general carelessness, however, the extent of which was no doubt great, some tradesmen's families appear to have enforced the outward observances of religion upon their apprentices, as we find these young gentlemen represented as begging the text of old women at the church doors, in order that they may satisfy their masters and mistresses. From twelve to one o'clock was the general dinner hour, when "all the common people's jaws in and about this great metropolis are in full employment." The Mall, however, was filled with Frenchmen, "picking their teeth, and counting the trees for a dinner;" and the rails before gentlemen's houses lined with hungry cadaverous figures

THE ILLUSTRATED LONDON NEWS.

No. 584.—VOL. XXI.] FOR THE WEEK ENDING SATURDAY, OCTOBER 9, 1852. [SIXPENCE.

RECENT LAW AND CHANCERY REFORMS.

THE superiority of the English people and their institutions is, perhaps, in nothing shown to more advantage than in the manner in which Governmental reforms are discussed, decided on, and adopted. Theoretically, our Constitution may be full of gaps, anomalies, and absurdities; but, practically, we are a free people, with a proper share in our own government. What the popular will really desires, it is sure ultimately to obtain, if the desire be just and reasonable. This has certainly been the case, however slowly, with the recent Law Reforms, to which we wish to direct the attention of our readers. Two measures of Law Reform have this year been carried: the first is the Common Law Reform, the other the reform of the manifold abuses of the Court of Chancery. The first is contained in a bill of 236 clauses; the other in statutes of a less formidable length, and in orders promulgated by the Chancery Judges. The object of both is the same—that of effecting an improvement in the "process, practice, and pleading" of the courts to which they separately relate. In order to enable the reader to follow us in the remarks we shall make on these two important schemes, it will be of advantage to define the three matters to which they refer.

The word *process* describes the writs by which one party is compelled to answer, and, if found liable, to satisfy the claim made upon him by another. The word *practice* describes the means by which that process is made available; settles the mode of bringing it to the knowledge of the defendant, the steps he must take to defend himself, the course of the proceedings thereon, and the regulations which require all the parts of these proceedings to be taken within a given time, and with a certain consecutive regularity. The word *pleading* describes, not (as is frequently supposed) the speeches of counsel in court, but the written statements made on one side and the other. Bearing these descriptions in mind, let us proceed to consider the law reforms of the last and the present Government.

The process of the law courts was formerly objectionable in many respects. It was not merely needlessly expensive, but it was defective. A knave frequently could and did evade it; to the honest but struggling debtor alone was it terrible. Outlawry was said to follow the disregard of the process issued to compel an appearance, and outlawry was supposed to be the most formidable process to which a man could be subjected. And the supposition was not untrue with respect to a man who was compelled to remain in the country and to rely on his own exertions for subsistence; but to the scamp and the profligate, outlawry had no terrors—they left the country, enjoyed a pleasant residence abroad, and lived upon property which they had contrived fraudulently to retain, or on money wrung from the tenderness or pride of relatives and friends. The only effect, too, of the outlawry was to compel an appearance in court, and the process was invariably set aside when the party was willing to appear, and was able to discharge the expenses which his negligence or contumacy had occasioned. All this absurdity has now been abolished, and the result of non-appearance to a writ of summons properly issued, and served according to the provisions of the statute (15 & 16 Vict., c. 76, s. 27), will be to entitle the plaintiff to enter final judgment against the defaulting debtor. So far there is nothing but praise to accord to the statute. But when we come to look at the means by which this beneficial end is to be attained, it is impossible not to feel that the petty forms and loose wording of the new statute will, to a great extent, counterbalance its advantages.

In the matter of the joinder of parties, a considerable, but not a sufficient, amendment has taken place. A familiar instance will show how this is accomplished. A husband and wife are both injured at the same moment by the same act—the act of B's carriage running against theirs. The husband must now sue in one action for the injury done to himself; but if the wife desires to recover damages for the pain and loss of health she may have suffered through the injury done to herself, though that action must be brought with the husband's concurrence, and in his name, it must be in form a separate action. The action for damages to compensate the injury done to the wife cannot even be joined with that which is brought to recover the amount paid by the husband for medical attendance on her. This folly will in future be unknown; but the same act of negligence may have occasioned mischief to the child or children, as well as to the wife; and one action ought to have been allowed to include all the remedies sought for it in the way of damages. This has already been done in the case of a death following such an injury; Lord Campbell's very excellent act (9 and 10 Vict., c. 93) expressly providing for such a proceeding, and containing directions as to the division of the damages. Did the draftsmen of this new statute disregard alike the hints they

EMBARKATION OF THE FRENCH PRESIDENT AT MARSEILLES.—(SEE PAGE 305.)

had received from public writers, and the precedent set them by the enactments of the Legislature? It seems so.

With regard to pleading—that mysterious horror to unprofessional men—the amendments introduced by the new act are not inconsiderable. Yet, they are not what they ought to have been, or do they embody all the changes which the Report of the Common Law Commissioners led men to expect. Pleading, or "special pleading," as it is called, is to men in general what we have named it, a mysterious horror: it is a kind of hobgoblin that haunts the imagination of luckless plaintiffs and defendants. Such persons look on special pleading as our travelling ancestors must have looked on Dick Turpin, as a something ever intent on mischief and robbery, never to be entirely guarded against, and very likely to come on a man when he thinks himself most happily free from the chance of the annoyance. Yet in truth, special pleading originally meant nothing but the clear, full, and logical statement of a claim, or of a defence, and its bad character was obtained for it not so much on account of any evil necessarily incident to the system itself, as on account of the foolish abuse of it which over-acute men perpetrated, in the indulgence of their love for subtlety. Still, however, the objection to special pleading, though ill-founded, is universal; and the Commissioners, in their report, and the draftsmen of this act have adopted and applied the popular dislike, even to the extent of exceeding the bounds of discretion, and acting on the prejudice. Fictitious and needless averments are swept away, and special demurrers are abolished. This last proceeding has, by excess, converted a remedy into an evil. Objections of mere form ought to be taken away, but special demurrers need not be objections of form, and the ground on which a man's right of action is denied ought to be specifically stated.

We need not proceed further with this analysis of the Common Law Bill. The remaining portions of it are too technical to be intelligible without explanations longer than our space can afford. The purpose of the bill is good, many of the changes effected by it are highly commendable, but there are about it a sense of littleness, a spirit of antiquity worship, and a tendency to leave any possible difficulty to be solved by an appeal "to the discretion of a judge," which no one desirous of real legal reform can approve. The bill is ill-drawn, and is full of unnecessary repetitions; hence, no doubt, the absolutely alarming number of its sections; and its want alike of clearness and comprehensiveness. These objections are apparent on the face of it. How many more will present themselves when the bill comes to be brought into actual practice, no one can foresee. But all practitioners anticipate that what is really good in it will be materially affected by the form in which it has been presented to the public.

We now turn to the alterations effected in the administration of justice in the Courts of Equity. These depend on three statutes, passed during the by-gone session of Parliament, and on certain general orders just issued by the Lord Chancellor and the other Judges of the Court of Chancery. The first of these statutes is called the "Masters in Chancery Abolition Act" (15 and 16 Vict., c. 80); the second, the "Act to Amend the Practice and Proceedings in the High Court of Chancery" (15 and 16 Vict., c. 86); and the third, the "Suitors in Chancery Relief Act" (15 and 16 Vict., c. 87). Of these the first is by far the most important.

The Master's Office had of late years become a name of terror. Causes were said to be "locked up" there; and to announce that a suit had got into the Master's Office was to announce that it had arrived at that condition at which progress in it was indefinitely delayed, and costs were indefinitely increased. But for the delay and the costs, the Master's Office would have been deemed a myth. The office is now abolished.

By the second of these acts, power is given to the Lord Chancellor, and the other Equity Judges, to regulate anew the practice of the Court, a power which has been already acted on by the promulgation of the new general orders. The great benefit conferred on the public by this second act has been that of altering the mode of taking evidence in Chancery suits. Nothing could be more unsatisfactory than the examinations of witnesses upon written interrogatories, and for years past it has been the subject of complaint by the Judges of the Court, who were often much puzzled to obtain information and to get at truth from examinations so conducted. At the same time, the practice was no less expensive than unsatisfactory. Henceforth the evidence in a Chancery cause is, as a rule, to be taken orally, and the admission of affidavits and depositions is to be, as in Common Law cases, the exception; such exception being only allowed under circumstances of convenience or necessity.

The pleadings in the Court of Chancery are likewise to be simplified, which means greatly abridged, and consequently rendered much less expensive.

The third of these new acts relates chiefly to the abolition of certain offices in the Court, and to the transfer of official salaries from the Suitors' Fee Fund to the Consolidated Fund, a transfer which is in itself a great benefit, as it will prevent the imposition of official fees on judicial proceedings in a new light, and enable the people and the Parliament fairly to discuss together the question whether any Government has a right to tax an individual suitor for the maintenance of the public courts of justice.

These three statutes have received an interpretation and an enforcement by the issuing of new general orders in Chancery, which have laid down rules of practice and pleading that must simplify, cheapen, and every way improve the administration of justice in the Court of Chancery. About one class of them alone have we any doubt, and that is the class relating to the printing of bills in Chancery, instead of allowing them still to be in writing. This, like some of the amendments in the Common Law procedure, is a correction which exceeds the evil, and so becomes an evil in itself. There was formerly a practice which required that every bill should be engrossed, thereby rendering it entirely unreadable for any but professional persons. But, because engrossing was abolished, it did not follow that printing ought to be substituted for it. In many cases—in all where there may be but one or two defendants—the printing will increase the expense. The true course would have been to abolish the practice which required a bill to be engrossed, and then to have allowed the suitor to print the bill, if printing should be found the least expensive mode of dealing with it. The Equity Judges have, however, decided that all bills shall be printed, and have settled the rate at which the defendant shall pay for the copies which he may require to be delivered to him. Oddly enough, they have adopted a crotchet of the Chanchery Commissioners, and have left without notice the question whether answers are also to be printed; and the records of the Court of Chancery may thus be made up of matter partly in print and partly in engrossment. Nor is anything said on this subject with regard to interrogatories, and no mention of them is made in the interpretation clause affixed to the orders, although proper care has there been taken to declare that "bill" shall include "information;" and all quibbling differences on that matter are thus avoided.

The other general orders relate to matters of too technical a kind to require notice here. But we cannot close our summary of the alterations thus effected in the Chancery practice without remarking on the great superiority of the model forms of pleading contained in these orders, over those which are contained in the schedule to the Common Law Procedure Bill. This praise applies alike to bill, interrogatories, and answer; and the public can only hope that the Common Law Judges, who have the authority to make pleading rules and to form models of pleadings, may take a . . . and a very valuable lesson it will be—from those models whi . . . Lord Chancellor and the Equity Judges have just framed . . . . use of suitors in the Court of Chancery.

FOREIGN AND COLONIAL NEWS.

FRANCE.

The news from the French Republic is chiefly of a personal nature, relating to the progress of the President through the departments of the south. We have given full details of these proceedings, with illustration, in another part of our paper. The President is not expected to return until the 17th inst., having consented to spend a night at Blois on his way. His Highness's reception throughout his journey, though flattering and gorgeous in appearance, has not been unmarked by disagreeable incidents.

At Montpellier, on leaving the theatre, he was received with loud cries of "*Vive l'Amnestie!*" put forth by a violent and excited mob. It was found necessary to force a passage for him through a compact and evidently ill-intentioned mass of people. The President haranged the crowd, and told them that he would willingly grant an amnesty, if the persons transported, and those *internes*, would render themselves worthy of his indulgence by their conduct.

The Marquis de Dammartin, Mayor of Usez, in the Gard, was assassinated on the 30th ult., at the very moment he was setting out for Nismes to pay his respects to the Prince President. Four armed men were concerned in this atrocious act, and have at present eluded apprehension. Political vengeance is said to have been the cause of this diabolical deed.

One hundred and fifty of the political offenders in the department of the Var have either received pardons, or had their sentences commuted.

On the other hand, we learn from Paris that the Minister of General Police, by virtue of the decree of the 8th December last, has commanded that the following individuals be transported to Cayenne:—MM. Adam, Bohain, Frère Freulon, Genvrain, Godefroy, Held, Michaud, Monton, Rouelle, Sandieux; and a letter from Toulon, of the 2d inst., announces the sailing of the *Orenoque* for Algiers, having 32 political prisoners on board.

A letter, dated Toulon, the 2d inst., states that, on that morning, the *Chaptal* and the *Chacal* weighed anchor and put to sea. The following ships of war are at present anchored in the harbour:—*Ville de Paris*, *Valmy*, *Henri IV.*, *Jena*, *Jupiter*, *Bayard*, *Napoleon*, *Charlemagne*, *Uraïne*, *Provençale*, *Perdrix*, *Orenoque*, *Gomer*, *Sané*, *Labrador*, *Pluton*, *Grondeur*, *Dauphin*, *Salamandre*, *Caton*, *Vedette*, *Narval*, *Averne*, *Eclaireur*, *Prony*, *Heron*, *Brazier*, and *Vigilant*.

The weekly commercial report represents the state of trade as favourable. The advices from the vine districts say that there will be a very inferior crop of grapes, and wine has risen in consequence.

During the whole of Tuesday and a part of Wednesday a violent storm of wind and rain raged in Paris. Tiles, slates, and shutters were blown from the houses in all directions. The rain poured down in a deluge, with, however, an occasional gleam of sunshine.

A dreadful domestic tragedy occurred in Paris, on Friday, the 1st instant. Mr. Morton, the correspondent of the *Daily News*, was stabbed by Mr. Bower, correspondent of the *Morning Advertiser*. Death ensued instantly. The cause was a fit of well-founded jealousy. Mr. Bower succeeded in escaping to England.

The *Siècle* of Wednesday says that one of the first acts to be examined by the Council of State will be a project of law for the reduction of interest on lodgments by way of security, and on savings banks deposits. It is also in view to convert the Four-and-a-Half per Cents into Three per Cent. Stock.

The following extraordinary address—being a blasphemous parody on the Lord's Prayer—was presented by one of the Mayors of a neighbouring town to the Prince President at Montpellier:—

Our Prince, who art in power by right of birth and the acclamation of the people, glorified be thy name; thy kingdom come, and may it be perpetuated by the immediate acceptance of the Imperial crown of the great Napoleon; thy will, firm and sage, be done, in France as abroad; give us this day our daily bread, by diminishing duties on the necessaries of life; forgive us our trespasses, when assured of our repentence and of our improvement; lead us not into the temptation of cupidity and place-hunting, but deliver us from evil—that is to say, the evil of secret societies, the abuses of tradition, and the errors of the press, and from all kinds of factions; and continue to raise more and more, in honour and practice, morality, religion, respect for authority, agriculture, industry, love of order, and labour. Amen. (Signed)

CHARLES MAISTRE, Mayor of Villeneuvette.

At the Bourse on Thursday, the Four-and-a-Half per Cents. closed at 106f. 35c.; and the Three per Cents. at 78f. 55c.

BELGIUM.

The *Independance Belge* of Tuesday says:

M. H. de Brouckere, summoned yesterday to the Palace, was received, at two o'clock, by the King. It was stated that, at the close of the conference, which was of very long duration, M. de Brouckere, without awaiting the difficulties of this situation, commenced to occupy himself in the composition of a Cabinet. We learn that M. Firmin Rogier has asked the King to accept his resignation of the mission to Paris.

The *Emancipation* of Brussels states that the following list of a new Ministry is in circulation, but it says that it cannot guarantee its authority:—Finances, M. Liedts; Interior, M. Piercot, burgomaster of Liege; War, M. Anoul; Public Works, M. Van Hoorebeke; Justice, M. Faider; Foreign Affairs, M. H. Brouckere.

The *Cologne Gazette* states that MM. Liedts and Lecleroq will be members of the new Ministry.

The report of the Military Commission appointed last autumn to consider the questions relating to the defence of the Belgian territory, which has just been presented, is an important document. It recommends the demolition of the fortifications of Ypres, Menin, Philippeville, Mariembourg, and Bouillon, and the preservation of the fortifications of Mons. The opinion of these authorities is that the substantial defence of the country depends mainly on the efficiency of its fortifications on the two lines of the Scheldt and the Meuse. For this reason, they have decided to keep up all the fortifications which cover the line of the latter river—Dinan, Charleroi, Namur, Huy, and Liege. They also recommend the strengthening of Antwerp by the completion of the bomb-proof buildings or ators. MM. Donoso Cortes, Conga Arguelle, Alejandro Llorente, Olivan, and Rivera were spoken of as future Ministers.

The funeral of the Duke de Baylen took place at the church of Atocha, on the 1st inst. The king was present. The Queen assisted at the religious service.

GERMANY.

The camp near Pesth, the costs of which are said to have amounted to 3,000,000 florins (nearly half a million sterling), was raised on the 26th ult. This expensive military pageant concluded with a grand field-day, or mimic battle; the three *corps d'armee* being divided into two armies, of which one was commanded by the Emperor, and the other by the Archduke Albert, the Governor of Hungary. The army commanded by the Emperor consisted of 20 battalions, 56 squadrons, and 100 guns; that of the Archduke, of 20 battalions, 49 squadrons, and 72 guns.

The Emperor, after this event, returned to Vienna; whence he was to start on an expedition to Croatia on the 1st inst., which would occupy him till towards the end of the month.

The rate of exchange was still 11 fl. 28 k.; silver at 16½ pm. The new loan was lower in price than that at which it was formed. This, it appears, is accounted for by undue speculation in the first instance, induced by a large subscription to the extent of more than £3,000,000 on the part of the Rothschilds, which has been followed by reaction as the periods for the payment of the deposit and first instalment approached—scrip being then disposed of at ½ discount, in order to raise funds for the purpose.

The Austrian Government has just rendered the observance of the Sabbath obligatory in all parts of the imperial dominions. On that day ... public and private works are to be suspended, all shops closed, with the exception of the ... re provisions are retailed, which may be open only for certain hou. .

Letters from Dresden state that the King of Saxony has accepted the resignation of his Prime Minister, M. Beust.

A grand military "mourning ceremony" took place at Vienna on the 30th ult., in honour of the late Duke of Wellington, as Austrian Field-Marshal and Grand Cross of the Order of Maria Theresa. The whole of the garrison was drawn up in full parade on the glacis in presence of the Emperor and a brilliant staff of general officers. Not only did the officers wear the usual stripe of black crape on the left arm, but even the flags and standards were hung with crape. The Emperor has issued orders that the same ceremony shall be observed in every place in the empire where there is a large garrison.

By letters from Berlin we learn that the negotiations on the subject of the renewal of the Zollverein treaties, after having been protracted to an unusual length, have come to an end without any result. A circular to this effect was issued by the Prussian Government on the 30th ult.

In consequence of cholera existing on the German side of the Baltic, the Swedish sanitary regulations had directed that no persons arriving from Germany or Denmark shall be permitted to land, unless provided with a certificate of health.

The cholera has reached Cracow and Lemberg.

ITALY.

The *Augsburg Gazette* states that the processes against the club of Ammazzarelli, which, during the Republic, had its head-quarters at Sinigaglia, has just been concluded at Rome. Of 81 persons who were indicted, the Sacra Consulta has condemned 22 to death.

THE EAST.

The Constantinople correspondent of the *Ost-Deutsche Post* writes under date Sept. 18, "The English fleet is expected at Smyrna to support the negotiations which are now going on between the Porte and the maritime Powers relative to the right of their men-of-war to pass the Dardanelles and Bosphorus. The Powers demand free passage through the Straits, that privilege having been granted to the French war-steamer *Charlemagne*. The excuse made by the Porte is that the French Ambassador was on board the vessel, which hoisted a white flag. To this the reply is, "We too will always have a white flag flying whenever we pass the Straits." It is considered highly probable that a Russian fleet will appear before Trebizond and Varna.

We learn from Constantinople of the 23d ult., that advices had been received from Erzeroom, announcing that an attempt had been made by six men to assassinate the Shah of Persia, while on a hunting excursion. The plan adopted by the ruffians was each to present a petition to the Shah, at which moment they fired upon him, and wounded him in the mouth and the thigh, but not seriously. The villains endeavoured to escape, but one was cut down by the Shah's attendants, two were arrested and sent to Tehran, and the other three fled to the woods, where they were shortly afterwards discovered, when they were instantly cut to pieces. The assassins belonged to the sect of Babi, and the Shah having had their chief put to death, was the reason assigned for this revengeful act.

AMERICA.

By the *Europa* (Lyric commander) we have advices from New York to the 22d ultimo. The news is not important.

General Scott, the Whig Presidential candidate, was on a political tour through the west. His prospects, however, did not appear to be promising, and the agitation of parties was extreme.

The New York money market was buoyant. The cotton market inactive. Stocks in port light; but at fully ¼ c. per lb. reduction.

Advices from Quebec to the 21st ult., states that the Assembly, after a stormy debate, had agreed to an address to the Queen, requesting power to pass a bill for the distribution of clergy resources by 52 votes against 22 votes.

From Havannah, under date 14th ult., we learn that a court-martial had sentenced the persons connected with the *Voice of the People* to death.

By the *Humboldt* steamship, which arrived at Southampton on Thursday, we have advices from New York to the 25th ult. The cholera and yellow fever had, to a great extent at Charlestown.

From Canada we learn that the Ministers of that province had introduced a resolution proposing that the Legislative Council shall in future be elected by the inhabitants, instead of being appointed by the Crown.

The papers state that the guano question will be satisfactorily settled.

INDIA.

The accounts from India by the Marseilles route, dated Bombay, September 1, state that the preparations for the resumption of the campaign in Burmah were actively pending. It is intended to re-occupy and garrison Prome, the successful *reconnoissance* upon which by way of the river, under Captain Tarleton, has already been recorded (ILLUSTRATED NEWS, 25th Sept.); and from that point it is considered the advance on Ava may not be one of great difficulty.

The army which will be assembled in Pegu in the month of November will consist of more than 20,000 men—that is, six regiments of European foot, 12 regiments of native infantry, and a full complement of artillery, as well as sappers and miners: the Bengal Brigade, now at Rangoon, commanded by Lieutenant-Colonel Reynolds—18th Royal Irish, 40th Native Infantry, 67th Native Infantry; 2d Bengal Brigade, to consist of her Majesty's 80th Foot, 10th Native Infantry, 4th Sikh Local Regiment, and to be commanded by Lieutenant-Colonel Dickenson; 3d Bengal Brigade, to consist of 1st European Bengal Fushers, 37th Native Infantry, regiment of Loodiana, and to be commanded by Lieutenant-Colonel Hush, C.B.; and the Light Field Battery now at Dum-Dum.

Emigration from Bombay to Australia was about to commence. Several Anglo-Indian families had taken their departure in the *Ramsymede* on the 25th September, and upwards of 150 soldiers of her Majesty's 86th regiment are said to have applied for their discharge in order to proceed to the "diggings."

The money market continued to be well supplied. The general prospects of the Indigo crop had not improved since the last advices.

NATIONAL SPORTS.

The Newmarket "Second October," and its "Cesarewitch," not by any means the most interesting of the races, stand alone in the Calendar for next week. Steeple-chasing is blank, and cricketing and aquatics have had their day. Coursing, however, is now beginning to show a head, for we find, early though in the year, three meetings fixed, viz. the North Berwick and Durham, on Tuesday; the Northumberland, on Wednesday; and Tarriff (Aberdeenshire), on Thursday—each two days. The "register" looks well for sport.

OBITUARY OF EMINENT PERSONS RECENTLY DECEASED.

THE RIGHT HON. AND MOST REV. THOMAS STUART TOWNSEND, D.D., LORD BISHOP OF MEATH.

THE death of this learned prelate occurred at Malaga, on the 16th ult., just two years after his consecration as Bishop of Meath.

Dr. Townsend, who was born at Mardyke House, county Cork, in 1801, received his education at Westchester School, and graduated at Trinity College, Dublin. He was well known as the author of many works on theology and education. His father, Thomas Townsend, Esq., barrister-at-law, sat in the last Irish Parliament as member for Belturbet. For many years Dr. Townsend held the rectory of Burnchurch, county Kilkenny, and was subsequently Dean of Lismore. His elevation to the see of Meath was in 1850. His Lordship married, in 1828, the second daughter of Charles Spread, Esq., of Lansdowne Lodge, county Kerry, and leaves a large and youthful family to deplore his early and deeply-lamented death.

THE REV. SIR SAMUEL CLARKE JERVOISE, BART., OF IDSWORTH PARK, HANTS.

THIS venerable gentleman died on the 1st instant, aged eighty-one. He was the last surviving child of the late Jervoise Clarke, Esq., M.P. for Hants, who assumed, by act of Parliament, in compliance with the testamentary injunction of his maternal grandfather, Thomas Jervoise, Esq., of Herriard, the surname and arms of Jervoise. Sir Samuel obtained his Baronetcy by creation, 13 November, 1813. He married, Feb. 4th, 1799, Elizabeth, daughter of the Rev. Nicholas Griffinhoffe, of Woodham Mortimer, Essex, and had two sons and four daughters, all of whom are married. The eldest son is the present Sir Jervoise Clarke Jervoise, 2d Bart., of Idsworth Park.

WILLIAM FINDEN.

MR. WILLIAM FINDEN, the celebrated engraver, was the elder brother of Mr. Edward Finden, with whom he often worked in conjunction. It is generally understood that he was a pupil of the late Charles Warren, so famous for his engraving of Wilkie's "Broken Jar;" but he exhibits much less of Warren's style than of the elder Heath; and, if never instructed by that artist, it is plain, from the evidence in all his engravings, that he profited by the diligent study of his best productions.

Finden executed few works of a large size. His masterpiece in that way is a full-length portrait of George IV., seated on a sofa, from an original painted for Sir Thomas Lawrence for the Marchioness of Conyngham. For this work he received fifteen hundred guineas, the largest sum ever paid for engraving a portrait. The sale, however, fully justified such a liberality of outlay, for so great at the time was the demand, that proofs were advertised for, with a large advance on the first price of publication. The mania has long since passed away; and the work, with all its merits, and they are many, may now be had at a very reasonable rate.

Finden was never so much himself, and this is paying him no mean compliment, as when employed in engraving after Wilkie. The best of these efforts is probably the "Village Festival" of the Scotch artist, originally painted for Mr. Angerstein, but now in the National Gallery, and next to that the "Highlander's Return," for which he is said to have received 600 guineas.

The success of the Brothers Finden, in working for the booksellers in the illustration of popular publications, led them at last to attempt the same thing on their own account, with the hope of more exclusively enjoying the profit of their labours. It is not often that professional men of any kind succeed when they venture to invade the province of the trader; but, in the case of the Findens, the rule, however general, did not hold good: they were the fortunate exception, so far at least as regarded the "Byron" Illustrations, the profits of which were so great as to make the regular publishers look upon the attempt with no very favourable feelings. Success, however, brought with it this evil; they were tempted into other undertakings of the same kind, and upon a more extensive scale, which were far from being attended with the same results. One noble design, and as nobly executed, "The Gallery of British Art," occasioned Mr. Finden a serious loss; in fact, it absorbed the gains he had made by "the Byron," and reduced him once again to the state of a poor artist, at the mercy of the publishers.

One of the last acts of Mr. Finden's long and valuable life was affixing his signature to the petition intended to be laid before the Queen for the admission of engravers to the full honours of the Royal Academy.

Mr. Finden was a widower. He died on the 30th ult., in the 65th year of his age; and was buried in the picture-que cemetery at Highgate.

JOHN SOMERS, SECOND EARL SOMERS.

His Lordship died in Grosvenor-place, on the 5th inst., in the 65th year of his age. He was second son of John, first Earl (the eldest son, the Hon. Major Edmund Charles Somers Cocks, fell at the assault of Burgos, in 1812), and fourth in descent from the marriage of Charles Cocks, Esq., M.P., with Mary, sister and co-heir of John, Lord Somers, so illustrious as Lord Chancellor of Great Britain. Earl Somers married, 4th February, 1815, Caroline Harriet, youngest daughter of Philip, third Earl of Hardwicke, K.G., and leaves one son, Charles Somers, present and 3rd Earl, and three daughters, of whom the eldest, Caroline Margaret, is married to the Hon. and Rev. Charles Leslie Courtenay, and the second, Harriet Catherine, to F. R. Wegg Prosser, Esq. The deceased Peer was Lord-Lieutenant of Herefordshire and Colonel of the County Militia. Prior to his accession to the title, he sat in the House of Commons as member for Hereford from 1820 to 1833, and for Reigate from the latter year until 1841. His Lordship possessed a considerable estate both in Herefordshire and in Sussex; his seat in the former being the fine Castle of Eastnor, and in the latter Reigate Priory. He was patron of no less than seven livings

JOHN BENETT, ESQ., OF PYT HOUSE, LATE M.P. FOR SOUTH WILTS

This gentleman, who sat in Parliament for Wiltshire for a lengthened period, having been first elected in 1819, died at his seat of Pyt House on the 1st inst., of an apoplectic seizure. He was born in the year 1773, and had consequently completed his 79th year. His family is one of the oldest in Wilts, being authentically traceable from John Benett, who served as Sheriff of the county, 31st Henry III. Their original place of residence was Norton Bavant, but at the beginning of the 16th century, William Benett, Esq., of Norton Bavant, Recorder of Shaftesbury, having married Mrs. Petronilla Bishop, sister and sole heir of Colonel Thomas Benett, of Pyt House, Secretary to Prince Rupert, their son Thomas Benett, Esq., of Norton Bavant, purchased the Pyt House estate. He married Elizabeth, daughter and co-heir of William Wake, D.D., Archbishop of Canterbury, and was grandfather of the gentleman whose death we record. Mr. Benett married, in 1801, Lucy, daughter of the late Edmund Lambert, Esq., of Boyton, Wilts, and had four daughters and one son, John, who married, in 1836, Emily Blanche, youngest daughter of the late Sir Henry Tichborne, Bart., and died before his father, leaving issue. His widow took for her second husband Matthew James Higgins, Esq., of Lowndes-square. During his long Parliamentary career, Mr. Benett was a moderate and consistent Whig.

*** Erratum in the Obituary of last week, page 282, middle column, for the "Rev. T. F. More," *read* Robert Bridgman More, Esq., Linley Hall, Shrewsbury.

TO THE EDITOR.—"Cheltenham, Oct. 4, 1852.—Some ingenious person has invented a paragraph, which seems to be going the round of the papers, and which appeared in your last number, describing the sailing of a Dutch emigrant vessel for Australia. With this company I am described as proceeding to the land of gold in the capacity of chaplain. I beg you will give this unqualified contradiction to this invention in your next number; and am your obedient servant, T. P. BOULTBEE, Curate of Cheltenham."

SIGNS OF A HARD WINTER.—On Tuesday much curiosity was excited, and a great deal of sportive talk, by large flocks of wild fowl making their appearance and alighting on the banks of the river. The sea gulls were also very numerous, and those Bartons-le-hedges and Hammersmith swallows and stormy petrels were seen by the fishermen. The presence of wild fowl, and especially of the stormy petrel, at this season of the year, is said, by these accustomed to the water, to be a sure sign of a long and severe winter.

THE CHAMPIONSHIP OF THE THAMES.—This exciting match, between Thomas Cook, the present champion, and Robert Coombes, for the championship, and the large stake of £400 takes place on Thursday next, the 14th, from Putney-bridge to the Ship Inn, Mortlake. To start about half-past one o'clock. Betting at the last deposit was 5 to 4 on Cole.

ARCHERY.—A match between the Cheshire bowmen and the archers of Warwickshire took place at Leamington on Tuesday and Wednesday last. The match was decided by the six highest scores on each side. Warwickshire gained the greatest number of hits, namely, 696 against 688; but Cheshire won the match by a score of 2798 against 2730.

NAVAL AND MILITARY INTELLIGENCE.

THE "WINDSOR CASTLE."—As a mark of respect to the memory of the late Great Duke, on the day of whose death the *Windsor Castle*, screw three-decker, was launched, the name of the ship has been altered, and will hence orth be known in the official *Navy List* as the *Duke of Wellington*.

The two largest screw ships of war in the world belong to the French and the English navy. France has still the *Napoleon*, and has great rival's name is perpetuated in the large-t ship of war ever built—the *Duke of Wellington*, from whose broadside more than 4000lb. weight of metal will be hurled at one discharge.

The *Megæra*, 6, iron screw steam-ship, Commander J. O. Johnson, arrived at Portsmouth on Saturday last, having on board Captain Jones and Captain Hewitt's companies of the Royal Artillery for service in the Mediterranean. Captain Mason, R.N., goes out in her to visit the West Indies. She takes out also a few supernumeraries.

By the recent death of Rear-Admiral of the Red William Fisher, Rear-Admiral of the White William Fitzwilliam Owen is promoted to be Rear-Admiral of the Red; Rear-Admiral of the Blue Sir David Dunn, K.C.H., becomes Rear-Admiral of the White; and Captain James Mingaye becomes Rear-Admiral of the Blue.

TRIAL TRIP OF THE "AGAMEMNON."—On Saturday last, at ten o'clock P.M., this magnificent war-steamer started from Gravesend, on a trial trip. She had on board her captain, Sir Thomas Maitland; Commander Hall; Mr. Lloyd, chief engineer of the steam department at Somerset House; Mr. F. P. Smith, the inventor of the screw-propeller, &c. Between the Nore and Mouse lights the speed of the *Agamemnon* was tried by Massey's patent log for half an hour, and found to be 10 6 10th knots against a strong head-wind, the engines making 58 revolutions. The result was most satisfactory, as exhibiting not only the enormous power of her engines, but also the great advantage and success of the screw as a propeller.

THE "CLEOPATRA" STEAMER.—The following is an extract from a letter by a passenger in this vessel, dated Madeira, September 13:—"From first to last the Cleopatra has well manned by most agreeable people, and one of the owners is on board. We anticipate a delightful day in Madeira. The captain read morning service yesterday, in the aft saloon, to a numerous congregation. The engines, which are of 400-horse power, make 60 revolutions of 24 feet each round the base of the funnel having caught, or, rather, it was found to be smouldering: a few buckets of water, I am told, quite extinguished it; and the captain had the whole of this work broken down and thrown overboard."

WOOLWICH ROYAL ARSENAL.—An additional building has been taken from the civil estate and added to the laboratory department, where it is intended to cast the new conical bullets now made for experiment, to see whether they will not supersede the round bullet now in use in the British service.

THE "FORERUNNER."—The *Forerunner*, a new and beautiful steamer (in connection with the African Mail Packet Company), which sailed a few days since for the coast of Africa, will be succeeded by four other steamers of a much larger class, two of 500, and two of 1000 tons burden, to sail every month; and a steamer will shortly be laid on to Madrid and Tenariffe. Two missionaries have gone out in the *Forerunner*, one from the Church of England Society, the other from the Wesleyan body.

THE MILITIA.—At the Newport Pagnell Sessions, William Brewer was bound over in recognisances to appear and take his trial on a charge of a misdemeanour, by circulating and publishing at Little Brickhill, a scandalous libel, headed "Flogging in the New Militia."

MERCHANT SEAMEN PENSIONERS.—A circular has lately been issued from the War Office, addressed to the staff officers of pensioners, which says that, in order to insure uniformity in the applications made to the office by persons who are anxious to commute their pensions from the Merchant Seaman's Fund for the purpose of emigrating, a form is annexed according to which all such applications are in future to be made.

THE PORTUGUESE ARMY.—The Queen of Portugal has issued a degree against the wearing of beards in her army, and orders that nothing shall henceforth be worn on the faces but moustaches and imperials. Generals, officers, however, will be allowed to wear whiskers.

COLONEL GORDON HIGGINS.—This gallant officer having been released in the command of the Royal Artillery at Quebec, by Lieut.-Colonel Charles Lee, was, previous to his departure for England, presented with a most complimentary address by the Mayor, on behalf of the principal inhabitants of Quebec. The document concluded by a request of his acceptance of a piece of plate, to be presented to him in England, as a lasting memorial of the kind feelings his many friends in Quebec entertain for him.

SHIPWRECKS AND LOSS OF LIFE.

Up to the moment of going to press we continue to receive accounts of new disasters to the shipping interest.

The American ship *Mobile*, Captain Furber, which sailed from Liverpool on the 25th ult. for New Orleans, with upwards of 50 passengers and a crew of about 30 men, has been totally lost. At half-past two o'clock on the following Wednesday morning she struck on Blackwater Bank, and by the afterwards began to break up. Efforts were made to launch the boats; but, in consequence of the heavy sea, they were fruitless, and at every succeeding sea one or more of the passengers were washed off the wreck, until all, and all disappeared, with the exception of eight seamen and one passenger, who were saved, but Captain Furber, together with all his officers, perished. The *Mobile* was upwards of 1000 tons burden, and nearly new.

The *Morse*, belonging to Messrs. Young and Co., of South Shields, which was laden with Indian corn, from Ibraila or Cork or Falmouth for orders, while on her passage home, encountered on the 3rd or August a dreadful storm of thunder and lightning, about midnight, and, as the master states, from which any one had come away "God help us!" a ball of fire came out of the heavens, struck the mast of the vessel, and in a moment capsized her. She went down in about three minutes. The master, Mr. Pearson, and a sailor lad, named William Murray, a one succeeded in grasping some of the floating spars, when the former by great exertion contrived to make something like a raft, to which he secured Murray. Their sufferings were intense during the night; but, on the next morning, the poor boy, being unable to endure the misery occasioned by the clashing of the buoy with the oars and spars, said, "Good bye, master; God help my poor mother!" and sunk to rise no more. The master was drifted about until, about five o'clock P.M., on the 4th, he was at length picked up by the barque *Peter Schroeder*, of North Bergen, from which he was transferred to the Dorus, of Newcastle.

The *Jamina*, a brig, laden with linseed, from Taganrog for Cork for orders, was seen in great distress, on the 17th September, by the *Agamora*, Henry master, in lat. 46 deg. 54 min. north, long. 15 deg. 45 min. west, in a terrific gale of wind. She had then 5½ feet water in her hold, with her cargo afloat, and decks swept of boat, gaffey, bulwarks, &c. Every effort possible was made by the *Agamora* to render assistance, but, as the boat which was sent to their relief was stove in and broken up, as all means of communication were cut off between the two vessels, and as the gale increased, the *Agamora* had to leave the unfortunate brig to her fate. It is thought impossible that she could have weathered out the gale, and all hope of her safety is abandoned.

The ship *Cromwell*, which arrived at Liverpool on Sunday, reports having on the 15th inst., in lat. 44 deg. 4 min., long. 41 deg. 21 min., fallen in with the brig *Darling*, of London, from New York or London, laden with grain, and taken off the crew, eight in number. The brig had sprung a leak twelve days before, and the crew, exhausted with pumping, were obliged to abandon her, not being able to keep her free from water. It was blowing a strong gale from E.N.E. at the time, with a very heavy sea running, the *Cromwell* had to lay by the brig twenty four hours before the men could be taken off.

A severe gale visited the North Welsh coast on the evening of the 28th ult., during which the ship *Harriet*, of Bangor, laden with coal, was driven on the Dutchman's Bank, near Penmon, and sunk immediately. Five persons were on board—the captain, his wife, a female passenger, one man, and a boy; and he whole are supposed to be drowned.

The brig *Carr*, from Liverpool to Shields, laden with salt, had her sails blown to atoms, and after a violent encounter with the gale, went ashore in Redwharf Bay, on the North Welsh coast. The *Mostyn* life-boat put out, and happily succeeded in saving the lives of master and crew.

Several vessels dismasted, and otherwise damaged, put into Yarmouth Roads on Tuesday. One large barque had been wrecked on the Scroby Sands, and the master and a boy drowned. A vessel laden with railway iron was ashore on the beach.

The *Princess Royal*, contract mail packet, with the Hamburg and Bremen mails, was obliged to put into Harwich, and land the mails at that port. When off Southwold on Tuesday morning, she fell in with the *Ondine*, (of the same name) of the Ostend, of Whitby, wrecked on Sizewell Bank, and conveyed them on board to Harwich.

The *Elizabeth*, Mr. Baynes, of Jersey, was wrecked on the Main, be ween St. Margaret's Bay and Kingsdown, at eleven o'clock on Monday night. She was last from Halifax, and was bound for Havre with a cargo of mahogany. The lives of all on board were saved.

Off Lungeness, New Romney, and Rye, four vessels named the *Laurel*, of Whitby, the *Thomas and Ann* from Dipps, the *Venerus*, for London, and the *William*, from Liverpool, were cast ashore, and probably will become total wrecks. The crews were providentially saved by taking to the boats

Northward of the Thames, along the coast off Harwich, Aldborough, Yarmouth, and Brasington, no fewer than thirty coasting vessels were driven ashore, where, up to the last post, they remained, without a chance of being got off.

A brig named the *Euphemia*, belonging to Blakeney, bound from Seaham to London, on Tuesday morning struck on the Shipwash Sand: the gale blew her off into deep water, where she foundered. Us-pp-ly, some of her crew went down in her and perished; the remainder took to the boats, and were saved. Near the same spot, on the previous morning a barque was seen by the coastguard at Aldeburgh to capsize and disappear almost immediately afterwards. Not a soul was saved from her.

FIRE AT SEA.—A Liverpool vessel, named the *Helen*, bound from Para, South America, to Liverpool, and laden with a cargo of general merchandise, took fire on the morning of the 6th of August, in lat. 30 deg. 20 min. north; longitude, 52 deg. west. The vessel was wholly consumed, the crew and the only passenger on board, Mr. Wallace, having previously left in the long boat and gig. After having been buffeted about the ocean for about ten days, during which they suffered much from the boisterous weather and the scarcity of provisions, they were, on the 16th of August, rescued from their perilous position by the *Jordeson*, Mr. Venables, master. The provisions on board this latter vessel, owing to a protracted voyage and the addition of the *Helen's* men, ran, however, so short that some rats, which were caught on board, were cooked and devoured with eagerness.

In addition to the above list of disasters, several total losses have been reported at Lloyd's.

MAIL FOR THE CAPE AND AUSTRALIA.—Notice was issued by the Post-office on Wednesday, that the Cape of Good Hope and Australian mail packet *Melbourne*, which was to have left Plymouth on the 24th inst., has not yet taken her departure from that port, and that mails will continue to be made up for her in the General Post-office and at Plymouth until further notice.

GREAT FLOODS.

On Tuesday last the town of Lewes was visited by one of the heaviest floods it has ever experienced. During seven preceding days the rain had fallen in considerable quantity, but on Monday it came down in such torrents that, according to the rain-gauge, there had fallen no less than two inches of water during the twenty-four hours. The consequence was, that all traffic on the Lewes and Keymer Railway was suspended. As the lower portions of the town, the water burst into the cellars and warehouses, and one small street, containing of from 20 to 30 houses, leading to Messrs. Hillman's brewery, was completely under water, and sailing about. Since the evening of the 4th inst. the waters gradual y fell. Considerable damage has been caused by the flood.

The *Banffshire Journal* states that the whole of the northern part of the island had been visited last week by a severe storm of wind and rain, occasioning floods that did considerable damage to that part of the country. It appears, also, that the Southampton Railway, near Romsey, had suffered severely from the same cause, and that the traffic on the line was suspended for some time.

On the Eastern Counties Railway, the 5.36 P.M. return train from Cambridge, on Monday night, was, in consequence of the great flood upon the line between Tuebarst and Etchingham, thrown completely off the rails. The engine-driver and fireman were jammed between the engine and tender, and were much extricated from their position until some assistance had arrived, when it was discovered that the driver had escaped with some bruises, but the unfortunate fireman had sustained a fracture in his thigh. Fortunately there were no passengers in the train. The traffic on this railway also was suspended for some time.

LAUNCH OF THE NEW IRON EMIGRANT SHIP, THE "W. S. LINDSAY," AT WILLINGTON, NEWCASTLE-UPON-TYNE.

ON Thursday, the 30th ult, the launch of the above iron vessel took place at Messrs. Coutts and Parkinson's, Willington, near Newcastle-upon-Tyne. The *W. S. Lindsay*, which has been built entirely for the purpose of emigrants, is 1200 tons burthen, being 207 feet in length over all, nearly 29 feet in breadth, and 18 feet depth in hold. She was commenced in March last, so that the rapidity of her construction is quite as remarkable as the superiority of her figure and materials.

The *W. S. Lindsay* is a full-rigged ship, and has an elliptical stern, with a shield figure-head and appropriate carved work. She is coated with the Anti-Sargassian paint of Peacock and Buchan, by whom information has been received from India, that the *Poltinger* and *Shamjack* steam-ships, now nine months on the India and China stations, which had been coated with the paint, were, upon being docked, found to be perfectly clean. The number of cabins is 280, of which 60 are of the first-class, on the upper decks; in the centre of which is a magnificent saloon, the sides decorated with beautiful marine views. The *W. S. Lindsay* is advertised to sail about the middle of November. Good judges speak of her as being a beautiful model, and in every respect a fine specimen of naval architecture.

Shortly after four in the afternoon, the launch took place, Mr Hutt, M.P., Sir John Fife, and several members of the Corporation of Newcastle, the Mayor of Gateshead, and a large number of merchants and neighbouring gentlemen being on board at the time. Mrs. Western, wife of Alexander Western, R.N. (the commander of the vessel), gave her the name she is intended to bear and she floated into the Tyne amidst enthusiastic cheering from the large concourse of spectators assembled.

Shortly after the launch, the large work-room of the establishment was thrown open for dinner, having been temporarily fitted up for that purpose. Mr. W. S. Lindsay the proprietor of the new vessel, took the chair; Sir John Fife and the Mayors of Tynemouth and South Shields occupying the vice-chairs. Mrs Chisholm, whose enthusiastic services in the cause of emigration are everywhere so well known and appreciated, sat on the right of the chairman. An excellent dinner was then done full justice to, and, on the cloth being drawn, the usual loyal and patriotic toasts were given and responded to.

Mr. Hutt, M.P., proposed the health of Mr. Lindsay, one of the largest, most intelligent, and most enterprising shipbuilders of the world. (Prolonged cheering.)

Mr. Lindsay replied, and, in the course of his remarks, he stated that he had begun life a poor orphan boy, and that he had succeeded in gaining his present position solely by honesty and industry. In speaking of the mercantile marine of this country, he expressed his belief that it was a very true way of maintaining its supremacy was by a free and unfettered trade. There was now no going backward. Protection was banished for ever, and, so long as Englishmen do justice to themselves, and put forth their energies, and developed the resources of the country, the old flag of England would still be seen in every sea of our globe. (Loud cheers.) In referring to iron vessels, he said, seventy years ago, some persons would not believe that iron would swim, and it was a long time before steamboats were built of iron; now there were scarcely any of wood. He believed that in five or six years there would be very few ships built of wood, and what a marked superiority that would give them over the nation which most interfered with them as competitors! America laboured hard to maintain the supremacy of the seas, but we had now a material for building ships which America did not possess, and for which she would have to come to us. This would open her eyes to the impolicy of maintaining a duty of 30 per cent. on manufactured iron, for the freight and charges alone would be quite sufficient to operate as a protection to the British shipowner. (Hear, hear.)

The chairman concluded by proposing the health of Mrs. Chisholm, who felt so warm a desire to benefit mankind that she had come down from London purposely to witness the launch, and who had expressed her high approbation of the *Lindsay* as an emigrant ship. He regarded Mrs. Chisholm as an instrument in the hands of her Maker, destined to produce great and lasting good; and her name was now blessed by thousands of orphan and once destitute girls. (The toast was drunk with loud cheering.)

Mrs. Chisholm rose to reply, and was greeted with hearty applause. She briefly expressed her thanks for the kindness of the company, and then referred to the purpose for which she had attended there that day. For many years, she said, she had been engaged more or less in emigration, but it had been very difficult to procure emigrants of the right class. She found at last that we should never have them of a better class until we had better ships. The evils of emigrant vessels were such as no lady could detail, but the evil had to see them eradicated. She had long been in search of a shipowner who would cooperate with her in her design, and she believed she had found him in Mr. Lindsay; and that, through his instrumentality, hundreds of young women would be sent to the mother land to work. She shortly proposed to return to Australia in charge of 500 single women of all creeds, whom she would attempt to convey to their new home under moral and religious influences. She then sat down, after again expressing her thanks for the kindness of the company, amidst reiterated plaudits.

Other toasts followed, and the festivities terminated with a grand ball.

On Saturday evening, a "group meeting," was held in the lecture-room, Newcastle, when Sir John Fife presided. Mrs. Chisholm expained the advantages of emigration, and gave a variety of practical advice to intending emigrants; and in conclusion, introduced Mr. Lindsay, who announced that he had contracted with

LAUNCH OF THE "W. S. LINDSAY," IRON EMIGRANT SHIP, AT WILLINGTON, NEAR NEWCASTLE-UPON-TYNE.

the builders, Coutts and Parkinson, for a vessel twice the size of the *Lindsay*, to be fitted with auxiliary screw power. This is the vessel by which Mrs. Chisholm intends to return to Australia in July, with her cargo of 500 females. The ship will be called the *Caroline Chisholm*, and is the first of a series of six vessels which Mr. Lindsay contemplates for the Australian trade.

On Tuesday evening a group meeting of intending emigrants for Australia, under the popular plan suggested by Mrs. Chisholm, was held at the Parochial School, Clapham-common. The meeting was very numerously attended by working men and women, intending colonists. The Rev. Wentworth A. Bowyer, rector of Clapham occupied the chair, and Mrs. Chisholm addressed the meeting at considerable length.

OPENING OF VICTORIA COLLEGE, JERSEY.

On Wednesday week this new educational Institution was opened with much ceremony. At twenty minutes before eleven o'clock, his Excellency the Lieut.-Governor, Major-General Love, C.B., K.H., attended by a brilliant staff (all wearing the usual military badges of mourning, for the death of the great Duke) arrived upon the ground, and was received with the National Anthem from the Militia bands, and with the other wonted military honours. His Excellency then rode along the lines, and was heard to express himself in terms of high praise of the soldierly appearance and bearing of the Militia companies.

Soon after eleven o'clock, the States of the Island assembled in the little edifice to the west of the College, called "The Temple," there robed, and then, with his Excellency and staff, passed to the interior of the College in the following order:—Mr. Simon, bearing the mace; the Bailiff and the Lieut.-Governor; the Jurats; the Clergy; the Constables and Chiefs of Police; Army and Militia officers of the Lieut.-Governor's staff.

As the procession entered the building, the Royal standard on the south-west turret was hoisted to the top of its flag staff.

The multitude assembled in the hall had, at twenty minutes past eleven o'clock, the pleasure of seeing the procession make its appearance at the west end of the noble apartment, in front of the desk of the principal of the College; where also, or near thereto, we observed Mrs. Love, the Lieutenant-Governor's Lady, Sir James and Lady Reynett, the Rev. the Principal of the College, the Rev. Mr Day, class lord master; the Rev. Mr. Whittard, English master; M. Beaufils, French master, &c. The Rev. Mr. Le Suer, mathematical master, was absent from the Island. Silence having been obtained,

The Bailiff of Jersey rose, and spoke (in the French language) an address, wherein he thus explained the origin of the institution:—

The visit of her most excellent Majesty and of her august Consort has left imperishable recollections in all Jersey hearts. With a view of transmitting to posterity, and of commemorating in a manner worthy of both her Majesty and the country, an event so important in our annals, the administrators of the Impôt purchased this noble site of "Mount Pleasant," and, conjointly with the States, resolved to construct thereon a College for the education of our youth, and a walk for the recreation of the public.

The first stone of this edifice was laid on the 24th of May, 1850, the anniversary of the natal day of our well-beloved Sovereign. We to-day celebrate the completion of the work.

Since its commencement, her Majesty and Prince Albert have manifested a most vivid interest in this establishment; and, as a striking proof of their approbation, have presented to the college the admirable paintings on which you will soon have the gratification to gaze.

Let us express the hope that Victoria College, whilst it shall transmit to our descendants an enduring testimony of our love and veneration of her Majesty, may, responding to our expectations, assure to the present and future generations the inestimable benefits of a sound education!

The Dean of Jersey then moved to the principal's desk, and, with much devotional emphasis, delivered (in English) an eloquent occasional prayer.

His Excellency the Lieutenant-Governor then rose, and said, that the College having been opened by his honourable friend the Bailiff, and the venerable the Dean having solemnized the occasion by an eloquent prayer, it was now his pleasing duty to present to the College the portraits of her Majesty and Prince Albert, which had been graciously confided to him for that purpose by her Majesty, as an earnest of the interest felt by her Majesty in its prosperity; and in doing so he would only express his own wish, which he was sure was also the wish of all present, that the institution which they were thus met to inaugurate might meet with the most triumphant success.

At a sign from his Excellency, the veils were then, at twenty minutes before noon, let fall from the Royal portraits of the Queen and Prince Consort, amid the cordial loyal greetings of the great company.

A few moments afterwards, a preconcerted signal being given, three salvos of seven guns each were fired by the Militia Artillery, followed by three *feux de-joie* from the entire body of infantry on the ground. After this the ceremony terminated.

A view of the ceremony of laying the foundation-stone of this new College, appeared in the ILLUSTRATED LONDON NEWS for June 1, 1850.

VICTORIA COLLEGE, JERSEY, OPENED SEPTEMBER 29.

THE CASTLE DE SANCTO LAUDO, NEWTON-PARK, SOMERSET.

SOMERSETSHIRE ARCHÆOLOGICAL AND NATURAL HISTORY SOCIETY.

The fourth annual meeting of this excellent society commenced on Monday, the 23d ult., at the Assembly Rooms, Bath, and was brought to a close on the 30th, the interval being devoted to the reading of papers on subjects of archæology and natural history, the exhibition of a temporary museum at the rooms, and excursions to several objects of antiquarian interest in the neighbourhood.

The report of the entire proceedings of the meeting would far exceed our limits. The Excursions proved especially attractive, and we have therefore illustrated two of the most interesting objects inspected.

On Wednesday, the 29th ult., the members and visitors visited the ruins of Hinton Abbey; the church at Norton St. Philip's, which has recently been restored, at the cost of the present incumbent of the living, by Mr. Scott, the architect; also the George inn, at Norton St. Philip's, of which an Engraving appeared in the ILLUSTRATED LONDON NEWS, No. 355.

The greater number of visitors proceeded at once to view the ruins, where they were joined by the Rev. Samuel Clarke, who, in the absence of the Rev. Mr. Jackson, of Delamere, read a paper on the ruins, by that gentleman.

With this edifice the name of the family of Hungerford has for more than three centuries been associated. This family were originally seated at Hungerford, at Berks, from whence they removed to Farleigh. The ruins of the castle stand on the northern acclivity of a rocky hill, surrounded with trees. It consisted of two courts or wards, lying N. and S. The former was 180 feet in length from east to west, and 144 feet in breadth from north to south, flanked by four round towers, 60 feet in height. Each of these towers were originally divided into three stories, with narrow windows and embrasures. The walls of the south-east and south-west towers are still remaining, and are beautifully veiled with ivy. The hall was a very large and long apartment, hung round with the armour of its former martial possessors, and spoils from the battles of Cressy, Poictiers, Agincourt, and Calais. On the east side of the hall stands the chapel. It consists of a nave and chantry chapel on the north side, the former 56 feet long, 19½ feet broad, the latter 30 feet in length, and 14 feet in breadth. The altar slab is of rich granite. The monuments of the Hungerford family in the smaller chapel are exquisitely sculptured. Besides the old armour in the chapel, there are some frescoes: one a very fine one of St. George and the Dragon: also an old black-lettered Bible, and some beautiful wood-carving. The castle at the time of Edward Hungerford surnamed the Spendthrift came into the hands of the Baynton family, and afterwards came into the possession of the present owners, the Houltons. The ruins are most picturesque. The crumbling towers, with the hanging ivy; the moat, and the priest's lodgings, now converted into a farm-house; all these afforded interest to the eye of the antiquarian.

The paper being finished, the party entered the chapel, and inspected monuments and other objects of interest. They then adjourned to the rectory, where a substantial lunch was provided for the party by the Rev. Mr. and Mrs. Clarke.

The Society then left Farleigh for Bath, passing through Norton, and inspecting the old inn there.

On Thursday, the 30th ult., the members again met at the Assembly Rooms, and thence proceeded on an excursion to visit Wellow Church, the Roman remains, and Keltic Kist, near Wellow; thence to Englishcombe Church, the site of the castle (formerly belonging to the Gournays, and now attached to the Duchy of Lancaster); the Wansdyke, which is very clearly traceable in this neighbourhood; and the celebrated Barrow Hill. Mr. C. Rickman, at this spot, made some observations on the geological features of the district. The excursionists then proceeded to Newton Park, the seat of Mr. Langton, the president of the meeting, where they inspected the Castle de Sancto Laudo; and Mr. C. E. Davis read a paper on the building, of which communication the following is a brief notice:—

The Castle de Sancto Laudo, situated in Newton Park, near Bath, the property of W. H. P. Gore Langton, Esq., M.P., was possessed, in the time of Edward the Confessor, by Alaric, from whom it descended to the Bishop of Constances. Soon after the Norman Conquest it was the property of William de St. Lo, who came from St. Lo, in Normandy. In this family it remained nearly 200 years, one of the owners having, it is said, imprisoned King John in his castle. Another (1271) was in the Crusades, and was present at the siege of Acre, a third being registered as one of the Barons summoned to Carlisle (1299), to fight against the Scots, and was afterwards engaged with the celebrated Robert Bruce. From this family it descended, by marriage, to Lord Botreaux; and again, failing male issue, to Sir Robert Hungerford, who was created Lord Hoales, whose grandson, marrying the daughter of the Earl of Northumberland, had one daughter, heiress to the estates and title, who, in the latter part of the fifteenth century, married Lord Hastings, of Ashby-de-la-Zouch, whose son was summoned to Parliament as Earl of Huntingdon (1529). In 1587, Edward Nevill, Baron of Abergavenny, was seated here; from whose family, in the following century, it became the property of the ancestor of the present possessor.

The members of the Society were afterwards hospitably entertained by the worthy proprietor; and thus terminated a session which has proved one of the most interesting since the formation of the society.

We must not omit to state that the museum of the Bath Royal Literary and Scientific Institution was thrown open to the members of the Archæological Society and their friends, who had also the *entrée* to some very extensive private collections of great interest.

RUINS OF FARLEIGH-HUNGERFORD CASTLE, SOMERSET.

TOMB RECENTLY DISCOVERED IN ST. MARY'S CHURCH, REDCLIFFE, BRISTOL.

(From a Correspondent.

It has been the custom of all writers hitherto to ascribe building of the above Church to William Canynge, a wealthy merchant prince of Bristol, whose death is recorded to have taken place in 1475; but this popular theory is far from correct, as there are several marked eras in the various styles of architecture which prevail in the building. This William Canynge (the second of that name) has a tomb erected to the memory of himself and wife in the south transept of the Church, and on which their effigies repose; but that they could not have been buried there, nor at the foot of the monument, where once stood the altar of St. Catherine, has long been the opinion of the writer of this short paper, although, Canynge, by his will, desired that his body should be there deposited. It is also clear, on examination, that *both* the effigies on the tomb were not originally placed there.

The Church of St. Mary has been for some time undergoing a thorough restoration; and certain portions of the wall beneath the windows of the south aisle appearing to indicate that interments had taken place there, the authorities resolved to institute a search; the result of which was the discovery of two

ancient recessed tombs inserted in the wall; but most barbarously mutilated to make way for the erection of pews, which greatly disfigure this beautiful church. On opening the first tomb, that towards the west, portions of the scull, the thigh and other bones of a human body, were found, and in the second, or that more easterly, a nearly perfect skeleton was discovered; but which was again closed up for future inspection, opportunity not having been given so much as to decide the sex of the deceased. Some suppose it was the wife of the second William Cavynge; but in this opinion I do not concur, for the following reasons:—The first tomb opened is in the Perpendicular style of English architecture, and which the Saxon correct appearance. This monument, I have no doubt contains the ashes of the last William Cavynge, the architecture of the tomb precisely agreeing with the date of his death. Not so, however, the second tomb, the architecture of which is clearly late Decorated, which was in practice at a much earlier period than that in which the wife of this second William Cavynge lived, and of course was erected to commemorate one who lived at an earlier period also. It is well known that founders or rebuilders of churches were generally entombed on the south side of the structure; and as these monuments are so placed, I have no doubt that the second, or that farthest towards the east, enshrines the bones of the first William Cavynge, who died at the very time in style of architecture in which this second tomb was found, was in practice. Other circumstances could be named, which would go far to establish this fact; but into these the limits of a brief paper, like the present, forbids me to enter.

As the slab on which lie the effigies of the second William Cavynge on the tomb in the south transept, exactly fits into the first tomb discovered, under the windows in the south aisle, I have no doubt it was originally deposited there, and removed when the church was paved. Also, as it appears to me, the female figure in the south transept was the only one placed there when the tomb was constructed by Cavynge, to the memory of his wife, about the year 1460, and some fifteen years before his own decease.

CALENDAR FOR THE WEEK.

Sunday, October 10.—Eighteenth Sunday after Trinity.
Monday, 11.—Oxford and Cambridge Term begins.
Tuesday, 12.—Wat Tyler killed, 1381.
Wednesday, 13.—Fire insurance due
Thursday, 14.—Battle of Hastings, 1066. W. Penn born, 1644.
Friday, 15.—Great Exhibition closed, 1851.
Saturday, 16.—Houses of Parliament burnt, 1834.

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, OCTOBER 9, 1852.

The French President is still on his travels. Obsequious Prefects vie with each other who shall most slavishly record the gracious sayings and doings of "his Highness," and whip up the listless crowds to the proper pitch of enthusiasm in his behalf. It seems, however, to be generally understood that his progress has not been so satisfactory as was anticipated. The *de facto* Emperor is literally conveyed and welcomed, wherever he goes, by priests and prefects, in the first instance; by soldiers, in the second; and by the peasantry in the third. All other classes appear to hold aloof, even in the trading and industrial towns and cities, where it has been the fashion to represent him as the saviour of society, of order, and of the still, it appears, however, that, although the French Bishops and Archbishops are willing to lend all possible aid and countenance to Napoleon III.—for such is to be his title—the head of the Roman Catholic Church is not by any means so accommodating, and will not, though strenuously urged to do so, consent to quit Rome to assist at the ceremony of the coronation. The refusal—if such it prove to be—is certainly remarkable under the circumstances, especially when we consider that at the present time the Pope is only Pope by virtue of Louis Napoleon's bayonets.

But the most noticeable fact in connection with the President's late and present proceedings is the speech which he delivered at Marseilles, in which he expressed his hope to be able to realise, at no distant day, the vision or the threat of Louis XIV., of converting the Mediterranean into a French lake. Such an admission will, it is hoped, produce its due effect in this country. We have only to couple the ship of the President's tongue—for we suppose the boast was inadvertently uttered, though certainly meant—with the well-known fact that at no previous time did there ever exist such activity in the naval arsenals and dockyards of France as at the present moment, to be quite certain that mischief, if not imminent, is sufficiently probable to merit precautions on the part of this country.

The assumption of the Imperial dignity is a matter that concerns us less, though there can be no doubt it will be a breach of the public law of Europe, as laid down by the treaty of Vienna, for the President to establish himself as hereditary Emperor. But such progress has been made, quite independently of the provincial gatherings, in the preparations for this event, that M. Drouyn de l'Huys, the present Minister for Foreign Affairs, has officially announced the fact to several of the foreign Ambassadors in Paris, with the singular and significant exception of the representatives of Great Britain and Russia. The Russian Minister, it appears, will forthwith leave Paris. We do not anticipate that any such step will be taken on the part of the British Ambassador, although not many months ago no less a personage than the President himself informed Lord Cowley—or caused his Lordship to be informed—that no such project as the re-establishment of the Empire was entertained. The Empire will undoubtedly be proclaimed, whatever Louis Napoleon may have said at a former time; and then, as we have already more than once observed, the real difficulties of the "Emperor" will begin.

Our want of taste in ornamental manufacture has long been a by-word of reproach to us, and a serious obstacle to our commercial greatness. Fifteen years ago—namely, in 1837—the public attention was so forcibly directed to this subject, that a project for establishing Schools of Design was entertained, and acted upon, in the hope of remedying a great and crying evil. This scheme, although sanctioned by the Government, did not receive the amount of support which a measure of great public utility was entitled to; the grant of the use of rooms in Somerset House, which had been deserted by the Royal Academy, being nearly the extent of the aid afforded. On the other hand, the manufacturers, who were deeply interested in the result, were for the most part opposed to the experiment, the jealousies and prejudices of trade interfering, as is but too common when any project of reform is afoot; and the public, seeing the Government and the manufacturers so lukewarm in the matter, participated in their indifference. Meantime, to add to the perils of the "Infant School" of art, the professors engaged in it were divided as to the proper subjects and mode of instruction, and more than once the establishment threatened to fall to pieces by the force of internal dissensions. Can we wonder, under these circumstances, that, after the lapse of fifteen years, so little has been done to remove the scandal of Gothicism so long attached to us as a manufacturing nation; and that when the Great Exhibition of 1851 brought our productions into competition with those of the Continent, Commissioners, jurors, and connoisseurs of all grades shrugged their shoulders in silent pity at the melancholy spectacle we presented? Fifteen years would have been sufficient time, under a proper system of culture, to have produced out of the youngest of the pupils some efficient professors—to have shown some fruit as the result of our exertions. Such fruit, however, has not appeared; and, although we do not go to the length of condemnation which it is the fashion to cast upon our national taste—taken in all its various forms of development—we must, however reluctantly, come to the conclusion that the Schools-of-Design system has, up to this period, been a failure.

It would seem strange and almost unaccountable that, with a nation so enterprising, so wealthy,—generally so alive to its interests, and so liberal in supplying the means to promote them, this should have been the case; and it would not have been so, perhaps, if money had been all that had been required to supply an acknowledged desideratum. Such, however, is not the case here; there is no Royal road to learning, and there is no "money market" of taste. The feeling for art must be created and widely spread, and deeply understood, before any improvement in taste can be effected by those engaged in production, or tolerated by those who are their customers.

The "Department of Practical Arts" in connexion with, and under the control of, "the Lords of the Committee of the Privy Council for Trade," established to extend the usefulness of the Schools of Design, may prove, to some extent, successful, and aid in wiping off a national reproach; but to this end it must adopt a ground much more extensive than it at present occupies. The main feature of the new system appears to be that it proposes to afford the student examples for study, in addition to the mere faculty of copying, and to give him instructions as to what to imitate and what to avoid. In the words of the programme issued by the Department, the instruction afforded will consist:—

1. In the study and examination of the finest specimens of ornamental art.
2. In attendance at demonstrations, lectures, &c., on the principles and practice of ornamental art.
3. In the study and practice of those special processes of manufactures which govern the character of design, and lead to its production.

This scheme, although it goes further than had been gone before, does not, in our opinion, go far enough. Perhaps, also, it is not based upon the proper foundation. Towards the creation of an inventive taste—which is the thing wanted—it is not enough to study the productions, however admirable, of other and bygone days: new genius of genius will never spring from the stems of a decayed trunk. To make our handicraftsman such as *they* were who produced these works, considered admirable as examples, it is necessary to surround him with the influences under which *they* were fostered into excellence, to inspire him with that feeling for high art which, in the days when art was great, condescended to adorn the humblest objects of domestic requirement. This, indeed, is the secret of our discomfiture. When High Art retreats into the precincts of the "Academy," aspiring only to adorn the saloons of the great, and pander to the tastes of the exclusive few, it neglects the widest and most important half of its province, that of adorning works of every-day utility. Fine art and "ornamental art," in the sense used by Mr. Cole, in his programme, must go hand in hand, or both will degenerate.

And can we wonder that—when the taste of the multitude is reared and educated under vicious principles, surrounded from youth to age with extravagances and abominations, by which all æsthetic principle, and every rule of propriety, is outraged—that a sense for the great and beautiful is only kept alive amongst a very select few? And if so, shall High Art be allowed to complain of want of patronage, when it itself neglects the great field where true patronage is only to be looked for?

We have said enough to explain the view of the case which we entertain; that the art-culture of the country must go deeper, and be more extensive in its field of operation, before any good can be expected from it.

THE COURT.

BALMORAL.

The sojourn of the Court in the north, as we stated some weeks since, will not be extended to so late a period as usual this year. Her Majesty and the Royal family will leave Balmoral on Tuesday next, and sleep the same night at Holyrood. On Wednesday morning the Queen will proceed to Dalkeith Palace, the residence of the North-Western Railways, travelling as far as the Warrington Junction on the latter line, and then taking the Chester and Birkenhead Junction Railway to Chester; from which city her Majesty will again proceed westward to Bangor, and remain for the night at the Penrhyn Arms Hotel, where a suite of forty-five rooms have been engaged for the Royal accommodation. The object of her Majesty's visit to Bangor is that she may be afforded an opportunity of witnessing that great triumph of engineering, the Britannia Bridge, which, it will be remembered, is within three miles of the latter picturesque town. The Queen will inspect the bridge on Thursday morning, and, after a very brief visit, return on her homeward journey, *viâ* the Shrewsbury and Chester Railway, traversing an exceedingly picturesque district of country *en route* to Wolverhampton, where the London and North-Western directors will again have the honour of taking charge of her Majesty as far as Birmingham, whence the Royal party will proceed over the newly-completed Birmingham and Oxford Railway, *viâ* the Didcot Junction, to Windsor

The inhabitants of the principality are making very extensive preparations to welcome her Majesty: and our arrangements are completed for giving a series of illustrations of the first Royal progress into Wales.

There has been very little calling for remark in the routine of Court life at Balmoral during the week. The weather has not been very favourable; but, whenever possible, her Majesty and the Prince Consort have enjoyed the mountain breezes with true Highland zest.

On Saturday the woods at Balmoral were driven for deer. Her Majesty was present, with the Prince of Wales and Prince Alfred. In the afternoon of the same day her Majesty and his Royal Highness Prince Albert drove to see the Burn of the Vat.

On Sunday her Majesty and his Royal Highness Prince Albert attended divine service in the parish church of Crathie. The service was performed by the Rev. A. Anderson.

On Monday afternoon her Majesty and his Royal Highness Prince Albert, accompanied by her Princess Hohenlohe-Langenbourg the Prince of Wales, and Prince Alfred, drove to Invercauld on a visit to Mr. and Mrs. Farquharson. The Princess Royal, the Princess Alice, and the Princess Helena, went to Birk Hall, the residence of Sir James and Lady Clark.

Sir Edwin Landseer has been a guest of her Majesty and the Prince Consort during the week.

Mr. Secretary Walpole has succeeded Sir John Pakington as Secretary of State, in attendance upon her Majesty.

Viscountess Canning has relieved Viscountess Jocelyn in her duties of Lady-in-Waiting to her Majesty.

His Royal Highness the Duke of Cambridge is at present on a tour of military inspection in the north.

The Prince and Princess Baristinski and family have arrived at the Clarendon Hotel, from Shanklin, Isle of Wight.

His Excellency the Hon. J. R. Ingersoll, successor to the Hon. Abbot Lawrence as Envoy Extraordinary and Minister Plenipotentiary from the Government of the United States to the British Court, accompanied by his suite, have arrived at Mivart's Hotel, and Liverpool, from New York.

The Marchioness of Chandos gave birth to a daughter on Thursday last, at the residence of her father, Langley Park. Her Ladyship and the infant are progressing favourably.

Viscount Hardinge has arrived in Great Stanhope-street, from visiting her Majesty at Balmoral.

The Chancellor of the Exchequer has arrived in town, from his seat Minchenden Manor, High Wycombe, Bucks.

Royal Marriage.—The preliminaries for a matrimonial alliance between his Royal Highness Prince Henry of the Netherlands and her Serene Highness the Princess Amelia of Saxe-Weimar, daughter of the late Duchess Ida of Saxe-Weimar, and niece of the late Queen Dowager, have been finally completed, and the auspicious event will be celebrated early in April next.

COUNTRY NEWS.

The Wellington Memorial at Manchester.—The committee met in the Mayor's parlour, at the Town-hall on Monday afternoon; Alderman Sir John Potter presided, and there were sixteen other members present. Small subscriptions, amounting in the wholes to about £500, were reported, making a total of between £3900 and £4000.

Royal South Buckinghamshire Agricultural Association.—The nineteenth anniversary of this society was held at Slough on Tuesday. After the conclusion of the ploughing matches, and the distribution of a vast number of premiums to deserving labourers, upwards of one hundred members dined together at the Windmill Inn, Salt hill, under the presidency of Edward Wanklyn, Esq., of Fulmer, one of the county magistrates. The vice-chair was taken by Major Bent, of Wexham. The chairman announced that Mr Disraeli had written to say that official business would prevent him taking part in the proceedings. The usual toasts were given and responded to on the occasion.

Queen's College, Birmingham.—The annual meeting of this institution was held in the Shire Hall, Stirmingham, on Monday afternoon, Alderman Lucy, in the absence of Lord Lyttelton, the principal, presided. After the report had been read, and which was of a highly satisfactory nature, the Archbishop of Coventry delivered a long, eloquent, and interesting address. The prizes, &c., were then distributed.

Royal Cornwall Polytechnic Society.—The twentieth anniversary of this institution (the first established in England) was held at Falmouth on the 26th, 29th, and 30th ult., and 1st and 2nd instant, in the splendid hall of the society, which has lately been newly painted and otherwise embellished and improved. The contributions this year have been of a superior order in most of the departments. The total value of prizes awarded in metals and money this year will reach to £130. An art-union, in connexion with the society, has been started, under favourable auspices of encouragement, in order to reward the professional artists who send their productions to the exhibition, and who will now more easily make beneficial sale of their works. Picture valued at £70 were selected at the anniversary for prize distribution.

Beneficial Society's Hall School.—The annual dinner in aid of this institution took place on Monday in Portsea, and was very respectably attended. Sir Francis Baring, Bart., and Lord Monck, the borough members, with Mr. Bonham Carter, and Mr Sergeant Gaselee were present. The Mayor of Portsmouth presided.

Liverpool Orphan Asylum.—On Tuesday the foundation-stone of a new asylum for orphan boys, was laid in Myrtle street, Liverpool, by Mr. Littledale, the Mayor. The Lord Bishop of Chester laid the foundation-stone of a new church at the same time, for the accommodation of the existing Female Orphan Asylum, and the institution for boys about to be erected.

Mr. Bright, M.P., in Belfast.—The Liberals of Belfast entertained Mr John Bright at a grand public dinner on Monday night, in the Music Hall of that city, with a view of marking their respect for his high public character, and their appreciation of the many valuable and important services he has rendered during his political career to the great cause of Reform, as well as for his eloquent advocacy and untiring support of the principles of Free Trade. Mr. Robert Grimshaw, D.L., presided, and the company comprised 250 of the leading Liberal gentry, merchants, and professional men of the city and its vicinity.

Opening of Gas-works at Rickmansworth.—On Thursday (last week) this town was enlivened by a display of fireworks and gas illumination, in the grounds of the Swan inn, to celebrate the opening of the gas-works; the directors, shareholders, and their friends dined at the inn; and, on Friday, the workmen in the employment of the contractor—Mr. Atkins, C.E., of Ox ord—were regaled with a dinner.

Newark.—On the 22d ult. a full-length portrait, life-size, of W. Hall, Esq., ex-Mayor of Newark, was presented to that gentleman at a large meeting of the inhabitants of the borough, held at the Town-hall; the Rev. J. G. Bussé, the Vicar, in the chair, supported by W. N. Nicholson, Esq., and other gentlemen. The painting bears the following inscription:—"This portrait was presented to William Hall, Esq., by the voluntary contributions of 700 of his fellow-townsmen, as a mark of their esteem for the impartial discharge of the duties of Mayor of Newark during two consecutive years, 1850-1. Sept 23, 1852." The artist is Mr. Cabley, of Newark; and the likeness is very successful.

Earl Brownlow.—The magistrates and deputy-lieutenants of the county of Lincoln have resolved to present to the Right Hon Earl Brownlow, on his retirement from the office of Lord-Lieutenant and custos rotulorum of the county, an address expressive of their acknowledgment of his lord-ship's services and impartial conduct in the discharge of the duties of his high office. They have also resolved to have executed a copy of the lordship's portrait which had been painted by the late Sir M. A. Shee, with a view to its being placed in the grand jury room.

Ballinasloe October Fair.—This great fair commenced on Monday. The supply of cattle was not equal to that exhibited last year; and, as a consequence, there was an advance in prices, particularly for breed stock, at rom 1s to 3s over the rates obtained in October last. For sows the improvement was still greate, varying from 4s. to 8s. a head, and in several instances even higher rates were obtained.

Decrease of Pauperism.—At the last weekly meeting of the Leeds board of guardians a statement was read of the amount paid for pauper relief within the township of Leeds in the last week of September of the present year, and in the corresponding weeks during the preceding seven years, by which it appeared that the amount paid in the week ending the 29th ult., was less than in any of the correspond ng weeks of any year since 1845, and did not amount to half the sum expended in 1846. A return recently made to the guardians of the poor of Manchester, shows the steady decrease during the half year between March 29 and September 27 in the present year and the corresponding period of the 26 weeks of 1851, in the relief given to the out-door paupers. In Doncaster, it is stated that the workhouse has been emptied of able-bodied men some months past.

Handloom Weaving.—The Glasgow houses having made an advance of ½d. to ¾d. per ell last week, some of the Perth manufacturers also advanced theirs. The weavers at Dunfermline are also expecting a rise in their wages.

Earthquake at Crieff (Scotland).—On the morning of the 26th ult., about a quarter past five o'clock, Crieff was visited with a shock of earthquake. It was accompanied with a loud rumbling noise, like that of distant thunder. A great number of the inhabitants were roused from sleep. The sky was dark at the time, and not a breath of wind—not even a leaf moving. The ground was thickly covered with hoar-frost. The tremor of the earth was not great, and it lasted but a short time. It seemed to proceed from the south-west, and went towards the north-east, as it always has done in this locality.

Destructive Whirlwind.—On Sunday last, between three and four o'clock in the afternoon, the town of Lyme Regis, in Dorsetshire, was visited by a terrific whirlwind, by which a stack of hay in the Home Bush fields, weighing upwards of five tons, and a field of flax was carried up into the air and scattered about the country in every direction. An immense body of water was raised with violent force, which fell like a heavy shower of rain. The water, in its descent, fell with violent force, and, in the Cobb Walk, was drawn up into the air on high like a waterspout, but it did not discharge the main body of its contents on the town itself, or the adjoining lands. The damage done to the neighbourhood by the storm is very considerable.

Prince Gustavus, Duke of Upland, and second son of the King of Sweden, died at Christiana on the 24th ult. He landed there on the 16th ult., with their Majesties, and complained of indisposition. On the following day he was seized with violent fever, which proved fatal.

We learn with much concern from Lausanne that the Duchess of Orleans is still severely indisposed, although her state does not excite any immediate disquietude. Prince Alexander of Prussia has gone to visit the Duchess.

Workings of Transportation.—Western Australia intelligence is in receipt. *The convicts have stolen the treasury chest, knocked the bottom out, and possessed themselves of the money.* The chest in question was an iron safe, questionably so called; and we are happy to say that the Government has recovered the bottomless safe, and also the convicts' handcuffs with which the bottom was knocked out. The next Western Australian papers will no doubt bring intelligence of the convicts having taken charge of the government, and that they have set the Governor and his staff to work upon the roads; also that they have appropriated the property, including the wives and daughters, of the free colonists. The *reformed convict system* is working beautifully, and, we will add, satisfactorily, for neither the colonies nor the English public will submit to this state of things much longer.—*Australian and New Zealand Gazette.*

POSTSCRIPT.

FUNERAL OF THE DUKE OF WELLINGTON.

At a Court of Common Council on Thursday, the Lord Mayor read a letter he had received on Thursday from the Right Hon. S. W. Walpole, the Secretary of state, dated the 4th instant. It is stated that her Majesty had signified her royal pleasure that the remains of the late Duke should be publicly interred in the Cathedral Church of St. Paul's, with all solemnities usual on such occasions, and that, as soon as the arrangements necessary for giving effect to her Majesty's pleasure were determined, he would not fail to communicate further with his Lordship on the subject.

The committee appointed on the 23d instant reported to the Court that they were unanimously of opinion that the Corporation of London should take part in the public funeral of his Grace, and that it should be recommended to the honourable Court to cause a monument to be erected in the Guildhall of the City, to perpetuate his memory.

Mr. John Wood therefore moved, "That this Court do agree with the committee in their report, and that it be referred back to them, with instructions to procure models or designs for the said monument, as they shall deem worthy, together with an estimate of the expense for erecting the same, and to report thereon to this Court."

Mr. Deputy Loft seconded the resolution, which, with the report, was agreed to unanimously.

CANTERBURY DIOCESAN EDUCATION SOCIETY.—The annual meeting of this society took place on Thursday, at the College, Maidstone. His Grace the Archbishop of Canterbury presided, and was supported by the Earl of Romney, the Marquis Camden, Lord Holmesdale, and a large number of the clergy and gentry of the district. The report stated that the grants made during the past year had amounted to £1116 19s. 9d.; also £453 12s. for training purposes. Notices of applications for further grants, to the amount of £1489 were now before the board. In future the board proposed to give grants to monitors—£4 to £5 to boys, and £3 to £5 to girls; the candidates to be not less than twelve years of age at the time of becoming monitors. The receipts during the past year had been £831, and the payments £1211. The balance at present in the hands of the treasurer was £716. The report was adopted.

FEMALE ORPHAN ASYLUM, WESTMINSTER.—The quarterly general court of the subscribers to this asylum was held on Tuesday, in the board-room of the institution, Westminster-bridge-road. The report stated that the number of children admitted since the commencement of the institution in 1758 to April 4, 1852, had been 3951. Of this number 237 had died in the house; 2180 had been placed or apprenticed out; and 2 were employed in the institution. Since the year 1756, 746 young women have returned pulic thanks, and received five guineas each for having faithfully served out their apprenticeships. The total receipts for the past year had been £4962 7s. 7d. There was left a balance in hand of £1096 6s. 8d. The report was received. It was stated that a legacy of £160 had been left to the asylum by the Rev. P. S. Dodd.

NEW ZEALAND COMPANY.—On Thursday the annual meeting of the shareholders in this company was held at the New Zealand Chambers, Bridge-street-buildings. The report, which was exceedingly long, set forth the claims of the company on the Government, the engagements entered into with the Canterbury Association, and the current expenses and other liabilities outstanding. On each of these heads the directors lamented that they were unable to make a satisfactory report. The Government had not yet settled one portion of the company's demands, and had set led the other in a measure short of the company's equitable claims. With the Canterbury Association the company is still in litigation. After considerable discussion the report was adopted, and it was agreed that an adjourned meeting should be held on a future day for the purpose of going into some business details.

DEATH OF TWENTY FOUR HORSES IN THE LATE GALE.—Information was received on Thursday that the sloop *Zebra*, Cooper master, of Exeter, with a cargo, consisting of 37 young horses from Parres, in Brittany, for the fore-mentioned port, was caught in a heavy gale on Thursday, the 30th ult., when half channel over. The sea was so furiously violent that the hatches had to be battened down (made water-tight). On the hatches being opened on this following morning (the gale having abated), it was d scovered that 24 of the animals, valued at £30 each, had been suffocated.

LATEST FOREIGN NEWS.

FRANCE.

The *Globe* correspondent, under date Paris, Thursday evening, writes as follows:—"There is, it seems, to be a triumphal entry for Louis Napoleon on the 17th, although all the preparations are not yet decided on. The Municipal Commission has voted 40,000 francs for a triumphal arch, and it is proposed that the Prince shall mount his horse at the Barrier, and pass along the Boulevards at the head of the army. Fireworks and illuminations are talked of."

It was said on Thursday that Ministers had received notice that immediately on the Prince President's arrival in Paris a Cabinet Council would be held of so important a character as to require their unanimous attendance. In consequence of this understanding, the Prince President is to be preceded by a day by such of the Ministers as may happen to have joined him on his way back to the capital.

A convention for the international service of telegraphs between France, Belgium, and Prussia was signed in Paris on Monday last.

THE CAPE.

The *Haddington* steam-ship, belonging to the Oriental and Peninsular Steam Navigation Company, commanded by Captain Bradshaw, arrived at Southampton on Thursday afternoon, having been sent home to have a thorough repair.

The *Haddington* touched at the Cape of Good Hope, whence she brings a mail and advices to the 23rd August. The intelligence is not important, very little having been done since the last mail in checking the enemy.

The last accounts left his Excellency the Commander-in-Chief encamped near Whittlesea, and preparing to move to the grand rendesvous, the Umvani.

The *Graham's-town Journal* gives particulars of a desperate attack upon a train of eight waggons, chiefly laden with wool, by the rebel Hottentots, who evidently, strange to say, were armed with Minié rifles, and supplied with conical bullets. They were driven away, after three hours' firing, by the gallantry of the men in charge.

LAW AND POLICE INTELLIGENCE.

THE NEW CHANCERY ORDERS.—In the new Chancery rules, in lieu of the present fees allowed to solicitors for instructions for bills (which from the commencement of next term are to be printed), the following charges are to be allowed:—For instructions or bill, £1 14s.; for making a copy of a bill or claim for the printer, per folio 4d.; for correcting the proof sheet, per folio 2d. (the printer's bill to be paid and allowed); for amending each copy of a bill or claim to serve where there is no reprint, 13s. 4d.; instructions for brief (in severa. matters) to be charged only once in the progress of a cause, £1 1s.; for amending each brief of a bill or claim, where there is no reprint, 13s. 4d.; for perusing and considering the bill on behalf of each defendant, or set of defendants appearing by the same solicitor, £1 1s.

THE ACCOUNTANT-GENERAL'S OFFICE IN BANKRUPTCY.—This office, which has been closed by order of the Lord Chancellor, since the 12th of August last, was re-opened on Monday, and dividend warrants paid.

BILLETTING OF SOLDIERS.—IMPORTANT DECISION.—A case was a short time ago tried at a justice of peace court held in Crieff, in Scotland, regarding the billetting of soldiers. The person upon whom a soldier was billetted, instead of accommodating the soldier in his own house, offered to provide him with quarters elsewhere; but the soldier refused to avail himself of it, and brought an action for billet-money. The justices were unable to come to a decision, and they agreed to refer the case to the Secretary at War. He was according.y communicated with on the subject, and the question may now be considered settled whether or not a householder is bound to provide accommodation for soldiers in his own house. The following is the letter from the War Office:—"War Office, Sept 21, 1852.—Sir In reply to your letter of the 10th inst, I am directed to acquaint you that the householder upon whom the soldier was billetted was bound to receive the soldier into his own house; and that having offered to provide quarters for him elsewhere, the householder has satisfied the obligation imposed upon him by law.—I am, &c. (Signed) B. HAWES."

A DANGEROUS RUFFIAN.—At Worship-street Police-office, on Wednesday, Charles Jones, an athletic fellow, was sentenced to pay two penalties of £5 each, or in default, to be committed to the House of Correction for two months, for attempting, on the previous night, to precipitate a little boy, thirteen years of age, from the gallery of the Standard Theatre heading into the pit; and for committing a similar assault upon William Lambert, one of the doorkeepers, when the latter had rescued the boy from the prisoner's grasp. Jones, not being able to pay the penalty, was conveyed to prison.

SCARCITY OF MEN FOR THE POLICE.—On Tuesday there were vacancies for thirty men in the police force at Scotland-yard, when only seven were eligible for that service. This is said to be owing to the immense number of young men that have left this country for Australia, and gone to the diggings.

METROPOLITAN NEWS.

KING'S COLLEGE HOSPITAL.—On Wednesday a meeting of the governors of the above hospital was held in the board-room in Portugal-street, Lincoln's-inn-fields, for general business. The report stated that, during the past year, 30 607 in and out-patients had received relief, being an increase of more than 5000 over the preceding year, and a grand total of upwards of 220,000 patients since 1839.

ROYAL DISPENSARY FOR DISEASES OF THE EAR.—The half-yearly meeting of this institution was held on Wednesday, at the dispensary, Dean-street, Soho square; the Rev. W. Charles Williams in the chair. The secretary read the annual report of subscriptions, amount which was due from his Majesty the King of the Belgians. The number of new admissions was 698, and of cured 386. Votes of thanks were passed to the rev. chairman and to Mr. Harvey, the surgeon, and the meeting separated.

THE SCOTTISH HOSPITAL.—On Wednesday, at one o'clock, a court of governors of the Scottish Hospital was held at the hall of the corporation, Crane-court, Fleet-street; Dr. Webster in the chair. Major Adair, the secretary, produced the accounts, which showed the amount for the year to have been £3877 4s. 5d. A sum of £1775 8s. had been given in contributions to the numerous applicants on the funds of the charity, and, after payment of all necessary charges, there remained a balance in hand of £37 9s. 4d. at the bankers. The report of the hospital at a general court, held in June last, to consider a proposition of the secretary allowing "individuals to make foundations of from £300 to £400 each, in order to produce pensions of £10 a year, these to be for the use and dispensation of the hospital, and each to bear for ever the name of the founder," was next presented. At the last court a letter was read from the Duke of Sutherland, expressing his approval of the plan, and offering the annual income of £100 for future years for that object. The document concluded by recommending that the proposition of the Duke of Sutherland should be gratefully accepted, that the endowment should begin after payment of the second instalment, and that the recipients should be called the "Sutherland Pensioner." The report was received.

ROYAL MASONIC INSTITUTION FOR BOYS.—On Monday morning a general quarterly court of the proprietors of this institution, established for clothing, educating, and apprenticing the sons of indigent and deceased masons, was held at the offices, 34, Great Queen-street, Lincoln's-inn-fields: Rowland Gardener Alston, Esq., in the chair. The secretary stated that there were at present 70 boys upon the funds. It is intended to enlarge the scope of the charity by placing it upon the same footing with the institution now at Wandsworth for maintaining the daughters of deceased or destitute brethren. To carry out this intention an appropriate building is required, as the fund for erection to which all the friends of masonry are invited to contribute. £600 have already been subscribed. Some routine business having been transacted, the proceedings terminated with a vote of thanks to the chairman.

ENTOMOLOGICAL SOCIETY.—At a meeting of this society, held on Monday (by permission), at the house of the Zoological Society, in Hanover-square—J. O. Westwood, Esq., in the chair—the larvæ of various rare and interesting insects were exhibited.

CARSONS CREEK MINING COMPANY.—A meeting of this company was held on Monday at the Auction Tavern by Mr. Sadlier, M.P., in the chair. The report of the directors stated that in the month of March last a deputation was sent out to Califorr ia to report on the titles, and the general appearance of the mine. The deputation arrived at the mine, when the Sheriff of California had placed in possession the American proprietors, after evicting the marauding parties who had forcibly taken possession of the mines during the absence of Messrs. Hanson and Mosley, co-proprietors in England. It was arranged that no payment was to be made by them for the sett, but they were to receive, on account of their having provided the machinery, 40 per cent. of the net profits, and the American receding the remaining 60 per cent. The assays of ores had proved this was one of the richest mines in California. The original account of shares issued was 386,150. Of these, they might say now, 231,650 were American, and the remaining 154,450 were English, which would make the capital of the company £771,230. The report having been adopted, Mr. Walker read a number of letters, proving the validity of the title and the general richness of the mine, together with assays having produced upwards of 60 ounces to the ton of gold. Votes of thanks were given to the directors, to Mr. Walker, and the American proprietors; and the meeting then separated.

METROPOLITAN COMMISION OF SEWERS.—A special general Court was held on Wednesday at the Session-house, Newington-causeway; Mr. R. Jebb in the chair. On the question being raised as to whether farm land was liable to sewer-rates, the chairman decided in the affirmative. A deputation of gentlemen from the parish of Camberwell called the attention of the Commissioners to the imperfect state of the drainage in the neighbourhood of Camberwell. Major Dawson said that the district in question was five or seven feet below high-water-mark, and that would account for the present wretched state of the drainage of the district, and show the difficulties which stood in the way of improving it. Nothing would answer the purpose of an effectual drainage in this locality but a system of deep drainage, which they had not the money to carry out. The Chairman said the Commissioners would make every effort, and were doing so, but they had not the funds to carry out the deep drainage. The borrowing powers of the Commission, and also its rating powers, were insufficient that they could do nothing; they had therefore to obtain a loan from Government, but that was still in abeyance. A long conversation here ensued, and eventually the deputation determined to open a subscription to raise the necessary funds, and then withdrew.

REMOVAL OF NUISANCES.—The Poor-Law Commissioners have issued a circular addressed to the boards of guardians, directing their attention to the provisions contained in the statutes for the removal of nuisances, and the prevention of diseases (11 and 12 Vic. c. 123, and 12 and 13 Vic. c. 111), which they say must be strictly enforced, in order to guard as much as possible against the recurrence of the disease of Asiatic cholera, with which this country is threatened.

LUNATICS IN ST. PANCRAS WORKHOUSE.—On Tuesday, at a meeting of the directors and guardians of the poor of St. Pancras—Mr. Churchwarden Pearce in the chair—the report of the medical committee, recommending the immediate formation of padded rooms for dangerous female lunatics, was read. After some discussion, the report was adopted.

NEW CITY PRISON, HOLLOWAY.—The committee appointed by the Court of Common Council to carry out the instructions in the erection of this edifice having completed their labours, and all necessary arrangements having been made by the magistrates for immediate occupation, the two bodies proceeded on Tuesday to the prison, where, after a minute inspection of the building, Alderman Wire formally presented the key to the Lord Mayor, in token of delivering over the possession of the new building comprising the House of the City magistrates. The Lord Mayor afterwards handed the key to Lieut. Wright, appointed governor *pro tem.* On Wednesday a great number of persons were received into the prison from Clerkenwell and Tothill-fields. The accommodation afforded in the prison is as follows:—

Women	.. ..	60
Juveniles	.. ..	61
Male adults	.. ..	353
		474

EXTENSIVE FIRES AND LOSS OF LIFE.—On Sunday evening, a fire, involving the destruction of much property, broke out on the premises of Mr. Samuel Grimsell, the extensive builder and contractor, of Bell-lane, Goodman-street, Whitechapel. Although the fire was confined to Mr. Grimsell's buildings, which occupied a space of about 150 feet square, yet the Jewish National School, the adjoining Hanbury's premises, and sons of the houses in Fieldcoat-lane were more or less damaged by the flames and the water. A man named Tomkins, and several boys are very much injured by being thrown down and trampled upon by the crowd.——About the same time another fire broke out on the premises of Mr. Lewin, dairy and butterman, situate in the New North-road, Islington, which destroyed a considerable amount of property.—— On the same evening a third conflagration occurred at a fire-work factory, situate in Long Alley, Elden-street, Finsbury, belonging to Mr. Holyhead, occasioned by the explosion of a quantity of gunpowder, with which one of the men employed in the establishment was making squibs to complete a large order for Guy Fawkes's day. Three persons who were in the place at the time were with great difficulty dragged out of the burning premises; but, being dreadfully injured, they were removed to St. Bartholomew's Hospital. Two of the others, however, died soon afterwards, and the third is not expected to survive. The fire was not subdued until it had occasioned considerab e damage to the building and its contents. An inquest having been held on the bodies of the deceased, the jury returned a verdic of "manslaughter" against George Holyhead.——About half-past six o'clock on Monda night a fire broke out in the premises of Mr. George Barrett, a trunk and portmanteau-maker, No. 20, Commercial place, Brixton-road. The flames were extinguished, but not until the workshops had been levelled with the ground, and the outbuildings of Mr. Grey destroyed.

BIRTHS AND DEATHS.—The births registered in the metropolis during the week ending last Saturday were—807 boys, and 797 girls: total, 1604. The deaths during the same period were—males, 697; females, 554: total, 1251. Although there appears to be an increase in the number of deaths this week beyond that of last, yet there has not, in fact, been an increased rate of mortality. There has, however, been an accumulation of cases—principally violent and sudden deaths—on which inquests had been previously held, but which had not been formally registered till the close of the quarter. The fatal cases under the several kinds of zymotic disease were—6 cases from small-pox; 5 from measles, 13 from hooping-cough, 6 from croup, 2 from thrush, 3 from influenza, 4 from purpura, 1 from acne, 2 from remitter fever, 1 from rheumatic fever, 4 from puerperal fever, 51 from typhus, 6 from erysipe as, 72 from diarrhœa and dysentery, and 2 from cholera, while 81 were caused by scarlatina.

METEOROLOGICAL OBSERVATIONS.—At the Royal Observatory, Greenwich, the mean height of the barometer in the week was 29·603 in. The mean temperature was 52·2 deg. The wind blew from the north-east on the first three days, and from the south-west afterwards.

CHURCH, UNIVERSITIES, &c.

APPOINTMENTS AND PREFERMENTS.—The following appointments and preferments have recently been made:—*Honorary Canonry:* The Rev. J. Boudier, in the Cathedral Church of Worcester. *Deanery Rural:* The Rev C. Donovan, to. diocese Cork. *Rectories:* The Rev. F. E. Long, to Friar's Fordon, Tiverton; the Rev. C. E. Harrison, to Leigh, Essex; the Rev. G. J. Lloyd, to Tewdyrant, Cardiganshire; the Rev R. T. Lewis, to Salesian, Glamorganshire. *Vicarages:* The Rev. W. James, to Plympstock, with Turnchapel annexed, near Plymouth; the Rev. T. Stanton, to Burbage, near Marlborough; the Rev. J. G. Bourne, to Castle Donnington, Leicestershire.

TESTIMONIALS.—The following clergymen have recently received testimonials of affection and esteem:—The Rev. E. H Travers, curate of Coombeintehghead, Devon. from the parishioners; the Rev. W. Yates Rooker, from the congregation of St. James's, Lower Gornal, Staffordshire; the Rev. R. Leicester and lady, from his congregation of Much Woolton, Cambridgeshire; the Rev. J. Draper, late curate of Saddington, from the parishioners of that place, on his removal to Wakefield: the Rev. A. Tomline, one of the curates of the parish church of St. Nicholas, Liverpool, from several members of his congregation; the Rev. Francis Holland Addams, by the parishioners of Abbots Morcton, on his leaving the curacy.

SOCIETY FOR THE PROPAGATION OF THE GOSPEL.—A general meeting of the Southwark branch of this society took place on Tuesday evening, at the Girls' National School-room, Union-street. The Rev. Samuel Benson, morning chaplain of St. Saviour's, presided, and addressed the meeting at some length. He referred to the increase of emigration occasioned by the late gold discoveries in Australia, and augured the greatest advantages to accrue therefrom. He said that recently upwards of £50,000 had been raised by the jubilee; in the parish of St. Saviour alone, as much as £400. If all the populous parishes in England had contributed in proportion, the society would have derived much more valuable assistance. Several other speakers having followed, a collection was made at the close in aid of the society's funds.—His Grace the Archbishop of Canterbury preached a sermon in behalf of this society, at Trinity Church, on Thursday morning se'nnight, and presided at a meeting at the Trafalgar Hotel in the afternoon, after which £102 16s. 3d. was collected. The Archbishop and upwards of fifty of the neighbouring clergy and gentry were entertained by the Rev. Daniel Wilham, secretary, at breakfast and luncheon on the occasion.

BRITISH AND FOREIGN BIBLE SOCIETY.—The committee of this society has just published *in extenso* its forty eighth annual report, which states that the proceedings of the last year have been attended with the most satisfactory results. The funds, which at the close of the last year exceeded those of the previous year by £11.000, have, during the present, made a further advance of £6000. The expenditure of the year has amounted to £103,930 9s. 10d.; the donations have amounted to £5764 17s. 10d.; the number of 1,154,642 copies, showing an increase of 17,108 copies over the preceding year; the total issues have now amounted to 25,403,309; the engagements of the society amount to £52,000.

SOCIETY FOR PROMOTING CHRISTIAN KNOWLEDGE.—On Tuesday afternoon the first general meeting of this society since its recess took place at the offices in Lincoln's-inn-fields; the Bishop of London presided. The report, which was adopted, stated that since 1840, £90 000 had been contributed by the society towards new colonial bishoprics. £31,000 towards colleges, and £19,000 towards cathedrals in the colonies. Upwards of four millions of books and tracts, inc uding bibles and prayer-books, have been circulated, to a great extent gratuitously, during the present year.

RESIGNATION OF A LIVING BY A BISHOP.—The Right Rev. Dr. Eden, who was appointed Bishop of Moray and Ross in the early part of last year, has just resigned the rectory of Leigh, Essex, which up to the present time he has held in connexion with his bishopric.

CHURCH OF ST. MARY-LE-BOW, CHEAPSIDE.—On Sunday morning, this church was re-opened for divine worship, after having been closed for repairs and renovations. This beautiful temple—one of the finest productions of Sir Christopher Wren—in steeple considered his masterpece—presented a very gratifying appearance after the restoration, which has been effected with much taste The rector, in his anxiety for the spiritual welfare of the inhabitants of the three parishes which were united after the fire of London assembling in this church, has announced his intention of establishing a week-day evening service on Tuesdays, and also instituting a young man's class, to meet in the vestry. The arrangement will be of considerable benefit to the young men so numerously employed in the wholesale warehouses in the neighbourhood.

FALL OF A CHURCH.—On Friday se'nnight the parish church of St. David, in the town of Brecon, fell in with a fearfu. crash. Fortunately no one was in the church at the time, or close enough to sustain any injury.

THE BOARD OF TRADE AND NAVIGATION RETURNS for the month ending September 4, 1852, and for the eight months terminating at the same period, were published on Wednesday. Connected with the accounts for the corresponding periods of the two preceding years, they show that there is no falling off in our commercial prosperity.

THE BORDEAUX FETES.—Several of the most eminent shipbuilders and engineers of this country have received cordial invitations from the Mayor and corporation of Bordeaux to be present t the *fêtes* that are to take place on the 7th, 8th, and 9th of the present month in that city and port, in commemoration of the visit of the Prince President. Among other interesting facts will be the fine ship of 2400 tons built on the new plan of double framing (wood and iron) just completed by Messrs Arman and Co. The vessel, the fourth these gentlemen have constructed on this plan, will be launched on the occasion, and named the *Prince Louis Napoleon*.

ERUPTION OF ETNA.

THIS grand volcano, by the last-received accounts, continued in eruption (See a View of the Eruption, with details, in the ILLUSTRATED LONDON NEWS, No. 579.)

A letter, dated Catania, August 30th, describes the lava at a gun-shot distance: it moved slowly and uninterruptedly: the first waves rose and fell at the least distance as they encountered; then sent forth streamlets, receded, extended themselves, and again advanced. Now it was heard as a continued sound of glass breaking in the fire, nothing more, and now immense damage succeeds.

The effect of all this grand mass presented an appearance between red and yellow, sometimes dull, sometimes brighter; by night the dull stream of fire, clouds of ashes, and sulphureous vapours were sublimely horrible.

The lava flowed over the richest and most cultivated part of the country, destroying vineyards, all sorts of fruit trees, and some houses.

Letters, to the 16th of September, announce the mountain to be still in active labour, and that the course of the volcanic stream of liquid lava, which had branched off close to Zaffarana, had taken the direction of Mte. Nolla, which seemed so assuredly doomed to destruction that the inhabitants were clearing not only their houses, but likewise carting down the lofty chestnut-trees in its vicinity, in the hopes of having time to remove the same to save the timber. A vast quantity of sal-ammonia has been vomitted from the crater, which rendered the air so impure as to threaten the lives of seamen in small craft trading along the coast. The dock of a small revenue steam cruiter had been nearly covered with volcanic cinders. Even as far as Malta some of the soot and lava dust had been wafted by the wind during the night of the 21st of September. The mountain has on several occasions been distinctly visible from the town of Valletta, the smoke from its summit presenting the appearance of a very heavy cloud. Very oppressive sirocco winds have prevailed at Malta throughout the month of September, and at the usual date a very dense fog, which is unusual at this season but the island generally was very salubrious.

(From our own Correspondent.)

Sept. 16th.

THE present eruption of Mount Etna commenced on Aug. 21, and is one of those grand convulsions of which history records some seventy-six. Thirteen were before the Christian era, and are partially referred to by Thucydides. The remaining eruptions are scattered over 1800 years, during which period the lava stream has visited every side of the mountain, finally even pressed to give you an account of this still continuing eruption of Mount Etna. I left Naples in a steamer on the 30th August, and, on arriving at Messina, a party of us persuaded the captain to take us to the nearest point for assuring an easy ascent of the burning mountain. Some Sicilians, who wished to join us, delayed the departure of the steamer for several hours, owing to the difficulty of obtaining passports. Eventually we steamed on to a place called Resposto, a small town on the sea-shore, directly in a line with the centre of the mountain. Miles before we reached this spot, we could observe an immense mass of smoke, which, as we drew nearer beamed as if it were "a thing of life," wreathing about in black grandeur, and assuming a variety of rounded forms, amongst which forked lightning played incessantly, piercing the purple clouds which ascended high up into the blue sky, probably not less than 15,000 feet. Occasionally we caught a transient view of the whole outline of the mountain, and then again it was veiled in clouds every varying in form and colour.—*(See the Illustration* "Etna from the Sea.")

Arriving at Resposto, the captain seemed to be very glad to get rid of us, as he was tormented by all sorts of questions, even to answer which, with his universal "*Non so*," was itself a labour. Then came live

ETNA IN ERUPTION.—SKETCHED FROM THE SEA.

scramble for donkeys and mules, and ham and eggs, and wine and bread. We were eventually mounted on donkeys; the priest insisting on carrying a lantern, as he gravely observed, "to see the danger."

We commenced the ascent at 9 P.M., the night being rather dark for the first three or four miles. We passed along a bad road, that wound about a deep rocky valley, which had lately been flooded. We next came to huge rocks, with occasional signs of cultivation. The sea was now some miles behind us. A black sand was falling about like rain—it was perfectly dark. The ground occasionally trembled under our feet. Here most of the party halted, the greater number returning and consoling themselves by "There's nothing to see!" We had an obstinate fight with our beasts to get them to go on. St. Antonio, however, helped us; and, by turning the donkeys round several times, we persuaded them that they were going homewards, whilst, in fact, we scrambled on towards the fountains of fire. We had several falls, but there was so much black sand on the earth, we did not suffer at all.

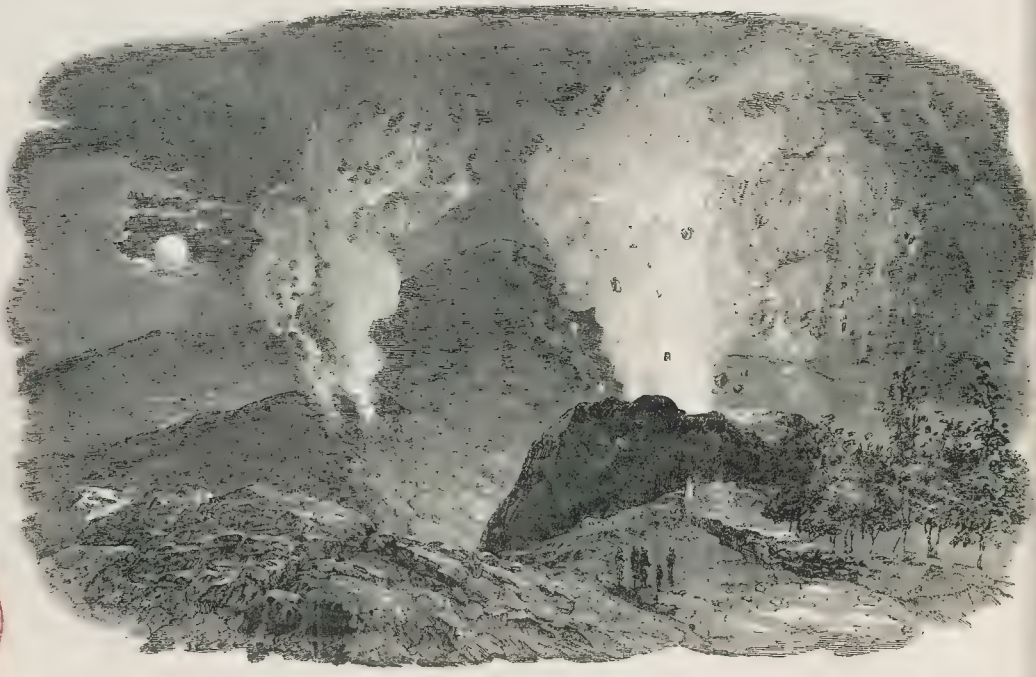
We now caught a glimpse of the fiery volcano at the foot of a steep rugged hill, which took us an hour to scramble up; and there, to our surprise, we found a patch of land planted with the vine, and walled round. The whole grandeur of the eruption was at length before us. From a huge mass of the mountain issued broad sheets of fire in the form of swords; between which large lumps of red-hot rock occasionally were shot up into the air, and lost sight of in the masses of smoke above. On the left was a second crater, with two fiery mouths; and below, again, in a direct line, the earth opened in red-hot fissures. Far away, in the distance, we beheld the summit of Etna, the old crater quietly sleeping in moonlight. The earth thundered under our feet; black sand fell heavily about us. The scene was awful, yet fascinating.

From the now larger crater a stream of molten lava, sixty feet wide, flowed down a rocky hill, and eventually formed a lake of fire; from which again two or three streams issued, the larger creeping on towards a small village, called Zaffarana. Whilst endeavouring to trace out the directions of the lava, we were suddenly surprised by a hurricane, and we all fell on the ground for safety; the priest declaring that he would return home immediately, if ever the wind allowed him to get up again. Fortunately there came a lull, and we all began again to make the best of our way down the mountain, the donkeys and guides having long since deserted us

As I gave a last look at the unearthly scene, the large crater was throwing out steam and sand; the scene was completely changed; the clouds were differently grouped and coloured. I made an outline of what I saw.

Morning dawned as we walked down the mountain, but the sun did not change materially the aspect of the volcano. It continued to thunder; the fiery tongues shot through the black smoke: the sand fell in torrents; the clouds curled their giant forms; daylight could not penetrate their perpetual gloom. The whole party was like a group of sweeps. The priest was very proud of his perseverance: and, after a tumbler of wine, spoke with a courage which had never displayed itself before, in our presence at least. Resposto afforded us a bed, in which I again ascended the mountain in my dreams.

The latest accounts state that the lava is still creeping on, and destroying much valuable private property.



ETNA IN ERUPTION.—THE NEW CRATER.

LANDING OF THE PRESIDENT AT TOULON.

TOUR OF THE FRENCH PRESIDENT IN THE SOUTH.

We resume, from our Journal of last week (page 278), the Illustration of the tour of the President in the south, commencing at Marseilles.

On the afternoon of the 26th ult. the President laid the stone of the Cathedral, and of the Bourse. The Prince next witnessed a jousting-match, then passed the troops in review; and at a quarter past four the Prince embarked, above the Prado, on board the *Reine Hortense* steamer, and, after having gone round the isles, returned to Marseilles a few minutes after six. Everywhere the population shouted "*Vive l'Empereur!*" "*Vive Napoléon!*"

The review at the Prado attracted an immense concourse of spectators. The Prince distributed crosses of the Legion of Honour; and after the review he went on the road of the Prado as far as the sea, where the corvette *Reine Hortense* was waiting to receive him. He visited the port of Frioul, and returned to Marseilles by the grand port, through a forest of vessels, dressed in flags, all the yards of which were manned. The whole population of the town were assembled on the quays and on the roofs of the houses; and the enthusiasm went on increasing, when the Prince got into his carriage at the Cannebière. In the evening, the Prince went to a grand ball, and was received with great enthusiasm on his arrival and departure.

On Monday morning the 27th ult., the President embarked at Marseilles on board the *Napoleon* for Toulon; when the *Languedoc*, the *Belzunce*, the *Herault*, the *Ocean*, the *Pharamond*, and other private steamers, left Marseilles, loaded with passengers, and arrived at Toulon about three in the afternoon. About two miles from that port rode at anchor the *Charlemagne*, just returned from Constantinople, as well as the whole Mediterranean squadron, composed of the *Jupiter*, 84 guns; the *Henri IV.*, 100; the *Ville de Paris*, 120, bearing the flag of Admiral de la Susse, the officer in command; the *Bayard*, 84; the *Valmy*, 120; and the *Jena*, 100. Hundreds of boats crossed the harbour, and thousands on thousands of persons occupied every vantage point of land from which the roadstead could be perceived.

About two o'clock the *Napoleon* steamer entered the port, followed by a numerous escort of steamers. The national flag, surmounted by the eagle, flying from the mainmast, and bearing the letters "L. N.," indicated the presence of the head of the State. All the vessels saluted the *Napoleon* as she passed, and the sailors on deck and in the rigging shouted "*Vive l'Empereur!*"

When the *Napoleon* came abreast of the Admiral's vessel, the Prince entered a boat richly decorated; and the *Napoleon*, as if by enchantment, was dressed out with flags, and saluted the squadron with three rounds from all her guns. The whole fleet returned the salute; and in the midst of these salvoes the boat of the Prince, followed by others bearing his suite and the officers of his squadron, entered the military port, and advanced towards the quay of the arsenal. He landed at the arsenal quay, where he was received by the Mayor of Toulon, who presented him with the keys of the town. The Municipal Council, the Council-General of the Department, and the civil and military authorities, assembled on the quay, set up a loud cry of "*Vive l'Empereur.*" On the Place du Champ de Bataille were ranged a number of old soldiers of the Empire, and the delegates of the communes of the Var, with their banners bearing patriotic inscriptions. On the steps of the Hôtel de la Marine were twenty-five young girls dressed in white, with waistbands of green and gold, the colours of Louis Napoleon.

The President then proceeded to the Champ de Manœuvres, to review the troops of the garrison, and he was there received with the same enthusiastic cries as had saluted him in the Arsenal and on the Champ de Bataille. During the review, one of the soldiers, whose musket happened to be charged, thinking to show rather more enthusiasm than his comrades, discharged it in the air, shouting at the same time, "*Vive l'Empereur!*" He was arrested, but immediately released on his explanation of the circumstance. The Prince, on his return from the review, received the public functionaries and the officers of the squadron and of the garrison. He afterwards dined at the Maritime Prefecture.

In the evening the vessels in the roadstead, the public buildings, and the private houses, were illuminated, and all the population was out of doors.

On the evening of the 28th, bodies of workmen gave the Prince serenades under the windows of the Hôtel of the Prefecture, and he appeared several times on the balcony, and saluted them. On each occasion he was greeted with enthusiastic cries of "*Vive l'Empereur!*"

The next day commenced by the distribution of relief to the poor by the municipality, who, in addition decided that the Monte de Piété shall restore gratuitously up to the 15th of this month, all pledges not exceeding three francs. At eleven o'clock the marriage of six young women, to each of whom a present of 1000f. was made, took place at the cathedral. The Bishop officiated, and the ceremony was attended by the Mayor and the other authorities.

The Prince, in the undress uniform of a general, went in the course of the morning to visit the forts. He examined the different forts, and especially that called the "Lilt e Gibraltar," which is famous from having been taken by Napoleon when the English were masters of the town. The Prince, who possesses an unusual know edge of military defences pointed out that, in order to complete the system of defence, it was necessary to reconstruct the fort of Saint Elme, which had been abandoned. The Prince spent the afternoon in visiting the Arsenal. The workmen, who were drawn up under the command of their respective chiefs, greeted him with enthusiastic cries of "*Vive l'Empereur!*" Three of them, old soldiers of the Imperial army had the cross of the Legion of Honour conferred on them. The Prince after-

TAKING CASTS OF THE SPHYNX, AT THE LOUVRE.—(SEE NEXT PAGE.)

wards went out into the roadstead to visit the fleet. He first went on board the *Ville de Paris*, the ship of Admiral de la Susse, and distributed a certain number of crosses amongst the crew. The Prince afterwards visited successively the *Charlemagne*, the *Jupiter*, the *Henri IV.*, the *Bayard*, the *Valmy*, and the *Jena*. In each vessel he distributed crosses and military medals. Each vessel saluted the Prince as he left it; and when he set out on his return to land, he was greeted by a salute of 2000 guns from the whole fleet. The Prince landed at Castigneau, where works are going on with a view to the addition to the Arsenal. The Prince afterwards returned on foot to the Pref-cture, and in the evening went to a ball given by the town in a temporary building on the Quai de l'Horloge du Ville. The Prince left Toulon the next morning (the 28th ult.), attended by the authorities, amidst the acclamations of the people, and embarked on board the *Napoleon* amid the roar of artillery. The vessel steamed at once to Marseilles, preceded and followed by several others. When the *Napoleon* was perceived approaching the port of Marseilles the forts gave a salute, which was responded to by the vessels in the roadstead. The *Napoleon* steamed up to the Quai de la Joliette, where a vast crowd was assembled. The Prince, who was received by the authorities, proceeded along the Boulevard des Dames, the Place de l'Arc de Triomphe, and the Boulevard de la Paix, to the railway station, and thence by rail to Roquac, and with his suite in carriages, to Aix, where his reception was magnificent.

Next morning the Prince left for Nimes, where he arrived at two o'clock, amidst cries of "*Vive l'Empereur!*" and "*Vive Napoleon III.!*" His Highness visited the entire town; was present at a bull-fight in the arena of the ancient amphitheatre; then received the deputations at the Prefecture; and in the evening went to the ball at the Mairie. A Correspondent writes:—

It is now some seventeen centuries since this noble and picturesque building (the Amphitheatre) first rung to the shouts of a people calling themselves free, and exclaiming "Long live the Emperor!" while preparing to see gladiators fighting with each other, and to rejoice in the sight of maimed and defenceless Christians, who dared to think and act for themselves in the most important of matters, treated as criminals, and torn to pieces by wild beasts. And now these seventeen centuries have gone by, and the citizen of Nimes calls himself a Frenchman, instead of a Roman; now that these Christians have become the rulers and boast of freedom also, and of humanity and cultivation, and, most of all, of civilisation, they are again seen in the arena cleaned up and repaired for the occasion? Still the cries of "Long live the Emperor!" resound, though in a different language, and to a very different person. The Freedom of the French Republic in the Freedom of an hour's time at a mock fight of tame bulls, surrounded by official people, and eager to court a brief popularity. The progress of the President is marked, however, by events that will some day be found to have due significance, although they now appear sufficiently trifling; and, among these events, the visit to Nimes, and its public monuments at the date of the Roman empire, is certainly not the least interesting.

The Prince left next day (October 1), for Montpellier, which he entered at half-past twelve; he was received by the bishop and clergy at the Cathedral, and was present at the siege of the citadel.

Pezenas, Beziers, and Narbonne were the places in the next day's route, in each of which the Prince was received with enthusiasm. Next day he heard mass at the cathedral at Narbonne, where the crowd was immense.

Next morning the Prince left for Carcassone, where he was well received; and at four in the afternoon he arrived at Toulouse, which was splendidly decorated with flags and garlands, and crowded with people, and the enthusiasm was very great: in the evening the town was illuminated.

Next week we shall Illustrate the Prince's reception at Aix and Montpellier.

THE NEW CRYSTAL PALACE.

In the prospectus, just issued, of "The Crystal Palace and Park in 1852," we find the following note of promise:—

The contents of the building will be dissimilar to those which adorned the building of 1851. The whole of the sides of the nave, the transepts, and the divisions on either side between the several courts, will be adorned with the birds, plants, and trees of every clime, interspersed with fountains, statues, and other works of art. On the north-east side of the building will be arranged historical galleries of sculpture and architecture, with casts of the finest works of sculpture, and portions of buildings of ancient art. On the south-east side will be displayed similar collection of medieval art. In addition to the above collections, there will be a Nineveh and an Egyptian court, besides two large refreshment courts, one of which will be a restoration from Pompeii, and the other a portion of the Alhambra.

In furtherance of this portion of the plan, Mr. Owen Jones and Mr. Wyatt have been appointed by the directors of the New Crystal Palace to collect illustrations of the art of the Continent. At Paris permission has been obtained to mould several of the finest works in the Louvre; amongst others, Spring from Egina, the Diana, the Venus de Medici, the Venuses, and colossal statues by Jean Goujon, in all about 400 pieces, 80 of which will be above life-size; casts of the Ghiberti gates have also been secured, as well as of the principal of Michael Angelo's figures in the Medici Chapel at Florence; an important series of *Cinque cento* ornaments and fine works of Lucca della Robbia, Donatello, &c.

The Illustration upon the preceding page represents the taking of a cast of the colossal Sphynx, 92 feet long, and consisting of one block of rose-coloured granite; the cast being intended, when taken, to be placed in the Egyptian Court of the Crystal Palace at Sydenham. The process of taking casts, it may be interesting to describe. The usual mode of taking the mould of large objects is by pieces, for the more easy convenience in casting afterwards, the edges of each piece being carefully trimmed, and on one or two sides small hollows are made, so that when the next portion of plaster is laid on, when the first is somewhat dry, it may run into the hollows and make a more exact fit when the pieces are subsequently joined to enable the operator to produce the cast from the mould.

A short time since there appeared in the *Siècle*, in connexion with this subject, the following paragraph:—

Casts are at present being taken not only of the Great Sphynx, but also of a certain number of the finest statues in Egyptian, Greek, Roman, and French, the whole being destined to form part of a great exhibition to be formed in the new Crystal Palace, near London. Last year the French Government made an application to the administration of the Louvre for permission to take casts taken of some Greek monuments there, which would have been useful to French artists. The board at once refused. This year the administration accords the application made for it by the founders of the Crystal Palace. The English will now soon be enabled to admire the casts of the finest pieces of sculpture in the French museums.

This statement, we are happy to add, has received contradiction during the past week, from Mr. Grove, Secretary to the Crystal Palace Company, who states that M. Desaulx, the architect to the Musée des Beaux Arts to make casts in the British Museum, declares the assertion in the *Siècle* to be utterly without foundation; and that, on the contrary, he has experienced from the authorities of the British Museum the utmost courtesy and kindness, and has received permission to make casts of all the articles which he requires.

The Fine Arts Prize Fund Association in connexion with the exhibitions of the British Gallery of Artists have awarded their prize of sixty guineas (offered to the artist of the best picture contributed to the exhibition of the Society of Artists) to E. M. Ward, R.A. his picture of "Charlotte Corday going to Execution." The jury, at the same time, accompanied their award with an unanimous expression of their high appreciation of the merits of Mr. Hillais' "Ophelia."

The New Suspension-Bridge across the Niagara.—The wire suspension-bridge to be thrown across the Niagara, for the purpose of connecting the Canadian railroads with those in the state of New York, is to be 800 feet in length from centre to centre of the towers. These are to be 50 feet high, 15 feet feet square at the base, and 8 feet at the top, and of so compact a material as to be enabled to bear a pressure of 500 tons upon every square foot. The weight of a train reaching across the bridge is estimated at 400 tons, and the superstructure at 782 tons—making a total aggregate weight of 1273 tons

The Wardenship of the Cinque Ports.—The *Morning Herald* says: "We understand there is no foundation for the statement which has appeared in the papers, that the Earl of Derby has received the Wardenship of the Cinque Ports. We have, on the contrary, reason to believe that his Lordship has advised her Majesty to offer it to the acceptance of Lord Dalhousie, whose absence in India may for some time prevent the actual appointment from taking place. In the meantime, however, the duties of that office will be temporarily discharged by the Earl of Derby."

New Planets.—M. de Gasparis, astronomer royal at Naples, has just discovered another new planet of great magnitude. In the night of the 20th ult., M. Charconnac, a pupil at the Observatory at Marseilles, discovered a new planet in the constellation of Pisces. At midnight its right ascension was 2 deg. 48 min., and its northern declination 1 deg. 46 min. On the 21st, at 10 hours 40 min., its right ascension was 2 deg. 36 min., and its declination 1 deg. 42 min. It appeared like a star of the ninth magnitude. The director of the Observatory has proposed to call it Massilia, and to designate it by the symbo (20), characteristic of the rank of his discovery.

MUSIC.

MUSIC IN BRIGHTON.

Orchestral Concerts.—Some leading members of the Royal Italian Opera orchestra commenced, on Monday last, at the Town-hall, a series of instrumental concerts. Despite of the hurricane that was raging, there was a very full attendance, and the programme was received with much enthusiasm; it included three overtures—Cherubini's "Anacreon," Auber's "Bayadère," and Weber's "Jubilee," besides an operatic fantasia on the "Don Giovanni" themes, and the andante of Beethoven's symphony in D. These pieces were relieved by dance-music of Musard, Lanner, Mellon, Carnaud, and Schaller. Instrumental solos, by Mr. Cooper (violin), Mr. C. S. Pratten (flute), Mr. C. Harper (horn), Mr. Winterbottom (trombone), Mr. Nicholson (oboe), Mr. Mayrock (clarionet), Mr. Larken (bassoon), Mr. W. F. Reed (violoncello), Mr. Howell (contra-basso), Mr. Webb (viola), Mr. T. Harper (trumpet and cornet-à-piston), are included in the schemes, so that the Brighton amateurs have the opportunity of hearing first-rate executants. Mr. Mellon is the conductor, whose animated concert overture in A minor was included in Friday's programme. The orchestra is well chosen and combined, and it plays with a remarkable *ensemble*. If the patronage be extended, that these concerts (which are something more elevated in art than promenade concerts have usually exhibited in Brighton) richly deserve, symphonies in their entirety will, no doubt, find their way in the schemes; the only objection to which at present is, that the dance-music is out of character with the elevated order of the other selections.

Madame Oury's Evening Concert.—Whilst the orchestral entertainment was going on at the Town-hall, Madame Oury, the accomplished *pianiste* was doing the musical honours to a fashionable auditory in the gay Pavilion, although the harmony of the evening was at times rudely interrupted by the pelting of the pitiless storm without; and whilst the rich and mellifluous voice of Madame Fiorentini was heard in the invocation to the Moon from "Norma," "Casta Diva," the sad news spread amongst the visitors that there was a vessel lost off Kemp Town; the crew, however, being happily saved. Madame Oury never played more finely; her reading of the Andante and Capriccio of Mendelssohn and her pianoforte singing of his "Songs without Words," left nothing to be desired, whether in point of sentiment or execution. Equally artistic was her interpretation of the negro melody by Gottschalk; the Mazurka of Schulhoff was delightfully rendered; and her own Galop di Bravura, taken at an express-train speed. Indeed, in the velocity of her octave playing, with both hands, Madame Oury seems to have gained. Mr. Oury joined her in the duo concertante on the themes from Meyerbeer's "Huguenots;" and also played his "Souvenir Borgia" fantasia. Making every allowance for the gale, which probably chilled the company, we never recollect to have witnessed a more frigid assemblage; the exquisite singing of Beethoven's "Adelaide" by Gardoni, Belletti's surprising feats, Madame Fiorentini's magnificent voice, and Madame Oury's perfect playing, did not rouse the insensible listeners. It was only when Madame Fiorentini sang in German, Balfe's ballad, "I dreamt that I dwelt in marble halls," and gave one of her Spanish airs, and Madame F. Lablache sang so excellently one of her charming Scotch songs, that the auditory awoke from its lethargy. The former *artiste* obtained encores for both displays, proving, as they did, that Madame Fiorentini is equally successful in all schools, whether sacred or secular, oratorio or opera, ballad or bravura. The unaccompanied trio from Meyerbeer's "Roberto," sung by Mdme. Garcia, Demunck, Gardoni, and Belletti, was also re-demanded, although the *point d'orgue* of the soprano was decidedly objectionable.

MUSICAL EVENTS.

The Cecilian Society performed, at the Albion Hall, London-wall, on Thursday night, under Mr. Shoubridge's direction, Mendelssohn's "Elijah;" Mr. J. G. Boardman being the organist. The vocalists were Mrs. J. Roe, Mrs. H. Bloom, and Messrs. Gadsby and Barnham. The Dead March in "Saul," and a solo and chorus from "Samson," were executed, as a tribute to the late "Duke."

At Miss Lizzy Stuart's concert, at the Albion Institution, Kingsland, on Tuesday, under the direction of Messrs. J. Jay and Anschuez, the *bouffeuses* was assisted by Mrs. J. Roe, Miss F. Stirling, Madame Zimmermann, Miss Lowe; Messrs. Borsham, Wallworth, G. Tedder, and Kreutzer.

Mr. Edney commenced, on Wednesday, a series of lectures, at the Educational Institute, Aldersgate-street, on Popular Vocal Music, with illustrations

Mr. Thorpe Reed, of the Royal Academy of Music, is giving vocal illustrations of the National Music in the provinces

The English Glee and Madrigal Union (one party consisting of Mrs. Endersohn, Miss Williams; Messrs. Lookey, Barnby, and Phillips; the other of Miss Louisa Fyne, Miss Dolby, Mr. Land, Mr. Francis, and Mr. Bodda) are making a circuit of the principal country towns.

The Ulverstone Philharmonic Society, at its eighth concert, on the 16th inst, will perform Sir H. R. Bishop's sacred composition, "Mourn for the Mighty Dead," with Dr. Mackay's words, published in the Illustrated London News of September 28th, as a tribute to the memory of the late Duke of Wellington. Mr. William Salmon, the conductor of the society, announces that the melody has been arranged as a duet, quartet, and full chorus. We would suggest that as Sir Henry Bishop has himself just arranged the tribute as a quartet, the gifted composer's own version should be preferred.

The formation of a "Sacred Harmonic Society" at Liverpool, on the same principles as those of the London parent institution, must be commended. Mr. C. D. Hackett, Mus. Bac., Oxon, is the conductor; and Dr. W. R. Bexfield is the organist. There are vocal classes, as well as weekly rehearsals; and it is proposed that the public performances shall be on the same grand scale as those of London, to take place in St. George's Hall, when completed. Dr. Bexfield's oratorio, "Israel Restored," and a new work by Mr. Hackett, "The Passage of the Red Sea," are to be the first novelties

It will provoke a smile to learn that at the Paris Théâtre de la Porte-Saint Martin, an adaptation of Shakspeare's "Richard the Third," with music by M. de Groot, has been produced with extraordinary success, M Ligier being the *Richard;* Mdme. Person, the *Duchess of York*; Mdlle Lia Felix, *Elizabeth*. M. Groot has composed an overture, besides the Incidental music, to the drama, the incidents in which, according to French custom in such matters, are of the most absurd kind to the English hearer.

Meyerbeer has left Boulogne for Paris, where he will remain a short time prior to his return to Berlin.

Mdlle Clauss, the young *pianiste* who created such a sensation in London last season, is about to visit St. Petersburgh.

Madame Schutz-Odolsi, a Court *prima donna*, who sang at concerts last season here, died suddenly, recently, at Baden, near Vienna.

Madame Bauermeister, a German *prima donna* of note, much admired by Schiller, died lately at Prague, aged 88 years.

Mr. Balfe is in Berlin; and it is rumoured that he will be the director of the Italian Opera in that capital: for which brilliant offers have been again made to Madame Lind-Goldschmidt who has resolved, however, to sing at oratorios and concerts in this country.

The arrival of Madame Sontag in New York has been marked with the honours which the Americans rendered to Jenny Lind, Catherine Hayes, and Alboni.

The Norwich Musical Festival.—The official returns of the receipts are 870 guinea tickets, 944 at 10s., and 4798 half-guinea tickets; besides 441 at 15s. for the ball, and 406 spectators thereof at 2s. 6d.

English Songs and Melodies.—We have received a neat German publication from Darmstadt, entitled "Drei Englische Lieder," in which may be recognised by our musical readers three old friends, being the three songs published in our Musical Supplement of December 20, 1851, with Charles Mackay's poetry, and Sir H. R Bishop's symphonies and accompaniments. The first is the air "I lay in sorrow deep distressed" to which the title "Das Erbarmen" (Sympathy), is given; the second is "If his heart never throbb'd with affection," called "Die Wahl" (the Choice); and the third is the "Barley and the Hop," this designation being retained in the German edition. The title book is, in fact, a fair exact copy of Sir H. Bishop's arrangement, and the translation is remarkable for its fidelity, following Mr. Mackay's poetry almost word by word. Should travellers in Germany, will, therefore, be not surprised to hear our old airs at the "Ploughboy" and "If the heart of a man" sung with German words. Musical Germany is evidently not insensible, by re-producing our Musical Supplements, to our national claims as melodists

Organophonic Band.—The twelve Germans, who imitate instruments with the human voice, have continued their performances this week at the St. James's Theatre. It is well known of course amongst "gruesomen," "concertinas," "collegemen," "boaters" &c., that it is not at all unusual for the clever wag to imitate instruments as well as animals, with no small degree of fidelity, but it is the first time that an attempt has been made to organise a body of instrument-imitators into one orchestra. The Organophonics, perhaps, would have more success if the absurdity of calling their noises a science had been avoided. The exhibition is very curious, from the clock-like precision of the execution, and is not unpleasing on the whole to the ear. The sounds are naturally muffled, and they come upon the ear like distant military music. It is by no means difficult to imitate the double-bass, the *pistons* of the violin, the cornet-à-piston, the trumpet, the trombone, the ophicleide (which John Parry, by the way, does to perfection) the bassoon, the bagpipes, the musical snuff-box, &c. Instrumentalists in an ordinary orchestra often amuse themselves with parodies on their own playing. It is, therefore, not precisely a marvel, what the organophonics achieve; but their ear is quick and apprehensive, and they accomplish the gradations of time, tune, and sentiment. As partsingers they are far inferior to our artists of the English Glee and Madrigal Unions, whether in the quality of the voices, in truthfulness of intonation, or in light and shade of execution. Great pains are taken to assure the public that there is no trickery in the Organophone Band; that everything is done with the voice. There is no occasion to make these assurances: the imitations are not the less effective for the entertainment: it is in the *ensemble* and that is sufficiently novel and piquant for amateurs to hear the Organophonic Band.

THE THEATRES.

DRURY-LANE.

This theatre was re-opened on Saturday for a limited number of nights, under the direction of Mr. George Bolton. The play was "Richelieu," which, owing apparently to the want of proper rehearsal, was inefficiently performed. Mr. Robins, who made his first appearance in the character, addressed the audience, and was indulgently permitted to conclude the performance. The drama was followed by the gymnastic exhibition of the brothers Bailey, and the ballet of "Un Bal d'Ete." The house was scantily attended.

HAYMARKET.

This theatre re-commenced, on Monday, the dramatic business proper to its boards. Sir E. B. Lytton's comedy of "Money" was performed, Mr. Barry Sullivan enacting the part of Sir Frederick Evelyn. He performed with his accustomed elegance and effect. Mr. Buckstone played *Benjamin Stout* with characteristic humour. The house was well and fashionably attended.

ADELPHI.

The company attached to this establishment have returned from the Haymarket, and on Monday performed in "Green Bushes." Madame Celeste, having completed her American engagements, was also present, and performed her favourite part of *Miami*. It is evident that enlarged arrangements are intended for this theatre—to which, in a few months, Mr. Webster's attention will be exclusively devoted—from the number of new engagements announced: among these are Mr. Wigan, Mr. H. Bedford, Mr. James Rogers, Mr. R. Romer, and Mr. Flexmore.

PRINCESS'.

On Wednesday a new melodrama was produced, in which Mr. Wright, who has seceded from the Adelphi, made his *début* on these boards. It is entitled "Mont St. Michael; or, the Faëry of the Sands."

The play, which is in two acts, is of the romantic and picturesque class, and opens with a striking *tableau* and ballet, by Oscar Byrne, in the village of St. Jean a beautifully-painted scene, presenting the Bay of Avranches, with Mont St. Michel in the distance. The Seigneur of the Sands, *Count de Rochemont* (Mr. Graham), is delivered from the peril of arrest by the *Chevalier St. Pré*, (Mr. G. Everett). But the Commandant of St. Michel, *Raoul de Fortbras* (Mr. Ryder), pursues him with implacable vengeance, and succeeds in imprisoning the *Chevalier*, in order to discover the Seigneur's retreat. Failing of this, he takes possession of *de Rochemont's children*, and proceeds with his troopers to destroy the furniture, until informed that it is his own by the King's gift. They then proceed to revel, and at length sink exhausted to sleep, when *Claire de Rochemont* (Miss Carlotta Leclercq) enters by the window to secure possession of certain documents essential to her father's honor, and also of the warrant for his execution.

This scene is very cleverly managed, and it brought down the curtain with great applause on the first act. The second was not quite so happy. Mr. Wright's part consists of the humours of one *Thibaut*, a cockle-gatherer. This worthy mistakes *Claire* for a fairy, who, according to the local superstition, will bestow his wishes on the man who may catch her. *Thibaut* succeeds in doing this, and obtains from her fifty louis, which happened to be in the same pocket with the warrant. He is taken up for the theft, and doomed to be hanged. Preparations are made on the stage for his execution, and various jokes indulged in, irreverently directed against the sanctity of capital punishments. The audience expressed their dissatisfaction. In subsequent scenes, *Claire* falls into the power of *Raoul*, who endeavours to convey her across the sands, but sinks, while she is saved by the Chevalier. A superb scene of sunrise on the sands closes the drama, and secures the triumph of the author of the piece. When the objectionable scene is properly abridged, no doubt the melodrama will prove perfectly successful. It is by Mr. Bayle Bernard. Mr. Wright, and other leading performers, were summoned for their ovation before the curtain.

OLYMPIC.

Mr. Stirling Coyne has placed on this stage another of his stirring and *apropos* farces, under the title of "Wanted, 1000 Spirited Young Mariners for the Gold Diggings." Such is an advertisement inserted in the papers by two persons in search of a scamp—one a lawyer's clerk, and the other a medical student—and which is replied to by a number of female applicants, whom they receive in the disguise of two old women. They are ultimately detected, and are threatened with summary vengeance; and, indeed, are in danger of being sacrificed on the points and edges of the needles and scissors of their intended victims. The *mêlée* is put an end to by the return of the lawyer to his chambers; who recognises one of the girls, and is interested in securing her silence. A free pardon and a champagne supper are accordingly announced, to the general satisfaction of actors and auditors. The piece is written with much spirit, and admirably acted by Mr. Hoskins and Mr. Compton, as *Joe Baggs* and *John Tipton*, the mischievous wags who give rise to the main situation of this little drama. It was well received.

SURREY.

This theatre has been brilliantly re-decorated in every part. Ceilings, proscenium, fronts and panels of the boxes, box-lobbies, and the boxes themselves, are now illustrated with new elegant ornamental looking-glasses, have all been profusely embellished by Mr. E. T. Archer, of Oxford-street, to whose taste the numerous adornments are highly creditable. Besides these, there is a new classical act-drop, painted by Mr. W. J. Calcott. The dramatic season, also, has been inaugurated by a new piece of extraordinary pretensions. It is a drama in four parts, entitled "The Seasons," and confessedly founded on Thompson's celebrated poem. The hero is impersonated by Mr. Creswick as one *Brightheart*, cast on the world by his father for marrying *Amanda Leigh* (Miss Clara Wyndar), the ward of *Leonard Loftus* (Mr. J. Davis). The discarded son is, however, an industrious man, and acquires a fortune sufficient to obtain, by the operation of money lending, the estates of *Loftus*. The agent in these transactions is *Martin Iron* (Mr. T. Mead)—the villain of the piece. The *Brighthearts*, however, are not always fortunate. Their son is a gay and giddy youth, whose extravagances lead him to seek pecuniary help from *Iron*, who desires his sister's hand, but has been met with her scorn. *Iron* seeks to be revenged on the family. Meantime, he gets into a quarrel with *Loftus*, who, having been refused money by *Iron*, shoots at and wounds him. *Iron* pretends that it is young *Brightheart* who had assaulted him, and accuses the young fellow to his father, in the capacity of a justice of the peace; when his nefarious attempt is defeated by the testimony of one *Tom Rooke* (Mr Shepherd), a fellow-collegian of old *Brightheart*, but now a mendicant, who details the particulars of the transaction. *Iron* is accordingly committed for perjury, and the virtuous parties are made happy.

The piece was capitally acted, and was judiciously relieved by means of a comic character, *Joe Griffin*, which, in the hands of Mr. Widdicombe, proved exceedingly amusing. The scenery and accessories were in a lively style. The play was followed by two more good pieces, entitled "Going to Cremorne" and "The Divorced." The house was full.

Cremorne Gardens.—This very popular place of amusement closed a highly successful season on Saturday last; fully rewarding the very spirited management of the proprietor, Mr. Simpson.

An Exhibition at Salisbury, has been suggested by the great event of the past year. It embraces a commercial and manufacturing department, and a collection of works of art, articles of *vertu*, antiquities, and objects of taste, contributed from the picture-galleries, museums, and private collections of the nobility, clergy, and gentry of the neighbourhood. The opening is fixed to take place on Tuesday next, by the Mayor and corporation.

EPITOME OF NEWS—FOREIGN AND DOMESTIC.

In addition to his munificent offering of £20,000 towards forwarding the objects of the Irish Industrial Exposition, Mr. William Dargan, the eminent railway contractor, has agreed to enlarge the amount by a further sum of £6000, to complete the work of which he was the author.

The committee of the late Exhibition at Cork is to consider a plan for distributing bronze medals among the exhibitors. The number required for this purpose is about a thousand. The cost is estimated at £150, of which sum the Lord-Lieutenant has liberally contributed £50.

A letter from Vienna of the 25th ult., in a Berlin journal, says:—"Field-Marshal Radetzky intends to retire from active service to his villa at Kaybach. The death of the Duke of Wellington has, it is added, profoundly affected him."

There was lately sold a large farm in Anglesey at 44*s.* and an extensive landed estate in Carnarvonshire at 34 years' purchase upon rack-rents. Cattle and store sheep change hands at prices that quite satisfy the sellers. One extensive corn grower in Anglesey, last week, sold a lot of wheat at 47*s.* per quarter. The corn crops are unusually good, and generally speaking well secured.

The *New York Literary World* says that "the international copyright question between England and the United States is 'under consideration' at Washington; and so thoroughly has the way been prepared in public opinion, by a efficient examination of the topic through the press, that we anticipate no substantial and valid bar to its early settlement."

The *Opinione* of Turin states, from Aosta, 21st ult., that the torrents of Courmayeur and La Thuile have carried off the bridges of Champe and Sémaaz. The glaciers of Miage and the Brenva having simultaneously poured immense volumes of water into the Dora, a most serious inundation has been the consequence, which has ravaged the whole extent of country between Courmayeur and Morgex, destroying five bridges, three mills, and a large portion of the road leading to Entrèves.

Last week the deliveries of tea in London fell off, being 600,382 lb.

We read in the *Journal de Francfort*, "in consequence of an arrangement concluded between Austria and the States of the Church, the former is to receive an indemnity of 800,000 florins for the occupation of some of the legations by the Imperial troops."

Mary Phillips, aged 63 years, the wife of an eating-house keeper in Horse-shoe-court, Clerkenwell, died on Saturday last, in consequence of injuries sustained by her having fallen under the train at the Blackwall Railway station, in Fenchurch-street, on the previous Wednesday.

On Friday se'nnight, eight lives were lost off a watering-place called Lytham, about twelve miles from Preston, in Lancashire, by the upsetting of a life-boat. It was a trial excursion made by eleven seamen, who, but too much sail was crowded, found the boat to behave admirably. She capsized, however, in the breakers, and but three of the crew were saved. The deceased were all married men, and had families.

The *Monmouth Merlin* says, that the Messrs. Bailey, of Nantyglo, have voluntarily announced their six or seven thousand workpeople that wages would be advanced in a month from Monday last.

A meeting of the sugar-manufacturers, in the departments of the Aisne, the Somme, and the Oise, was held a few days ago at St. Quentin. They discussed the new regulations fixed by the Government, and resolved to present an address to the President of the Republic, calling for a modification of certain portions of them.

The prizes to the London exhibitors in the Crystal Palace last year, were distributed on Friday se'nnight, at the London Tavern. Baron Rothschild presided.

Davis, a pensioner, receiving 2*s.* a day as a discharged sergeant of the 25th Regiment, and living at Bristol, has been struck off the list by the Chelsea commissioners, for carrying about a bill, issued by the Peace Society to deter persons from joining the militia.

The counting-house of Mr. H. B. Downing, of 11, Mark-lane, was recently entered by an expert burglar, who speedily decamped with a cash-box, which he subsequently, however, most kindly deposited up a door way in Fleet-street, in order that sundry documents, of no service to himself, might reach their legal owner through Mr. M'Lean, acting inspector at the Fleet-street police-station.

Government has sent the sum of £50 to be distributed among the police and others who exerted themselves so effectually in saving the lives of the crew and passengers of the *Sharpsboy*, on the coast of Waterford, last week.

The election of the Chancellor of the University of Oxford, in the room of the late Duke of Wellington will take place on Tuesday next.

The Town Council of Arbroath have con erred the freedom of the burgh on the right hon. Lord Panmure (late Mr. Fox Maule).

Mr. Wallace, who, for a period of thirteen years, had been the representative of Greenock in Parliament, has been presented by his admirers with a fund which will secure to him an annuity of £500.

Recent accounts from Malta state that an act of high police has been exercised by the Governor, who is supposed to have acted in this instance under the influence of the Austrian and Naples Consuls; it is no less than the ordering Mr. A. Lumley, late secretary to Kossuth, to leave the island within three days! The Governor has refused to give any reason.

On Friday se'nnight, Mr. Edward Newnham Winstanley, aged 52, chemist, of No. 7, Poultry, in a fit of temporary insanity, committed suicide, by swallowing a powerful dose of prussic acid, in a cab, which he had hired in St. James's-street, to convey him to Row Common, in Cheapside.

A memorial signed by the Lord Provost, magistrates, and council of Edinburgh, in favour of the restoration of the palace of Holyrood to her Majesty's use, has been recently presented to the Lords Commissioners of her Majesty's Treasury.

On Wednesday a man named Connolly was instantaneously killed by falling from the top of a scaffold ing, 50 feet high, which was erected before the new buildings at the end of Victoria-street, near the Vauxhall-bridge-road.

The Lord Mayor has recently appointed Mr. Harford Arnold to be one of the harbour-masters of the port of London, in the place of Lieutenant Stone, resigned.

According to the *Gateshead Observer*, the arrivals and sailings from the Tyne, in the course of each twelvemonths, are actually larger in number than those at either London or Liverpool.

As the express train of the Morayshire Railway was crossing the Loch of Spynie, a few days ago, the tender of the engine struck and killed a bird of the species called the northern diver, which was flying with a fish in its bill. On the bird being secured, it was found to measure from the tip o. the tail to the beak 3 feet, and from wing to wing 4 feet 4 inches. Its prey was nearly 10 inches in length.

The Earl of Strathmore and party, with six guns, killed in one day last week, between eleven o'clock in the morning and half past five in the afternoon, 227 rabbits, 93 hares, 8 partridges, and 1 woodcock, upon his Lordship's rabbit-warren in the immediate vicinity of Gamma Castle.

The Rev. James Forbes, formerly a Roman Catholic Priest in Glasgow, has lately declared himself a convert to Protestantism, and has offered his services to the Irish Mission of Edinburgh.

At La Tour, in the Swiss canton of Freiburg, an accidental fire last week destroyed fifty houses. Happily no human life was lost.

A second line of telegraph has been constructed, at a cost of £5000 for the 38 miles, between Liverpool and Manchester, with its message rates.

There is now living at La Horgne, canton of Aumont (Ardennes), a woman named Lourency, surnamed "La Duchesse," who has just entered her 110th year. She walks a long distance every day, and picks up wood for her fire about the fields.

An Oregon correspondent of the *Commercial Advertiser*, in speaking of the famous Oregon land law, which gives a square mile of land to every actual settler married before a certain date, says that it set the whole country astir, and everybody got married that could.

On Tuesday evening about twenty hop-pickers, having taken refuge in an outhouse, near the village of Sutton Valence, in Kent, during a dreadful thunder-storm, the lightning entered the building and killed instantaneously three men and one woman. The rest of the party were more or less injured.

It is said that suicide prevails among the German emigrants in the United States, with reference to the natives, in the proportion of five to one.

Mr. Loch, by direction of the Duke of Sutherland, has issued an announcement to the entire tenantry, authorising them to kill all the hares and rabbits on their farms and lots.

There were in the month ended the 5th ult. 3241 vessels, of 741,710 tonnage, employed in the foreign trade of the United Kingdom entered inwards, and 3737 of 735 484 tonnage cleared outwards.

The *Revue Britannique* states that an application has been made by the French Government to the English Cabinet for the original will of the Emperor Napoleon, which has hitherto remained in the possession of England.

"The two first portions," says the *Union*, "of the sale of the furniture and other household property at the Château d'Eu are now terminated. The third part, for the land and the copper articles, will commence in a few days. The sale has been well attended, and the prices given were satisfactory."

CHESS.

TO CORRESPONDENTS.

PUTTINO.—The charming Problem by "Judy," called "Stella," which appears in the October Number of the *Chess-Player's Chronicle*, and has baffled some of the most acute players in London, is perfectly correct. Set the pieces as follows:—

White: K at Q Sq; R at Q R 6th, B at K Sq, Kt at K 5th.
Black: K at Q B 4th, Ps at K & h and Q 4th.
White to play, and mate in five moves.

L B T.—The position of the men in Judy's Problem, called "Stella," is given above, and we are somewhat curious to see how many correct solutions we shall receive of this fine strategem within the next fortnight.

B W P.—There can be no more than one way of effecting mate in four moves. The following may suffice:—1. Kt to K 8th (ch). 2. R takes Q P (ch). 3. Kt takes Q P. 4. Kt to Q B 7th. Mate.

SOPHIA.—You are quite right. The examiner had mistaken the colour of the Bishop at Black King's square.

R C, Bury St. Edmund's.—Thanks for the two games played by correspondence in India. They shall be duly attended to.

J F. Inbon.—It shall be reported on next week. Your solution is correct.

M D M, H S Manchester Chess Club.—The Problems are under examination.

SOLUTIONS OF PROBLEM No 451, by Alpha, Delta, A B, are correct.

SOLUTIONS OF PROBLEM No 452 by H W T Nemo, J M of Sherburn, are correct.

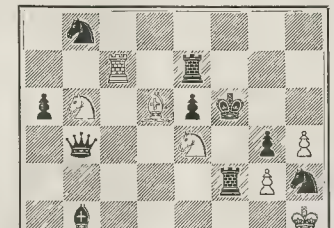
SOLUTIONS OF PROBLEM No 453, by Dawson, B W P, Hereford Dad, Stevens, Hyder, Fabricius, H D, S P Q R, are correct.

SOLUTIONS OF ENIGMAS, by J M of Sherburn, True Blue, F R S, M P, Lynx, Eddy Judge, Field-Chess, are correct. All others are wrong.

PROBLEM No. 454.

By E M. H., of Hull.

BLACK.



WHITE.

White, playing first, mates in four moves.

CHESS IN SCOTLAND.

The following game well deserves attention, not so much for its intrinsic merits as a good example of a bold and vigorous attack unexpectedly retorted, as for the remarkable variety and beauty of the combinations which spring from some of its positions. It was one of the games played between Mr. STAUNTON and the Rev. T. GORDON (Gamma), the former giving the odds of the Pawn and two moves.

(Before playing it over, remove Black's King's Bishop's Pawn from the Board.)

WHITE (Gamma.)	BLACK (Mr. S.)	WHITE (Gamma.)	BLACK (Mr. S.)
1 P to K 4th		16. Kt takes Kt	P takes Kt
2 P to Q 4th	Kt to Q B 3d	17. Q to K 2d	Q to Q 5th
3. P to Q 5th	Kt to K 4th	18. B to Q 2d (*d*)	Q B takes K P
4. P to K B 4th	Kt to K B 3d		(*e*)
5. P to Q B 4th	P to K 3d	19. P takes B	Q R to Q sq
6 Kt to Q B 3d	B to Q B 4th	20. Kt to K 4th (*f*)	B to K 2d
7 Kt to K B 3d	K Kt to K 5d	21. K B to Q 3 5d	Q takes Q Kt P
8. P to K B 3d	Castles	22. Q B to Q B 3d (*g*)	B to Q Kt 5th
9 B to Q 3d	P to Q B 3d	23. B takes B	Q takes B (ch)
10 P to K 4th	P to K sq	24. Kt to Q 2d	Q to Q Kt 7th
11. P to K Kt 5th (*a*)	K Kt to his sq	25. Q to K 4th	Q takes Q R (ch)
12. P to K 5th	P to Q 3d		(*h*)
13. P takes K P	Q B takes P	26. K to K 2d	R takes Kt (ch)
14. P to K B 5th	Q B to his sq (*b*)	27. K takes R	Q to Q 5th (ch)
15. P to K 6th (*c*)	Kt to K 4th	And Black finally won the day.	

(*a*) The impetuosity of this assault subjects B ack to a very difficult and a very humiliating defence. He has the consolation, however, of observing that White's best onslaught is met unassisted with his resistance is himself; there, in the event of a counter-charge, his King must be exposed to great danger from not having Castled.

(*b*) B at 2d would be wholly to retreat, or by sacrificing this Bishop break up the phalanx of opposite Pawns. After carefully examining the situation, we are convinced that the sacrifice of the piece at this moment would have been premature, and must have tended to strengthen rather than enfeeble White's game.

(*c*) These Pawns are terrible in their advance, but can they be sustained?

(*d*) White is fain to pause one instant, in the hope of saving his King in safety on the Queen's side.

(*e*) The sacrifice now became imperative, for if White could once have Castled, his position would soon have been irresistible. If, instead of giving up the Bishop, Black had made the more obvious and more natural move of K K to Q sq, his adversary had only to reply with B K B to 4th, and he would shortly have been secure enough at home to prosecute the attack he had already so well begun.

(*f*) This certainly looks the most feasible move, for, if he had retreated the K's Bishop then by playing K Kt to K B 7th, Black must have won easily.

(*g*) Had he played the move made antelpiacch, of 22 Q B to Q B sq or, 22. Q to Q sq, the game would have proceeded through many beautiful continuations. For suppose,

In the first place

WHITE.	BLACK.
22 Q R to Q B sq	B takes B

This unlocked-for capture will be found a far better mode of pursuing the counter attack now established than the more evident move of 23 B to Q Kt 5th. or, 23 B to Q B 6th. For example—

23.	*B to Q Kt 5th*

Playing the Bishop to Q R 6th would be still less advantageous, as White might answer with B to Q 3d and presently escape all danger.

23	*Q R to Q Kt sq*

This is the proper response. If, in place of the move, White take the Bishop, Black can retake with his Queen giving check, and upon the Kt interposing, as best, play his Q to Q Kt 7th, and win.

23	*B takes B (ch)*
	He has no better move.
24.	*Q takes B*
	Thus again is White's only safe move. Q takes Q R P
25.	*Kt to Q 6th*
	And play as Black may, he can no longer retrieve the game.

Let us now return to the point from whence we diverged, where Black correctly played

22.	K takes R

His most natural answer, for if he take the Rook with his Queen, Black wins her by B to Q Kt 8th, and if he take with his Kt Black equally wins by taking the Q's Rook (ch), &c

23	R to Q sq (ch)
24	K to K 3d

White may here interpose his Queen retaining her two Rooks against the adverse Queen, but he would then lose through his opponent's strength in Pawns

24.	B takes K Kt P (ch)

The only move to sustain this instructive attack.

25.	K takes B

If he decline to take the Bishop, Black wins the Rook, &c.

WHITE	BLACK.	WHITE.	BLACK
25.	Q to Q 8th (ch)	27. K to Kt 3d	Q takes Kt (ch)
26 K to B 3d	Q to K B 6th (ch)	28. Q to K Kt 4th	

His best move evidently

WHITE.	BLACK.
28	Q to Q 7th (ch)

If he check with the Rook instead of with the Queen, White may win the game.

29.	R to K Kt 3d (best)
29	R to Q 8th
30	R to K 4th

We see no better move for him. If he play 30. Q to K B 6th. Black must reply with P to K Kt 3d, &c. If

30.	Kt to K B 8d
31.	P to K 7th	Q to K 8th (ch)
32	Q to K B 3d	

If, in lieu of interposing his Queen he play the King to R 4th, Black gives mate in six moves; and if he retire the King to the B 2d or Kt 3d, defeat is equally inevitable.

32.	Kt takes B (ch),

and Black wins

In the second place:—

23 Q to Q sq	B takes B
24 Kt takes R (best)	P takes K Kt P
24 Q to Q Kt 4	Q to K 6th (ch)

If he play K to R 3d. Black can respond with Q to Q B 6th. and must win:—

24.	Q to her 5th
25 K R to K B sq	

If he venture to move the Kt to K 4th again, or to K B 3d, Black wins by checking with his Queen at her R's 6th

25	B takes Kt (ch)
26 Q takes B	B takes Kt (ch)
	And then takes the Queen with an easy game

(*h*) This will be found a better way of proceeding than playing P to K Kt 3d; except—

26.	P to K Kt 3d
26 K to his 2d	R to R B 5th
27 Q to K 3d	

And as Black dare not take the Bishop, White will gain time to bring his reserve forces to the rescue, and presently retort the attack upon his adversary.

THE "DUKE" AS A MUSICAL AMATEUR.

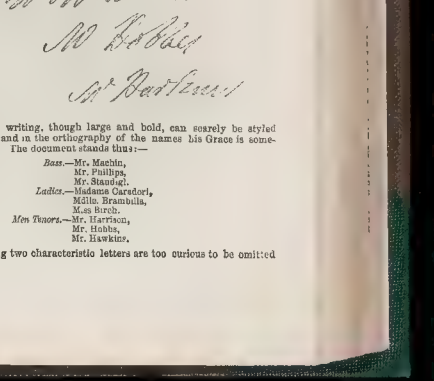
IN the ILLUSTRATED LONDON NEWS of September 25th, details of the late Duke of Wellington, as one of the Royal and noble directors of the Concerts of Ancient Music, were supplied. It was mentioned that the "Duke" was attached to the great choral works of Handel. In secular music, his partiality was always strikingly evinced for Mozart. This taste for the operatic inspirations of that great master, was created by the circumstance, that at the period when his Grace first became a frequenter of the Italian Opera-house (King's Theatre), Mozart's star was in the ascendant, and "Così fan tutte," "Il Flauto Magico," "Le Nozze di Figaro," "La Clemenza di Tito," and "Don Giovanni," were standard works of the repertory. Moreover, there can be no doubt that the Duke's great admiration of the vocal genius of the celebrated contralto, Signora Grassini (the aunt of Grisi), fixed his operatic taste and predilections. It is not a little curious, that Grassini should have had as admirers two of the greatest military men of the age—Napoleon and Wellington. Both warriors were her earnest patrons. The singing of "Paga Poi," from Winter's "Ratto di Proserpina," by Grassini, always excited in the Duke's mind the strongest feelings of delight. Although it may have been supposed that the Duke would only have given his name as a director or patron of the Ancient Concerts, Sir Henry Bishop, the conductor, states that he never knew any director of that Institution (which, unfortunately, no longer exists), or of any other musical societies with which Sir Henry has been connected, who gave more thorough business-like attention to the whole matter. Whatever the Duke undertook, having undertaken it, he seemed, however it might be thought out of his own immediate sphere, to think that it was his "duty" (and that was the great idea always before him) to carry it out to the fullest extent of his abilities. His correspondence and "programmes," which he corrected and altered with his own hand, are singularly clear and specific in the directions for his night, each of the directors having in turn the selection of the music and of the chief singers for the eight concerts. The Duke's night was generally one of the most expensive of the series. The directors laid down rules for their guidance as to the outlay; but the Duke's first remark to Sir Henry Bishop used to be, "I must have a good concert." When Sir Henry gently hinted at times that his Grace was exceeding the prescribed limits, the Duke would reply, "Never mind the expense—I will pay the difference." It is stated that if the amount of excess thus incurred by the "Duke" had been charged, it would be no inconsiderable sum. The punctuality of his Grace in his attendance was very remarkable. It was customary for each director to give a dinner to his brother directors prior to the concert; at these dinners the conductor was invited. The first time Sir Henry (then Mr. Bishop) dined at Apsley House, in the evening of the concert, he kept looking at his watch after the dinner, anxious not to be over time for the departure to the Hanover-square Rooms. The Duke looked at Sir Henry Bishop, and asked if it were time to go. Sir Henry replied, "There is yet a quarter of an hour to spare." "Very well," rejoined his Grace; "remember, Mr. Bishop, we are under your orders." Sir Henry was conversing with Lord Ellenborough, and the "Duke" got into earnest conversation with a noble director, when suddenly his Grace broke off and turned round to the conductor and said "It is time." Sir Henry looked at his watch, and found the quarter of an hour had elapsed to a second; a fact which the Duke was conscious of without reference to a time-piece, and in the midst of talking!

In the season 1847 his Grace directed the second concert of Ancient Music; and also the eighth, for his nephew, the present Earl of Westmoreland, now in Vienna, who was then in Berlin. Handel's name in four times, and Mozart's is equally as often, in the Duke's scheme; in that for the noble Earl, we remark the quintetto "Di scrivermi," from Mozart's "Così fan tutte;" the "Parting of the Lovers," always an especial favourite of the Duke's. His Grace loved the martial choruses of Handel, such as are to be found in "Saul" and "Samson"—particularly the one from the former oratorio—

> Gird on thy sword, thou man of might,
> Pursue thy wanted fame.

We have before us a programme drawn up by the Countess of Westmoreland, in which there are the Duke's alterations in his own handwriting. Gluck's "Orfeo" stands "Iphigenia" once, the latest Beethoven's "Hallelujah" chorus from the "Mount of Olives" to follow. After the duo "Sul' aria" of Mozart, his Grace substituted for a scene of Gluck's a song by Staudigl, "With joy the impatient husbandmen," of Haydn. In Horsley's trio, "When shall we three meet again," his Grace changed the name of Miss Birch to Madame Caradori Allan. After Handel's "Deeper and deeper still," the Duke inserted Avison's "Sound the loud timbrel." This trio and chorus was a standing dish in the Duke's musical banquet; and the brother of the singer, who knew his partiality for it, always left the piece for his selection. The words seem to supply a key to the soldier director's love of it.

In the programme the Earl of Mornington's name appears to the glee, "Here in cool Grot." The "Duke," on seeing the name, said to Sir Henry, "Ah, my worthy father! Could he compose?" "Yes," replied the conductor, "he has composed music which any professor would be proud to claim." "Ah, indeed," rejoined the Duke, "I am glad to hear it!" Locke's music to "Macbeth," of which the Duke was very fond, is also in this scheme. We remark, also, another entry in his Grace's handwriting, of Staudigl's name for the song from Hayun's "Seasons" "He layeth the beams." The Duke was partial to bass voices, and of the names Staudigl and Phillips were his favourite singers. We here engrave an autograph of the late Duke of Wellington, being the singers engaged for May 1843.



The Duke's writing, though large and bold, can scarcely be styled a plain hand, and in the orthography of the names his Grace is sometimes at fault. The document stands thus:—

Bass.—Mr. Machin,
Mr. Phillips,
Mr. Staudigl.
Ladies.—Madame Caradori,
Mdlle. Brambilla,
Miss Birch.
Men Tenors.—Mr. Harrison,
Mr. Hobbs,
Mr. Hawkins.

The following two characteristic letters are too curious to be omitted

here; they are exact copies of the original ones:—

London, June 24th, 1847.

F. M. The Duke of Wellington presents his Comps. to Sir Henry Bishop. He would prefer Made. Caradori Allan or Mrs. Shawe, or any other, to Mesmr. Dorus Gras, and any other Tenor voice to M. Rogier's.

London, June 29th, 1847.

Field-Marshal The Duke of Wellington presents his Comps. to Sir Henry Bishop.

It appears H.R.H. the Duchess of Cambridge is anxious to hear M. Rogier at the Ancient Concert.

If possible, the Duke will be happy to gratify her Royal Highness.

The Concert may be already sufficiently long, or possibly too long! and it may be necessary to rehearse with the Orchestra what he should sing.

But if the only hindrance should be the expense, The Duke begs that that may not prevent his singing.

Sir Henry Bishop, Cambridge-street, Hyde Park.

It is evident from the above letters that "the Duke" had a particular dislike to the singers of the French school; as Madame Dorus Gras and M. Roger (the chief tenor of the Grand Opera in Paris, who sang at the Royal Italian Opera, Coventgarden, in 1848) were stars of the London season; and he only waives his objection to M. Roger, in his second letter to the conductor, because "the Duke" was anxious to gratify the Duchess of Cambridge! Grisi, Jenny Lind, Caradori Allan, Sontag, Mrs. A. Shaw, Mdlle. Brambilla, Miss Birch, Miss Dolby, Gardoni, Jenny Lutzer, Machin, Fischeck, Phillips, Staudigl, Mario, Rubini, Lablache, &c., figure in the latest concerts, private and public, of the Duke.

How precise his Grace was in his arrangements, and how thoughtful for any contingency, may be gathered from the annexed letters:—

London, May 16th, 1848,
½ past 9 o'c.

F. M. The Duke of Wellington presents his Compliments to Sir Henry Bishop.

He has just now received intimation that H M Queen Adelaide intends to be present at the Concert of Ancient Music to-morrow.

He is not informed whether her Majesty will be pleased to sit in the box above stairs, or below stairs, near the orchestra! It will be desirable that preparations should be made for either and, accordingly, He requests Sir Henry Bishop to be pleased to have directions that the Directors' box below stairs may be prepared for Queen Adelaide's reception, as it was for that of the Queen on the 10th inst., and besides the box prepared above stairs.

Sir Henry Bishop!

London, May 17, 1848, Morning.

F. M. The Duke of Wellington presents His Compliments to Sir Henry Bishop. He has received Intimation from the Lord Chamberlain of her Majesty the Queen Dowager that her Majesty will sit below, at the concert this evening, in the space usually occupied by the Directors, which The Duke requests may be prepared for her Majesty's reception as on Wednesday, the 10th instant, for the reception of her Majesty the Queen.

Sir Henry Bishop.

After having existed for seventy-three years, the Concerts of Ancient Music ceased to exist; and with its cessation, expired the only institution in London specially devoted to the preservation of the works of the old masters. Prince Albert, "the Duke," and the Earl of Westmorland, made strenuous efforts for the continuance of the annual series of concerts; but the advance made by the Sacred Harmonic Society, and the formation of a second Italian Opera-house, turned the tide of fashion, into a different direction, and the falling off in the number of subscribers left no alternative but to close the annual series of Ancient Concerts.

SKETCHES AT STRATFIELDSAY.

THE CONSERVATORY AT STRATFIELDSAY.

SKETCHES AT STRATFIELDSAY.

We resume from page 280 our Illustrations of this interesting seat, with a view of the Conservatory adjoining the mansion at Stratfieldsay, not Strathfieldsaye, as usually written. Here the Duke was accustomed to read his extensive correspondence.

Near the south corner of the gardens is the paddock which is the resting-place of the celebrated charger Copenhagen, that carried the Duke throughout the glorious day at Waterloo. The paddock contains a noble cluster of elms in the centre, and is sheltered on every side. A small circular railing incloses the spot in which Copenhagen was interred with military honours; old age having prostrated him in 1825.

Copenhagen derived his name from the city in which he was foaled, his dam being taken out there in the expedition of 1807, by the late General Grosvenor. The horse, we are told, was not only thoroughbred, but he was also very fashionably bred, being on his father's side a grandson of the celebrated Eclipse; and on his mother's, of a well-known horse of his day—John Bull. The General, however, did not long keep Copenhagen, but sold him to the Marquis of Londonderry, then Adjutant-General of the Peninsular Army, who sent him, with other horses, to Lisbon early in the year 1813. While there, he was selected and bought, with another horse, by Colonel Charles Wood, at the price of four hundred guineas, for his Grace the Duke of Wellington, with whom he soon became an especial favourite. In the battles of Vittoria and Waterloo the Duke, we believe, used no other horse; and in the latter, it is said, was eighteen hours on his back, but Copenhagen gave little signs of being beaten, for on his rider patting him on the quarter as he dismounted after the battle, the game little horse struck out as playfully as if he had only had an hour's canter in the park. For endurance of fatigue, indeed, he was more than usually remarkable; and for the duty he had to fulfil as proportionately valuable. However hard the day, Copenhagen never refused his corn, though he ate it after a very unusual manner with horse, lying down at full length on his couch.

For many years Copenhagen was one of the "sights" at Stratfieldsay. It was not, though, the stranger alone who asked for the famous old horse; the Duke himself rarely omitted to visit him, and the ladies of the family made him, as he deserved to be, an especial pet. And it would have been extraordinary had they not, for, in addition to his well-earned renown, Copenhagen had one of the surest and best characteristics of true courage—an extremely good and docile temper.

Copenhagen, in colour a full rich chestnut, stood scarcely more than fifteen hands high; he possessed, however, very great muscular power, and had nearly all the good useful "points" to be looked for. His general appearance rather favoured the Arab cross in his pedigree, which his lasting qualities tended yet more to confirm. From his size he was not much adapted for crossing a country, though the Duke is said to have occasionally ridden him with hounds.

Miss Mitford, in her very interesting "Country Stories," relates some amusing particulars of Copenhagen. "He died," says Miss Mitford, "at the age of twenty-seven. He was therefore in his prime on the day of Waterloo, when the Duke rode him for seventeen hours and a half, without dismounting. After his return the paddock was assigned to him, in which he passed the rest of his life in the most perfect comfort that can be imagined; fed twice a day (latterly upon oats broken for him), with a comfortable stable to retire to, and a rich pasture in which to range. The late amiable Duchess used regularly to feed him with bread, and this kindness had given him the habit (especially after her death) of approaching every lady with the most confiding familiarity. He had been a fine animal; but latterly he exhibited an interesting specimen of natural decay, in a state as nearly that of nature as can well be found in a civilized country. He had lost an eye from age, and had become lean and feeble, and, in the manner in which he approached even a casual visitor, there was much of the demand of sympathy, the appeal to human kindness, which one has so often observed from a very old dog towards his master. Poor Copenhagen, who, when alive, furnished so many bequests from his mane and tail to enthusiastic young ladies, who had his hair set in brooches and rings, was, after being interred with military honours, dug up by some miscreant (never, I believe, discovered) and one of his hoofs cut off, it is presumed, for a memorial, although one that would hardly go in the compass of a ring."

THE GRAVE OF THE CHARGER "COPENHAGEN," AT STRATFIELDSAY.

LETTERS LEFT AT THE PASTRYCOOK'S:

BEING THE CLANDESTINE CORRESPONDENCE BETWEEN KITTY CLOVER AT SCHOOL, AND HER "DEAR, DEAR FRIEND" IN TOWN.

EDITED BY HORACE MAYHEW.

OPENING EXPLANATION BY THE EDITOR.

THE accompanying Letters were rescued from the butter-shop in the most miraculous manner. I had been waiting for some time at a fashionable pastrycook's—which was then in Tottenham-court-road—to keep a business appointment. I had read every ginger-beer and soda-water label round the room. I had admired all the different varieties of architecture and bird-cages to which barley-sugar lends its glittering but fragile aid. I had carefully noted down on the porcelain tablets of my recollection the many fanciful forms of zoology into which sponge-cake, like a second Proteus, delights to metamorphose itself. I had watched with a feeling of envy and tender regret that I couldn't do the same—the little children playing with their Bath buns, first picking out the white plums, which, like pearls, adorned the coronet of their sugary brows, and then slowly eating the bun in small pieces, as if to make the most of a pleasure which they were conscious was too sweet to last for ever. I had imbibed glass after glass of cherry-brandy, until I felt as if another cherry would have choked me; in short, my patience, my admiration, and my appetite were alike exhausted, and I was registering a vow in that mental office in which indignation sits frowning to receive the vows of lovers, patriots, and all injured persons, never to transact any more business at a pastrycook's shop, when the postman entered, and demanded "tuppence" for an unpaid letter, which he had flung down upon the counter. The young lady standing behind it, with the pretty lace cap that looked so light and frothy, that one's imagination, kindled by the locality, pictured it as having been spun out of a dish of trifle, examined the letter, and, in a sharp tone, which cut short all remonstrance, said, "I shall not take it in." She then pulled down from the shelf a little bundle, black with long neglect, which was lying on an empty box of kisses, and displaying them, like a pack of cards, said, "I have already got all these—not one of them has been fetched away, and I'm determined to take in no more. These I shall sell to-morrow for waste paper." Luckily I had twopence still left after my reckless extravagance of cherry brandy, and I requested the young lady, in so many words, "to be kind enough to allow me to pay the twopence, and, further, to increase the obligation, by adding the letter, which had so narrowly escaped being thrown upon the wide world, to its little lot of orphan companions." These two requests she smilingly complied with; and, a month afterwards, the letters still being in durance vile, she was not proof against the temptation of a large sum of money, which my curiosity, backed by a strong feeling of sympathy, prompted me to give, to release them from their dusty captivity. I should have been well repaid for this outlay by the interest of the letters themselves; but I am bound in justice to state that their ransom money, as well as the twopence originally expended, have been refunded to me since by my liberal publishers. On examination, I found there were no names to the correspondence beyond those of "Kitty" and "Nelly," which, being pretty names, I have retained; neither was there any address inside the letters, nor any clue, indeed, by which I could trace out the fair heroines of them. The other names have either been added or altered by myself. Under the circumstances, therefore, I hope there is no harm in my publishing a correspondence I came so curiously in possession of. I know nothing whatever of the persons whose Christian names were mentioned in it; and, having fairly purchased the letters, surely I have a right to do what I please with them, more especially when no one is likely to be injured or compromised by the innocent result. One plea more, and I have done. The object of the letters having been written was, as I imagine, to be read by the person to whom they were directed. It is as clear, therefore, as isinglass that there is more chance of this object being fulfilled by the letters being circulated far and wide in the pages of the ILLUSTRATED LONDON NEWS, than in their lying with the inscription *"to be left till called for,"* carried out most mockingly to the very letter, unopened on a dusty shelf at a pastrycook's shop in Tottenham-court-road.

With this explanation, I leave "Kitty's Letters" to speak for themselves. The originals are left with the publisher, at the office, in case Kitty or Nelly should feel inclined to call and claim them in person

THE FIRST LETTER LEFT.

SHOWING HOW KITTY WAS TAKEN TO SCHOOL BY HER WICKED MAMMA.

LETTER I.—KITTY TAKEN TO SCHOOL.

Oh! my darling Eleanor, it is all over!—and yet I live! but I have strong hopes of dying before to-morrow morning. I feel that I can never exist within these hateful walls, to be a wretched slave to Mrs. Hextra's maternal solicitude and intellectual culture. What do I want with intellectual culture, indeed? But I'm determined I won't learn a bit—not a tinny-tiny bit!

"I must tell you, dearest, that before leaving home I cried continually for at least three weeks; but my tears made not the slightest impression on Mamma's hard heart, which, I am sure, must be stone. More than this, I starved myself during the last three days—did not take one luncheon—even refused pudding; and at Mrs. St. Vitus's ball would not dance, nor touch a thing at supper. But all in vain! No one seemed to care a pin about it; and Ma only appeared to take pleasure in my sufferings. The boys teased, and made cruel jokes upon my misery; and that detestable Laura helped to get me ready as cheerfully as if I—no, she—was going to be married. The last day I went into hysterics; and looked so ill—with my red eyes and pale cheeks—that Ma, to my great joy, got frightened, and sent for Dr. Leech. But that cross old monster only dangled his bunch of big seals, and said that I should be better at Turnham-green—a little change of air would do me good! Much he knows about medicine; for, at the very moment he was talking, I felt as if I must have fainted!

So in a cold drizzling rain—will you believe it, Nelly?—I was dragged into the carriage (for Pa had walked down to the office on foot, carrying his own blue bag, purposely that Ma might have the carriage), and propped up on each side with bags of oranges, cakes, and goodies, to cheat me into the stupid notion, I really imagine, that I was going to have a treat, in the same way that nurse always gives Julius his powders, with lots of sugar on the top! Oh, my sweetest Eleanor, words cannot express the wretchedness of your poor friend during that long ride! And yet Oates never did drive so quickly; he seemed to be doing it on purpose—whipping the poor horses through Hyde-Park as furiously as if we were trying to catch a mail-train, instead of going at that delicious crawling pace which we have always been accustomed to by the side of the Serpentine. Opposite Lord Holland's Park the horse fell. Oh, how my heart beat to be sure! I thought he was killed at least, and that we should be obliged to return home; but no such thing. He picked himself up as quietly as you would a pin, and the carriage went on even faster than before.

But, after all, Eleanor, what pained me most was Mamma's and Laura's cold-hearted conversation whilst I was in the corner suffering so much! They chatted as cheerfully upon worldly nonsense as if we were going to a pantomime. I shall never forget their cutting cruelty at such a moment as that, and, to make matters worse, what with crying and the rain, I felt as wet through as if I had been travelling along the submarine telegraphic, besides my tears spoiling my pretty puce-coloured bonnet strings, which were new that day.

At last we stopped before a large, cold-looking house, with wall-nailed tight round it like the curtains of the four-poster when Pa's ill in bed. It was all windows, with bars here and there, and the plaster looked damp, and, altogether, it was much more like a convent than a college; for I must tell you our school isn't called a "school" (for it seems there are no schools for young ladies, now-a-days), nor a "seminary," nor an "academy," but it's a "college." I thought I should have fainted away, only I had the cakes and oranges in my arms, and was afraid of dropping them down the area, when Mrs. Hextra, the Lady Principal, as she is called, began stroking me down, and calling me her "dear young friend," with whom she said "she should soon be on excellent terms" (only I am sure we never shall, excepting the "excellent terms" Pa pays her), and she went on playing with me, Nelly, just as I have seen the great big boa-constrictor, at the Zoological Gardens, cuddle and play with the poor little rabbit, before he devours it.

And now, dearest, mind you never mention what I am going to tell you; but all the sentiment and fine talking and writing about a mother's love is nonsense! utter nonsense! all a delightful sham!—for all the world, Nelly, like those delicious sweet *meringues* at the pastrycook's, days are so plentiful, and far cheaper, I am told, than maids of all work! Why, it was only last Friday morning I showed Ma the most beautiful advertisement there was in the *Morning Post*, all about a governess offering to "teach English, French, German, Italian, Latin, the use of globes, dancing, and crochet-work too, and drawing, painting, music, singing, together with the art of making wax-flowers astually, and all for £21 a year!" But Ma only patted me, and said she "should be ashamed to encourage such a terrible state of things," or some such stupid stuff that put me in a passion to listen. I am sure I shall never believe Ma loves me again, after throwing me from her dear fat arms into the long thin claws of that awful Mrs. Hextra! They opened and shut, and closed round me, Nell, exactly like a lobster's!

Before I could escape, Ma and Laura were gone, and I was left alone—all alone—in this large dungeon of a place, with every door fast. Well, Nelly, you have been to school—at least I suppose you have—so you can imagine how I was allowed to remain in the schoolmistress'—no, our schoolmistress is called a "Lady Principal"—in the Lady Principal's *boudoir* to compose myself; how I was treated to weak tea and thin bread-and-butter with Mrs. H., and asked all the time all manner of questions that made my cheeks burn with rage, about home, and about Mamma and Papa, until eight o'clock came, and with it the permission to retire, as "bed would do my head good." I was too glad to get released, if it was merely to indulge my grief, and cry myself to sleep underneath the bedclothes!

But, law! if it was so uncomfortable in the *boudoir* (and such a *boudoir*, Nell!—a dark closet with a handfull of cinders for fire, and full of gimcracks, little pincushions, lavender baskets, painted card-racks, and fire-screens, until it seemed furnished from a fancy fair)—but if that was uncomfortable, I say, it was positively wretched in the bedroom, with its six iron cramp-beds, three washing-basins, and one looking-glass! Yes, Nelly, only one looking-glass amongst six young ladies! I never heard of such a thing. And then the place was so, so very cold, that I am sure I shall have a red nose and chilblains for the remainder of my life; but I hope, my dear, fond Nelly, you will love me all the same!

Well, I cried myself to sleep, and it was a great comfort, I can assure you; and it seemed still the middle of the night, when a loud ringing in my ears frightened me out of my sleep, and made me nearly fall out of bed. And after that came a sharp, barking voice, calling out, "Now, young ladies! are you going to breakfast in bed?" and causing a general stretching, scuffling, and jumping up.

The cold glimmering dawn lighted only portions of the room, but I could see five other girls creeping about, half asleep, quarrelling for basins, engaging turns at the one looking-glass, joking, grumbling, yawning, and laughing; whilst I, poor I, sat hope-forlorn, shivering, half with cold and half with fear, on the edge of the bed. There a tall young lady, in a flannel dressing-gown, discovered me, and exclaimed, "Why, here's the New Girl! I say, my young lady, you had better make haste; the second bell will soon ring, and Miss Snapp will give you something to cry for if you're not ready."

Then they all came and stared at me (the rude things); and as I could not help crying, one of them called out, "Oh, oh! how affecting! Oh! oh! oh, oh!" ending at last in a loud bellow, in which I joined in painful earnest; and then they left me, and went on whispering, washing, combing, and lacing each other, until "Ding, ding, ding," went the second bell; and at the first sound they all scampered away, some with their dresses still unfastened, calling after others to come and hook them for them.

I never should have got finished myself, unless a mild, quiet-looking woman had not ventured to my assistance, and led me down stairs into the school-room, where I nearly dropped upon *feeling* the stare of some fifty girls fall upon me all in a lump, just like the water from a shower-bath after you have pulled the string. Oh, darling Nelly! what would I have given for one familiar face that I knew, or to have had your loving self by my side, so that I might have thrown my arms around your dear neck, and have a *good cry*; for I am sure that a good cry does one, frequently, much more good than a good laugh!

The buzzing, which had suddenly ceased on my appearance, began again with double vehemence, making nearly as much noise as the water when it's running into the cistern at home. Amidst the hurried whispers, I could detect, "What a milksop!" "Mamma's darling!" "She'll soon be broken in," &c.; when the same dog-like voice was heard to bark again, calling out above the uproar, "To your seats, young ladies! Silence! Five forfeits for the first who speaks!"

In the lull which followed, I was seated by the side of my quiet conductress, and permitted to write this letter to my dear darling Eleanor, just to fill up my time before breakfast, after which I am to be examined and classed according to what I know.

Oh, Nelly, I do so dread this day, and am so extremely wretched, thinking all the time what they are doing at home, and how Laura is rejoicing that she has got her sister away from home. But I must leave off, dearest; and I will promise you a letter every week (that is, of course, if I survive this day), in which I will tell you of everything that occurs in this filthy school—I mean college. That will be the only ray of plea-

LETTER II.—THE NEW GIRL.

sure, Nelly, whilh will shoot in this dark dungeon through the captive heart of your devoted, but wretchedly unhappy KITTY.

P.S.—Excuse haste and my dreadful scrawl.

P.S.—You will see I have forwarded this to the pastrycook's in Tottenham-court-road. Do not eat too many pink tarts, dear, when you call for it.

P.S.—We hear a great deal, Nelly, about the trials and troubles of the world, and of all we have to go through, and about school being the happiest time of our lives; but they seem to do all they can to make it miserable, and I don't believe any hardship on this world is worse than going to school, and having to face fifty girls, all making fun of the New Pupil.

THE SECOND LETTER LEFT.

SHOWING HOW KITTY FARED (OR SCARCELY FARED AT ALL) THE FIRST DAY AT SCHOOL, AND THE DREADFUL DISASTER THAT BEFEL HER.

OH! my dear Nelly, I'm in such a mess, and can't think how I am to get out of it. I would run away, only I don't know where to run to: and, besides, all the doors are fast; and more than that, I feel Ma would only bring me back again if I were to get away. Only think of that mean Mrs. —— (you know who I mean), opening all the letters; and I never knew this until my letter was in her bag. Miss Sharpe (who has promised to give this to some one who will drop it in the post on the sly for me) says every word we write home, and every word we receive from home, is pried into, and very often kept back if it does not exactly please the Lady Principal! A pretty lady! I wonder she isn't ashamed of herself! A nice example to set us young girls—actually teaching us to go a-peeping into other persons' secrets! Meggy (that's Miss Sharpe's name) says she is friends again with Ma, about mine. She is a "Sister" and Protestant-lawyer; and she has often heard him say that there's a fine of £100 for any one who breaks a seal upon trust papers! What fun it would be if we could make the Lady Principal pay £100! I'm sure it would only serve her right.

The beauty of it is, Nelly, she says she only looks at the signatures of the letters that come here, to see if they are from proper persons. This is very likely! How, then, does she know all that is going on in the girls' homes, if she never their letters? Two patience with her! I'm sure I shall never be able to look the mean creature in the face again.

Now, Nelly, I must tell you all about the young ladies; for I may not have another opportunity, dearest, of smuggling out a letter.

Well, then, when we went to breakfast, Mrs. Hextra was seated on a sort of raised throne at the end of the table, and all the girls walked up to her to curtsey, and "*Soukaiter le bon jour, Madame,*" and show her —that is a positive fact, dearest—their teeth and nails! Meggy told me this was to teach us to keep them sharp and in good fighting condition, as woman's natural weapons; but she was only laughing at me, for I learnt afterwards it was to see that they were properly cleaned every morning. But I think the practice might well be dispensed with, as not being over and above complimentary to young ladies!

When my turn came, I was preparing to show my teeth in real earnest—for I felt both indignant and ashamed of such treatment—when she took me kindly by the hand, and instantly, as token of kindness, my mouth shut of its own accord. She asked me how I had slept, and introduced me to Miss Plodder, who, she said, would cheer my spirits and make me feel more at home. She is such a fat, round, little sloppy, looks as stupid, too, as she is fat! If my spirits have to wait for Miss Plodder to cheer them, I'm afraid they'll have to wait long enough.

Well, my own darling Nell knows I am not dainty, and that I should think it wicked to be fanciful over good food; but I never did see such thick slices of bread, smeared over with what they called butter. I have not been so petted at home as to quarrel at any time with my bread and butter; but, on my word, I should as soon have thought of munching a deal board, as taking up one of the long slices—planks, rather—that were piled up, as in a timber-yard, before me; and yet, to see the poor hungry girls! If it had been wedding-cake, they would not have devoured it more greedily!

I thought of the dear delicious hot rolls soaked through and through with the hot fresh, that I had been in the habit of having every morning for breakfast, and sighed that I was not at home!

Meggy asked me which I liked best, "hay or beans?" Before I could answer that I had never tasted either, the Lady Principal inquired "if I took cocoa or coffee?" A beast—for the latter was brought to me: but unless I had been told it was coffee, I'm sure I should never have guessed it. It looked more like water taken from the Regent's-canal. Meggy whispered into my ear, "Hay's best;" and seeing me puzzled, she explained, shortly afterwards, that in their school dictionary they meant cocoa, and that beans was the English for coffee, from a popular belief, which, she said, "was extremely well grounded" (in their coffee cups), that those agricultural commodities formed the principal ingredients of their matutinal beverages.

Meggy Sharpe is such a nice girl, so clever and so full of fun, and such large bright black eyes, and a face laughing all over with mischief; it puts one in good humour merely to look at it. I feel I shall love her very much, but not so much as you, dearest Nelly.

After breakfast she told Miss Plodder that she would "take care of me, and introduce me to the Elders." Then, bidding me not to be afraid, she led me by the hand to a group of tall young ladies, and in a set speech, delivered in a mock tone, such as I've heard my brothers imitate Mr. Charles Kean and Wright in, "begged to present a humble candidate to their friendship and favour." The tallest, a Miss Noble, who seemed the head girl, and as stiff as a backboard, made me welcome, and then began questioning me in the following manner:—"Did I live in London?—at the West-end, of course?—perhaps in Belgrave-square? No! then near Hyde Park? No! then in one of the squares? Yes! Well, some of the squares were still respectable. In which of the squares did I live, pray?"

I mumbled out, as well as I could, "Torrington-square."

"Oh! hem! where was Torrington-square?" continued my tormentor. "Near the City, was it not? No!—what, near Russell-square and Gower-street? Gower-street! Well, really, she knew nothing of those parts of the town."

I was next asked, "Whether my mamma went to Court?" "No," I answered, in my ignorance: "but Papa does sometimes, and takes his blue bag with him when he has law business." This gave rise to shouts of laughter, and long exclamations of "Dear, dear?" whilst looks of pity were showered down upon me.

"I mean," continued Miss Noble, "her Majesty's receptions. My Mamma goes to Court; and I am to be presented myself by the Grand Duchess of Mechlenburgh-Sedlitz (remember it), on my leaving college;" and she tossed her head up to the ceiling, until I thought it would never come down again.

"How did you come last night?" resumed Miss Noble. "In the omnibus," cried out wicked Meggy, who immediately ran away. "Eh? I know how she came," said another beauty, "for I was in the drawing-room at the time, and looked out of the window; she came in a clarence with one horse." And they all tittered again, and I felt my cheeks growing red, though why I should be ashamed of Mamma's pretty clarence I don't know, even though it has but one horse.

I was next asked "Whether my paternal (meaning Papa, I suppose) lived at home?" "Of course," I answered; "where should he live?" "Why some people have an establishment in the City, and a family in a square. The shop (and they tittered again) must not be neglected." "Do not be rude, Miss Ogle," interrupted Miss Noble, affecting to be very serious; personalities are extremely rude; and, besides, Miss Clover's father may not live in a shop. Tell us, dear, what profession are you in?" "I—I'm in no profession," I said, trembling lest I should be laughed at again. "Dear! what beautiful simplicity!" said the Court lady, lifting her hands up. "And you—your father, child." "Oh! papa is a stockbroker." "A what? A stockbroker? Pray what's that?" "I know," said the young lady who had told about the clarence with one horse; "it's a trade; for I hear Papa talk of desiring his stockbroker to buy and sell; am certain now that I think of it, that they deal in bears and ducks." "No such thing," exclaimed a third girl with a turned up nose, "they sell old stocks, such as bankrupts' stocks, or retiring haberdashers' stocks; they're a sort of old-clothesmen." "At any rate, they are not professional, and therefore must be in trade," decided proud Miss Noble; and they all turned away from me, with sneers and contempt. "It's no such thing," I burst out; "My papa is a gentleman—a real gentleman—and he's quite as good, if not better than any of your papas, though you are so proud: and I shan't answer any more of your rude questions." "That's right," laughed Meggy; "that's the way to disappoint them. Don't tell 'em anything."

You should have heard, too, Nelly, their curiosity about my brothers, making me describe them over and over again—their eyes, whiskers, noses, and calling them by their names, Oscar, Alfred, Augustus, Walter, as if they had known them for years. The impudent girl, with the turn-up nose, actually said she felt she could madly love Oscar; and I couldn't help replying, "You need not trouble yourself, Miss; he'll never ask you." Silly thing! I'm sure Oscar wouldn't as much as look at her —not even in church.

But the greatest shame has yet to come. You can never believe what I am going to tell you, Nelly, although you know I scorn fibbing; Clara had just broken up, when a maid came in carrying a large tray; and only imagine my confusion when I saw laid out on it all my cakes and goodies! Miss Blight (the maiden who had brought me into the schoolroom) called me, and I was going to ask for permission to put them into my play-trunk, when—think of my surprise, Nelly! if she did not actually seize my plum-cake, and begin cutting it up into thin slices! At first I was so shocked I could not speak; and I was about to stop her, when she cut some large slices, and desired me "to hand them to the governesses, and then take the dish round to each young lady." I am afraid I looked vexed, and, in truth, I was nearly choking with passion; and I am sure you would have done the same, Nelly, for you would have seen no joke in treating girls to your goodies, after they had been making fun of you, and turning your papa and mamma into ridicule. But this was not all; for one rude thing, upon ascertaining from me that Mamma made it, said, in a voice running over with vinegar, "I thought so, for she has forgotten the plums." Then my oranges were cut into quarters, and I had to hand them round also (the governesses had halves!) until all was gone, and I only had two pieces myself as a favour. Now, don't think me greedy, Nelly—you know I don't care for feasting, only I do not like to be forced to be generous, and to give to all alike, whether I like them or not—offering as much to that proud Miss Noble (who is not too proud, however, to eat another girl's cake) as to dear Meggy. I dare say it was very pleasant when it's not your own—"share and share alike" is all very fine; but I should like to know when their goodies are coming? As I am the last girl entering this term, I suppose it won't be before next half-year? And I mean to say, Nelly, it is most heartrending—putting insult on the top of cruelty—to force you to help the governesses, and to double shares, too, whilst I'm sure my slice broke all to pieces, it was so miserably thin.

Oh, dear, there's Mrs. Hextra. If she catches me writing, I shall be found out; so, my own darling Nelly, I must say good bye. Mind you write soon, and tell me all about dear S. Has he asked after me? and often? Is he pale? Tell him not to forget your devoted, true-hearted,

KITTY CLOVER.

P.S.—Oh! Nelly, I have had such a fright; my heart is jumping up and down like a canary in a cage when the cat's underneath it. Only think of Lady Principal's coming up to my desk! I made sure it was to ask me for this letter, and I determined in my mind to swallow it sooner than let her read it. But, thank goodness! it was only to say she had not opened my last letter to you, as it was sealed; but, for the future, she would close them herself before they cover their contents. Much obliged! Catch me giving her any other than my home compositions. So, darling we are safe; but isn't it lucky?

P.S.—I'm sure you'll never be able to read this scrawl. Why didn't you answer my last?

LONDON AND NORTH-WESTERN RAILWAY.—The vacant chairmanship of this line is to be filled by Admiral Moorsom, a director of the company from the commencement, and also of the Chester and Holyhead Railway.

SCOTCH SETTLERS IN IRELAND.—Recent accounts from Ireland state that, owing to the failure of a number of farms in the best part of the provinces of Leinster, Munster, and Connaught, which have been abandoned by the emigrants who have proceeded to America and Australia, the proprietors in many districts are procuring, in lieu of their former tenants, a class of thrifty, hard working, and well-skilled agriculturists from Scotland. These persons are bringing with them, in many instances, large flocks of sheep, which it is expected will thrive better on the richer lands of this country than those to which they had been accustomed.

MONETARY TRANSACTIONS OF THE WEEK.

(From our City Correspondent.)

Notwithstanding that the amount of money business transacted in the Consol Market this week has been comparatively small, prices have had an upward tendency, the Three per Cents having improved to 100¾. This improvement in value is chiefly attributed to the immense abundance of money, and the near approach of the dividend payments, which, as a matter of course, will produce an increased amount of surplus means. The favourable returns of the exports of the United Kingdom have had considerable influence upon the minds of the leading jobbers, many of whom have entered into large bull operations for the next account. During the month ending the 30th of September last the declared value of the shipments of home manufactures was £6,870,386, against £6,645,928 in the corresponding period in 1851, showing an increase of £224,458. The total exports during the first eight months of the present year were £47,009,146, against £47,157,584 in 1851.

The Bank of England, and, indeed, the whole of the private bankers, continue to make large advances upon stocks; whilst good commercial bills are readily discounted, at from 2 to 2½ per cent.

In the metropolis, as well as in the provinces, a great scarcity of silver coinage is still felt. The fact appears to be that nearly the whole of the silver that is coined at the Mint for some time past, has been exchanged for gold, to ship to Australia. Additional exertions must be made at the Mint, or the present difficulties experienced in obtaining adequate supplies of silver to pay wages, &c., will continue. It is suggested that gold coins of 5s., 7s. 6d., 10s., and so forth, should be issued, and we may observe, that the drain of silver from the United States has induced the Government to adopt the plan of coining gold dollar pieces (worth about 4s. 6d.); hence the loss of the former currency there was not long felt there. It is clear that public opinion has long since declared itself against our five-shilling pieces; but the free circulation of half-crowns must ever be advantageous.

On Monday and Tuesday the Three per Cent. Consols were very inactive, at 99¾ to 100; but, on Wednesday, they became firm at 100⅛ to 100⅜. The market was not quite so active on Thursday, yet the Three per Cents were done at 100⅛ ⅜ or Money, and 100⅜ for the next Account. Exchequer Bills, March, £500, were 70s; and, ditto, £1000, 68s. to 71s pm. India Bonds have been 83s. to 85s pm. A transaction has taken place in India Stock, at 278.

Since we last wrote, very large imports of bullion have been reported: viz. £293,200 in gold from Australia; £16,000 from Portugal, and 370,168 dollars from New York. Our advices from the above colony state that the produce of the mines was rapidly increasing, upwards of 100,000 ounces of gold having been received at Port Phillip in one week by the same escort. In California, the yield continues large, and the shipments to the New York average about £360,000 each week. In our market silver has become scarce for continental purposes, owing to upwards of 1,000,000 ounces received by the last West India steamer having been sold for India. The prices has, therefore, advanced 5d. per ounce.

One of the leading features in the Foreign House has been the appearance of a new Swedish loan for £400,000. The amount, which is to be issued at 93, and bear four per cent. interest, will be secured upon certain localities in Sweden, where improvements are going on. The bonds will be drawn at par, at the rate of 100 per annum, and the last instalment will become due on the 1st of September, 1855. A large transaction has already taken place in the loan, at from 2⅝ to 3 pm. Foreign Bonds generally have not been very active: yet the fluctuations in prices have been comparatively limited. Mexican Stock has rallied heavy; but Peruvian has commanded the extreme rates of last week. The whole of the money advanced by Messrs. Rothschild to pay the interest due upon Mexican Stock has not yet been repaid. On Thursday, Brazilian Small, were done at 101; Ditto, Scrip, 1¾ to 1 prem.; Equador, 4½; Mexican Three per Cents., 24¾ ⅛; Peruvian Six per Cents., 103¾ ex div.; ditto, Three per Cents. Deferred, 63; Spanish Four-and-a-Half per Cents., 104⅛; Spanish, New Deferred, 33⅜; Turkish Six per Cent. Loan, 8½ prem.; French Rentes, Four-and-a-Half per Cents., 104f 25c. (Exchange, 25f 50c.); Dutch Two-and-a-Half per Cents, 65 to 64⅝; and Dutch Four per Cents, 97⅛ ex div. Transactions have been noticed in Danish Three per Cents, at 82 ex div.; Granada One-and-a-Half per Cents, 21¼; Ditto Deferred, 11¼ to ⅜.

A new steam company has made its appearance this week for the purpose of trading with the Mediterranean. The capital is fixed at £500,000, in £20 shares.

The Foreign Exchanges present a very favourable appearance, gold being 0 42 per cent. dearer in London than in Paris; 0.35 dearer than at Hamburg; and 0 80 dearer than at New York. These quotations show a slight profit on shipments; hence there is every prospect of a further increase in the stock of gold in the Bank.

Bank Shares have ruled very steady; and, in some instances, prices have again improved. Australasia, 58½ ⅝; London Chartered, 30⅝ ½; Union, 82; Royal Australasian and Gold Importing, 1½; London Joint Stock, 19½; London and Westminster, 23¾ ½; Oriental, 39, ex. New; Provincial of Ireland, New, 17¼; Union of London, 12.

Dock Shares have sold as follows: Commercial Stock, 108; East and West India, 168; London, 130; St. Katharine, 95; Southampton, 34; Victoria, 6.

General Screw Navigation Company's shares have marked 50¾ to 51 ex div.; Australian Royal Mail 4 to 3¾; General Steam Navigation, 28¾; Peninsular and Oriental, 86 to 86½; Ditto, New, 86¾ ⅞; Royal Mail, 78¾ to 79.

The rise in the value of Canada has had some influence upon Railway shares, the prices of which have slightly improved. Several sales have made their appearance; but, as they hold out a very poor prospect of profit to the shareholders, they have commanded very little attention. The following are the offic al closing prices on Thursday:—

ORDINARY SHARES AND STOCKS.—Ambergate, Nottingham, and Boston Junction, 6½; Bristol and Exeter, 70¾; Caledonian, 17⅞ ex div.; Chester and Holyhead, 20½; East Anglian, 4½; Eastern Counties, 1¼; Eastern Union, 8⅝; Ditto, B and C, 6⅝; East Lancashire, 18½; Edinburgh and Glasgow, 76; Great Northern Stock, 79½; Great Southern and Western (Ire and), 94; Great Western, 95½; Lancashire and Yorkshire, 84⅛; Ditto 11½; Lon Northern, 104; London and Blackwall, 8½; London, Brighton, and South Coast, 103⅜; London and North-Western, 118⅜; London and South-Western, 89½; Manchester, Sheffield, and Lincolnshire, 31½; Midland, 76⅝; North British, 30⅜; North Staffordshire, 13⅜; Oxford, Worcester, and Wolverhampton, 47; Scottish Central, 86; Scottish Midland Con., Shrewsbury and Chester (Oswestry), 15; Shropshire Union, 3½ ex div.; South Devon, 2½; South-Eastern, 7¼; South Wales, 40½; Thames Haven Dock and Railway, 3; Waterford and Kilkenny, 6½; York, Newcastle, and Berwick, 66¾; Ditto, Extensions, 11⅜; York and North-Midland, 49.

LINES LEASED AT FIXED RENTALS.—Buckinghamshire, 108½; Leeds and Bradford, 107½; Manchester, Buxton, and Midland, 53½; West Valley, 30½.

PREFERENCE SHARES.—Caledonian, 100 ex div.; Chester and Holyhead, 18⅞; Eastern Counties Extension, No 1, 1⅝ pm.; Ditto, No 2, 1⅝ pm.; Eastern Counties Five per Cents., 17¾; Great Northern Five per Cents., 127; Ditto, Sixth, redeemable at 10 per Cent. prem., 11⅜; Great Western, 4½ per Cent., 106¾; London and South Western, Consolidated Thirds, 83; Midland (Bradford Scrip), 106⅜; North British Extension, 22. North British Six per Cents., 104; Shrewsbury and Chester, 17½; York Newcastle, and Berwick Four per Cent., 104.

FOREIGN.—Caceres and Portugal, 1½; Dutch Rhenish, 7½; Great Indian Peninsular, 107½; Madras Extension, 1½; Ditto, No 3, 1½; Madras, 5½; Northern of France, 8½; Paris and Lyons, 24½; Paris and Rouen, 37½; Rouen and Havre, 19½; Sambre and Meuse, 8½; West Flanders, 4½; Western of France, 13½.

MINING SHARES have been steadily inquired for. Brazilian Imperial Iron were 3½ to ¾. Brazilian Imperial, 7½. Cwm Mine, 1. Colonial Gold, 1½; Nouveau Monde, 1⅝; Port Phillip, 1½ to ⅝; Quartz Rock, ⅞; South Australian, 1⅝; and Van Diemen's Land, 2¾.

FRIDAY EVENING.—Scarcely any change has taken place in the value of Consols to-day. The Three per Cents—Money and the Account—are 100⅝ ⅜. Exchequer Bills (June) are 68s to 70s premium. Foreign Bonds and Railway Shares tolerably firm.

THE MARKETS.

CORN EXCHANGE (Friday).—We have again to report the arrival of a very moderate supply of fine samples up to our market's closing, it having been confined to 2710 quarters. The quantity of foreign wheat offered fresh up this morning is by no means large, and was mostly sold at Monday's currency. For forward delivery a few sales took place at the late rates. The arrivals of foreign wheat having come in short, the market was better supplied. Fine qualities were in fair request, at full prices. In low and middling parcels little was done. There was a fair demand for barley for grazing purposes the value of which was well supported. The sale of all kinds of barley both small, the article being in good request and in some cases dearer. Oats were the turn higher. No change in malt. Holders grn rally were very firm. We had a moderate supply for oats, and selected samples produced a little more money. Beans, peas, and flour were firm, and quiet.

ARRIVALS.—English: wheat, 1710; barley, 1880; oats, 490; flour, 800 sacks. Irish: oats, 4,840. Foreign: wheat 22,720; barley, 1900; oats, 490; flour, 4770 sacks; 13,550 barrels. English.—Wheat, Essex and Kent, red, 35s to 40s; ditto white 38s to 43s. Norfolk and Suffolk, red, 34s to 38s; ditto white, 37s to 42s. Rye, 30s to 32s, grinding barley 20s to 22s, distilling ditto, 27s to 29s; malting ditto 28s to 32s; Norfolk and Lincoln malt, 52s to 56s. Grey peas, 32s to 34s. Maple, 33s to 35s. Kingston and Ware, 36s to 38s. Harvester, 40s to 42s. Yorkshire and Lincolnshire feed oats, 17s to 21s, potato ditto, 20s to 24s, Youghal and Cork, black, 17s to 20s, ditto, white, 19s to 22s. Oak beans new, 32s to 34s, ditto old 33s to 36s; grey peas, 30s to 34s. maple, 33s to 36s; white, 37s to 40s; bollers, 36s to 40s per quarter. Town-made new, 76s to 78s; Suffolk 72 to 75s Norfolk and Yorkshire ditto 70s to 72s per sack. Foreign: American flour 19s to 23 per barr. French ditto 45s per sack.

Monday.—Only a moderate supply of wheat to-day, and the trade was steady and quite as dear as last week. Most of the parcels arrived from the Black Sea.

Tuesday.—English: sowing, 30s to 35s Baltic, crushing 42s to 46s; Mediterranean and Odessa 41s to 47s; humpeed 36s to 46s per quarter. Coriander, 10s to 18s per cwt. Brown mustard seed, 6s to 8s. white ditto, 5s to 6s per bushel. Tares, 5s 6d to 6s per bushel. English rapeseed, new, £21 to £24 per last of 10n quarters. Linseed cakes, English £8 to £9 10s; Baltic £7 10s to £7 15s per ton. Rape cakes £4 to £4 10s per ton. Canary, 33s to 44s per quarter. English clover seed, red, 40s to 50s; white ditto, 60s to 69s per cwt.

Bread.—The prices of wheaten bread in the metropolis are from 6½d to 7½d; of household ditto, 5d to 6d per 4lb loaf.

Imported Grain, Average.—Wheat, 38s 9d; barley, 17s 6d; oats, 17s 6d; rye, 30s 5d; beans, 33s 10d; peas, 30s 6d.

The Sea Fisheries Average.—Wheat, 41s 7d, barley, 27s 8d; oats, 16s 11d; rye, 30s 6d; beans, 34s 3d; peas, 30s 8d.

Duties.—Wheat (q rd barley, 1s 6d oats, 1s 6d; rye, 1s 6d; beans 1s 6d; peas, 1s 6d.

Flour.—The sales to we ly supply of which is limited, are steady, the demand is tolerably firm, at very fu prices. Common sorts continue to sell at from 8d to 8½d per 8lb. Up to Monday last, our ve paid for foreign was 19 to 23 per barrel.

Sugar.—During the week of the week, a steady business has been transacted in all kinds of raw sugars, at full prices. Brown to fine grocery sorts have sold at from 36s to 38s. Common to middling yellow 32s 6d to 35s, good middling to good, 35s 6d to 37s, good grainy 36s 6d; fine white 38s 6d to 40s; low to fine Bengal Madras 32s to 36s; ordinary yellow 35s 6d to 37s per cwt. Refined goods are in but modern o request at from 44s to 46s 6d. The imports into the United Kingdom were 1,707 447 cwt. against 1,279 252 cwt in 1851.

Coffee.—Generally speaking the trade has been in a very inactive state but no material change has taken place in prices. Good ordinary native Ceylon is quoted at 47s to 48s per cwt.

Rice.—The demand is not so active as last week; but we have no sellers on lower terms.

Fruit and Plants.—Currants and raisins are inheavily firm. Cherries are 50s to 52s the latter, 40s to 43s per cwt.

Provisions.—The Irish butter is in good request, and prices are well supported. Carlow, 80s to 86s; Cork, 79s to 80s and Limerick 73s to 78s per cwt. English and foreign parcels supported at late rates. Bacon is rather lower in price. For forward delivery have been reported at from 50s to 58s per cwt. Most other kinds of provisions support previous rates.

Tallow.—A good business is doing in our market at full quotations. P T C on the spot is selling at 44 9d for old, and 45s for new. Town tallow, 41s 6d per cwt net cash; rough fat, 2s 2d per 8lbs.

Oils.—Linseed oil is very dull, at 29s per cwt. Common fish qualities have a downward tendency. Rape oil is firm, and drive somewhat dearer.

Hay and Straw.—Meadow hay, £3 15s to £4 0s; clover ditto, £3 15s to £5; and straw, £1 8s to £1 12s per load. Trade dull.

Spirits.—No change has taken place in the value of rum, to which article a steady business is doing. Fine old brandies are again dearer. Geneva and whiskey is ady.

Wool.—There is a steady, though by no means active, inquiry for most kinds of wool, the prices of which are very supported.

Potatoes.—The supplies still continue large, and in excellent condition Regent's are selling at 70s to 80s; Shaws, 50s to 60s; Rocks, 40s; and other kinds, 30s to 35s per cwt.

Hops (Saturday).—Although the supplies f m the country are very extensive, the demand for most kinds of fine has been very steady. The sales of Sussex and Kents are well supported. Yearlings are a slow sale. The duty is still called £210,000 on the 1852 growth.

Borough packets, 70s to 80s; Kent, 66s to 98s; Mid Kent, 102s to 140s; East Kent, 120s to 150s per cwt.

Coals (Friday).—Eden Main, 16s 9d; Belmont, 16s 9d; Braddyll, 17s 3d; Hetton, 17s 6d; Hartley, 17s 6d; Lambton, 17s; Stewarts, 17s 6d; Townley Moor, 18s; Usworth, 18s 3d; Adelaide Tees, 17s 6d per ton.

Coals (Friday).—Eden Main, 16s 9d; Belmont, 16s 9d; Braddyll, 17s 3d; Hetton, 17s 6d; Hartley, 17s 6d; Lambton, 17s; Stewarts, 17s 6d; Townley Moor, 18s; Usworth, 18s 3d; Adelaide Tees, 17s 6d per ton.

Cattle (Monday).—The supply of beasts here to-day was again excessive, but in very middling and low condition The primest breeds moves off steadily, at full prices. Otherwise the trade was in a sluggish state. Wh ch sheep we were steadily supplied. On the whole, the demand for that description of stock was firm, and Monday's improvement in A.. other kinds of sheep little alteration, and we paid per 8 lb lower The pork trade was steady at our quotations. Much cows were dull, at from £14 to £18 -5s each, including the young calf.

Beef, 2s 8d to 3s 6d; Mutton 2s 8d to 3s 6d; Veal, 3s 4d to 4s; Pork, 2s 8d to 3s 4d per 8lbs.

Beasts 3,600, sheep 23,000, calves 300, pigs 240.

Monday.—Only a moderate supply of beasts here to-day, and the trade was steady at our quotations. Much cows were dull, at from £14 to £18 -5s each, including the young calf.

Beef, 2s 8d to 3s 6d; Mutton 2s 8d to 3s 6d; Veal, 3s 4d to 4s; Pork, 2s 8d to 3s 4d per 8lbs.

Beasts 3,600, sheep 23,000, calves 300, pigs 240. Foreign beasts, 368, sheep, 1800, calves, 20.

Newgate and Leadenhall (Friday).—The greens demand ruled steady and prices were well supported.

Per 8lb of the carcase—Inferior beef, 2s 8d to 3s 2d; middling ditto, 3s 4d to 3s 6d; prime large ditto, 3s 8d to 3s 10d; prime small ditto, 3s 10d to 4s; large pork, 3s 10d to 3s 6d; Inferior mutton, 2s 8d to 3s 10d, middling ditto, 3s 0d to 3s 6d; prime ditto, 3s 8d to 4s 2d; veal, 3s 4d to 4s 8d; small pork, 3s 8d to 3s 10d.

Clocks and Chronometers. Watches manufactured with every modern improvement Observe. From 10, Strand, and Coventry-street.

LEVI'S ARGENTINE SILVER PLATE.—Established 17 and 18, CORNHILL. This beautiful metal continues to stand unrivalled amongst all the substitutes for silver. It is as pure in appearance, combines with the brilliant appearance, defies all competition in durability, as it did 12 years since. Its whole manufacture was introduced by LEVI and SONS to the public and, notwithstanding the many previous and unprincipled imitations, the present demand exceeds all former periods, thus giving a convincing proof of its having answered the end proposed, which was to produce an article possessing the durability and appearance of solid silver at one-sixth its cost. The magnificent stock has recently been enriched with many special novelties in Dinner Tea and Breakfast Services, and never possessed so many attractions as at the present time. The Spoon and Fork department includes all the various patterns that are made in solid silver, and orders to any extent can be immediately executed. A new and enlarged pattern Table Knife and Fork is just published, and now ready for circulation. It may be obtained of the Agents for its manufacture, LEVI and SONS, 17 and 18 Cornhill, London. The public are hereby cautioned that no Spoons is genuine except purchased at Nos. 17 and 18, Cornhill. No other parties are authorised to sell it.

PIANOFORTES at Manufacturing Prices.—Messrs HOLLERESSER and Co. 444, New Oxford-street, London. Beg to inform their friends and the public that they have REDUCED the PRICE of their Pianos Pianofortes, in rose nebra, or walnut, to 20 guineas, to 22 guineas each. These beautiful instruments are 82-octaves (C to A) in compass, and contain all the recent improvements possessed of amazing power, combined with sweetness of tone, and finished with the same taste and attention that have hitherto distinguished their manufacture. Warranted for three years, and exchanged if not approved. A variety of second hand, by Broadwood, Collard, and other makers, from £10; and double and single-action Harps, by Erard, from £16 to £30. Every description of musical instrument tuned, repaired, and taken in exchange.

VINAIGRE de BORDEAUX.—"College of Chemistry, Liverpool.—Dear Sirs. The cask of French Wine Vinegar came safely on board the Ocean Monarch. I analysis, and find it to be perfectly pure, i.e., it only contains the matters which are in all fermented grape-juice. It is very much liked in my house, being a most agreeable acid. The reason of my sending to you for Vinegar was on account of the dreadful, shameful stuff which is sold under that name. some of the samples I examined contained sugar, oil of vitriol, and arsenic. Yours truly,

"JOHN MURRAY, F.R.S.E., Dr. Phil., &c., &c.

To Messrs. W. and S. Kent and Sons, Corporation-street, Liverpool."

See also the Report on Vinegar of the Analytical Sanitary Commission, in "Lancet of the 17th January last, quoting" which and find the names of retailers throughout the Kingdom, may be had from the importers, W. and S. KENT and SONS, Upton-upon-Severn.

N.B. Agents for London, Liverpool, Bristol, and Gloucester.

BARON LIEBIG on PALE ALES.—"H I wished to associate wi h any individuals, however by remarks on the e liged audience ten of bitter beer with strychnine. It would have been unjust to have mentioned names without having by which steps and not Mr. Allsopp s. I was engaged in investigating the Burton mode of brewing beer, and it was also in the brewery of Mr. Allsopp that the Bavarian brewers acquired all the instructions they obtained as regards the manufacture. I expressed of this beverage in my letter to Mr Allsopp is advertised in such a manner as to lead to the conclusion that my opinion was exclusively confined to Mr. Allsopp's beer. This was not the case: my remarks referred to that class of beer

"Giessen, 24, 1851." "JUSTUS LIEBIG."

N.B.—The Baron's original letter is in the hands of Mr. Miller, at the Jerusalem Coffee-house, Cornhill, where it may be seen by any one making an inquiry on the matter.

THE CHOIROPOTAMUS AND LEUCORYX, IN THE ZOOLOGICAL SOCIETY'S GARDENS, REGENT'S-PARK.

The discovery of a new quadruped, so vividly coloured, and so singular in its form, as the African hog which the Zoological Society have recently obtained from the Cameroons river, is not a little remarkable when we consider the industry with which the world has been searched for every possible form which may by any chance have an effect in adding to or improving the races of domesticated animals subservient to the wants or luxuries of civilized man.

The Society have already produced a very interesting and shapely cross between the Indian wild hog and the Berkshire breed; and it will be desirable to ascertain in what degree the admixture of this new blood may hereafter tend to improve the somewhat over-bloated candidates for porcine honours at the critical board of the Smithfield Club in Baker-street.

The Choiropotamus, or Red Hog of the Cameroons, is also found on some of the other rivers of Western Africa; and, although it has hitherto escaped the grasp of scientific naturalists, has long been known to the merchant explorers of those mysterious streams. Its nearest analogue is the Bosch Vaik of the Cape, the *Sus larvatus* of Cuvier, an animal so far from common, that no spoil of it glared upon the walls of Gordon Cumming's Trophy House, the richest museum of the African chase which has yet been gathered, or perhaps will be gathered, in the Kaffrarian wilderness. The bright red colour of the Choiropotamus, the white streak which marks the line of its back, and the long lynx-like tufted ears, are features of so striking a character that it is almost incredible that it should, for so long a time, have escaped the numerous correspondents of the Zoological Society, whose indefatigable labours have helped so largely in accumulating the vast collection of species which are heaped together in almost painful profusion in their menagerie.

Next to the Choiropotamus, we found many additions of minor interest; and yet, perhaps, these give the most conclusive evidence of the successful management of the place. We allude to the young which have been born in the Gardens during the current year; and among them, especially to the Giraffe and the Leucoryx. The former is chiefly remarkable as being the sixth which has been bred in Europe, and, like his predecessors, the offspring of the fine old female imported by the Society in 1836.

The Leucoryx, on the contrary, is the first of her race that has been born out of Africa, and has thriven in so remarkable a manner as, already almost to equal her parents in height. The delicate colouring the long, exquisitely-curved horns, and the noble carriage of the Leucoryx, stamp it at once as one of the gems of the collection; and, in fact, the animals in question are the only specimens of their kind in Europe. The male was obtained by the late Lord Derby from the Gambia, the mother came from Nubia; and the species may, therefore, be taken to inhabit, like many others which are common to the western and eastern coasts, the whole extent of the Negro zone in Africa. It occurs in the ancient monuments of Egypt, as forming part of the tribute paid to the Kings by Ethiopia; and it, therefore, in addition to its natural beauty, has a peculiar historic interest, which must be appreciated by every one who is familiar with the ancient legends of the Valley of the Nile.

LEUCORYX AND YOUNG, IN THE GARDENS OF THE ZOOLOGICAL SOCIETY.

CHOIROPOTAMUS, OR RED HOG OF THE CAMEROONS, IN THE GARDENS OF THE ZOOLOGICAL SOCIETY.

IMPROVEMENT AND ENLARGEMENT OF GUY'S HOSPITAL.

This important extension of Guy's magnificent foundation has been effected by the removal of several adjacent small houses belonging to the estate, so as to afford space for the construction of two spacious and handsome wings to the Hospital, from the design of Mr. Hawkins; one of which extends nearly to the High-street, in the Borough. The eastern wing, already completed, consists of three long and spacious wards, with sufficient room for from 50 to 80 beds in each double ward. The building is three stories high, and of yellow brick, with a long terrace or balcony in stone extending from one end to the other, for the convenience of those patients who are able to walk and enjoy the fresh air. The interior of this wing is fitted up with every possible accommodation —wash-houses, water-closets, baths, &c., and to be ventilated and heated on a new principle. For this purpose there are three high towers or minarets, with an open cupola on the summit, at the top of which is a vane, which turns round with the wind, and thus sends down the shaft or turret the fresh air into the wards, which is regulated according to the degree required. These turrets or air-conductors have also the advantage of carrying off every effluvium that may exist. The wards, it is stated, are to be heated on the same principle as the new Houses of Parliament. Other extensions and improvements will include a new museum on a large scale, a commodious theatre for the medical students attending the lectures, and spacious rooms for anatomical study, and every branch of their profession. In the new building there will be separate fever wards, cholera wards, and wards for contagious disorders. The present insane ward for women (in which there are now from twenty to thirty) will be replaced by a more cheerful and enlarged one, so as to admit as many as fifty or upwards. Guy's Hospital is one of the richest in the metropolis; and when the improvements now making are completed, it will be the most extensive medical institutions in London.

GUY'S HOSPITAL, SOUTHWARK.—NEW BUILDINGS.

London: Printed and Published at the Office, 198, Strand, in the Parish of St. Clement Danes, in the County of Middlesex, by William Little, 198, Strand, aforesaid.—Saturday, October 9, 1852.

THE ILLUSTRATED LONDON NEWS

No. 585.—VOL. XXI.] FOR THE WEEK ENDING SATURDAY, OCTOBER 16, 1852. [SIXPENCE.

LOUIS NAPOLEON ON THE ESTABLISHMENT OF THE FRENCH EMPIRE.

SOMETHING like common-sense has at length reached us from France. Louis Napoleon has spoken out on the subject of the "Empire." It was high time that he should do so, for the outrageous, and at times blasphemous folly of the prefects, mayors, and other functionaries, who have lately been courting his favour, and speaking in his behalf, was such as to bring the very name of Frenchmen into disrepute, and to surround the half-established Empire with the ridicule of the world. The President has hitherto been noted for his reserve, and for the possession of a remarkable talent for silence; but, in promulgating his sentiments so boldly and so sensibly as he did at Bordeaux, he has laid the foundation of a new and a better fame. Whatever his future acts may prove to be, it will not be denied, even by his most strenuous opponents, that his speech is a good one.

In that document, which our readers will find fully reported in another portion of our paper, the President has once for all declared that the Empire will immediately be re-established. There was but little room for doubt upon the subject before, but a declaration so positive has removed the last remnant of uncertainty. But it is not so much for the announcement of the fact—although that alone would be sufficient to render the speech important—as for the declaration of principles which it contains, that his short and spirited address to the citizens of Bordeaux will be perused with interest throughout Europe. As if apprehensive that his unlucky renewal, a few days previously, of Louis XIV.'s threat of converting the Mediterranean into a French lake, would be ill-received by the great Powers, and especially by the Government of Great Britain, Louis Napoleon seems to have taken the earliest opportunity to convey a more consolatory assurance of his intentions. "Certain persons say the Empire is War," remarked the President; "but I say the Empire is Peace." Warming with the theme, he went on to observe, "Glory may be left as an inheritance; but war cannot. War is not made for mere pleasure, it is made for necessity. Woe, woe to him who shall the first give the signal of a collision, whose consequences would be incalculable." All this produced, as well it might, a profound sensation; and when the orator went on to explain, at greater length, what his own ideas were of the duties that would devolve upon him, if invested, as he is sure to be, with the hereditary or life dignity which is the object of his ambition, the applause of his hearers became irrepressible. "We have," said he, "immense and uncultivated lands to reclaim, roads to open, ports to dig, rivers to render navigable, canals to finish, our railroads to complete; we have, opposite to Marseilles, a vast kingdom to assimilate to France; we have all our great ports of the west to bring near the American continent by the rapidity of the communications which are still wanting to us; we have, in fact, ruins to build up everywhere, false deities to pull down, truths to render triumphant. It is in this manner I understand the word Empire, if the Empire be re-established. Such are the conquests I meditate, and you all who surround me, who wish as I do the good of your country, you are my soldiers!"

Nothing can be better than this; but the first feeling that will be excited in this country, and possibly in other parts of Europe, by the perusal of so remarkable a peace manifesto, will be one of doubt whether the President is to be trusted. The sentiments are just and noble; but are they sincere? The peaceful career so ably sketched by the Emperor *in posse*, would be the truest and wisest policy to be pursued by the Emperor *in esse*; but is it in reality that which would best accord with the temper of Louis Napoleon himself, and that of the nation which has chosen him? Without wishing to accuse of falsehood a man whose antecedents show that he can break the most solemn oaths when it suits his purposes to do so, the critics of his Bordeaux speech may at least be permitted to compare his words with his actions, and to ask if they agree? We certainly do not imagine, with some persons, that Louis Napoleon desires to pick a quarrel with this country—to wipe off the remembrance of Waterloo—to seize the Queen in the Isle of Wight—to land fifty thousand men in the Bay of Pevensey, or a hundred thousand in the Bay of Bantry; or that he meditates any other of the countless insane projects of war against, and invasion of, England that have been attributed to him by credulous alarmists. But, yet, remembering as we do the traditions of the French people; their love of military display, paraphernalia, and bustle; their worship of "glory;" their ignorance of "duty," as distinguished from mere renown; and their constant hankering to possess Bel-

ST. LEONARD'S-ON-THE-HILL, NEAR WINDSOR, THE RESIDENCE OF THE RIGHT HON. THE EARL OF DERBY.—(SEE NEXT PAGE.)

gium and the Rhine frontier, we cannot altogether divest ourselves of the belief that a war, however foolish and unjustifiable, would not be unpopular. It is the great misfortune of France to have the minds of its male population continually diverted from peaceful pursuits by the military education that they all receive. By far the greater part of the retail trade, and no inconsiderable portion of the wholesale business of the country, are conducted by women. Even the operations of agriculture fall almost exclusively to the lot of the weaker sex; while the men, who should be engaged in them, are marching or countermarching, or playing at cards or dominos, in the *cafés* and *estaminets* which military people frequent. One great result of this unfortunate bias of the national intellect, communicated to it by the first Napoleon, is to be seen in the fact that, while the commerce of other countries is expanding, that of France is restricting itself. The foreign trade of France is growing less and less every year; the home trade suffers, as a necessary consequence; and agriculture, that always declines in countries where trade and manufactures are neglected, rears up a race of men, half soldiers and half farmers, who, living in misery by their peaceful pursuit, cling to the idea of the war-like one, in the hope that it will improve their perishing fortunes. We believe that Louis Napoleon thoroughly understands this feeling and its causes; and, in spite of the noble sentiments in his Bordeaux speech, we think he is not so great an enemy to war as he would have the world imagine. Nay, more—we believe that he would only be too glad to find or make a war, which should feed the French with the glory which they love, which should employ a portion of his large army, and inaugurate his reign with a succession of victories. We do not believe that he is mad enough to rush into an encounter with Great Britain or any other first-rate European power; and we interpret his Bordeaux speech as a true indication of his feelings, so far as this country is concerned; but we may still ask—why, if he be so peacefully inclined, should there be such activity in his arsenals? Why all these ships? Why all these enormous contracts for naval stores and equipments? Why the falsification of the naval lists, to make the world believe that France possesses fewer ships than she really has? And, in addition to all these causes of not unreasonable suspicion, why does the President return, without an attempt at reduction, an enormous army, at a cost which ought to be frightful to a wise Frenchman to contemplate, especially when he knows that the national income is by no means equal to the expenditure, and that every available source of further taxation has been tried and exhausted?

We take the truth of the matter to be that in his Marseilles speech the President inadvertently allowed his real intentions to escape, and that his policy will be to follow out that of Louis XIV., and convert, if possible, the Mediterranean into a French lake; not by a direct collision with this country, but by indirect means, and by war with a more defenceless power.

To establish French influence in Egypt by diplomacy is a course fairly open to him, however much it may be disliked in this country, and there is another region bordering on the Mediterranean to which the attention of the French has been long and anxiously directed. "Opposite to Marseilles," says the President, "there is a vast kingdom to assimilate to France." That kingdom is Algiers, and the next neighbour of that kingdom is Morocco. Under Louis Philippe the French tasted the sweets of a victory over the Moors, and the remembrance of Moga lor is perpetuated in the name of one of the streets of Paris. No long time has elapsed since Tangiers was bombarded, and we think it will not be very long before the "Emperor of Morocco" will find himself in direct collision with the "Emperor of the French." How such a war would affect this country and the rest of Europe, we need not now inquire.

ST. LEONARD'S-ON-THE-HILL, NEAR WINDSOR,

RESIDENCE OF THE RIGHT HON. THE EARL OF DERBY.

ST. LEONARD'S, a fine eminence in the Royal Forest of Windsor, is clothed with venerable oaks and majestic beeches, and is altogether a sylvan retreat of picturesque beauty. In this delightful retreat Maria Countess Dowager Waldegrave built for her abode, many years since, a noble seat, which, with its pleasure-grounds, lawns, and meadows, consisting of about 75 acres, were sold, in 1781, to Mr. Macnamara, for 7000 guineas; of whom the property was purchased by General Harcourt for £19,000.

The estate has just been leased to the Earl of Derby. The Illustration upon the preceding page shows a portion of the mansion, and its well-wooded grounds, and that charming accessory to a well-appointed residence—a conservatory, communicating by an arcade with the house. The site commands, through the openings between the masses of trees, a splendid view of the surrounding country, in which "majestic Windsor" lies at less than three miles distance. The roadway to the house also presents several bits of exquisite beauty and cultivated landscape, such as can scarcely be found in any other county of England. This is altogether a retreat—

> Where Jove, subdued by mortal passion still,
> Might change Olympus for a noble hill.
>
> POPE'S *Windsor Forest.*

The context is suggestive:—

> Happy the man whom this bright Court approves,
> His sovereign favours, and his country loves:
> Happy next him, who to these shades retires,
> Whom Nature charms, and whom the Muse inspires
> Whom humbler joys of homefelt quiet please,
> Successive study, exercise, and ease.

WILLS.—Probate of the will of the late Right Hon. George Ralph Baron Abercromby has been granted by the Prerogative Court of Canterbury, having first passed in the session at Edinburgh. The will bears date in July, 1846. He has bequeathed to his son, the present Lord Abercromby, all his manors and estates of Tullibody, Alloa, and Airthrie, providing from the rents the annuities of the Baroness and younger children, and appointing the present Baron also residuary legatee. The acting executor is Lord Dunfermline, a power being reserved to the Baroness. He relict; also to Baron Panmure, Viscount Melville, the Hon. Ralph Abercromby, the Hon. Henry Dundas, and Captain Henry Dundas, R.N. The deceased Baron was grandson of the gallant Sir Ralph Abercromby, who fell in Egypt, and whose widow was raised to the Peerage in honour of the same distinguished commander.—The will of Sir George Baillie Hamilton, G.C.H., late of the city of Florence, her Majesty's Minister Plenipotentiary at the Court of Tuscany, has just been proved in London, by two of the executors, C. J. B. Hamilton and W. A. B Hamilton, Esqrs., the brothers. The Earl of Haddington and Lord Dunglass, the other executors, having power reserved to them. To Mrs brother Charles he has left the bulk of his property, bequeathing to him especially his orders, decorations, jewels, and plate.

CHARITABLE BEQUESTS.—The late Maurice Watts, Esq., of Richmond, has bequeathed £7000 to the Richmond National Parochial Schools; £600 to the Benevolent Institution for the Relief of the Poor Workmen in the Watch and Clock Trade; £600 to the Clock and Watchmakers' Pension Society, and a liberal bequest to Catholic Chapels in the London district.—The late Rev. Goff, Esq., of Bermondsey, £400 to the National Parochial Church School of St. Mary Magdalen, Bermondsey; £400 to the Surrey Dispensary; £400 to the Asylum, and Dumb Asylum, Old Kent-road; £400 to the Blind Asylum, St. George's Fields; and £100 to the National and Sunday-schools, Stoke Newington.—The late Henry Prosser, Esq., £100 to the Seamen's Hospital, River Thames; £100 to the Incorporated Society for Building and Enlarging Churches, £100 to the Society for promoting Christian Knowledge, and £100 each to the Jews, Indoor and Cutaneous Empire.—The late Mrs. Anne Oram, of St. Leonard's-on-Sea, £1000 to be divided between the Jews Society, Bible Society, Tract Society, London Hibernian Society, Church Pastoral Aid Society, and Church Missionary Society.

INTERNATIONAL POSTAGE ASSOCIATION.—This association has requested its honorary secretary, Don Manuel de Ysasi, to proceed to the seats of government of the principal countries on the Continent, also to Turkey and Egypt, with a view to collect information as to the difficulties which may stand in the way of carrying out the views of the association.

FOREIGN AND COLONIAL NEWS

FRANCE.

The President's progress to the Empire has been attended towards its close with increased *eclat* and enthusiasm. His passage by water (on the Garonne), from Aden to Bordeaux, was a prolonged ovation; the banks on either side being crowded with the populace, and studded with flags and triumphal decorations. He entered Bordeaux on the 7th. The *Morning Chronicle* correspondent says:—

Bordeaux has not altered; it is still the city of enthusiastic demonstrations. It was so in 1814 for the Bourbons; and in 1815 for the Emperor, on his return from Elba. But on the present occasion it has surpassed itself, and done much to cause these two last under mate evidences of its enthusiasm to be forgotten. It is certainly impossible to imagine anything more splendid than the reception given to Louis Napoleon here. From the landing-place to the cathedral, it was triumphal arch after triumphal arch; and over head, garland on garland, so as almost to form a verdant canopy over his head the whole way. Every imaginable kind of hangings were to be seen on the houses, and even lustres might be seen suspended in some places. Gilt eagles were to be seen everywhere, and it is only of the President that an absolute triumphal procession. Differently from his custom hitherto, a large number of the military preceded and followed him. The deputations of the communes were so long in passing, that it almost spoiled the general effect. Not less than 2 000 banners were displayed by these country folks. The President entered on horseback, which he managed with infinite grace. All the men were uncovered, and the ladies waved their handkerchiefs from the windows. The cries were "*Vive l'Empereur!*" "*Vive Napoleon!*" At night the pub le buildings were illuminated with extraordinary magnificence. At the cathedral the President was received under a *velum*, and led to the altar to the cry of "*Vive l'Empereur!*" In fact, the shouts were so tremendous that it was necessary to close the doors of the sacred edifice to enable the Archbishop's address to be heard. At eight o'clock the President received the authorities.

On the 8th the President attended at the launch of a large vessel called, after him, the "Louis Napoleon."

On the 9th he was entertained at a sumptuous banquet, given by the Chamber of Commerce; 180 sitting down to dinner, and 800 others crowding within the hall. The following is a toast drank in his honour, is made a speech, which, as unfolding his present views of power, created an immense sensation, and will be everywhere read with deep interest. It was as follows:—

The Imperial Chamber, and of the Tribunal of Commerce of Bordeaux, which I have accepted sincerely, gives me the opportunity of thanking your great city for its cordial reception and its magnificent hospitality, and I am happy at the close of my journey to convey to you the impression it has left with me. The object of my journey, you know, was to become acquainted with our fine provinces of the south—to study their wants; and it has produced a more important result. (Applause)

In fact, I say it with a frankness not mixed with pride nor false modesty, never have a people testified in a manner more direct, more spontaneous, more unanimous, the desire of getting rid of anxiety about the future by consolidating in the same hand a power which has all its sympathies. (Applause.) It is because they now know the deceitful hopes which culpled, and the dangers which menaced them. They know that in 1852 society was near its ruin, and that each party consoled itself be oreband with the universal shipwreck. (Cries of "*Vive l'Empereur!*") Blushing of these absurd threats, the people have acquired the conviction that these pretended reformers were only dreamers, for there was always a disproportion, an inconsistency, between their means and the promises they made.

Now, the nation surrounds me with sympathies, because I am not of the family of ideologues. In order to do the country good there is no need to apply new systems, but to impart above all confidence in the present, and security in the future. It is for these reasons France seems to wish to return to the Empire. ("Yes, yes! Bravo! *Vive l'Empereur!*") There is one objection to which I would wish to reply. Certain minds seem to fear war, and certain persons say "The Empire is war!" but I say the Empire is peace! (Sensation)—for France desires it, and when France is satisfied the world is tranquil (Bravo.)

Glory may well be left as an inheritance, but war cannot. Have the Princes who are justly proud as being the descendants of Louis XIV. recommenced his wars? War is needless for mere pleasure: it is made by necessity. And if at this epoch of transition, when on all sides, and side by side with so many elements of prosperity, are found so many causes of death, it can be said with truth, "We!" we! to him who first should give the signal of a collision, what consequences would be incalculable. (Sensation.)

I admit that, like the Emperor, I have many conquests to make. I wish, like him, for the conquest of the conciliation of dissentient parties, and to bring back into the grand popular stream the hostile parts, which must otherwise be lost without advantage to any one. I wish to win over to religion, to morality, to comfort, that part, still numerous, of the population which, in the centre of the most fertile land in the world, can scarcely enjoy the produce of primary necessity.

We have immense and uncultivated lands to reclaim, roads to open, ports to clear, rivers to render navigable, canals to finish, our railroads to complete; we have, opposite to Marseilles, a vast kingdom to assimilate to France; we have all our great ports of the Ocean to bring near the American continent. The rapidity of the communications which are still wanting to us; we have, in fact, ruins to build up everywhere, false deities to pull down, truths to render triumphant. (Prolonged applause.) Such is the manner I understand the Empire—if the Empire be re-established. (Cries of "*Vive l'Empereur!*") Such are the conquests I meditate; and you all who surround me, who wish as I do the good of your country, you are my soldiers! ("Yes, yes!" Continued applause.)

The President entered Angoulême on the 10th, when he accepted a dinner given by the public functionaries; and afterwards went to a ball. On the 11th he proceeded to Rochefort, when the same enthusiasm and splendour attended him.

He is to arrive at Paris on his return to "his" capital on the 16th (this day), when the programme for the ceremonial for his reception is on the most costly and magnificent scale.

The *Moniteur* announces that the President will make his entry into Paris on Saturday at three o'clock. He will be received at the terminus of the Orleans railroad by the Archbishop of Paris and the clergy, by the Ministers of State, the Prince President of the Senate and the senators, by the President of the Legislative Body and the deputies now in Paris, by the Councillors of State, the Grand Chancellor of the Legion of Honour, the General in command of the army of Paris, the Commander of the National Guard of the department of the Seine, the superior officers of the army and navy, the members of the Courts of Cassation and Accounts, and by deputations from the different tribunals, and the principal public functionaries. At the Place de la Bastille he will be received by the Prefect of the Seine and the municipal bodies of Paris and the *banlieue*, and will then proceed by the Boulevards, the Rue Royale, and the Place de la Concorde, through the principal entrance of the garden, to the Palace of the Tuileries, where he will be received by the members of his family. General Magnan, commanding-in-chief of the army of Paris, has issued an order of the day, containing the regulations to be observed by the army and National Guards on the occasion. Upwards of 60,000 men will be under arms, either to line the way or accompany the *cortège*. All the generals who receive the Prince are to be in full uniform. A squadron of the Horse National Guard and the two squadrons of Guides are to form the escort of the Prince from the railway station to the opposite side of the Pont d'Austerlitz. They will be under the command of the Marquis de Caulincourt, colonel of the Horse Guard cavalry. The division of the cavalry of the reserve is to be stationed on the Quai de la Rapée, and is to follow the *cortège* of the Prince after he shall have crossed the bridge. All the troops are to be in full uniform, and are to be at the places indicated for them at half-past o'clock. A battery of artillery, placed at the Rond-Point of the Barrière du Trône, is to fire a salute of 101 guns, and another salute of 101 guns is to be fired from the Invalides at four o'clock.

In addition to the military spectacle, the following arrangements are to be made:—An ornamental arch, assistant under the direction of M. Dufresne, is to be placed in the railway station to execute appropriate airs on the arrival of the Prince. A large triumphal arch, representing a portico, decorated in the style of the Renaissance, and ornamented with eight large allegorical statues is to be erected on the Pont d'Austerlitz by M. Visconti, at the expense of the municipality. The space between the station and the bridge is to be decorated at the expense of the workmen of the twelve arrondissements. Near the Arenes Nationales, there is to be a triumphal arch, and a stand is to be erected for 2000 spectators. From this arch, two young girls, representing Fame, and bearing in their hands crowns of oak and olive leaves, are to be suspended; and 40 young girls, dressed in white, stationed near the arch, are to throw flowers on the Prince. On the top of the Boulevard Beaumarchais there is to be another triumphal arch, which is to be constructed by the workmen of the Faubourg St. Antoine. At the New Circus, near the Rue des Filles du Calvaire, there is also to be an arch, and stands are to be erected for about a thousand spectators. In other parts of the Boulevards, about fifteen triumphal arches are to be erected. One is to be near the Porte St. Martin, another on the Boulevard Montmartre, another on the Boulevard des Italiens, another near the Passage de l'Opéra, and another at the entrance of the Rue Royale, in front of the Madeleine; and, finally, there is to be one in the Place de la Concorde. In this place, near the terraces of the gardens of the Tuileries, there are to be extensive stands for spectators. Several of the triumphal arches on the Boulevards will be constructed by means of contributions raised by working men among themselves, and great numbers of workmen of different trades are to be drawn up at various points with banners and flags. A great number of old soldiers, together with deputations from the communes of the neighbouring departments, of various charitable societies, &c., will figure in the day's proceedings, and will carry flags bearing appropriate inscriptions. A great many private houses will be decorated. Considerable progress has already been made in the construction of some of the triumphal arches. Contrary to the announcement of some of the newspapers, the Prince does not intend to visit Notre Dame, to attend the chanting of a "Te Deum."

All France—that is all that shows any signs of life in France—is in a frenzy of delight at the re-establishment of the Empire. Officials of all grades vie with one another in announcing and greeting it; and the Mayor of Sèvres, to be before-hand with all the rest, actually issued a proclamation of the Empire on the 7th instant. After a florid address to the inhabitants of that town, the "act" itself runs as follows:—

PROCLAMATION OF THE EMPIRE.

The town of Sèvres, obeying the force of its sentiments of affection and gratitude to Prince Louis Napoleon Bonaparte, the envoy of God, the elect of France, her saviour and her glory, proclaims him Emperor of the French, under the name of Napoleon III., and confers upon him, and on his descendants, the inheritance

Done at Sèvres, the year of grace and the resurrection, 1852, the 7th of October.

MENAGER, Mayor.

Though many may have misgivings about the sincerity of the peaceprofessions of the President at Bordeaux, the effect of his speech has been generally satisfactory; in Paris particularly, where the Funds immediately rose, touching 107 the following day, and on Wednesday being at 106 50.

A letter from Paris says:—"I learn from a gentleman who was at Bordeaux when the speech was delivered, that the published speech is not precisely the same as the one spoken. One very important modification has been made. Some allusion was made at Bordeaux to the terrible affair of 1815, every word of which has been suppressed. I may as well mention, also, that in the copy given last night by the Government agent in Paris, the words occurred of *Malheur à celui qui le premier donnerait en Europe le signal d'une coalition*; while in the speech published in the *Moniteur* the word *donnerait* is changed into 'collision.' If the Government scribe made a blunder, it must be said that he chose a blunder which was likely to give satisfaction." The speech has been placarded in all the streets of Paris. It is also to be placarded in every one of the 37,000 communes in France.

A letter has been addressed by the Marquis de Larochejacquelein to the President, explaining the reasons which prevent him from attending with the Council General of his department (the Deux-Sèvres) on the occasion of the Prince's visit on Wednesday. In the letter referred to, and which the President received on the 8th, M. de Larochejacquelein, it appears, declares in precise terms that, whilst he cannot without inconsistency, and a departure from the principles he has advocated for years, resist the will of the nation; yet that with the name he bears, and his own personal antecedents, he declines being confounded with the men who are ready to accept any power or any Government that may be uppermost for the time being; and he recoils from anything that would imply that because he has been rejected by his party he now proclaims the Empire merely to avenge himself for the manner in which he has been treated. The President is said to have expressed himself as extremely gratified with this explanation.

M. de Kisseleff, the Russian Minister, has quitted Paris on leave of absence. The fact of his doing so at the very eve of the Empire is too remarkable a fact not to be made the subject of comment. The Elysées treat the matter light y, and declare that, as M. de Kisseleff had a *congé* of full duty, his departure at the present conjuncture is of no importance; but the general impression produced by M. de Kisseleff's departure is very different.

BELGIUM.

The *Emancipation*, under date of the 12th of October, fears that some obstacles have occurred to interfere with the construction of the new Cabinet.

The *Independance* says:—"Although everything confirms what we have published as to the probable composition of the new Cabinet, it does not appear, however, that anything will be definitively settled before one or two days."

SPAIN.

On the morning of the 7th, the firing of artillery announced to the inhabitants of Madrid that these days honours were about to be paid to the memory of Arthur Wellesley, Duke of Wellington and Ciudad Rodrigo, a Captain-General of the Spanish army. At twelve o'clock the entire garrison of Madrid, in full dress, assembled before a mausoleum erected for the occasion, and there rendered all the honours to the memory of the Duke which is paid to a deceased Captain-General. The troops afterwards defiled before the Capt.in-General of the Province, who was accompanied by the Military Governor and a numerous and brilliant staff. There was no religious ceremony, in consequence of the Duke having been a Protestant.

A Royal Ordinance, dated the 5th instant, commands that the son or daughter to be born of the Infanta Maria Luisa Fernanda, and her husband Don Antonio Maria Philippe Louis D'Orleans, Duke of Montpensier, shall enjoy the prerogatives attached to the title of Infantes of Spain.

Marshal Narvaez, Duke of Valencia, has returned to Lojo from the baths of Puerto Llano, without having though Mad ro

A dreadful hurricane was experienced on the 1st instant at Corunna, which caused considerable damage.

The trial of the *Heraldo*, and the four other journals which had copied the article on the financial operations of the Treasury, took place on the 4th, before a jury sorted from a list of the highest taxpayers, and it resulted in all the journals being acquitted.

The Cortes will be summoned for the 19th.

Considerable light is thrown on official matters in the *Gazette* of the 8th inst. the floating debt, from 344,168,474 reals on the 1st of September, had increased to 358,291,825 reals on the 1st October.

GREECE.

A note has been communicated by the Bavarian Government to the French, English, and Russian Governments, with reference to the succession to the throne of Greece. The youngest brother of the King Otho, Prince Adalbert, has announced his acceptance of the 40th article of the Protocol, and his adoption of the Greek religion as the necessary condition to succeed his brother. The Bavarian Prince, who is now the heir presumptive to the throne of Greece, it is said is the personage selected by the Emperor of Russia for the hand of the Princess Vasa.

On Sunday, the 26th ult., the consecration of the first Bishop since the emancipation of Greece took place in the principal church at Athens. The ceremony was performed with the utmost pomp; the whole clergy of the town were assembled; and it was also remarked that the two Protestant clergymen at present in Athens were admitted into the Hieron, or Sanctuary, along with the Greek priests. The Queen was present, with the whole court, the diplomatic corps, and all the authorities, civil and military. The person thus chosen to occupy the first and the most conservative of the eighteen bishoprics which have to be filled up—that of Achaia, or Patras—is the same Father Missael who was sent to Constantinople to negotiate with the Patriarch, and afterwards to Russia, to announce the treaty to the Emperor.

GERMANY.

A notice appears in the *Vienna Gazette* of the 8th inst. that the sum of 26,199,000 florins, 2,874,000 florins of which consists of Hungarian assignats, would be publicly burned on the morrow: the remainder of the amount is made up of Treasury bills. No change in the sum of the State notes in circulation will be effected by this step.

With the terminat on of the Zollverein conferences in Berlin, the *Correspondenz* expresses itself disconcerted, but not surprised. The Austrian Government will still persist in its endeavours to establish a commercial brotherhood between the States, in spite of the accumulating difficulties.

The Emperor has appointed the General of Artillery, Baron Hess, and three other generals, to be present at the funeral of the Duke of Wellington.

DENMARK.

The Diet of Denmark was opened at Copenhagen on the 4th with the usual formalities. The First Minister read a Royal message, making known that his Majesty was unable to attend from indisposition, and announcing that the Government would submit to the Diet a bill for the settlement of certain matters connected with the Monarchy, in conformity with the Royal patent of the 28th January last, and for regulating the

projected change in the order of succession to the throne. The message added that no other business would be brought forward until after the settlement of those questions, and it invited the two Chambers to proceed to discuss them forthwith

The *Hamburg Correspondent* contains a letter from Copenhagen of the 4th, which says: "The King has been here these two days. Last evening the following bulletin was published relative to his Majesty's health:—'A sudden chill has caused the King to keep his bed for a week, and renders it necessary for him to keep it for some time longer.'"

The bulletin which appeared on the 5th, stated that his Majesty was considerably better, and again able to leave his bed for several hours.

AMERICA.

We have advices from America, *viâ* New York, by the Baltic to the 28th ult., and by the Pacific to the 2d inst.

The prospect of Gen. Scott in the Presidential election were considered to be more promising, owing to the strenuous exertions of his friends.

The announcement of the death of the Duke of Wellington had been received, and had caused a deep feeling of regret both in the United States and Canada. The Canadian Parliament, on receipt of the news, adjourned its sitting, as a mark o. respect.

The *Prince Edward's Island Gazette* states that the American fishing vessels are flocking to that island; 110 having been seen off the North Point at one time.

The Canadian Legislative Assembly had rejected the bill to incorporate the Sault Marie Canal Company.

Major-General Gore has been appointed General-in-Chief of her Britannic Majesty's forces in Nova Scotia and New Brunswick.

The Canadian Government has issued notices calling for plans and estimates for a vice-regal residence to be erected at Toronto, on the site of the old Government House. This indicates the settled purpose of the Government to redeem its pledge to Upper Canada to return to Toronto in four years.

From Havannah later dates had arrived at New York which reported the arrest and conviction of several persons connected with the paper called the *Voice of the People*, five of whom were to be executed, and the remainder to be sent to Ceuta for eight years. It was reported that the French Government had intimated to the Cuban Government, that in case an invasion of Cuba was attempted by the American people, they might calculate upon the aid of France to repel the invaders.

Advices from Buenos Ayres, received at Boston, announce the official recognition by Urquiza of the independence of the Republic of Paraguay, on the conclusion of the treaty for the free navigation of the rivers Paraguay and Parana being secured to La Plata and Brazil.

NATIONAL SPORTS.

In the bank week between the two great Newmarket meetings, the racing fraternity will have nothing of any consequence, beyond the Cambridgeshire, to bring their speculative talents into play. The only fixtures, in fact, are—Prestonpool and Pontefract, on Monday; Holywell Hunt, on Tuesday; Richmond (Yorkshire), on Wednesday; and Lanark, on Friday.

The Coursing calendar promises an abundance of sport, and includes the first of the great Wiltshire Champion meetings, commencing, as usual, on Tuesday, and extend ng to the end of the week. The other fixtures are Holywell and Elgin, on Tuesday; Lytham and Dalry (Ayrshire), on Thursday; and the North Union (Ireland), on Saturday.

PRENDERGAST STAKES.—Sittingbourne, 1. Filbert, 2.

CHAMPIONSHIP OF THE THAMES.—The race for this honorary title, and the large stake of £400, was brought to a conclusion on Thursday last; Cole, as on the last occasion, proving the victor, and one of the fastest races on record—the distance from Putney-bridge to Mortlake being done in twenty-three minutes and thirty seconds. Cole, from the start, gradually drew away from his opponent Coombes, who, however, rowed with the indomitable pluck and determination for which he has rendered himself so justly notorious; but the tremendous pace of the youthful antagonist baffled all his exertions, and Cole finally came in a winner by at least 120 yards Cole is 27 years of age, and weighs 11 stone 9lb. Coombes is his senior by 17 years, and weighs about 9 stone 21b.

ROWING MATCH.—At the rowing match which took place on Monday, on the Thames, between William Barrett and Henry Barrow for £30, the former was the winner by nearly a dozen lengths. The distance selected was from Putney-bridge to the Ship at Mortlake.

PEDESTRIANISM.—GREAT TEN MILE RUNNING MATCH FOR THE CHAMPIONSHIP AND £100.—This great match, between J Jackson (the American champion) and John Levett (of Battersea), to run ten miles for the championship and £50 aside, came off on Monday at the Copenhagen-house, Islington, and attracted to the grounds between 11,000 and 12 000 spectators. After a closely contested race, Levett ran in the winner by a yard and a half, thus obtaining for himself, a second time, the proud title of "The Champion Runner of England." The time, as stated to us, was, for the ten miles, rather under 62 minutes.

THE YACHT "AMERICA."—Lord de Blaquiere, the owner of the celebrated yacht *America*, in a letter to the *Times*, challenges the yachts of all countries—America excepted—not exceeding the *America* in tonnage, to sail with her yacht "for a sum not less than £500, and not more than £1000, on any day his yacht "for a sum not less than £500, and not more than £1000, on any day his yacht "for a sum not less than £500, and not more than £1000, on any day his

LOUIS NAPOLEON AT AIX.—"LES JEUX DE LA FETE-DIEU."

CELEBRATION OF THE BIRTH OF LORD INVERURY.

On the afternoon of Wednesday, the 29th ult., Inglismaldie was the scene of a festive meeting of a large number of the tenantry on the estates of the Earl of Kintore both in Kincardineshire and Forfarshire, to celebrate the birth of a son and heir to the noble Earl; the infant scion assuming the title of Lord Inverury.

The preparations for the festival were upon a most splendid scale: an elegant pavilion was erected on the lawn in front of the ancient house of Inglismaldie, which, though now untenanted by the noble family, suggests many associations of historical interest. The marquees were decorated externally with a profusion of evergreens and banners, among which were the Kintore and Hankerton arms; while from the top of the old mansion adjacent, the Royal standard, with its rampant lions, waved majestically over the bustling scene below. The pavilion was 60 feet in length by 30 in width, and the height, from appearance, more than thirty feet. The north end was covered with scarlet cloth, and fitted up with an orchestra for a brass band. Beneath and in front of the orchestra was inscribed in large letters of gold, "The Queen! God bless her!" around which there were some beautiful devices in heather, evergreens, and flowers, giving a most pleasing effect to the whole. At the other end of the marquee, over the chair, was inscribed, in letters of gold on scarlet, "God bless Lord Inverury!" "Long live the Earl and Countess of Kintore!" and "Quæ Amissa Salva!" These mottoes, like that at the other end, were tastefully surrounded with green branches and flowers, and a golden eagle surmounted the large tablet on which they were inscribed. The chair was an elegant antique design; betwixt and on either side of which were two ornamental trees, their tops reaching the roof of the pavilion. The company, numbering nearly 150, was seated at a cross table, and three other tables, extending the whole length of the pavilion. The whole was illuminated with wax-lights, six Chinese lanterns being suspended over the centre table, and the orchestra and walls lighted in a very appropriate and effective style. The entire decorations were highly creditable to the taste of Messrs Japh, of Montrose; and the arrangements were admirably carried out by the committee, of which Mr Barclay was the honorary secretary.

At a little past three o'clock the tenantry entered the marquee, to the number of about 150 and sat down to a dinner prepared by Mr Kinnear, innkeeper, Laurencekirk: John Blaikie, Esq., of Craigiebuckler, commissioner for the Earl of Kintore, occupied the chair; supported on the right by Captain Hawkins, father of the noble Countess; Provost Mackie, Montrose; the Rev. Mr. M'Gowan, Laurencekirk; Mr. Walter Dingwell, factor on the Inglismaldie and Hankerton estates; the Rev. Mr. Carlyle; and Bailie Fraser, of Kintore. On the left of the chairman were Sir James Carnegi, Bart., of Southesk, and Lord-Lieutenant of the county of Kincardine; Adam Burnes, Esq., Montrose; the Rev. A. C. Low, Marykirk; Thomas Barclay, Esq., Montrose; Charles

FETE AT INGLISMALDIE, TO CELEBRATE THE BIRTH OF LORD INVERURY.

Lyall, Esq., Kinnaigl; and Robert Hector, Esq. Dr. Guthrie, Westerton Dunlappie, David Dickson, Esq., banker, Laurencekirk, and James Farquharson, Esq., banker, Auchinblae, acted as croupiers. Among the other gentlemen present we observed Anthony Adrian Blaikie, Esq., advocate, Aberdeen; Thos. Ogilvy, Esq., J. Duncan, C.E., Perth; Wm. Partridge, Esq., Ardmurdo, Keithhall; Dr. Fettes, Laurencekirk; Mr. Mitchell, Brunton; Mr. Garland, Cairnton; Mr. Peter, Canterland; Mr. Duris, Dalladies; Mr. Barclay, Northwater Bridge, &c.

After the customary loyal toasts had been drunk, Captain Hawkins rose, and in an appropriate address proposed "The memory of the late Duke of Wellington," which was drunk in profound silence.

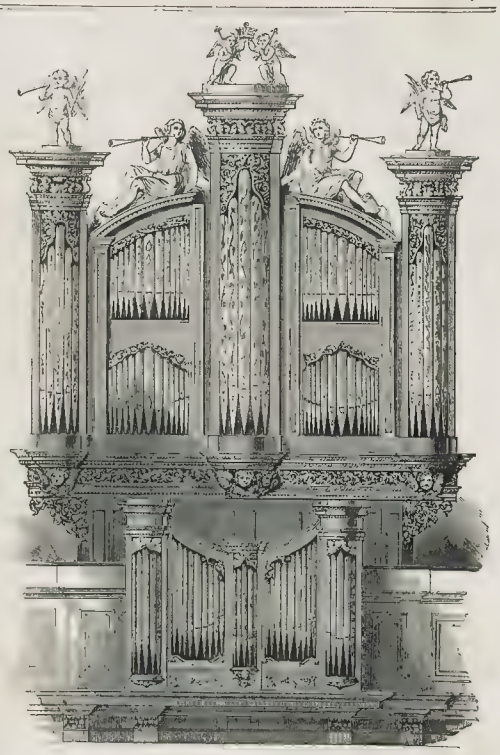
The Chairman then gave "The Military and Naval Services," hoping, after what Captain Hawkins had said, that the people of this country would remember what they owed to Wellington and Nelson, the saviours of our national independence.

The toast was drunk with much applause, the band playing an appropriate air, and a cannon outside of the marquee thundering most appropriately at the moment.

The Chairman then called for a special bumper to the toast of the evening, observing:—"Most present are aware that nineteen or seventeen months ago the tenantry proposed to meet here to celebrate certain proceedings; but that, from the death of a near relative of the Earl of Kintore, the intended meeting was deferred. We meet to-night under more agreeable auspices—to celebrate the birth of an heir to those noble estates. (Cheers.) The ancestors of the noble Earl were distinguished men in the days of Robert the Bruce—one of them fought by the side of that warrior, and took part in the battle of Inverury, which was the first successful battle that Robert won. (Applause.) The Earls Marischal occupy a very prominent place in Scottish story; the fifteenth Earl Marischal having founded the university which bears his name. The Earls of Kintore for a long time filled the distinguished post of Earl Marischal of Scotland; and it was only after the battle of Sheriffmuir that that honour was taken from them. (Applause.) Still the family of Kintore enjoy a large share of respect throughout Scotland; and the present Earl is deservedly esteemed by all who had had the honour of his acquaintance. I trust most sincerely that the young Lord may be spared to reach a ripe manhood; that Providence may have in store for him a better fate than that of the late Lord Inverury; that he may live to see his parents descend into the grave full of age and honours; and that, when he is called to leave the stage of time, it may be truly said of him that he possessed all the characteristics of his worthy ancestors. Drain your glasses, then, to "the health of the young Lord Inverury." (Tremendous and prolonged cheering.)

Captain Hawkins returned thanks on the part of Lord Kintore. A variety of other toasts were drunk. "The health of the Earl and Countess of Kintore" was received with deafening cheers; and Captain Hawkins, in acknowledging the toast, said, he was sure it was the wish of the Earl of Kintore that all on his estates should enjoy as great a share of the good things of this life as was consistent with the circumstances in which they were placed. He would not like the fire in his own hall to burn brightly while theirs was in darkness; for the Earl knew that he was but the steward of an Almighty Master, accountable for the manner in which he discharged his duties to his fellow-men; and besides, it was no merit of the Earl's own that had gained him the estates, for he had been left an inheritance; and, while discharging the duties of a landlord, it was his duty to remember that prosperity, while it had its rights, had also its duties to perform. Here the Captain entered into a statistical account of the money laid out since the 11th July, 1844, the date of the death of the late Earl, down to the end of 1851, showing that the expenditure on the estates in Kincardineshire and Forfarshire alone, on new and the repair and the enlargement of buildings, amounted to £13,060; on plantations, £3180; on drainage, £1220; on drainage, under the act, about £4000; and that the annual abatements allowed to tenants, in terms of a report by Mr Brown, of Linkwood, amounted to £2980; and the allowance, from August, 1850, to £470; and concluded his speech by sincerely thanking the meeting for the manner in which the health of the Earl and Countess had been received.

At length, the health of the croupiers having been drunk, the company retired to the green to witness a splendid diplay of fireworks from the roof of Inglismaldie House, and from the lawn; and the sports on the green continued till a late hour. The fireworks afforded great delight to the company; and their effect was very imposing for many miles round.



THE ORGAN AT ST. JAMES'S CHURCH, PICCADILLY, ORIGINALLY CONSTRUCTED FOR KING JAMES II.

THE ORGAN OF ST. JAMES'S, PICCADILLY.

The organ of the parish church, St. James's, Westminster, having been renovated and improved, the churchwardens, Messrs. Garrett and Crane, invited a large number of parishioners, and many musical professors and amateurs, to test its qualities, as developed by Mr. Burrowes, the organist, on the evening of the 8th inst. The original organ was constructed in 1687 by Harris, and erected for King James II., in the chapel of Whitehall (then used for Roman Catholic worship.) In 1691 it was presented by William and Mary, together with the gallery, to St. James's parish. To the present Rector (the Rev. John Jackson, M.A.) and churchwardens (Messrs G. Garrett and Frederick Crane) we are indebted for its restoration, with divers modern additions and improvements, including a detached choir organ standing in front of the Gallery. To Mr. C. Lee, of Golden-square, the architect to the parish, was assigned the task of the erection. Mr. Bishop, of Lisson-grove, had the building of the organ; and to Messrs. G. and C. Bishop, Bennett's-hill, Doctors' Commons, the herald painters to her Majesty, were allotted the decorative portions.

The organ has been re-constructed on the German principle, with three rows of keys, compass, C C to F in alt—the swell throughout—and independent pedal organ from C C C, 16 feet to E two and a third octaves. The great organ contains 12 stops, or 664 pipes; the swell organ 11 stops, or 810 pipes: the choir organ 9 stops, or 450 pipes; the pedal organ, 4 stops: total number of stops 45, and of pipes 2240, with 6 coupler stops and 7 composition pedals. The pedal is deficient in mixture and reed stops, so essential to give the brilliancy, but the general quality of the instrument is pure and rich in tone. Mr. Bishop is the inventor of the composition pedals, and the anti-concussion apparatus for steadying the wind; he also invented the stop "Claribella," which has a full tone between the mouth and reed-pipe. On such an occasion it is a pity the continental practice is not observed as to the trial of a new instrument, being entrusted to several players. Mr. Burrowes is, no doubt, apt at psalmody, but his selection proved that he is not a first-rate executant. Out of thirteen pieces only three appertained properly to the genuine organ school. The abilities of such players as Dr. Wesley, Dr. Gauntlett, Mr. Best, Mr. Henry Smart, Mr. Cooper, Mr. Chipp, M. Silas, &c., ought to have been put in requisition, if the full powers of Mr. Bishop's improvements were to be fairly and fully essayed.

In the admiration expressed at the elegant appearance of the organ, harmonising, as it does, with the florid style of the interior of the church, there can be but a cordial adhesion on all hands.

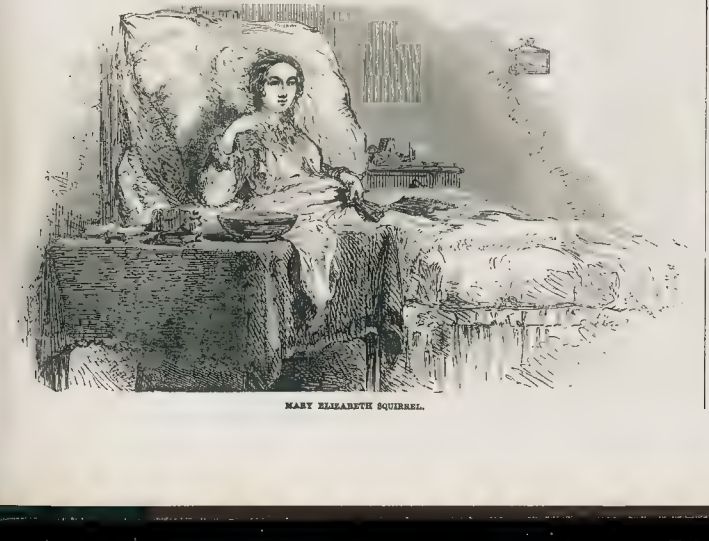
ALLEGED EXTRAORDINARY ABSTINENCE FROM FOOD, AT SHOTTISHAM, NEAR IPSWICH.

On Wednesday evening week a public meeting was held in St. Andrew's Hall, Norwich, having been announced by hand-bills, stating "The case of Elizabeth

SQUIRREL'S COTTAGE, AT SHOTTISHAM, NEAR IPSWICH.

Squirrel, who has abstained from food and drink for twenty-one weeks, having occasioned such an excitement, and many reports having been circulated utterly at variance with the truth, the public are respectfully informed that a public meeting will be held, at which every particular connected with the case will be explained by Dr. Matcham; and Mr. J. Buckingham, one of the gentlemen who watched the case for fourteen days, will attend and deliver his report."

Before we detail the proceedings at this meeting, it will be requisite to narrate an outline of the case. Mary Elizabeth Squirrel, about fourteen years of age, is the daughter of one Asaph Squirrel, a tea-dealer, at Shottisham, a village five miles to the north-east of Woodbridge, in Suffolk. The girl, it appears, possesses strong natural abilities, and at a very early age distinguished herself at the village school by her aptitude for learning. In June, 1850, at the age of twelve, she was attacked by a spinal affection, for which she was sent to the



MARY ELIZABETH SQUIRREL.

East-end Hospital, at Ipswich, where she remained about six weeks. Upon her return home, she became worse, and look-jaw set in, depriving her, it was stated, of the power of swallowing. According to the representation of her parents, she was kept alive solely by having milk poured down her throat, though the quantities were so small that her death was daily expected. In this way she continued to live until mid-summer, 1851, when she recovered from look-jaw. In the meantime, it is said, she became blind and deaf, two infirmities she is represented, under which she yet labours. Her misfortunes, coupled with her mental endowments, and with the assertion that she still ate no food, once went round the globe in the press, and, by degrees, her fame spread far and wide, the college in which she resided being visited at all hours of the day by persons anxious to see her. Conversation with her was carried on by means of the deaf and dumb alphabet, until the sympathies of her hearers were enlisted by the fervour with which she spoke, chiefly upon religious topics. In time she began to give out that she had had a vision of angels, that one of them had been commissioned to become her guardian and constant attendant, and that its presence was manifested by the ringing of a small tumbler, which stood upon a table by her bedside, caused, she said, by the wings of the angel sweeping against it. It was also alleged that she possessed great sensibility of touch, and could read manuscript letters, and even phonographic characters, by running her fingers over the lines. These various circumstances combined presented a case irresistible to the lovers of the marvellous, and hundreds, in every rank of life, found their way to the bedside of the girl. About four months since, she and her parents stated that much had ceased to afford her any nourishment, and that, in fact, she had left off taking any sustenance at all. Weeks passed on, visitors closely watched her, and all came away convinced of the truth of this statement. At length some gentlemen of Ipswich, interested in the case, felt it was a duty owing to society that some strenuous effort should be made to ascertain whether there was not imposition practised. A committee was, accordingly, formed, consisting of eight gentlemen, and measures were adopted to test the case. First two nurses were watched her for eight days and nights, during which they declared she took no sustenance whatever. A committee was then formed to watch, and, in consequence of their suspicions, the bed was searched by Mr. Frances, a surgeon, in the presence of the nurses, when proof was found that nourishment of some kind must have passed the girl's lips. Upon the discovery being made, the girl It is said, suddenly lost her deafness, and endeavoured to prevent the nurses taking possession of the bundle, and afterwards resisted the removal of a small box belonging to her. It also appears that the girl had a glass harmonicon in the room, which frequently let loose the bolt, at no great distance from this where stood the mysterious tumbler by means of which the angelic presence was manifested.

The parents still represent that their child has received no nourishment, whether liquid or solid, for nearly four months. It is not denied that during Saturday, Sunday, Monday, Tuesday, Wednesday, and Thursday, no food or drink was seen to be administered; but, it appears, the bed was allowed to have an open parcel on it tied, to screen her from a draught from the door, and that the parents frequently assisted her to vary her position in bed. Whether these were pretexts to enable food to be administered unseen by the nurses remains to be ascertained. The committee have made their report, avowing their unanimous conviction that fraud must have been practised.

At the meeting held at Norwich on Wednesday week, Mr. Dean took the chair; and in opening the proceedings, gave a brief exposition of the case, and stated the particulars of a visit paid by himself to Elizabeth Squirrel, the result of which was to convince him that she was no impostor, at least as far as blindness and deafness were concerned.

Mr. J. S. Buckingham next spoke, and, in conclusion, said—After watching this child for eight days and six nights, he had had good opportunities of observing her mode of action of speech, and he was fully convinced that she was entirely incapable of being a party to an imposture. He was, therefore, satisfied that she had, as stated, lived without food and drink for twenty-two weeks, and that she was totally blind and deaf.

Mr Matcham, as the result of "his own watch," avowed his satisfaction that the case was a genuine one; and, in conclusion, moved a resolution "That this meeting, having heard the statements of Mr. Buckingham and himself, do sympathise with Mr. and Mrs. Squirrel in the position in which they are placed by the statements of the other watch, which they are of opinion have been so contrived and varnished as to prevent their getting at the truth.

A Mr. Nockolds seconded the resolution, which was put by the chairman, and declared carried *nem. dis.*

The meeting then separated.

CALENDAR FOR THE WEEK.

SUNDAY, October 17.—Nineteenth Sunday after Trinity.
MONDAY, 18.—St. Luke.
TUESDAY, 19.—Dean Swift died, 1745.
WEDNESDAY, 20.—Sir Christopher Wren born, 1632.
THURSDAY, 21.—Battle of Trafalgar: Nelson killed, 1805.
FRIDAY, 22. Irish Massacre, 1641.
SATURDAY, 23.—Battle of Edgehill, 1642.

TIMES OF HIGH WATER AT LONDON BRIDGE, FOR THE WEEK ENDING OCTOBER 23, 1852

REGULAR SUBSCRIBERS from SEPTEMBER 18 will receive
LARGE SHEETS of the PROCESSION and PUBLIC FUNERAL, GRATIS.

A Lasting Memorial of the National Mourning.

THE LIFE, the DEATH, and PUBLIC FUNERAL
OF THE DUKE OF WELLINGTON. See
THE ILLUSTRATED LONDON NEWS,
SATURDAY, SEPTEMBER 18,

And following weeks to the week of the Funeral. Price Sixpence each Week. (Double Numbers extra.) Orders received by all Newsmen throughout the kingdom.

Office, 198, Strand, London.

TO CORRESPONDENTS.

THE NATIONAL SONGS AND MELODIES OF ENGLAND.—We beg to state in answer to numerous correspondents, that the publication of the 3 series is not cancelled.

BRISTOL Z.—The arms in question are, we believe, "Per pale sa and gu, three lozenges barry counter-coloured."

EDWIN.—Arms of Sir Isaac Pitzalan, Kt., of Bedale:—"Barry of eight or and gu." Of Sir Oliver Ingham:—"Per pale or and vert, across molline gu."

G. S. Armed Scarin.—"As a dolphin bent be worn three escallops or. *Crest:* On the stump of a tree couped, sprouting branches proper, a scaly snake, environed with a serpent, head to sinister, an eagle rising, all ppr. *Motto:* Volando repellin sperno." De Rupe is the Latin name for the family of Roche, and is frequently found on old deeds of the Lords Fermoy.

AN OLD SUBSCRIBER.—Mottoes may be assumed or changed *ad libitum*; consequently the grandson might legally adopt the motto of his grandmother's family. The daughter of an heiress does not become entitled to quarter her maternal arms until her mother is dead. No one is entitled to more than one crest, unless he bears two surnames, or has obtained himself, or derives descent from, an ancestor who has obtained a grant of the additional device. Thus, in the case of Mr. Whitbread, of Staffordshire, a second was granted to him and his descendants, in remembrance of the protection afforded by his ancestor at Moseley Court, to King Charles II., after the fatal issue of the battle of Worcester.

SKELLDRAKE.—The first Earl of Athlone, the famous General Godart de Ginkell, B. son de Reede de Reede Ginkell, died in 1703, leaving, by Ursula Plunkett, his wife, two sons. Godert, his heir, as second Earl of Athlone, and Frederick Christian Herr Harvell, one of the chief nobles of the province of Guelderland. We regret we have no further particulars of the General's marriage and issue. Archdeacon Ledge contains a meagre pedigree.

D T R.—Arms of Evans: "Arg a fesse between three fleurs-de-lis az."

A CORRESPONDENT will obtain information relative to the son of the celebrated Admiral Rooke, may learn particulars, personally or by letter, from Mr Lewis Rooke, "Manor Cottage, Newport, Barnstaple, Devon"

ARTHUR VERE.—The writer quoted is not an authority: Blackstone is. We refer Esquires by law.

HADELTONIAN.—The Marquis of Huntly is the "Father" of the House of Lords, having been born in 1761. He has, consequently, completed his 91st year. The present Duke of Hamilton has two surviving sons and a daughter.

OBSERVER.—The charge made by the Heralds' Office for granting arms is about 75 guineas. The charge to the same in all cases.

BETA.—There is, at present, no act of Parliament which gives in England a copyright in a painting, or protects it from being pirated. An engraving, however, is protected, on condition of the date of its publication and the name of the proprietor appearing on each plate.

P Q R.—The new patent law will come into operation on the 1st of next October. Under this new law the Attorney or Solicitor General may grant a six months protection to an invention which has been referred to him on petition for letters patent; but then the invention will be unprotected after that, if the proceedings for the patent be not continued. The fee for the petition will be £5; but the Attorney or Solicitor-General must be a so paid. The new law does not interfere with the present registration statutes.

J L S.—A person in priest's or, we believe, in deacon's orders, will not be admitted at the inns of Court for the purpose of being called to the bar.

J J C.—Some gentleman of the bar (whose name has escaped us) has announced a work on the new patents law, which may be had at any of the law booksellers, and which, no doubt, will supply the required information.

BOSTON and MIDLAND COUNTIES RAILWAY and DOCK COMPANY.—Provisionally Registered.
CAPITAL, £300,000 in 30,000 Shares of £10 each.
DEPOSIT, £1 per Share.

Supported by Landowners on, and in the Neighbourhood of the proposed line, and by the Mercantile, Trading, and Manufacturing Interests of Boston and Nottingham, and the intermediate districts; including, amongst others—

SECRETARY.—Mr Robert Hebbank
COMPANY'S OFFICES.—3, Verulam-buildings, Gray's-inn, London.

In the year 1845 an Act was obtained for the construction of a line of railway from Ambergate to Boston (old Nottingham and Grantham), called the "Amber-gate, Nottingham, and Boston, and Eastern Junction Railway;" but the difficulties of 1847 prevented the company carrying out the undertaking in its integrity, and they were compelled to limit their operations to the formation of the line from Nottingham to Grantham, thereby abandoning the most important feature in the undertaking—the connecting the Midland districts with the port of Boston.

The link in the chain of direct Railway communication between Nottingham and Boston being still unsupplied, the important Manufacturing Towns of Birmingham, Derby, and Nottingham, as also the Potteries, are yet compelled to send the produce of the Ports of Grimsby or Hull for their means of Export and Import to and from the Baltic and Dutch Ports.

The Port of Boston being nearer to the Dutch ports than either Grimsby or Hull, and the latter ports being each about thirty miles further distant from Nottingham (the Ayr of the Midland Counties from the east) than the port of Boston, it follows that, for many articles of exchange, Boston possesses, as well as a shipping port, has over the other two an indisputable advantage, while at the same time the new line of communication proposed to be provided would also give to those ports additional access to the inland districts.

At high water vessels of 400 tons burthen (a class of vessel usually employed in the Baltic trade) discharge their cargoes at the quays in Boston; and the harbour and river admit of considerable improvement, which, if found expedient to obtain, offers facilities for great improvement in the depth of water to carry out, would enable vessels of considerably larger tonnage to enter the port.

To secure the important results which will unquestionably arise by connecting the port of Boston with the Ambergate Railway at or near to Grantham, from which an unimterrupted line of railway will extends to Nottingham and all the mid and districts of the Kingdom, this undertaking is submitted to the favourable consideration of the public.

The distance between Boston and Grantham (old Swinesead, Heckington, and Sleaford) is under 31 miles. The line proposed will run over an unusually level country, and having been inspected by the engineers, they report the same to be free from all engineering difficulties; and that (as shown in the prospectus) considerable local support, both among the landowners affected by the line, and the commercial and trading community of Boston, Sleaford, and the surrounding districts.

From these combined circumstances the cost of construction will, perhaps, be less than that of any Railway yet formed; and the formation of the Docks, from the favourable nature of the site selected, will also be constructed at comparatively small cost.

The anticipated Traffic from the Line and Revenue from the Docks promises to pay a considerable per centage to the Shareholders.

An act for carrying out the undertaking will be applied for in the next session; and, if obtained, the works will be completed within a very short period.

Applications for shares to be made in the subjoined form, either to the Company's Solicitors or Secretary, or to Messrs. Oswin, Tootal, and Co., 10, Angel-court, Throgmorton-street, London; Mr. Thomas Roberts, Manchester; Messrs. Neilson, Liverpool; Mr. Pearson, Birmingham; and Messrs. Peat and Son, Nottingham.

FORM OF APPLICATION FOR SHARES.

TO THE DIRECTORS OF THE BOSTON AND MIDLAND COUNTIES RAILWAY AND DOCK COMPANY.

Gentlemen, I request you to allot me ——— Shares in the above Company, and I hereby undertake to accept the same, or any less number that may be allotted to me, and to pay the sum of £1 per Share thereon, and execute the Deed of Settlement of the Company when required so to do.

Name ———
Profession or Occupation ———
Address ———
Date ———

The aggressive spirit recently manifested by a loud-talking, blustering, unreasonable, and, we hope, a small party in the United States, who have frequently and energetically repudiated the interference of Europe in their affairs, deserves attention. These people do not aim at conquest, but at annexation; but the mildness of the phraseology cannot disguise the invasive character of their policy. Mexico is at their feet; their hands are stretched forward to wrest Cuba from Spain, and Jamaica from Great Britain. The guano of Peru, now regarded as a mere trading commodity, may serve as a pretext for war. The Polynesian Islands inflame their cupidity; while the expedition to Japan is only postponed to a more convenient season. Canada, immediately under their eyes, has, for years, been the object of their ambition.

This mania for territorial extension among a people already possessing far more land than they can cultivate for centuries to come, is directly opposed to the wise policy of Washington; nor do we believe that it finds favours with the intelligent people of the United States. That portion of the American press, the most noisy and the least patriotic, which delights in abusing and menacing the "Britishers," and indulges in inflated boasts compared with which gasconade is modesty, does not represent the national spirit, but the bitter prejudices of foreign immigrants. These men know nothing of a rational and well-regulated liberty, or of the guards and limits necessary to preserve it pure and intact. The freedom they worship is a licentiousness which has no respect for the rights of others. They leave Europe smarting under a sense of injustice and oppression, real or imaginary, and seek to soothe or gratify their hatred by encouraging or perpetrating violence. To judge the United States aright, this foreign element should be separated from the native population, and though this may be difficult, if not impossible, to accomplish with exactitude, still it is easy to draw a general line of demarcation when estimating the higher departments of international politics. So long as the old American families have the preponderence at elections, we feel certain that a pacific spirit will pervade the Legislature; but when the immigration of foreigners equals or surpasses the whole natural increase of the native population of the United States, then Europe may expect a change of policy, unless a limit be put on naturalisation. The tendency in this direction is already manifest, and census returns show that in Boston and New York city, about one-third of the population are foreigners by birth. Now, as the character of a nation results from the character of individuals, and is chiefly determined by the influences that ramify from great centres, as the metropolis and large towns of a kingdom, it is very evident that in due course of time such a change of public opinion may arise from the collision of European passions and caprices as seriously to modify, or perhaps to subvert the primitive institutions of the United States. This danger has been ably pointed out by an American writer:—"The attention of Congress," says Mr. Jesse Chickering, in a recent work on Immigration, "has been frequently directed to the subject of the naturalisation of foreigners; but the conditions of voting, in which resides their direct political power, are determined by each State for itself. In most or all of the States naturalisation is a pre-requisite to voting; but, owing to the carelessness and fraud in obtaining naturalisation papers, the looseness of the State laws, and the connivance of partisans, it cannot be denied, as it has been proved by abundant testimony, that great frauds have been committed, and many individuals have been admitted to the polls, in times of strong party excitement, who were not entitled to the privilege by a fair construction of the existing laws of the United States, or of individual States. . . . Do not these men who are chosen to office propose measures and frame laws which regulate all that we hold dear in the States and the Republic? In listening to the *foreign* voice, do candidates, when they become members, always seek to be controlled by the monitions of wisdom, irrespective of party?"

The Free-Trade policy of England, now a settled and irreversible principle, and which, as it extends itself to all commodities, will win over such enemies as still remain, has been received in a grateful spirit by the old Americans. In it they have recognised the olive-branch of peace; and the more that international trade makes kingdoms dependent on kingdoms, the less important becomes the vocation of the soldier. Mercantile acceptances and bills of lading are much better appreciated than cannon and bayonets, and the humanities of commerce are triumphing over the meretricious glories of war. It is the mission of our epoch to civilise, not to murder.

We feel persuaded that, either by limiting naturalisation or by some other adequate policy, the wisdom of the United States will frustrate the pernicious action of that foreign element to which we have alluded, and which alone foments an aggressive spirit, regardless of consequences. We have witnessed the amicable settlement of the recent misunderstanding between Sir John Pakington and Mr. Webster on the Fishery Question, in spite of the furious invectives of that portion of the American press which appreciates neither patriotism nor loyalty, the rights of men nor the rights of property; and so long as the Anglo-Saxon spirit dominates in the Congress and Senate, we will pervade their councils, and secure the blessings of peace, the triumphs of industry, and the development of an elevated and elevating statesmanship.

THE REVENUE.

The returns of the Revenue for the quarter and the year ending the 10th inst., were published on Saturday last, from which it appears that on the quarter, as compared with the quarter ending October 1851, there is an increase of £38,929, while on the year's ordinary revenue, as compared with the year ending October 1851, there is a net decrease of £732,241, which, though a large sum, is less than half the estimated loss by the repeal of the window duties and the other remissions lately come into operation. On taking into account the extraordinary items, this decrease is reduced to £437,397, owing to the repayment of advances. The details of increase and decrease will be seen in the following items:—

INCREASE.		
Excise	..	£163,801
Stamps	..	96 857
Property Tax	..	45,456
Total ordinary Revenue	..	£306,203
Imprest and other Moneys	..	13,666
Repayment of Advances	..	68,787
		£387,453
Total Revenue	..	£388,656
DECREASE.		
Customs	..	£293,264
Taxes	..	9810
Post-office	..	45,000
Miscellaneous	..	10,653
		£359,727
Increase on the quarter	..	£28,929

Comparing the quarter just ended with the corresponding quarter last year, we find that there is a diminution in the Customs to the extent of

£288,264. This, however, is accounted for by the considerable reduction that was made on the duties upon sugar and timber, and to the irregularities of commerce which tell greatly on the comparison of such short periods as quarters. There is, however, an increase in the quarter's Excise of £163,301. In the Stamps, too, there is an increase of £96,857. There is little alteration in the Assessed Taxes of the quarter. In the receipts of the Property-tax there is an increase of £45,445, while in the income of the Post-office, there is a decrease of £45,000. The result is a net decrease of £53,224 in the ordinary revenue of the quarter. The receipts, however, of the ordinary revenue are more than £70,000 in advance of those for the corresponding quarter, 1850, notwithstanding the immense reductions that had taken place in the interval. In the comparison of the whole year just ended with the year ending in October, 1851, the Customs show a decrease of £84,752. In the Excise there is, on the contrary, an increase of £114,185; and in stamps, of £133,332. The Property-tax exhibits an increase of £63,688. The receipts under the Post-office, the Crown lands, and miscellaneous items, are severally £28,000, £40,000, and £130,000 more than in the previous year. These statistical facts must therefore be considered as undeniable evidence of prosperity consequent upon the wise commercial reforms of the late Sir Robert Peel, and the abolition of the Corn Laws.

HER MAJESTY'S VISIT TO NORTH WALES.

HER Majesty, the Royal family, and the Court left Balmoral at an early hour on Tuesday morning, and posted by Ballater, Banchory, and the Slug-road to Stonehaven, which the Royal party reached about half-past one. After a short time allowed for luncheon, her Majesty entered the Royal express train, and proceeded by rail to Edinburgh, escorted to the railway by detachments of military.

Her Majesty, together with Prince Albert and the Royal children, reached Edinburgh at a quarter to five o'clock on Tuesday afternoon, amidst the acclamations of the people.

The Royal party immediately proceeded to Holyrood Palace, where her Majesty passed the night, and left on Wednesday morning at eight o'clock by the Caledonian Railway. At ten minutes before two o'clock the Royal train arrived at Preston amid the booming of cannon and the hearty cheers of ten thousand voices, the guard presenting arms and the military band playing the National Anthem. Immediately upon her Majesty stepping from the Royal carriage, the Mayor and members of the Corporation presented an address engrossed on vellum. The Bishop of Manchester also presented an address from the clergy. Amongst those on the platform were the Earl and Countess of Sefton, Mr. C. Towneley, M.P. for Sligo; Mr. J. Wilson Patten and Mr. Heywood, members for the northern division of the county; Mr. E. T. Parker, M.P. for Preston; Mr. Gregson, M.P. for Lancaster, &c.

Her Majesty, Prince Albert, and the Royal children then retired to the apartments prepared for them, and partook of a *recherché* luncheon, provided by Mr. Croft, of the Victoria Hotel. At half-past two the Royal party returned to the State carriage amid the acclamations of the assembled multitude, and the train moved slowly away, proceeding, *viâ* Crewe, to Chester and Bangor.

Her Majesty was welcomed at the railway station of this ancient city by a large number of the population. A loyal address was presented by the Mayor of the city on behalf of the municipality. From Chester her Majesty proceeded over the Chester and Holyhead line as far as Bangor, where the Welsh population had assembled in great numbers to welcome their Sovereign. Her Majesty was received at the station by Sir Richard Williams Bulkeley, M.P., Lord-Lieutenant of Carnarvonshire, the Bishop of the diocese, and a great many leading inhabitants of the district. The Queen left the railway here, and proceeded in a Royal carriage through the town of Bangor to the Penrhyn Arms Hotel, where her Majesty rested for the night.

On Thursday morning, the Queen and the Prince Consort, with the Royal children, left Bangor, and proceeded over the Menai Suspension Bridge to the Llanfair station of the Chester and Holyhead Railway, in the island of Anglesey. Her Majesty here took the railway, and was driven slowly back to the entrance of the Britannia Bridge, where the Majesty alighted, and was conducted by Mr. Stephenson within the tube. After making several particular inquiries, and receiving explanations from that architect of the work, the Queen re-entered the state carriage and was driven through the tube by a number of men. The Prince Consort and the Prince of Wales walked over the bridge with Mr. Stephenson. At the further end of the tube her Majesty again alighted, and, accompanied by Prince Albert and the Royal children, descended underneath the gigantic work. Her Majesty expressed her unqualified admiration of the bridge to Mr. Stephenson, before taking her departure. At eleven o'clock the Queen reentered the railway carriage, and proceeded on her journey southwards. The Chester and Holyhead Railway Company retained charge of the Royal train as far as the Saltney junction, near Chester, up to which point the journey was excellently performed—only one stoppage, to receive an address under the walls of Conway Castle, having taken place. The Chester and Shrewsbury Company conveyed her Majesty over their line as far as the latter town; here her Majesty lunched, and received an address from the Corporation. The Shrewsbury and Birmingham Company brought her Majesty on to Wolverhampton where another address was presented. The London and North-Western Company here resumed charge of the Royal train, and brought it on to Birmingham, where, at the Camp Hill station, a change from the narrow to the broad gauge was made, and her Majesty performed the remainder of her journey to Windsor Castle, under charge of the directors and officials of the Great Western Company, over the newly-opened Birmingham and Oxford Railway.

An address was presented at Banbury.

Her Majesty arrived at the Windsor station precisely at a quarter to seven o'clock.

Next week we shall illustrate, from Sketches made by our Artists, her Majesty's reception in, and progress through, the principality.

THE ROYAL FARMS, WINDSOR GREAT PARK.—The annual sale of live stock from the farms in the occupation of his Royal Highness Prince Albert took place on Tuesday, at Norfolk Farm, in Windsor Great Park. There was a numerous attendance of company. The sale consisted of 14 firm short-horned oxen, of the Bullock, the Duchess, 2 fat short-horned cows, 320 fat sheep, and 4 fat pigs. The first-lot offered was an immense bow, supposed to weigh from 70 to 80 stones. It was knocked down for £7 18s., and was by far the cheapest lot sold during the day. The sheep, consisting of Southdowns and Welsh, were unexceptionable in quality, and fetched from 52s. downwards per head. The beasts were all sold at the close over the market price. Lieut.-General Wemyss, Clerk-Marshal to Prince Albert, was on the ground in one of the Queen's carriages. A handsome cold collation was served in one of the out-buildings; and it was generally remarked that the auction went off with greater spirit than it has done for years past.

PROVINCIAL EXHIBITION PRIZES.—Mr. E. M. Ward, A.R.A., has just received the 50-guinea prize at Birmingham, for his picture of "Charlotte Corday going to Execution;" this being the first award in Birmingham of any premium for a work of fine art. Last year, Mr Ward received, at Manchester, a 100-guinea prize and the Heywood gold medal, for his picture of the Queen Family of France as the Prince of the Temple;" also, in 1850, at Glasgow, the £50 prize for "James II. receiving the intelligence of the Landing of the Prince of Orange;" and in 1847, at Liverpool, the £50 prize for the "Santa Sen Sabele." These four historical pictures have been engraved in the ILLUSTRATED LONDON NEWS.

AN EXTRAORDINARY HIGH TIDE.—On Wednesday afternoon, shortly after four o'clock, the Thames was overflowing to a very extraordinary extent, inundating the banks of the river, and doing considerable damage to property, especially in the low localities.

METROPOLITAN NEWS.

THE MEETING OF PARLIAMENT.—The *Morning Herald* (Ministerial organ) says the general impression in official quarters is that Parliament will meet about the 5th or 6th of November; but that the Queen's Speech will not be delivered until about the 11th of that month.

COURT OF ALDERMEN.—THE FUNERAL OF THE LATE DUKE.—At a Court of Aldermen held on Thursday, a discussion arose in consequence of a question asked by Alderman Farebrother, as to whether it was the intention of the Lord Mayor elect and the Sheriffs to postpone the general banquet from the 9th of November until some day subsequent to that on which the funeral of the late Duke of Wellington should take place. Mr. Alderman Challis (the Lord Mayor elect) advised that the Corporation should wait upon the Earl of Derby, with a view of learning whether her Majesty's Ministers were prepared to accept an invitation upon the usual day; and that they should be guided in their proceedings by his Lordship's answer. As it was understood that this course would be adopted, the subject dropped.

CUSTOMS DUTIES.—The Board of Customs having adverted to their minute of the 15th September, 1842, under which whenever an over payment of duty by a merchant is discovered, a regular intimation to that effect is to be made to him, has now directed that in all cases of over payments of duties the parties to be immediately apprised thereof in writing, accruably to a certain form, which is to be filed up in the office where the error may be discovered, and signed by the principal of the department.

MUSEUM OF ORNAMENTAL ART AT MARLBOROUGH-HOUSE.—The numbers attending, &c., during the month of September were as follows:—553 persons on the public days, and admitted free; 957 persons on the students' days, and admitted as students on payment of 6*d.* each, besides the registered students of the classes and schools. Thirteen articles removed from their cases to be copied. No account is taken of copies made of articles which are not removed.

TONBRIDGE CHAPEL (ST. PANCRAS) RAGGED SCHOOL.—The annual meeting of the supporters of this school took place on Wednesday evening in connection with the anniversary of the Sunday and Infant's Lords (which afford instruction to an aggregate of upwards of 1000 children), at Tonbridge Chapel, New-road, Mr. Strong presided. The report stated that in the present Sunday-school there were 201 boys and 365 girls, giving a total of 566. The news received from those who had been sent out to America was most satisfactory. The report was adopted, and resolutions in furtherance of the object of the meeting were agreed to.

THE ELECTRIC TELEGRAPH COMPANY.—During the last few days a number of men have been at work in laying down the new electric wires of the company along the curb-stone, or pavement, on the northern side of the Strand, to their branch-office opposite Hungerford Market, and are now continuing it through East-street to the Post-office, and the chief office, Flounder's-court, Lothbury. The wires, instead of being of copper as at first, are of iron, are of brass galvanised over, and carried through iron pipes the whole of the line.

ROYAL MAIL STEAM COMPANY.—The balance-sheet of the Royal Mail Steam Company, submitted at the half-yearly meeting held on Thursday, shows a surplus for the half-year ending the 30th of June of £153,112, being £2488 in excess of the surplus at the corresponding period of 1851.

THE BULLION IN THE BANK OF ENGLAND.—It is estimated that the Bank of England returns to be issued on this day (Saturday) will show an increase of upwards of £100,000 in the stock of coin and bullion. One or two dealing by bill brokers has sent into the Bank in two weeks no less than £300,000 worth of Australian gold.

ROYAL FREEMASONS' GIRLS' SCHOOL.—On Thursday, at a quarterly court of this charity, it was resolved to have an election in January next, at which one of the children who could not now be admitted from an informality, would be deprived of the advantages of the institution. An additional vent of the charity was voted a pension of £6 per annum; and the committee authorised to provide for the necessary furniture and fittings for the new schoolhouse, the completion of which has been delayed beyond the expected period. Four children were then elected into the school, and the meeting separated.

GREAT NORTHERN RAILWAY.—On Thursday the new terminus of this railway, at King's-cross, was opened to the public, and the temporary terminus at Maiden-lane finally closed.

LONDON (WATFORD) SPRING WATER COMPANY.—On Thursday, a meeting of this company was held at the London Tavern, when a report was read which, after alluding to the circumstance that the bill was not last session passed owing to the want of time, although it was read in the House of Commons by a majority of 196 to 85, recommended the reduction of his par share out of the deposit of £1 7s 6d, and the re-constitution of the Company. The report was adopted.

BATHS AND WASHHOUSES.—By the return of the officers of this establishment in Greenwich, for the quarter ending Michaelmas, we find that the number of bathers amounted to 38,388, and the amount taken was £490 8s. 6d.; washers, 812; the number of hours of washing, 4,713; the amount taken for which was £18 1s. 0*d.*, making a total of £508 9s. 9*d.*

THE CITY OF LONDON UNION AND THE POOR-LAW BOARD.—On Tuesday the guardians of the City of London Union met at their board-room, in Gresham-street, Old Jewry, and passed the following resolution:—"That the board of St. Mary-Axe, and passed the following resolution:—"That the Commissioners for regulating relief afforded to out-door paupers without inflicting great hardship, injustice, and oppression upon many who are entitled to their protection and sympathy." It was also resolved that a copy should be written, and transmitted to the Poor-Law Commissioners.

GREAT INFLUX OF SHIPPING.—On Tuesday no fewer than 193 vessels of all classes were entered inwards at the Custom House. Of this number, 91 were from foreign and colonial ports; 68 coasters, and 33 coasters, or vessels of the short-trade. The foreign arrivals are principally from ports in the north of Europe, with timber, grain, and cattle; 3 West Indiamen, 3 from North America; 2 from the West Coast of Africa; the *Adventure*, South Sea whaler, 4 from ports in the Mediterranean.

BUILDERS' BENEVOLENT INSTITUTION.—On Thursday evening the fifth anniversary festival of this society was held at the London Tavern. Samuel Morto. Peto, Esq., M.P., presided on the occasion. In the course of the evening Mr. Peto (who, it was stated, had the number of his workmen at the present time was fifteen hundred) stated that the number of his workmen at the present time was fifteen hundred. The funds stood standing in the names of the trustees amounted to £2,000. The total number of subscribers was 750, and the total income for the year ending for the last year was £600. The subscriptions at the dinner amounted to about £750.

OSTEND RABBITS.—A meeting was held on Monday night, at the Rose and Crown Tavern, Leadenhall Market, for the purpose of receiving the report of a deputation appointed last month at a meeting of the importers and dealers connected with Leadenhall Market, to confer with the General Steam Navigation Company, with the view of inducing them to facilitate the conveyance of Ostend rabbits, and to consider the propriety of applying to the Board of Trade to remove the duty levied upon rabbits. The chair was taken by Mr. S. Brooke, Common-Councilman of the Ward, who stated that so important had the trade in Ostend rabbits become that, whereas, fifteen years ago, the article was hardly saleable in London, now there were from fifty to a hundred tons a week imported, affording animal food for 100,000 people at the rate of 2lb. each. The present market was, on Saturday last, in consequence of the Cloth of Gold exhibition, the rabbits were frequently not delivered till nine, ten, and eleven o'clock at night; and the consequence was, that they were often rendered unfit for human food before they could be sold; and the persons engaged in the trade (numbering some 1000 persons, including salesmen, porters, and others), were deprived of their ordinary Sabbath rest. The duty was not of itself a very serious item; but as the Ostend packets came in frequently after the Custom-house hours were over, they proceeding to market, and an extra payment was required to obtain the delivery of the goods on the same evening, the freight of 4s. 6*d.* per cask was thus raised to a charge of 11s., under which a serious trade. To show the severity with which these regulations pressed upon the trade, he might mention that one salesman, Mr. Davenes, lost £120 in two weeks last season, in consequence of the delay they occasioned. The deputation had met with the most gentlemanly treatment from the Steam Navigation Company, who had not only received the deputation in the most handsome way, and had undertaken to sail their boats from Ostend not later than twelve o'clock on the Friday night, so that they might arrive in London by the middle of the Saturday at the latest, which was all the salesmen required; and all that was now needed was the removal of the vexatious Custom-house restrictions. It appears that Sir R. Peel had omitted from his tariff the item of "rabbits" altogether, but the Custom-house authorities have treated them as poultry, and have therefore subjected them to 6 per cent. ad valorem duty. Resolutions confirming the proceedings of the meeting of the 20th of September, and authorising summary actions to be entered into with the Board of Trade in furtherance of the object, were agreed to; and, after a vote of thanks to the chairman, the meeting separated.

BIRTHS AND DEATHS.—The births registered in the metropolis for the week ending last Saturday were—Boys, 1,475; girls, 1,383: total, 2,858. The deaths registered during the same period were 984, which is below the average, and therefore shows that the press of state of the public health is not unfavourable. The deaths registered in London last week were only 3, to small-pox 8, to hooping-cough 16, to croup 6, to thrush 4, to diarrhœa 43, to dysentery 5, to influenza 3, to ague 1, to remittent fever 1, to rheumatic fever 1, to typhus, erysipelas, &c., 47, to erysipelas, 5. A boy, aged 2 months, died at 39, Philpot-street, Commercial-road East, near the Globe distillery, Stepney, Camden New town, of "cholera infantum" (3½ days). The mortality from scarlatina is still considerable, but not so great as in the two previous weeks. The disease was fatal in the last three weeks in 68, 81, and 70 cases successively.

METEOROLOGICAL OBSERVATIONS.—At the Royal Observatory, Greenwich, the mean height of the barometer in the week was 29.534 inches. The mean temperature of the week was 46·3 deg., which is 6 deg. below the average of the same week in ten years. The mean daily temperature was below the average on every day of the week. The air was coldest on Friday, when the mean was only 39·8 deg. or 12 deg. below the average. The wind was for the most part south-west on the first three days, and generally in the north-west afterwards.

POSTSCRIPT.

THE ROYAL CHILDREN.—The *Fairy*, Royal yacht, Captain Crispin, embarked at Portsmouth, on Thursday morning, the younger members of the Queen's family, who have been sojourning at Osborne during her Majesty's visit to the Highlands, and took them to Gosport, en route to join her Majesty at Windsor. Their Royal Highnesses left for London shortly before ten o'clock.

CABINET COUNCIL.—A Cabinet Council was held at the Foreign Office yesterday (Friday), at two o'clock. The Ministers present were the Earl of Derby, the Earl of Lonsdale, Marquis of Salisbury, Chancellor of the Exchequer, Earl of Malmesbury, Right Hon. Spencer Walpole, Sir J. Pakington, Right Hon. J. W. Henley, the Right Hon. J. C. Herries, the Earl of Hardwicke, Lord J. Manners, and the Lord Chancellor.

The Queen holds a Privy Council this day (Saturday), at Windsor Castle. Summonses were issued on Thursday afternoon from the Privy Council Office.

DANGEROUS POSITION OF THE DUCHESS OF KENT.—An accident of an alarming character happened, on Thursday, to the train which conveyed the Duchess of Kent and her suite from Harrington and York. A spark from the engine, it is supposed, ignited the tar-proof covering placed over some of the luggage on the top of the first-class carriages constituted by some defect in the refining of the oil. As the train was going at a speed of between forty and fifty miles an hour, the fire spread rapidly, consuming the greater part of the covering, and also the tops of several of the windows and cases. Thick clouds of smoke were perceived by the passengers in the train, which consisted of several carriages besides those of the Duchess and her suite, and occasioned no small consternation, as chiefly amongst the ladies. Her Royal Highness, however, manifested no apprehension of danger, and, as the train was speedily brought over, manifested no apprehension of danger, and, as the train was speedily brought to a stand-still, and the fire extinguished by throwing off the burning cover and suppressing the flames on the boxes, no inconvenience, beyond the fright and a little delay of the train, was experienced.

UNIVERSITY COLLEGE, LONDON.—On Thursday the department of arts and laws in connexion with this University was opened by an inaugural address from Professor Colcock. There was a large attendance of professors and students, as well as many ladies, who had been invited to be present.

THE MIDDLESEX MAGISTRATES AND THE DUKE OF WELLINGTON'S FUNERAL.—At a meeting of Middlesex magistrates on Thursday, Mr. Turner proposed that a committee be appointed to consider what steps should be taken to procure for the magistrates of the county of Middlesex a place in the funeral procession of the Duke of Wellington, with a power to take such proceedings as they may think fit to carry out that object. The motion having been seconded by Lord R. Grosvenor, was carried unanimously.

LATEST FOREIGN NEWS.

FRANCE.

PARIS, Thursday Evening.—The funds have been heavy to-day and with a considerable fall, but the is attributed to some large sales in realisation of profits. The Four-and-a-Half per Cents closed at 105f. 40c., and the Threes per Cents at 80f. 4c. for cash. There was a nearly corresponding fall in railroad shares.

The city is alive with preparations for the reception of the President. Warnings have been given to proprietors of houses to be very cautious whom they allow to occupy windows on the line of the procession.

The Bourse will be closed on Saturday; also the Corn Market, which will be held on Friday instead.

A holiday has been ordered at all the lycæums, to enable the scholars to see the procession.

Vast numbers of visitors from the departments are expected in Paris on Saturday, and most of the railways have organised excursion trains for that day.

An old officer of the Imperial armies has issued the following extraordinary proclamation: "M. Sari, President of the Society of the Remnant of the Imperial Army, has the honour to inform the old officers, non-commissioned officers, and soldiers of the Empire, that they are to meet, at twelve o'clock, on Saturday, the 16th of October, at the *entrepôt* Quai St. Bernard, to proceed from thence to take up a position upon the passage of the Emperor."

It is announced that the French President will attend a solemn "Te Deum" at Notre Dame on Sunday next.

The marriage of Louis Napoleon with the Princess Czartoryski is again talked of, but no fact is stated to show that this has been decided upon.

ITALY.

A letter from Naples, of the 8th instant, states that sentences have been passed upon several of those accused of participation in the events of the 15th May, 1848: seven being condemned to death; one to exile; three to perpetual imprisonment in irons, for twenty-five or thirty years; and twelve to various periods of imprisonment, from two to nine years. That for the accused, in all thirty-seven, are retained in prison "for further information."

The Turin *Risorgimento* of the 10th says:—"Letters from Romagna bring the melancholy news of the carrying into execution at Sinigaglia of the numerous and atrocious sentences resulting from the prosecutions of which we have spoken. Twenty-four of these sentences were capital. There are besides about an equal number of condemnations to the galleys for periods of fifteen years and the like.

THE OVERLAND MAIL.

The papers and letters from India and China, in anticipation of the Overland Mail, were received in town on Friday. Their political news is not important. The dates from Rangoon come down to the 1st September, at which time no further collisions had taken place with the enemy. Every preparation, however, was making to advance upon Prome with the least possible delay. Reinforcements were daily arriving; and soon a force would proceed up the Irrawaddy. The northwest frontier was again in an unsettled state, and fears were entertained that before long war would re-commence. The commercial advices from Calcutta are of an improved character. Trade was brisk, and money easily obtained. At Singapore all kinds of imports were dull of sale.

The news from China principally relates to the continued insurrection, and the Imperialists are said to have obtained some successes. A local paper, however, says that the people throughout the empire were discontented and rebellious. The health of the troops at Hong-Kong had improved. Business at Canton was rather gloomy. The tea arrivals were short; and those of the first class very deficient.

GOVERNMENT EMIGRATION IN AUSTRALIA.—Notwithstanding the great number of emigrants who have been sent out by her Majesty's Colonial Land and Emigration Commissioners to our Australian colonies during the present year, the applications at the office, in Park-street, Westminster, for persons qualifying to be sent out under the Government regulations are more numerous than can possibly be complied with. The Commissioners have, however, decided upon sending out a few more this year (exceeding 4000) of the classes most required in our colonies, and the next ship appointed to sail is the *Hope*, of 600 tons, to be followed by others that have been contracted for for that purpose by Government. The *Hope* is appointed to sail from the Thames, ranging from 400, 600, 800, 900, and 1000 tons each, appointed to sail during the present month to Port Phillip, Geelong, Melbourne, Western Australia, Adelaide, Sydney, New South Wales, &c.

FIRES.—On Tuesday night a fire broke out in the premises belonging to Mr Frederick Elliot, manufacturer of patent cordage, nets, and twines, Orange-square, Commercial-road East, near the Globe distillery, Stepney, which destroyed the ware-house, hemp-stores, and the warehouse, with their contents.—On the same night, another fire broke out in the premises of Mr. Lever, a coal dealer in Acorn-street, situate at No. 90, Golden-lane, St. Luke's; but the flames were soon subdued.—At a late hour on Wednesday night, great damage by fire was occasioned at the residence of a gentleman named Brown, Food-cottage, Haverstock-hill, Hampstead.

GENERAL VISCOUNT HARDINGE, G.C.B.

HENRY, VISCOUNT HARDINGE, of Lahore, and King's Newton, the successor of the Duke of Wellington in the command of the army, and for years his Grace's highly-esteemed friend, was born March 30, 1785, and is, consequently, in his 68th year. His father was the Rev Henry Hardinge, Rector of Stanhope, co. Durham; and his brother, the gallant Captain George Nicholas Hardinge, R.N., who fell gloriously in action after capturing, with an inferior force, the *Piedmontaise*, French frigate

The family is one of antiquity. So far back as the reign of Henry VII the Hardinges were seated at King's Newton, co Derby (the locality wherein his Lordship derives the dignation of his title); and they continued to reside there until the beginning of the eighteenth century. About that time, Sir Robert Hardinge, of King's Newton, died, leaving a son, the Rev. Gibeon Hardinge, Vicar of Kingston-upon-Thames, who was the father of Nicholas Hardinge, Esq., a barrister of considerable

practice. This gentleman filled successively the offices of Chief Clerk of the House of Commons, Attorney-General to the Duke of Cumberland, and, finally, Joint Secretary to the Treasury. His wife was Jane, daughter of the learned and estimable Lord Chief Justice Pratt (father of the great Lord Camden); and by her he had no less than nine sons and three daughters. Of the sons, the seventh, the Rev. Henry Hardinge, Rector of Stanhope, co. Durham, was father of Viscount Hardinge. He had, besides, with several other children, the present Rev. Sir Charles Hardinge, of Boundes Park, Kent (who succeeded to a baronetcy at the decease of his uncle, Sir Richard Hardinge); and the late Captain George Nicholas Hardinge, to whose brief but brilliant naval career a grateful country has erected a public monument in St. Paul's Cathedral.

Henry Hardinge was only fifteen years old when he joined his regiment, then on active service in Canada. Even at so early a period of life he is said to have evinced a wonderful aptitude for the military profession, and to have given unmistakeable tokens of those talents, which were, in the sequel, destined to shine out with so much lustre. We next find him serving in Sir John Moore's unfortunate campaign, which terminated so fatally, and yet so gloriously, at Corunna. The young officer was in the act of speaking to General Moore when the latter received his death wound. How little at such a moment could Hardinge have anticipated the glorious future that awaited himself and the British arms in the Peninsula! But even now the scene was about to change. Sir Arthur Wellesley appeared in Portugal, and his first successes lent a new spirit to the nation at a time when many brave and wise men began to think the struggle against France a hopeless one. Fresh exertions were made, the whole of Britain rousing itself from the torpor of despair. The Portuguese, whom the French had hitherto despised, were now drilled to arms and taught to conquer under Marshal Beresford. Hardinge acted with him as Deputy Quartermaster-General of the Portuguese forces, and took an active share in all the principal events of the Wellington campaigns. His name stands high in the rolls of the great battles of Busaco and Albuera, the Siege of Badajoz, and the glorious conflicts of Salamanca, Vittoria, the Pyrenees, Nivelle, Nive, and Orthez. A cross and five clasps were the reward of those services.

In Beresford's despatch relative to the bloody and hard-fought day of Albuera, the Marshal says, "I cannot here omit the name of Lieutenant-Colonel Hardinge, Deputy Quartermaster-General of the Portuguese army, whose talents and exertions deserve my thanks." The following year he had the yet higher honour of being favourably mentioned by the great captain himself, whose simple eulogium will be, by most people, considered as outweighing stars and ribands, however worth in themselves or worthily conferred. In his despatches, after the siege of Badajoz, Wellington says:—"General Kempt mentions in high terms, in his reports, the cool and persevering gallantry of the officers and troops. He particularly mentions Lieutenant-Colonel Hardinge, of the staff of the Portuguese Army, who attended him on that occasion." The subject of such eulogium might well exclaim with Hector, in Naevius—"Lætus sum laudari me abs te, laudo Viro; ea est enim profecto jucunda laus quæ ab iis proficiscatur, qui ipsi in laude vixerunt."

The office of Deputy Quartermaster-General was held by Colonel Hardinge from 1809 to 1813. In the Waterloo campaign he was attached to the Prussian army, with the rank of Brigadier-General; and at Ligny he received the wound which occasioned the loss of his left arm.

As a statesman, Lord Hardinge's career has been equally distinguished. In 1820, he was first returned to Parliament as member for Durham, and in 1828 became Clerk of the Ordnance. In 1826, he was again elected by the same constituency, and soon commanded the notice of the House of Commons, for, though, perhaps, not a brilliant declaimer, he was something much better; his plain and manly style of address oftentimes carrying with it more conviction than all the florid eloquence of practised rhetoricians. He continued to hold the appointment of Clerk of the Ordnance until 1828, when he was transferred to the more important position of Secretary-at-War. This post he retained until his appointment as Chief Secretary for Ireland, under the Duke of Wellington's Administration, in 1830. In the same year he was chosen M.P. for St. Germains; in 1831, for Newport, in Cornwall; and in 1832, for Launceston. In 1835 he was selected, a second time, to fill the office of Secretary for Ireland, but on this occasion with a seat in the Cabinet.

In 1841 he attained the rank of Lieutenant-General, and in 1844 was constituted Governor-General of India. This was at a time when our Eastern empire seemed to be in no small peril; but his energy, wisdom, and professional skill restored, in its fullest degree, British preponderance. Though others held the military command at the signal victories won over the Sikhs at Moodkee, and Ferozepore, yet how much was the final issue attributable to the Governor-General! "Sir Henry Hardinge (we quote from the "Annual Register," recording these great events) needs no eulogy. We know not whether to admire most his patient forbearance—whereby he put his antagonists completely in the wrong, and armed himself with a 'quarrel just'—his skilful combinations, or his heroism in the midst of battle. Brilliant indeed has been his career as a soldier and a statesman, from the battle-fields of Spain, to the victories on the banks of the Sutlej." For these great and glorious services he was created a Peer of the realm as Viscount Hardinge, of Lahore, in 1846. His Lordship has been present in sixteen general actions, for which medals have been given, and he has twice received the thanks of Parliament.

Viscount Hardinge married, in 1821, Emily Jane, daughter of Robert, first Marquis of Londonderry, and relict of John James, Esq.; and by her he has issue two sons, both military officers, and two daughters.

The accompanying Portrait is from the original picture (by Sir W. C. Ross, R.A.), in the possession of Lady James. It has just been cleverly lithographed by E. Dalton, and published by Mr. M'Lean, of the Haymarket, to whose courtesy we are indebted for permission to Engrave the same in our Journal.

THE RIGHT HON. GENERAL LORD VISCOUNT HARDINGE, G.C.B., COMMANDING-IN-CHIEF HER MAJESTY'S FORCES. PAINTED BY SIR W. C. ROSS, R.A.

THE SIXTH ANNUAL EXHIBITION OF THE MONTREAL HORTICULTURAL SOCIETY.

Although the severity of the winter in Canada is unfavourable to horticulture, yet the exhibitions of the above society, which are held three times during the summer, in addition to the annual fêtes, compare favourably with those of other countries enjoying a more genial climate. This excellence was manifested at the sixth annual exhibition of the Montreal Horticultural Society, which was held at Guilbault's garden, on the 16th and 17th September, and which we Engrave from a Sketch by Mr. Duncan, of Montreal. The locality was admirably adapted for the purpose, the garden being situated on rising ground, affording a fine view of the city. A large number of visitors were attracted to the exhibition, who appeared much delighted with the specimens of fruits, flowers, and vegetables which were there presented, while the splendid band of the 20th Regiment enlivened the occasion with its fine music. A large number of the junior visitors amused themselves with the very complete gymnastic apparatus erected by Mr. Guilbault.

The fruits, plants, and flowers were displayed under a large tent nearly 100 feet in length, the entrance to which was ornamented with arches of evergreens, surmounted by a statue of the "Gardener at Rest." The fruits consisted of apples (60 varieties), pears (19 varieties), plums (24 varieties), peaches, grapes, nectarines, currants, melons (21 lb. weight), raspberries, water-melons, &c. A very fine pine-apple, perfectly ripe, being the first ever exhibited in Canada, was sent by H. Atkinson, Esq., of Quebec. Grapes, of fine quality, grown under glass, were presented by J. Torrance, Esq.; W. Lunn, Esq.; and E. Muir, Esq. Several varieties of peaches were shown by S. Jones, Esq., of Brockville, Canada West.

The Rev. Mr. Villeneuve, superior of the Seminary, exhibited fifteen varieties of pears.

Messrs. Cockburn and Brown, nurserymen, received four prizes for dahlias. The Hon. J. Leslie exhibited a variety of greenhouse and herbaceous plants. The large mountchouse tree, measuring 28 feet in height, which ornamented the front of the tent, was from the greenhouse of the Hon. J. Molson, who also sent a wax-plant covering trellis-work 15 feet high. Vegetables, in great variety and of excellent quality, were placed upon tables in the open air.

Two of the "Canada squashes," exhibited by Mr. James Clark, weighed each 120 lbs; another, 112 lbs. On a former occasion a squash of the same variety was shown, weighing 278½ lbs.

The large egg plants and vegetables occupying the end of the principal table, were from Rose Mount Garden, the residence of the Hon. John Young, Commissioner of the Board of Works. Many prizes were awarded for bouquets, floral designs, &c., of which there were quite a number very tastefully made.

Eighty different sorts of garden and flower seeds, of native growth, were presented by Mr. Shepherd, seedsman.

The day was fine, and the spacious grounds afforded a fine opportunity to the numerous visitors for promenading.

The Montreal Horticultural Society, of which Hugh Allan, Esq., is the active and efficient president, has been in existence six years, and numbers among its members many of the leading citizens.

EXHIBITION OF THE HORTICULTURAL SOCIETY, AT MONTREAL.

CASTANOS, DUKE OF BAYLEN.

Spain, by a singular coincidence in the decrees of Providence, now mourns, as well as England, the loss of her best soldier. The fortunes of Spain render this coincidence still more striking; for the Spaniards, like the English, have their three victories of surpassing renown to boast of over the French. Our Crecy, Agincourt, and Waterloo have with them a match in Cerignola, Pavia, and Baylen. Castanos is the Wellington of their modern triumphal contest with France. The same struggle in the Peninsular established the fame of Wellington and Castanos, and gave their names to history; now but one week elapses between the deaths of these two gallant companions in arms—Nobles and Generals of the same Monarchy—the one the Captain-General Duke of Ciudad Rodrigo, the other the Captain-General Duke of Baylen. The latter is the subject of this notice.

Francisco Xavier Castanos was born at Madrid on the 22d April, 1758: he was the son of a commissary in the army. At a very early period of life he went, under his brother-in-law, General O'Reilly, to Prussia, to learn the manœuvres practised by the troops of the Great Frederick. In 1794 Castanos served in the army of Navarre, under General Caro, distinguishing himself by his daring and courage, and receiving, on one occasion, a severe wound in the left side. At the peace of 1795 he was made Marechal de Camp, and in 1798 a Lieutenant-General. After he had thus risen to rank in the Spanish army, his talents were brought into still greater activity by the iniquitous attempt, in 1808, of Napoleon to possess himself of the Spanish Monarchy, which led to the Peninsular war and its momentous sequel. Thiers, in his "History," describes Castanos as being at this time a soldier of the old school, and a discreet politician, full of sagacity and shrewdness. The moment the insurrection against the Emperor and his puppet, King Joseph, became general throughout Spain, Castanos joined the movement and sent in his adhesion to the Junta of Seville. He was at once appointed to command their forces, and through him the Spanish defeat at Rio Seco was destined to be speedily and brilliantly repaired. Castanos, with an army of 9000 men only, had to encounter the French General Dupont in Andalusia, and signally routed him at the battle of Baylen, which occurred on the 20th July, 1808, within a month of Wellington's subsequent victory at Vimiero. Baylen was a dreadful affair for the French. Dupont found himself undone on all points, and so enclosed by the conquering force of the Spaniards as to render his retreat impossible. He was compelled to surrender himself and the troops under his immediate command, to the number of 17,000, prisoners of war. The convention of Baylen was afterwards, against the consent of Castanos, broken by the Spaniards, and the whole of the French army, instead of being sent to France as stipulated, were detained close prisoners. The Spaniards were led to this act of bad faith partly by an opinion that the French Generals had been too cunning for Castanos in the conditions they had obtained, and partly by the treachery already exercised by the French towards themselves.

THE LATE CAPTAIN-GENERAL CASTANOS, DUKE OF BAYLEN.

Sir Walter Scott in his "Life of Napoleon," thus speaks of this victory of Baylen:—

> The battle and subsequent capitulation of Baylen was in itself a very great disaster—the most important which had befallen the French army since the star of Bonaparte arose—the *fureor eonsilium*, as he called it of his military history. More than 3000 Frenchmen had been lost in the action; 17,000 had surrendered themselves; Andalusia—the richest part of Spain—was freed from the French armies; and the wealthy cities of Seville and Cadiz had leisure to employ a numerous force of trained population, and their treasures, in support of the national cause. * * * * The battle of Baylen dissolved that idea of invincibility attached to Napoleon and his fortunes, which, like a talisman, had so often palsied the councils and disabled the exertions of his enemies, who felt, in opposing him, as if they were predestinated victims, struggling against the dark current of destiny itself.

The immediate result of the victory of Baylen was the evacuation of Madrid by King Joseph Bonaparte. Castanos soon after became President of the Spanish Council of War, and took the command of the central army of Spain. Thiers, in his "History of the Consulate and the Empire," thus speaks of these events:—

> But the evacuation of Madrid looked like a formal avowal of the new royalty, that it was incapable of retaining by force the kingdom which it pretended to have received from Providence. What Providence wills it knows how to sustain, and suffers it not to fall. From this moment all Spain would be astir, and the particular disgrace of Baylen, which lighted upon a few generals, was destined to be succeeded by a cruel confusion for Napoleon, the confusion of his policy, a consequence of the total evacuation of almost the whole of Spain.

In the course of the continuing war in the Peninsula, it fell to Wellington's lot to complete what Castanos had begun; and though Castanos himself subsequently sustained reverses, particularly at the defeat at Tudela, yet he fought and led gallantly as an able and esteemed coadjutor of England's greater warrior, until victory and independence crowned the united efforts of Great Britain and Spain. In 1811, the Regency named Castanos Commander of the Fourth Spanish Army, and Captain-General of Estremadura, Old Castile, and Galicia. He commanded the lines at St. Roche, and highly distinguished himself at the famous battle of Vittoria. Nevertheless, the Regency deprived him of the command as well as of his title of Captain-General; but, as a kind of palliative, conferred on him the grade of Counsellor of State. Castanos

FESTIVAL OF THE PERAHERA, IN CEYLON.—(SEE NEXT PAGE.)

wrote to Wellington, complaining bitterly of the treatment he had experienced, and the English General replied by a strong expression of disapprobation of 'the dishonourable and unjust conduct of the Spanish Government in displacing one who had rendered such great services to his country." When the peace came, Castanos, who was just sixty, received from the restored Monarch the Castilian Generalship of Catalonia, with the Grand Cross of the Order of St. Ferdinand; and, on Napoleon's return from Elba, was placed at the head of an army of 70,000 Spaniards to assist the Allies. Subsequently he was made Duke of Bayl-n, and his later years were passed in honoured and dignified retirement. To his countrymen the veteran was always an object of pride and affection. And his death, which took place on the 21st ultimo, has caused a great and praiseworthy sensation among them. Castanos, though in his 96th year, preserved his intellectual faculties to the last. The Spanish Government decreed him a public funeral. This took place at the expense of the State, in the church of Atocha. The Queen of Spain was present. The sword of the warrior is deposited in the Museum of Artillery: a magnificent monument is to be erected to his memory. In an article on him, the *Gazette* says that he died poor, and that his property was occasioned by his charity. His death, it declares, is a national loss; and it adds, that "he lived a hero and died a saint." His title passes to one of his great-nephews. By his death, and that of Wellington, the Viscount Beresford, the Duke de la Vittoria, the Marquis Romana, the Duke de Valencia, and the Marquis del Duero, are, with the Royal Princes, the only persons who now hold the dignity of Captain-General of the army.

The accompanying Portrait is from a drawing by R. Benjumea, Esq., of Madrid.

Next week we shall Engrave the Grand Funeral Procession of the late Duke.

IDOLATROUS FESTIVAL OF THE PERAHERA, IN CEYLON.

(From our own Correspondent.)

On my arrival at Colombo, from Madras, I found the community in a great state of excitement, getting up petitions to the Queen against the connexion of the English Government with the idolatry of Ceylon. which, they said, had been given up in 1847, and was being resumed by their new Governor, Sir G. Anderson. As I had a few days to spare, I thought I could not better employ them than in visiting one of the temples in which the native superstitions are practised; so I took a run up the Colture river to Ratnapoora, where the festival of the Perahera was then in course of celebration. Ratnapoora is a neat station, the residence of a civil sector and judge. His worship being from home, I got a man to show me the road to the temple, called the Suffragam Dewale. In front is a oblong square, formed by three streets of shops, the Dewale forming the fourth side: to the building the ascent is by a steep flight of steps from a courtyard; you then enter a long hall supported by pillars; at the end of this there is a building supported three stories high, with common sloped roofs: the entrance and walls round the Temple are covered with rude paintings of demons and Hindoo deities, as I ascended. At about four o'clock, after a stunning noise of tom-toms, and blowing of horns and conch-she ls, the procession began. I send you a sketch of the scene. 1. In front came two snortmen on mules, nine or ten feet high, representing devils, with horns, tusks, &c. 2. Then came a silver shrine, which I was told cost £150; consisting of three stories, and covered with coloured cloths and they were framed of wicker-work, and covered with coloured cloths and handkerchiefs, and were moved by a man hidden in each, who walked them along. 3. A party of men with guns, and eight flags, of all colours. 4. A high white elephant, artifically made, and moving on wheels, so ours. 5. A high white elephant, artifically made, and moving on wheels, so ours. 6. Six Lascars. 7. A pagoda of three stories, with female figures in the arches. 8. Six Lascars. 9. A pagoda of three stories, with female figures in the arches. 10. A man-guns and a nobby horse, all three of wood, besides several girls, with a number of musicians. These were all dancing. 6 A pagoda of six or seven stories, better of musicians. These were all dancing. 6 A pagoda of six or seven stories, painted with female figures, and devils eating human beings. These pagodas were on wheels, and drawn along by men. 7. A silver shrine, like No. 3. In the lower were on wheels, and drawn along by men. 7. A silver shrine, like No. 3. In the lower story I found there was a silver shrine, which I was told cost £150; consisting of three stories, and covered with coloured cloths and handkerchiefs, and were moved by a man hidden in each, who walked them along. 2. A party of men with guns, and eight flags, of all colours. 3. A high white elephant, artifically made, and moving on wheels, so ours. 4. A high white elephant, artifically made, and moving on wheels, so ours. 5. Six Lascars. 6. Six Lascars. 7. A pagoda of three stories, with female figures in the arches. 8. Six Lascars. 9. A pagoda of three stories, with female figures, and devils eating human beings. These pagodas were on wheels, and drawn along by men

EPITOME OF NEWS.—FOREIGN AND DOMESTIC.

The Earl of Derby was on Tuesday elected Chancellor of the University of Oxford, without opposition, in the room of the late Duke of Wellington. The proceedings did not occupy more than half an hour.

Lord Fitzroy Somerset has been raised to the dignity of Baron of the United Kingdom, by the title of Baron Raglan of Ragnan, in the county of Monmouth.

Lord Viscount Combermere has been appointed Constable of the Tower of London, also her Majesty's Lieutenant and Custos Rotulorum of the Tower Hamlets, in the room of the late Duke of Wellington.

The King of the Two Sicilies, by a recent decree, removes the prohibition to import foreign horses into the kingdom, and allows all such horses to be imported, with the exception of a peculiar sort from Dalmatia. The decree fixes the duties which are to be paid on importation.

Bills of health being required in Sweden from all travellers from Copenhagen, the Danish steamers between the latter city and Bornholm have ceased stopping at the Swedish town of Ystadt, which has caused some considerable inconvenience to persons in business

The Asiatic cholera continues in Berlin, and though the reported attacks are few, the proportion of deaths to the number of attacks partakes of the general severity of the visitation.

We learn that not a militia-man has yet been raised in North Devon or in Cornwall. The numbers in the latter place are getting £3 10s. or £4 a month; and it is said there is room for hundreds of able hands at those wages.

Captain D. M'Kinlay, the commander of the *Oscar*, screw-steamer, of Belfast, was lost overboard, off Beachy Head, on the passage from Belfast to London, on the night of Monday, the 4th inst. He has left a wife and five children to mourn his loss.

A severe collision took place on the night of Friday se'nnight, at Port Bello, three miles from Edinburgh. One man was killed and several passengers injured. The accident occurred in consequence of a luggage train standing on the rails, and the mail-train, which leaves Edinburgh at six o'clock, coming into collision with it.

The subscriptions on behalf of the families of those who suffered by the Lytham Life-boat accident now amount to about £800. Only three of the bodies have yet been recovered, it being supposed that the remaining five have been carried out to sea.

On Saturday morning last a very large robbery of watches, jewels, and articles in gold and silver, was perpetrated on the premises of Mr Jones-watchmaker and jeweller, of 338, Strand, nearly opposite Somerset-house The value of the property stolen is about £600.

By the arrival of the *Prince Albert*, we learn that the whale fishery at Davis's Straits has been a failure. Up to August only six fish has been taken among all the ships engaged in the fishery. The *Regalia*, of Kirkaldy, had been lost. An American whaler had also perished.

Captain E. J. Carpenter, R.A., has patented an invention in the art of propelling vessels at sea. He makes use of two screws and a duplex rudder by which the speed of the ship and the control over her are considerably increased.

The total capital required by the various joint-stock companies including gold, railway, banking and mining undertakings, projected during the present year is estimated to amount to £30,000 000., independent of the usual supplies in the shape of calls and loans for established companies.

The Treasury has just sanctioned the appointment of seven permanent Poor-Law Inspectors, at a salary of £800 a-year, with allowances. It is understood that these appointmen s are to be made from the eleven Poor-law inspectors who were employed in the service temporarily, and whose warrants will expire on the 31st inst

A German gentleman, named Leiderdorff, who has just died, has left 400 thalers a year to the heirs male of Schiller for ever, as "a tribute of admiration to the poet's genius."

The Government has forwarded notes to her Majesty's Ministers at foreign Courts, requesting them to send plans and other details of picture-galleries on the Continent, with a view to assist the committee in the choice of a design for our proposed National Gallery.

A little girl, aged five years, the grand-daughter of Mrs. Newton, who keeps the toll-gate near Black Hill, Newcastle, died in great agony, last week, of hydrophobia, having been severely bitten in the face by a rabid hound about six or seven weeks previously.

In the month ended the 5th ult., the declared value of steam-engines and parts of engines exported was £36,710, which was a great increase on the same period of 1852, when the value was £23,609.

The Crystal Palace at Dusseldorf, being an exhibition of provincial arts and manufactures for Westphalia and the Rhine, formed on the made of the Hyde-Park building, was closed on the 30th ult

The failure of Messrs. Podesoff and Sons, the largest tallow-dealers in St. Petersburgh, is announced for £400 000; but only a few thousands less will fall on creditors in England, the debts being chiefly local.

The translation of English works is just now being carried to an almost incredible extent in Germany; and every book of some note which appears in London is immediately issued upon, and "done" into German by one or two, if not more, translating firms.

The sporting world will be glad to learn that foxes are generally plentiful in Berkshire and the neighbouring counties, and especially in the neighbourhood of Oxford.

It is stated that upwards of 250,000 persons had visited Ireland during the last year, through the cheap excursion trains.

The *Wave Queen* steamer, which was stranded on Newhaven beach in the gale of the 28th ult. has been got into harbour, with scarcely any perceptible damage.

Amongst recent emigrants to Australia are a son of the Bishop of Exeter, who is gone out as a settler near Melbourne; and the Hon. and Rev. Baptist Noel's son, who has gone out to practise at the Australian bar.

More than twenty years ago a Mr. John Watt, it is said, left funds, believed at present to amount to about £24,000, to build some sort of hospital in Leith for "well-behaved old people," and it appears nothing had been done by the trustees (of whom the Provost is one, *ex officio*) in the matter. The Leith Town Council have appointed a committee to look into the affair.

Arrangements are in contemplation to complete the testimonial to the Duke of Wellington, which stands on a rising ground in the Phœnix Park, adjacent to Dublin. It is estimated that about £5000 will be required for the purpose.

It is stated that the Roman Catholic Defence Association, which was established in Dublin last year, has been lately dissolved, in consequence of the want of funds to support it.

On Monday morning, while two of the labourers in the employ of the Lancashire and Yorkshire Railway Company were at work on the line, near the Seven Stars Bridge, Wigan, they were knocked down by the passenger train to Liverpool, which suddenly came upon them. One of the men was killed on the spot, and the other had one of his legs broken.

Thomas Burns, aged 82, having been run over by a Clapham omnibus, on Saturday night last, on Westminster-bridge, died, shortly afterwards, in the Westminster Hospital.

It is proposed to carry the telegraph under Southampton Water to the Isle of Wight, and the Royal residence at Osborne.

The friends of the National Society will be glad to learn that her Majesty has favoured the society with the usual Royal letter. The necessary steps will be taken forthwith to issue the letter to the clergy throughout the country.

As a train on the Strasburg Railway was on Saturday passing over the bridge of St. Phlin, department of the Meurthe, a passenger leaned out of the door to look about him Unfortunately, the door was not well fastened; it flew open, he fell out, and was killed on the spot.

The Treasury has given the necessary directions for permitting a case of casts, &c., which has arrived by a steamer from Boulogne for the Department of Practical Art, to be sent direct and undisturbed to Marlborough House, for delivery at that establishment.

The *Durham Advertiser* states that, at the Sunderland corporation meeting last week, it was resolved to collect the expenses the corporation had incurred in flogging divers streets, from the owners of the adjoining property in "forthwith," and then to take "counsel's opinion" if it was legal! Execution first, and trial afterwards.

CHESS.

TO CORRESPONDENTS

VOS H and L. Bates-Boston.—We regret to say that owing to some negligence on the part of the Foreign bookseller, your welcome souvenir, and the still more welcome letter which accompanied it, though dated July, only reached us on the 9th instant. An acknowledgment was immediately despatched by post; but, to be doubly sure, we adopt this means also of announcing you that the packet has, at length, come to hand

C S, New York.—Its papers were duly received, and a letter shall be forwarded by the next mail

COLONNA.—The copy of the original edition of Zeilen von Diemitz's rare work, "La Superiorité aux Echecs" (1792), so obligingly presented by our Correspondent arrived safely, and is deservedly appreciated as one of the very best *elementary* treatises on the game ever writ on

J B R, Sittingbourne.—We have tried in vain to penetrate J B R's intentions and wishes respecting the Problem he revises above. Perhaps he will be good enough to favour us with a few more lines, stating his views esp fully

BODGER.—Have the kindness to direct your communication in the ordinary way, "To the Editor," &c

CHARADE.—Good Chess Problems are much more difficult of solution than you appear to think. Look again at No 454, and you will see your error

Q R E.—The joke of sending a set of impossible moves and calling them a "solution," is lost upon us, and appears a very silly waste of time and paper

J F, of Ilston.—Your last is a tolerably obvious mate in two moves, by 1. Q takes Kt (ch); 2. R to K 4th mate

P Q P, Plymouth.—In playing games by correspondence, the adversaries are seated sometimes in separate rooms, and sometimes only at different tables The rules observed are those of the ordinary game, and neither party is justified in touching the man except to play them, or in counting any move he may have made on the pieces in advance

R D M.—Your card-game is clever, but too easy

SCOTIA.—Suppose White for his first move, play Q to Q R 6th, how can Black possibly prevent mate next move?

B W P. You should remember your diagrams. The one last sent is capable of two easy solutions

J S, M P. The problem is correct but very obvious

PERSIS.—The humorous specimen which has attended the new pattern Chess pieces called "The Staunton Chess-men," is another quite without parallel in the sale of such articles, in a sufficient attestation of their excellence. Upon their first appearance we expressed an opinion that they were immeasurably superior, both in points of unity and elegance, to any others we had ever seen and after two or three years experience of their qualities we are confirmed in that opinion It will be a regr ss to the taste and judgment of Chessplayers if these really beautiful pieces do not entirely supersede the barbarous imitations of ancient "Chess-men" which he farmers have hitherto imposed upon us

J M, of St Pierre.—There is no flaw in "Stella," but the solution difficult is shown in the fair, that of the solo less neat to us only about half a dozen are correct, and in these, one of the chief and most beauti ul variations is omitted We shall without delay hope for a few days longer

DERWENT.—You have been misinformed. The *Chess-Player's Chronicle* has been established two years and continues to be what it always was—the chief organ of communication for chess-players throughout the world

F D Bruges.—Received safely and in time. We need hardly say the remainder of the seven played well by Herr Mayet with which you are acquainted

R M, Spalding.—The Honorary Secretary of the Hull Chess Club is Mr S W Kirke, and to him we must refer you for tickets and par iculars of the Great Chess Meeting on the 20th instant

CYMRO, PRIZE.—In French, Jaenisch's "Analyses Nouvelle," price 10s, to be got of Williams and Norgate (to open books shelves). In English, "The Chess player's Handbook," price 5s, just issued by H G Bohn

OMEGA.—A correct sum, sport we believe

IDLER. You cannot do better than join the St George's Chess Club. Apply to Mr Longbottom, Fenwick-street, Liverpool

C K K.—They shall receive attention

SOLUTIONS OF PROBLEMS No 454, by Stevens, Argus, Phiz, Ernest, Albert, Bodger; J M of Sheffield, Perseus, Idler, and Dot

SOLUTIONS OF ENIGMAS by Vida, Subaltern, W B S, of Tonbridge Wells, are correct; all others are wrong.

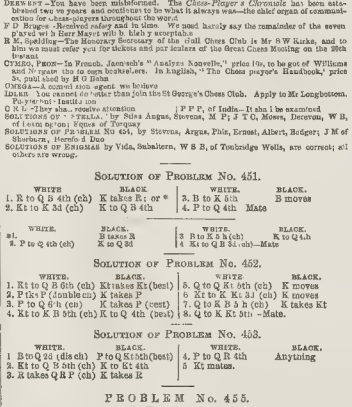
PROBLEM No. 455.

By Herr LÖWENTHAL

BLACK.



WHITE.

White to play, and mate in five moves.

MR. PETROFF'S GAMES.

The following Game was played at Warsaw by Mr. PETROFF and Mr. SZYMANSKI.

(The Bishop's Opening.)

BLACK (MR. S.)	WHITE (MR. P.)	BLACK (MR. S.)	WHITE (MR. P.)
1. P to K 4th	P to K 4th	22. K to K 2d	K Kt takes K B P
2. B to Q B 4th	Kt to K B 3d	23. Kt takes R	K B P takes Kt
3. P to Q 3d	B to Q B 4th	24. K to K 3d (d)	P to K B 4th
4. Kt to K B 3d	P to Q 3d	25. P takes P (in passing)	P takes P
5. P to Q B 3d	B to K Kt 5th		
6. Castles	Castles	26. B to Q B 2d	P to K B 4th
7. P to K R 3d	B to K R 4th	27. K to K 2d	Q R to Q sq (e)
8. P to Q 4th	P to Q K 4th	28. K takes K Kt	Kt takes R
9. B to Q Kt 3d	P to Q B 3d	29. K takes Kt	Q R to Q 8th
10. B to Q B 2d	Q Kt to Q 2d	30. Kt to Q K 3d	Q R to Q 7th (ch)
11. P to Q Kt 4th (a)	K R to K sq	31. K to his sq	K R to Q sq
12. B to Q R 3d (b)	B takes B	32. R to Q sq	R takes R (ch)
13. Kt takes B	P to Q 4th	33. B takes R	K to B 2d
14. P to K sq	Kt to Q B 4th	34. B to K 2d	P to K 6th
15. Kt to Q Kt sq (c)	P takes K P	35. Kt to Q B 2d	K to B 3d
16. P takes P	Q takes Q	36. P to Q Kt 4th	P takes P
17. R takes Q	Q Kt takes K P	37. Kt takes P	R to Q sq
18. P to K Kt 4th	B to K Kt 3d	38. B to Q sq	K to his 4th
19. P to K Kt 5th	K Kt to Q 4th	39. K to Q 3d	K to Q 5th,
20. P to Q B 4th	K Kt to K B 5th		
21. Kt to K B 4th	K Kt takes K P (ch)	And Black gave up the game.	

(a) This is very "Plano" Black did not sufficiently appreciate the value of time in Chess, or he would never have thrown it away thus.

(b) Badly played, because it leads to his Kt being forced to a square where he can be of no possible use, and to set from whence he must use another move.

(c) As this is mere bable Why move the Kt back at this moment, and thus lose a centre Pawn? Mr Szymanski was manifestly not himself during the present game. His usual play, as we are pleased to know, was of a very different stamp.

(d) R to Q R 2d looks stronger

(e) Mr Petroff prefers to surrender the two minor Pieces for the Rook, rather than permit his Pawns to be broken up.

THE YORKSHIRE CHESS ASSOCIATION.—From the reports of these most intimately concerned in the arrangements of the HULL CHESS FESTIVAL on the 20th, the assemblage promises to be a bumper In addition to the customary visitors from all parts of Yorks ire, Lincolnshire, Northumberland, &c., a strong muster of members from Liverpool, Manchester, Birmingham, and Preston, are confidently expected; and several of the very finest players in the metropolis have also fixed the appointation of being present on the occasion of this interesting and intellectual tourney.

NAVAL AND MILITARY INTELLIGENCE.

PROVISIONS FOR THE NAVY.—The following are the terms upon which the Government contracted last week for the yearly supply of beef and pork for the navy:—Beef, 3000 tierces and 5000 barrels; pork, 2400 tierces and 2,200 barrels. The beef was taken at £5 2s. 6d. to £5 16s per tierce for Irish, and £5 16s. for American; the pork was taken at £5 12s to £5 19 . per tierce for Irish, and £5 5s. for Hambro'. Of this quantity Messrs. Allen and Anderson supplied 1300 tierces and 800 barrels of pork, at £5 17s. to £5 18s. 10d. and 1600 barrels of beef, at £3 16s 8d. to £3 19s. 11d.

NAVAL APPOINTMENTS.—Consequent on the decease of Rear-Admiral Thomas Bate, C B, Rear-Admiral of the Red, Vice-Admiral of the Blue Fairfax Moresby, C B, born a Rear-Admiral of the White; Captain James Hanway Plumridge (1822) is promoted to a Rear-Admiral of the Blue on the active list; Retired Captains Thomas Ladd Peake and William Hendry are, in accordance with the Order in Council of August, 1846, placed on the retired list of Rear-Admirals; Captains Norwich Duff, Sir Charles G. Parker, John Edward Walcot, M.P., and the Right Hon Frederick Earl Spencer, K.G., are placed on the reserved list of Rear-Admirals

THE ROYAL LONDON MILITIA.—The full number of 600 volunteers for this corps is now complete, and, as compared for the most part, of able-bodied and efficient men; but, notwithstanding, volunteers are still daily applying to the magistrates for enlistment.

FURLOUGHS IN THE ARMY.—The General Commanding-in-Chief has recently issued a general order from the Horse Guards, whereby he states his approval of general officers commanding districts in Great Britain, and officers commanding in garrisons not being field officers, or any military district, granting leaves of absence to officers and furloughs to non-commissioned officers and soldiers, under certain regulations and restrictions, which he lays down.

ANTI-MILITIA PLACARDS.—In Buckinghamshire, a bill-sticker, named Barron, has been held to bail to answer a charge of having posted some placards intending to dissuade men from enlisting in the militia. At Great Bardfield a clerical gent man became so much excited by the exhibition of one of the placards on the shutters of a Quaker neighbour, that he discharged the contents of a double-barrelled fowling-piece at the document, completely obliterating it of course, but at the same time doing serious injury to the window-fastenings upon which it was posted.

PLYMOUTH.—The Lords of the Admiralty, headed by his Grace the Duke of Northumberland, in full uniform, commenced their duties at Devonport on Tuesday, by accompanying Commodore Superintendent Seymour and the principal officers through the dockyard, closely inspecting the steam-basins, engine-house, and new dock; after which they went on board the ships under construction, viz., the *St. Jean d'Acre, Exmouth, Algiers, Peake*, and *Narcissus*. Their Lordships subsequently proceeded to Keyham, and inspected the new yard and docks there. His Grace the First Lord held a levee at four o'clock for officers in the dockyard, and subsequently gave his official dinner.

BILLETING THE MILITIA.—There is a provision in the New Militia Act to the effect that the militia may be billeted in those townhouses in which soldiers may be billeted.

THE "MELBOURNE" STEAMER.—The *Melbourne* mail steamer, having made good her defects, was to have sailed from Plymouth on Wednesday morning for her destination; but, in getting under way in Hamoaze with the ebb tide, she ran between two hulks, and fouled one of them She carried away her jibboom, cathead, and anchor, let her chain cable run out, broke the boat davits, and did other damage, which will cause further detention to the ship.

THE CUNARD COMPANY'S SCREW STEAMERS.—The new line of screw steamers about to be started by the Cunard Company to run from Liverpool to Quebec and New York, has just been advertised. The fleet is to consist of six vessels, each of from 1500 to 2000 tons burden, and between 300 and 400 horse power; and the names are to be the *Andes*, the *Alps*, the *Taurus*, the *Etna*, the *Jura*, and the *Caucasus*. Two or three of them are already launched, and the first is to sail on the 6th of December next. At the commencement they will per orm only monthly trips, but they will ultimately sail twice a month on the alternate Wednesdays, when there is no Collins' steamer to New York. It is contemplated that the entire passage from Liverpool to Niagara, calling also at Jamaica will be performed in from eighteen to twenty days.

The whole officers' corps, down to the lowest subaltern of the Austrian regiment, "Wenlington," will accompany their colonel to London to join in the funeral procession of the illustrious Duke.

MATCH BETWEEN THE YACHT "AMERICA" AND A SWEDISH SCHOONER The match between the *America* and the Swedish schooner *Sverige* (Mr. Nahnlah Beckman), for £400, came off on Tuesday The vessels started from Ryde at half-past eleven o'clock. The *America* took the lead at once, and came in to the winning station at four minutes past eight P M, the *Sverige* making the goal at twenty-eight minutes after the *America*. A correspondent has kindly favoured us with the following additional facts:—"They were accompanied by two cutter yachts, the *Fleur-de-lys* R L Y C., and the *Wildfire*, R.Y.C. The latter vessel started astern of the racing yachts at Ryde, but passed both of them off Whitecliff Bay. She then steered for the steamer moored twenty miles to leewards of the Nab Lightship, which she rounded six minutes ahead of the Swede, fourteen minutes of the *America*; the *Fleur-de-Lys*, being so far astern, gave up the chase, and went home through the Needles. About half an hour after rounding the steamer, the *Wildfire* carried away her topsail-yard, which lost her some minutes. It was speedily replaced by a smaller one, and she retained her lead on the return until off Bembridge Ledge, when the *America* passed her. Between this point and Ryde she recovered her lead, and finally arrived off the market-boat two minutes ahead of the *America*, thus proving herself to be superior to that celebrated yacht."

BIRTH-PLACE OF THE DUKE OF WELLINGTON.

(From a Correspondent.)

I SPENT a few days in the county of Meath in 1843. I visited most of the interesting places, such as Tara Hill, the scene of the Battle of the Boyne; the town of Trim; and that place which draws tourists to Trim, Dangan Castle, the birth-place of the Duke of Wellington.

It was on the afternoon of the 16th of August that I and my wife alighted at Mr. Darling's hotel. After making inquiries about the distance to Dangan, and ascertaining that it was four miles, and that we could hire a car, Mr. Darling introduced me to a Mr. Sherlock, who came to the hotel altogether unaware that any strangers were there, interested in seeing the birth-place of the Wellesleys.

Mr. Sherlock was a respectable-looking, venerable old gentleman. With his brother he had been many years in business as a tailor and draper in the town. His father had made clothes for all the sons of the Countess of Mornington, when boys at Dangan. He himself, working with his father, had stitched some of the juvenile garments of the boy Arthur; and he was a master-tailor, and measured the same Arthur for clothes when he was a soldier, and came to Trim on the recruiting service.

Mr. Sherlock said that he remembered, "as if it were but yesterday," the election of the Hon. Arthur Wellesley as member for Trim, and the dispute about his age, it being alleged that he was under twenty-one years. There was the nurse, Daly, who attended the Countess of Mornington in her accouchement, "put upon the table," and she made oath that she was present on a certain day when the boy Arthur was born, at Dangan Castle, which made him then twenty-one years old. Mr. Sherlock's mother had also been present at the accouchement of the Countess in Dangan, when Arthur was born: but she, not remembering the exact day, did not make oath to her statement of recollection.

Now, is it not improbable, I may say impossible (with our knowledge of the Duke of Wellington's character, and that of his mother, whom all who ever knew her have lauded for her stern virtues), that they should have produced, or permitted any one else to bring forward, domestics and neighbours to perjure themselves?

According to the relation made to me by Mr. Sherlock, whose words no person doubted, his mother, the nurse, and others, examined at Trim, could not have spoken to the birth of Arthur Wellesley, unless it had occurred at Dangan, and not at Dublin; for they were not at Dublin to witness it.

If the register of baptism in St. Peter's parish, Dublin, is now to decide that Arthur Wellesley was born there, and born on the 30th of April, 1769, instead of the 1st of May, why was that register not deemed sufficient to prove his age when elected to the Irish Parliament?

But it appears that in some Irish periodicals of the year 1769, there is a notice that the Countess of Mornington had given birth to a son at Dublin, which son must have been Arthur. Were all other evidence in favour of Dangan the birth-place, this would conclude the controversy. But as the evidence seems all the other way (with the exception of this, and that of the register of baptism), these newspaper notices suggest a few remarks. They cannot be absolutely disproved, but there is a very strong presumption that the printer read Dublin for Dangan. In those days the press was not so carefully corrected as now; but even now, in printing-offices better supervised than the newspaper offices of Ireland, such a mistake could occur The "reader for the press" in Dublin might know that the Earl of Mornington has a house in that city; possibly he might not know that he had a house called Dangan, in the

THE DUKE OF WELLINGTON.

RUINS OF DANGAN CASTLE—FROM A RECENT SKETCH.

county of Meath; he might, even if the compositor had set up the word Dangan, have substituted Dublin as a correction.

What followed? One paper copied from another.

Be this the true solution of the newspaper difficulty or not, there is, without it, the strongest presumptive evidence that Arthur Wellesley was born at Dangan. I have given the statement of Mr. Sherlock. Mr. Flood, a gentleman of property and good mercantile business in Trim, told me that no one about that town had a doubt as to the Duke's birth-place. Add to this the fact related and illustrated in the Number of the ILLUSTRATED LONDON NEWS of the 25th of September, that the nobility and gentry of Meath, including most of the inhabitants of Trim who could afford to subscribe, erected a monument many years ago to record their estimation of the Duke of Wellington as an illustrious General who had drawn his first breath in that neighbourhood.

Next we have the fact that the Duke's own confidential editor of the Despatches and letters, Colonel Gurwood, relates the hero's birth to have occurred at Dangan, on the 1st of May, 1769; which statement was not corrected as an error by the Duke or any member of the Wellesley family.

Also, there is the letter of the Countess of Mornington, written in 1815 to a gentleman at Edinburgh, recently published, stating, for his information and that of the public who desired to celebrate the Duke's natal day, that it was the 1st of May. This disposes of that authority which named the 30th of April as the birth-day.

I come now to a kind of negative evidence in favour of Dangan, which, I believe, has never attracted public notice. It would carry little weight, standing by itself, but following all the preceding, it is of some significance:—

The Wellesley family, from a period antecedent to the military eminence of the Duke, had substantial reasons for despising Dangan Castle; in fact the Marquis Wellesley parted with it in disgust, and no one of the Mornington family have recognised it as the place of their childhood. The cause was this:—When the Marquis of Wellesley, then Earl of Mornington, was appointed, at the instance of Mr. Pitt, to the Government of India, the paternal estate and reversion of Dangan (called a "Castle," though it had no feature or quality of a castle), were let on lease to a tenant, Mr. Roger O'Connor, father of Mr. Feargus O'Connor, late M.P. for Nottingham. He proved to be not only a very bad tenant to pay rent, but to preserve the property. In his time the noble woods, covering 900 acres, a park not excelled for its beautiful landscapes and excellence of timber anywhere, was devastated. The roof of the mansion was taken off, and the timber disposed of; and, lastly, the mansion in one wing was burned to the ground. The stumps of the park trees are seen to this day standing one, two, three, and four feet above the ground, memorials of the reckless way in which they were felled and the park despoiled. Mr Sherlock, and all with whom I spoke at Trim, affirmed that this devastation, committed by a tenant while the landlord was absent in India, was always understood there to be the cause of the Marquis Wellesley and the family parting from that estate never to return, even to look upon their birthplace.

KILMORE CHURCH, ON THE DANGAN ESTATE.

Reverting to my visit on the 16th of August, 1843: I hired a car from Mr. Darling, of the hotel, after my conversation with Mr. Sherlock and others relative to the matters already named, and drove to Dangan. On arriving at the margin of the domain, we entered a narrow avenue by an iron gate. This was opened by a woman whose house was one of the wretched huts. She poured out blessings on our heads, and begged for the love of God. On each side of the avenue was a lofty thorn hedge, rugged and picturesque, and so luxuriantly grown as to prove the soil on which it grew to be deep and fertile.

At the distance of four or five hundred yards up this road, the park, with its undulating surface, its bold eminences, and receding hollows, became exposed to view, with its bare bald head. Here and there some stump not bereft of life, had sent up shoots which promised to be trees at a future time, and which, in some degree, relieved the barrenness of the scene. On closer inspection we found the stumps bare of twigs, and without bark, bleaching to grey whiteness, and over the distance of a mile, marking the track of the despoiler. I believe it is not too much to say that there is not a tract of country, or local spot, devastated by war in either hemisphere, in any of Wellington's campaigns, but has long ere this recovered its cultivated or its natural character; yet those noble woods, the artificial lakes and waterfalls, the shaded walks and cool grottoes, in which the musical Lord Mornington, father of the noble Welleseleys, so much delighted, and in which he was inspired to compose that music which still lives, and may never die—"Here, in cool grot" that magnificent park, despoiled by no exigence of war, and certainly by no warrior, has not yet recovered its former beauty and grandeur, and probably never will. The road from the head of the narrow avenue before named bore towards the left, and again turned to the right. From this last turn we saw, on the brow of a gentle slope, the Castle—brute, grey, shelterless, and, in most part, roofless; cars, waggons, ploughs, harrows (most of them broken), dunghills, live pigs, gates without hinges, and ragged ploughmen lying or standing idly about.

On speaking to some of the ragged loitering workmen, one of them, with that promptitude and subserviency of manner so peculiarly Irish, opened the crippled gate to admit us to the front of the Castle; and another, with equal promptitude, carried our compliments to the inmates with the request to be allowed to see the apartment in which the Duke of Wellington was born.

In the front, we observed that the windows were rudely built up with stones, and the roof entirely gone. A red painted door, which fitted its place by a great part of the doorway being made to fit it, was opened from the inside. We entered, and found the main portion of the building entirely cleared of its party walls. It was open to the sky above; and where the floor of the dining-room, library, and parlours had been, there was now a flower-garden. This had a prettiness of flowery outline, which indicated another hand than that which was answerable for the disorder outside. It was cultured by a young female, whom we found to be at once handsome, obliging, and intelligent.

This young lady led us through the ruin to a parlour, which had a spacious bow-window looking out on the neat garden and disorderly farm-yard, and down a gentle green slope to a streamlet, distant about two hundred yards. Inside this room, opposed to the bow-window, was a circular recess, now shelved—the shelves covered with household utensils. Here stood the Countess of Mornington's bed; and here, as Mr. Sherlock (on his mother's authority, and on that of the nurse, whom he knew well) told me, was born Arthur Wellesley.

Subsequently, in this same room was born Feargus O'Connor.

The unfortunate spoliation of Dangan is supposed to have made the Welleseleys little desirous to set the public right in the controversy about the great Duke's birthplace.

(*To the Editor of the* ILLUSTRATED LONDON NEWS.)

Some years since, I communicated to the *Liverpool Mercury*, a statement, grounded on oral information received on the spot, similar to the opinion given in the ILLUSTRATED LONDON NEWS, relative to the great Duke having been born at Dangan, and baptised in Dublin; and have lately communicated with the Rev. Quintin Dick Hume, rector of Larscor; and the Rev. Mr. Hamilton, curate of Trim; from whose obliging information I find that there is no register extant in the former parish further back than 1800; nor in the latter than 1782; so that little light, beyond tradition, is here to be discovered. But the date of birth as well as baptism, is always inserted in the Irish parochial registries: Dr. Mann's entry is, therefore, unusually deficient, and very probably alludes to the *elder Arthur*, deceased before the *great Arthur's* birth; nor are baptisms performed so quickly after birth in Ireland as customary in England. I have frequently in respectable families christened together two children of a year's difference in age, born of the same parents.

After all, of how little consequence is the place of this illustrious man's birth. Trim, Dangan, and Dublin, eagerly put forth their claims for an accidental distinction. In Dangan was the manor house, situate in the parish of Larscor, immortalised by the incumbency of Dean Swift; but the manor of Dangan extended into the contiguous parishes of Trim on the one side: and, in the opposite direction, into Kilmore and Ballymaglasson (till lately held as *commendam*), and into Colmolyn, or Knockmark; the churches of ALL which should have, consequently, been put into mourning on the sad occasion, to silence the imputation of the Meathmen's boast being "*nec si prœteras nahi*."

Even the locality of the town residence of the Duke's parents seems uncertain, Lord Clancurry placing Mornington House, Dublin, in Upper Mercion-street; Mr. Montgomery Martin, in Grafton-street; and Philip Dixon Hardy, a man of much accuracy and research, in the fourth volume of the *Dublin Penny Journal*, locates it in Molesworth-street, and gives a wood-cut of the mansion. All three houses are still fine edifices; and, to complete the difficulty, are in different parishes, viz., Peter's, Andrew's, and Anne's.

E. TIGHE GREGORY, D.D., LL.D,
Rector and Vicar of Kilmore, Meath.

Paget Priory, Post Town, Kilcock,
Oct. 2, 1852.

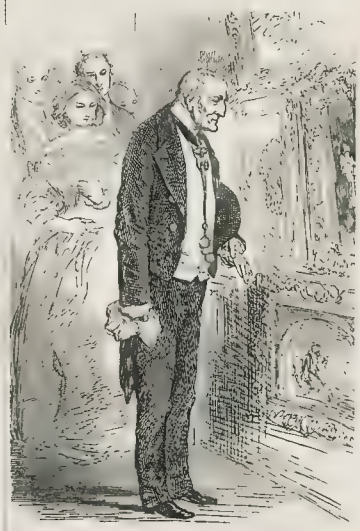
Kilmore Church, of which we engrave an Exterior View, has, at the expense of the worthy Rector and Vicar, been placed in mourning, to remain until after the obsequies of the Duke.

In this church, on three Sundays succeeding the Duke's lamented decease were preached sermons, illustrative of his career, by Dr. Gregory, from the texts viz.:—

Gal.: vi., 14.—"God forbid that I should glory, save in the cross of our Lord Jesus Christ." 1. Sam.: xvii., 10 and 33, in connexion.—"I defy the armies of Israel this day! give me a man, that we may fight together!" "Thy servant will go and fight with this Philistine." Zechariah: ix., 14.—"The Lord God shall blow the trumpet." In these discourses death, in the battle-field and hospital were portrayed from personal observation of the preacher.

THE DUKE AT THE ROYAL ACADEMY SOIREE.

ONE of the latest occasions of his Grace's appearance in public in the metropolis was at the *soirée* given by the Royal Academy, at their rooms in Trafalgar-square, on July 28 last. The company was exceedingly numerous: though late in the London season, several persons of distinction were present, and among them the Duke of Wellington, who, throughout his stay, was "the observed of all observers:" his Grace arrived about ten o'clock, and remained about two hours, going attentively over the pictures in the different rooms. One of our Artists,



THE DUKE AT THE SOIREE OF THE ROYAL ACADEMY.

who was also a guest, sketched the Duke as he was attracted by a masterpiece in the Exhibition; and this Sketch the Engraver has here rendered. Our Correspondent was greatly struck with the intensity with which the artists gazed upon the venerable hero as he passed through the rooms; this was especially noticeable among the foreign artists, of whom there were many present: Scheffer was among them. The Duke looked well, and much stronger than he did at the *soirée* of last year.

"THE DUKE'S HOUSE," AT WALMER.

EVERY spot associated with the memory of the Duke is invested with a melancholy interest, and more especially the village of Walmer—or "Walmer-street," as it is called—within whose fortress the illustrious hero breathed his last.

In this pleasant sea-side village the Duke resided for a period previous to his campaign in Spain. The house is situated about half-way down Castle-street, Walmer, and is pointed out as "the Duke's house" which he tenanted when Sir Arthur Wellesley, and a General of Division; and his Grace was often heard to speak in praise of Walmer long before he was appointed to the Lord-Wardenship of the Cinque Ports.

In the View, the centre house was the Duke's residence. It looks towards Deal, and from its windows the sea is visible.

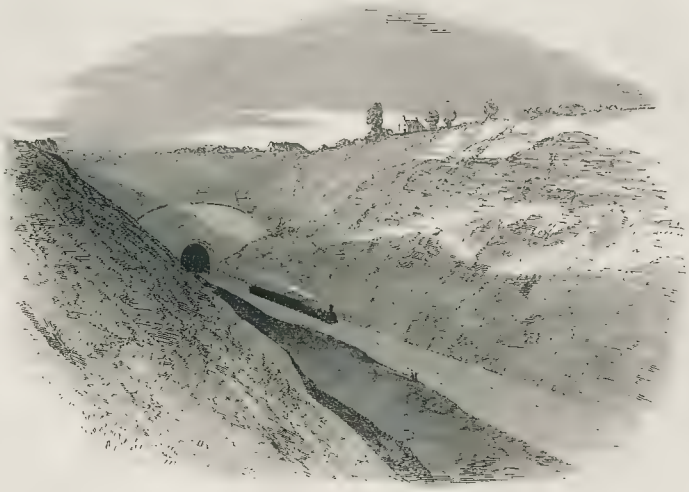
"THE DUKE'S HOUSE," AT WALMER.

THE OXFORD AND BIRMINGHAM RAILWAY.

THE completed portion of this new line of railway was opened on the 30th ult., when the event was celebrated by a *déjeûner* at the Regent Hotel, Leamington.

The line from Oxford to Fenny Compton (31¼ miles) is part of the Oxford and Rugby line, the portion of the latter lying between Fenny Compton and Rugby having long since been abandoned. From Oxford to Banbury the railway has been opened about two years; and the line just opened extends from Banbury to Birmingham (65 miles).

The "Battle of the Gauges," fought principally in reference to this line (and practically illustrated in our Journal), must be in the recollection of our readers. The Oxford and Birmingham line was projected in 1845: among the provisional directors were some members of the Grand Junction board; and, in fact, the Grand Junction, in the first instance, promoted and gave every possible encouragement to the scheme, for the purpose of rendering themselves, by means of it and the Oxford and Rugby line, independent of the old London and Birmingham. The two Companies afterwards amalgamated, and offered the most determined opposition to the Bill for the construction of the line. The original estimated cost of the line was about £900,000, including the borrowing powers; but, according to the *Railway Times*, the actual outlay will amount to about £3,000,000, including the premium of £600,000, paid by the Great Western on the purchase of the line.



CUTTING AT HARBURY.

The Oxford and Birmingham line has been constructed by Messrs. Peto and Betts, under the superintendence of Mr. I. K. Brunel. The following are the most important engineering works on the line:—The Harbury cutting between Banbury and Fenny Compton, half a mile in length, and 110 feet deep, out of which there have been excavated about 3,000,000 cubic yards of marl and limestone; an embankment immediately beyond the cutting, and formed out of the earthwork thereof, four miles in length, and of the average height of 23 feet; this is stated to be the largest cutting in the world. (*See Illustration.*) The next important work on the line is the Wildmarsh cutting, out of which have been taken 250,000 cubic yards of red marl; a viaduct at Leamington, and bridge over the High-street, the latter 130 feet span; an aqueduct at Myton, constructed so as not to impede the navigation of the Birmingham and Oxford Canal; a bridge over the Avon, 160 feet in length; viaduct at Warwick, of 30 arches, 25 feet span each; a bridge over the road and canal at Warwick, composed of iron girders, 150 feet span; the Hatton embankment, three miles in length, and 25 feet in height; the Hatton cutting, out of which 600,000 cubic feet of earthwork have been taken; the Finwood-bridge, 50 feet high and 140 feet long; an iron bridge over Stratford Canal, 60 feet in length; the Blythewood embankment, one mile long and 40 feet high; the Solihull viaduct, 500 feet long (*See Illustration*); an embankment at Haycock's-green, one mile long and 48 feet high; the Haycock's-green cutting, one mile long and 30 feet deep; a bridge under the Bristol and Gloucester Railway, constructed on an embankment, 50 feet high—the trains of the Bristol and Gloucester line having worked over it during the progress of the works; an iron bridge over the Warwick canal 150 feet long; and a bridge over the Coventry-road into Birmingham, 60 feet long. The whole of the works from Leamington and Warwick were constructed in 40 weeks. Some of the stations are of pleasing design, of which that at Leamington (*See the Illustration*) is a good specimen. They were designed by Mr. T. H. Bertram, the resident engineer, and erected by Messrs Jay and Co., of London, under the personal superintendence of Mr. T. Pearson, of that firm. They were commenced in May last, and are now nearly completed. In addition to the portion of the line between Banbury and Birmingham, there was another small portion opened on the 30th ult., for the first time—viz. that known as the Oxford deviation, about a mile in length, the effect of which will be to enable passengers to Banbury and northward to proceed without the necessity of first going into Oxford.

BRIDGE OVER THE RESERVOIR, AT SOLIHULL.

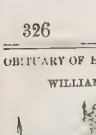
At the *déjeûner*, at Leamington, Mr. Peto, in returning thanks for his health and that of the other contractors of the line, observed that he could not claim the slightest credit for the way in which the works of the line had been executed, the credit being entirely due to his partner, Mr. Betts, and his assistant, Mr. Watson. (Cheers.) His own labours had been exceedingly light indeed, considering that, in addition to the assistance he had referred to, he had had the able aid of the engineer-in-chief, Mr. Brunel, who had placed the designs in his hands in a state of perfection that could not be surpassed. (Cheers.) Before sitting down, he begged to be permitted to express the obligation which the contractors owed to the clergy and magistrates of the district with reference to the conduct of the works on the line. Having been the employers of upwards of 5000 men for three years, it was manifest that, without the assistance of those parties, it would have been impossible for the contractors to have kept the neighbourhood in such a state as that there should not have been the slightest cause for alarm with respect to either person or property during the whole period; which was the fact, as they were aware, in the present case. (Applause.)

THE LEAMINGTON STATION.

One of the carriages in the train on the 30th ult. was an eight wheeled composite carriage, constructed to carry 24 first-class and 56 second-class passengers; the first-class compartments ranged together in the centre, and two second-class compartments at each end. The length of the body is 33 feet, and the width 9 feet 9 inches, and it is covered externally with *papier-maché* panels. The framework of the carriage is entirely of wrought-iron, the sides being trussed and stayed with light rods. The wheels are connected together by wrought-iron scroll stays, bolted to the axle-boxes in sets of two pairs, five feet apart in the centres—the extreme wheels being 28 feet 4 inches apart in the centres. The carriage is slung to the springs with long shackles—ample space being left in the axle-guards to admit of the wheels traversing or swivelling on the shackles and facing the curves freely.

OBITUARY OF EMINENT PERSONS RECENTLY DECEASED.

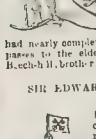
WILLIAM LEWIS, SECOND LORD DINORBEN.



This unfortunate young nobleman, whose mental weakness rendered him incapable of taking any part in life, died at Kinmel Park, Denbighshire, on the 6th inst., when the title became extinct. He had long suffered severely from epilepsy fits, and was attacked in an alarming manner on Sunday the 3d, after which he never rallied.

His Lordship was the only surviving son of the late venerable and respected lover At the period of his decease he had nearly completed his 21st year. The splendid estate of Kinmel passes to the eldest son of the late Hugh Robert Hughes, Esq., of Beech-hill, brother of the first Lord Dinorben.

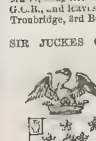
SIR EDWARD THOMAS TROUBRIDGE, BART., REAR-ADMIRAL OF THE RED C.B.



This gallant officer died on the 7th inst. His naval career includes a distinguished period of our sea annals. In the *Edgar* he fought at the battle of Copenhagen, 2d April, 1801; in 1803 he served on board the *Victory*, Nelson's flagship, in the Mediterranean; in 1806 he assisted, as Commander of the *Harrier*, at the destruction, under the Fort of Monado, of the Dutch Commander-in-Chief's flagship, and in a gallant action with a Dutch squadron, in which he was severely wounded. He was captain, and, in 1811, commanded the Naval Brigade at New Orleans. From 1831 to 1847 he sat in Parliament for Sandwich; and from 1836 to 1841 was one of the Lords of the Admiralty. His rank of Rear-Admiral of the Red he obtained in 1849. Sir Thomas was only son of the famous Admiral Sir Thomas Troubridge, the 1st Baronet, who, in his day, distinguished at the battle of the Nile, who was lost at sea in the *Blenheim*, returning from the East Indies.

The officer whose death we record married, October 18th, 1810, Anna-Maria, daughter of Admiral the Hon Sir Alexander F. J. Cochrane, G.C.B., and leaves, with other issue, a son and heir, now Sir Ingles Troubridge, 3rd Baronet, born in 1816.

SIR JUCKES GRANVILLE JUCKES-CLIFTON, BART., OF CLIFTON, NOTTS.



This venerable Baronet died on the 1st inst., at his seat, Clifton Hall, aged 82, in which he represented was one of the oldest and most eminent in Nottinghamshire. Sir John Clifton, of Clifton, M.P., was a man at the battle of Shrewsbury, fighting on the King's side against the Percys, and his descendant, Sir Gervase Clifton, of Clifton (whose mother, Agnes Clifford, was lineally descended from Joneel Plantagenet, Duke of Clarence), held a prominent place at the Courts of Henry VIII., Edward VI. and Elizabeth. He was a gentleman of great authority in peace and war; yet, notwithstanding his martial inclination, of so courteous and affable a disposition, that he was usually styled "Gentle Sir Gervase," and Queen Elizabeth [illegible] in that title in a sketch attributed to her Majesty on four Notts [illegible] Knights

Gervase [illegible], Stanhope, the stout;
Markham, the lion, and Sutton, the fox!

The head of the family in the time of James I. was included in the first batch of Baronets ever created, and the title ranks third on the list of baronetical honours, Bacon and Hoghton alone preceding it. Sir Juckes, whose death we record, succeeded to the Baronetcy at the decease of his elder brother, Sir Robert, and assumed subsequently, on inheriting some additional property, the surname of Juckes. He married, 1st, in 1794, Margaret, daughter of James de Lancy, Esq., of Bath; and secondly, in 1821, Marianne, daughter of John Swinton, Esq., of Swinton, county Yorkshire. By the latter he had one son, the present Sir Robert Clifton, 5th Baronet, born in 1826; and one daughter, Marianne Margaret, married, 12th June, 1842, to Sir Henry Hervey Bruce, Bart.

General Sir Arthur Benjamin Clifton, K.C.B., is a younger brother of the late Sir Jukes.

WILLIAM LORD ROLLO.

William Rollo, 9th Baron Rollo, of Dunoreb, in the county of Perth, was son of John 8th Lord Rollo, by his marriage, in 1806, with Agnes, daughter of William Greg, Esq., of Glenfield-place, Lancashire. Born in the year 1809, the deceased Peer entered the Royal Dragoons in 1825, and served in that regiment for eight or nine years. In October, 1834, he married Miss Rogerson, the only child of Alexander Rogerson, Esq., of Wamphray and Dunscroft, in the county of Dumfries; and by this lady (who died on the 10th of June, 1836) had a son and heir, the Hon John Roger-on, now Lord Rollo, born on the 2nd of October, 1835.

The late Lord Rollo succeeded to the title and estates on the death of his father in December, 1846. He was nominately a representative Peer of Scotland, and continued to hold that office until the last election a few months ago, when he resigned his seat in favour of his heir-apparent.

His Lordship's ancestors were stated at Runcorn since the reign of Robert III., when David Stuart, Earl of Strathern, granted the estate to John de Rollo

THE LAST TWENTY-THREE SERMONS Preached at ST PAULS and St BARNABAS, Pimlico. 8vo, 12s.

London: JOHN CLARKE, 16, Piccadilly.

AUTHENTICATED TARTANS of the CLANS and FAMILIES of SCOTLAND; with Historical and Genealogical Accounts of Each Individual, and Such Remarks as may be worthy of their national importance. In a work of this kind the History of the Dress must form one of its chief features, as much may can be more incongruous than to see these and, at such distance in the page of their Tartans, and to be subject to bequeath their beauties to posterity. The care with which all the selection of the sets has been made is evidenced by the fact that the work has received the approval of the Antiquarian Society of Scotland.

W. and A. SMITH, Macmillan Ayrshire. A. and C. Black, Edinburgh.

Just published price 9d,

SIMPKIN and MARSHALL, Paternoster-row.

LIFE of MARY QUEEN of SCOTS.—In a few days will be published, Volume Third of MISS AGNES STRICKLAND'S LIVES of the QUEENS of SCOTLAND and ENGLISH PRINCESSES connected with the Royal Succession.

This volume completes the Life of Mary Queen of Scots, and contains the commencement of a personal Life of Mary Stuart, which is to be carried well down into her authentic and complete than any which has yet appeared. The concision and arrangement of materials for it has occupied the author many years before the publication of the "Lives of the Queens of England." It comprises an amount of curious and important information hitherto locked up in the state Paper Office of England, Scotland, France, and other nations, and in the charter-chests of the descendants of the noble families of Great Britain inseparably connected with that momentous period. The result is a biography which is like y to be the crowning work of Miss Strickland's great national undertaking

Vols I and II contain the Lives of Margaret Tudor, Magdalene of France, Mary of Lorraine and Margaret Douglas Countess of Lennox

Embellished with Portraits and Historical Vignettes.

Price 10s 6d each.

WILLIAM BLACKWOOD and SON, Edinburgh and London

FLOOD ON THE GREAT NORTHERN RAILWAY, BETWEEN DARLINGTON AND FERRY-HILL STATIONS.

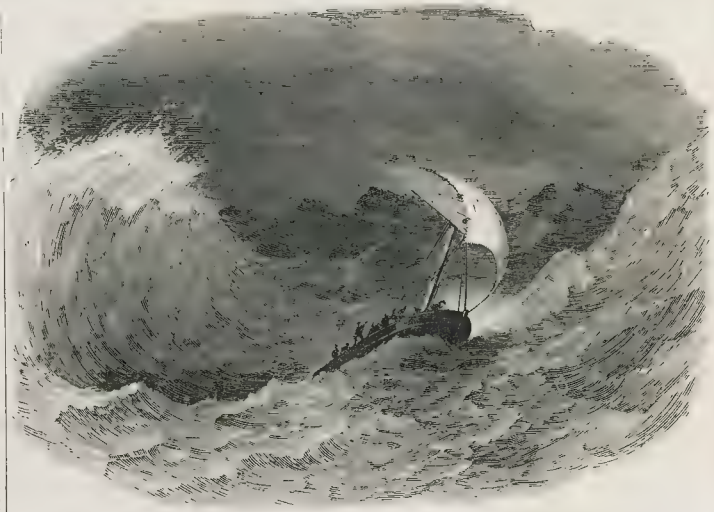
FLOOD ON THE GREAT NORTHERN RAILWAY.

During the week before last, great part of the north of England was flooded by the heavy rains by which all the streams were greatly swollen, and many fields and portions of the Great Northern Railway were laid under water. North of Darlington a mile or two, the line begins to traverse a dead level, and for some miles the water on Thursday extended for more than 100 yards on either side of the line, which passes across the plain on a slightly raised embankment; in other portions of the line, the rails were covered to such a depth that the passengers feared the engine-fire would be extinguished. By-and-by the rails became altogether submerged, and the engine, with its heavy tail of carriages, slowly proceeded to clear its way through an immense lake of from a foot to two feet in depth. A brilliant moon, shining through a clear frosty sky, lighted up the inland sea which the trains were strangely navigating, showing the water flashing through the wheels of the carriages as through the paddles of so many little land-steamers. This extraordinary scene our Artist has engraved from a Sketch showing the line between the Darlington and Ferry-hill stations. The tops of the fences here and there at the sides of the line were the sole visible evidences of the roadway for about a mile and a half, and only by these and the trees and hedgerows rising out of the water could one be convinced that the train was actually traversing an inland country, and not an arm of the sea. One of the up trains of the previous night had to return to Newcastle after reaching Ferry-hill, the line northwards being then impracticable.

EXTREME PERIL OF THE "CASTOR'S" LAUNCH.

The first attempt to lay down with accuracy the position of the rock on which was wrecked the ill-fated *Birkenhead*, which has now given to it the above name, was attended with an adventure of a most dangerous character, and one which, but for the most providental escape, would have added other memories of affliction to that already connected with it.

Towards the end of March last, directions were given to Lieutenant O'Reilly, and ten men, of her Majesty's ship *Gladiator*, to hold themselves in readiness for this duty. Mr. Mann, assistant astronomer at the Cape observatory, son of the late General Mann, Royal Engineers, was ordered to accompany the party, in order to execute the desired work, as well as make a map or chart of Danger Point. The *Gladiator's* boat not being considered A 1, the launch of the *Castor* was selected. At midnight, 28th March, there being scarcely any wind, orders came to embark, and the party left. Little progress was made; but, after knocking about for two days, they arrived off Danger Point at midnight. Failing to find any place to anchor, the boat lay to, hoping to find one on the morrow. Before morning the south-east wind sprang up, and increased to such a violent degree, that there was nothing left but to run for it. So they stood away to the westward, running all day, and being about 140 miles from land. When day dawned, they were out of sight of land, a long way west of Cape Point. The gale continued, and the boat was with difficulty kept afloat. Once a heavy sea struck her, and the waves closed over the heads of the whole party. But by the mercy of God on the noble efforts of Lieutenant O'Reilly and the party, who behaved in a similar spirit of calmness and order to that of their brethren of the *Birken-*



EXTREME PERIL OF THE "CASTOR'S" LAUNCH, SENT TO SURVEY THE BIRKENHEAD ROCK.

head, the boat was saved; and after various escapes, during eighteen hours, they made Green Point on the night of the 29th, being unable to enter Table Bay on account of the continuing gales.

There appears to have been some deficiencies in the equipment of the boat; however this may be, it is interesting to record such dangers and difficulties, when met in a worthy and undaunted manner, and overcome.

METEOR SEEN IN THE ISLE OF WIGHT, OCTOBER 5.

METEOR SEEN IN THE ISLE OF WIGHT.

(To the Editor of the Illustrated London News.)

I hope some of your astronomical readers have seen the beautiful phenomenon I have just witnessed: the time eight o'clock; the path from east to west. My attention was attracted by a strong flash of light intercepted by a cloud; on its re-appearing before a fine sky the shape was that of a small tapering club, for about thirty seconds every object was very brilliantly defined by a remarkably clear blue light; it disappeared slowly on the eastern horizon behind a dense cloud. The day previous was exceedingly tempestuous here.

I am, sir, &c., J. O.

Ferry-hill, Isle of Wight, Tuesday Night, Oct. 5.

Observers of this Meteor are requested to send their accounts to J. Glaisher, Esq., F.R.S., 13, Dartmouth-terrace, Lewisham, giving its path among the stars, its altitude and azimuth. We may take this opportunity of stating that the Meteor of August 19, engraved in our paper of August, was seen from different places in Ireland, and that Mr. Glaisher determined its position at the time of its disappearance to be vertical to Worcester, at the distance of 65 miles from the earth. See the "Philosophical Magazine" for this month.

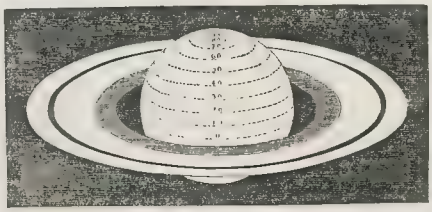
THE PLANET SATURN, WITH ITS THIRD RING, AS SEEN THROUGH THE CRAIG TELESCOPE, AT WANDSWORTH COMMON.

Our readers are aware that the famous American astronomer Mr. Bond, of Cambridge Observatory, Massachussetts, intimated that he believed he could at times see a third or inner ring belonging to this planet. When news of this reached England, the Northumberland achromatic, at our Cambridge University, was brought to bear, by Professor Challis, on the rings of Saturn, and he failed in discovering the third: so, also, with the giant reflector of the Earl of Rosse. Hence, it became a matter of intense interest, as to whether there was in reality *a third ring*. We are happy now to exhibit an Engraving of the Ring, as seen in this country. In the Craig Telescope—engraved and described in the Illustrated London News for August 28—this third ring is quite palpable; so that there can be no longer any doubt as to its existence. The colour of the ring is a brilliant slate. The great quantity of light which the telescope at Wandsworth brings to the eye of the observer from this planet gives, we presume, this bright appearance to what in instruments of less power is in fact completely invisible.

The Craig telescope is, in a small portion of one of its lenses, too flat by about the *five thousandth part of an inch*. This has to be stopped out when extreme accuracy of definition is required, as, for instance, in observing such a fine point of an object as Saturn's third ring. To many of our readers it will seem incredible that the *five thousandth part of an inch* is rendered, as to its results, in any degree evident, and is a quantity that can be positively measured. But so it is. The rays which come through the too flattened portion of the convex lens, although that portion is only too flat by *the five thousandth part of an inch*, go beyond the proper focal point, and thus confuse the image. The remedy is, therefore, to stop out such rays; and, as the aperture is so large, their absence is not perceived, the light without them being immense. In fact, exclusive of these rays, the Craig telescope magnifies the light of the Moon at least forty thousand times; and in coarse objects, like the lunar craters, the whole of these rays may be allowed to pass to the focal point, as they, in such objects, do not confuse the image in any appreciable degree. Mr. Craig seems to think, were he to attempt to have this five thousandth part of an inch corrected, it might be over-corrected the other way, and thus more harm than good be the consequence; so he prefers the simple method of preventing such rays coming to focus, as he has without them an overwhelming quantity of light already.

To explain how this Telescope grasps in the light, we may instance an anecdote we have heard of its powers, by one of about a party of thirty who spent a portion of an evening with Mr. Craig at his Telescope. A gentleman directed the Telescope to a most minute test object, not to be seen by most excellent telescopes, though gazed at by first-rate observers in profound darkness. He at once perceived that this test object was indeed not a minute speck of light, but a brilliant double star; and, in admiration of what he saw, at once congratulated Mr. Craig on having solved the question as to large achromatic telescopes. If the disclosing of the third ring of Saturn, and obviously setting the question at rest as to its reality, was a proof of the extraordinary defining power of this eighty-feet Telescope, the fact of its bringing out this test object into a brilliant double star, shows its space-penetrating power.

The Messrs. Chance made the flint glass, which is perfectly free from strize.



THE PLANET SATURN, WITH ITS THIRD RING, AS SEEN THROUGH THE CRAIG TELESCOPE.

THE ILLUSTRATED LONDON NEWS

No. 586.—VOL. XXI.] FOR THE WEEK ENDING SATURDAY, OCTOBER 23, 1852. [SIXPENCE.

NAPOLEON III.

THE Presidential chrysalis has assumed the last and perfect form, and that which was once a grub now soars upon wings of Imperial purple. M. Louis Napoleon Bonaparte has been hailed by his subjects by the style and title of Napoleon III. Although not anointed, or robed, or crowned, he is, to all intents and purposes, a real Emperor. It only depends on his own good will and pleasure to fix the day when the last formalities shall be gone through, and when a crowning spectacle, more dazzling and gorgeous than any which have preceded it, shall announce to the amused Parisians, to the delighted French peasantry, and to surprised and half-bewildered Europe, that the dynasty of the Bonapartes has been re-established. The new Emperor has taken care, in the selection of his title, to found a claim more ancient than that which he derives from the suffrages of living men. He will not consent to be known as Napoleon II., because he chooses to consider that there has already been an Emperor of the French under that title, although it is as notorious to the most devoted adherent of the Bonapartes, as it is to all Europe, that such a Potentate never reigned. The line of the Bonapartes is not to be broken by any act or deed of Louis Napoleon. According to him it is not a new thing that has been created, but an old thing that has been restored. It dates from 1804, and if the actual race of Frenchmen did not choose to submit to the Bonapartean dynasty, the divine right of the present inheritor of the power and *prestige* of the name would be in no degree invalidated. It is Bonapartist legitimacy that asserts its irrefragable privilege, and claims a purer legitimacy and prerogative than those of the Bourbons. Louis XVIII., Charles X., Louis Philippe, and the Republic, are all ignored, and their reigns and deeds are henceforth to be a blank in that Imperial history, which takes no cognizance but of Bonapartes and of Napoleons. It is certainly not for Englishmen to object, unless as mere critics and *cognoscenti*, to an arrangement which seems to have such charms for the French. The right of that people to acquiesce in and applaud the new Government is unquestionable; while the duty of this country is equally clear, to respect the actual chief of the state, whatever his title may be, as long as he respects the general law of nations. But, while all sensible men in this country will admit this, and oppose any attempt to quarrel with the French on such a ground, they will as certainly exercise their right of criticism upon this new play, just as they do upon a new book, a new picture, a new opera, or a new *danseuse*. There is at least one country in the world where opinion is free to express itself; and in that country the merits or demerits of Napoleon III.—great as he is—will be freely canvassed.

Though we live in a wonderful age, and when to be surprised at anything wears an aspect of rawness and inexperience, it begins to be apparent that Louis Napoleon is its most wonderful product. We may know where to look for many men more able, more honest, and more brilliant, but where shall we look for a man whose fortunes are in every way so extraordinary? Even the destiny of the first Napoleon himself is scarcely to be compared to that of his successor. If we reflect upon the "why and because" of things, it does not, after all, appear so very unnatural or strange that one of the greatest generals and ablest administrators the world ever saw—and a man who consolidated the power and extended the fame of the French nation till they rung throughout the world, should have reached the perilous heights of Empire, as that the invader of Boulogne with a steam-boat and a tame eagle—the prisoner of Ham—the exile of Regent-street—the penniless man about town—the adventurer, who had gained no battles, reformed no laws, and extended no territory, should vault into so lofty a seat. In this respect the fortunes of Napoleon III. are far more wonderful than those of Napoleon I. The sudden changes in Oriental politics—did we know them all—might, perhaps, offer some parallel to such a career; but, in the annals of Europe, we search in vain for such a character and such a history.

But, it is evident that the end is not yet. Louis Napoleon is Emperor; but is he Emperor merely because the French love him or confide in him? It is a question that Europe may well ask, whether there is not a large admixture of national spite, as well as vainglorousness, in the choice that has been made? Had there been no such flight as that from Elba; no such day as Waterloo; no such event as the entrance of the allied armies into Paris; and had Napoleon I. died peaceably, of the gout, or

HER MAJESTY'S VISIT TO THE BRITANNIA TUBULAR BRIDGE.—(SEE PAGE 381.)

of old age, in the Palace of the Tuileries, it is possible, and highly probable, that the French might have execrated his memory as much as they now adore it. There is a sanctity in great misfortune, which all men feel and reverence. Napoleon I., defeated, discrowned, and exiled to a lonely rock in the ocean, established a claim on the hearts of the French; and, when his overthrow became the humiliation of the whole people, his name became as dear to the national vanity as his misfortunes were to its sympathy. Europe coalesced against France, and deprived her of her Bonaparte. The French have felt as if they owed Europe a grudge for the deed; and they have now taken their revenge in a manner which we hope will prove harmless, though it looks menacing. They have of their own good-will, and in the exercise of their undoubted right, undone the work of 1815, and restored the family of which the Allied Sovereigns deprived them. They have done it in satisfaction of their vanity. They have installed and worshipped their Bonaparte, and their wounded self-love rejoices in the salve, and promises to get well again. But after a time Napoleon III. will find that the French look for something more than a name in their autocrat; and that, if they have yielded up their liberties to a master, they expect an equivalent in the "glory" which they love, and in the extension of territory which they covet. When they shall demand the *quid pro quo*—as they are certain to do—the difficulties of the Emperor, and perhaps of Europe, will begin.

If we take a review of the state of the Continent in this first week of the reign of Napoleon III., we shall find it much more warlike, and far less consolatory than the speech of Louis Napoleon at Bordeaux, would indicate it to be. France herself possesses, according to the excellent authority of the *Almanach de Gotha*, an army of no less than 404,500 men, and 328 ships of war, including 102 armed steam-vessels; and 27,000 sailors and marines, a greater naval force than that of Great Britain. Austria bristles with bayonets, and keeps up an army of 540,000 men. Her whole territory is under the operation of martial law; and the rigor of the system is such that a traveller, besides his ordinary passport, cannot move from the railway station to his hotel without a special pass; or go from his hotel to the station without another. Prussia maintains a regular army of 225,550 men, capable of being augmented at a few days' notice to 575,362 men, by the calling out of the two contingents of the Landwehr. Russia possesses an army variously estimated: the *Almanach de Gotha* states the infantry to comprise 3993 companies, and the cavalry 802 squadrons, besides the artillery and the engineers, and hosts of irregular Cossacks and Barkirs. All these included cannot amount to less than 750,000 men, and it is probable that, if stated at one million, their numbers would not be exaggerated. Such are the forces of the continental powers, maintained partly to repress and coerce their own subjects, and partly because they distrust France and each other, and think it prudent to be prepared for a general war. It is impossible to reflect upon such facts as these without fears for the peace of the world;—fears which there is nothing in the personal character of the new French Emperor or in the public necessities of his position to remove or to allay. Yet we may, nevertheless, be permitted to hope that all will work for the best. The Divine Providence which shapes our ends, ordains that right shall ultimately emerge from all conflicts, and establish itself above all contingencies.

It was, no doubt, necessary that France should suffer from a violent attack of Bonapartism. She is now in the full fever and paroxysm of her malady; and, until she be quite well, Europe will, no doubt, endeavour to keep aloof from her. That war is as necessary to the Emperor, as the Emperor has been to the French, we still believe, notwithstanding the contrary assertion of the speech at Bordeaux. In support of the opinion stated last week that Africa, and not Europe, would be its field, it may be mentioned that, since the triumphal entry of Louis Napoleon into Paris, the *Moniteur* has announced that Abd-el-Kader will be allowed to depart from France, and to reside in Turkey. Napoleon III. knows what he is about. Such an act of apparent generosity may, perhaps, provide the restless spirits in his army with the employment and the "glory" for which they hunger and thirst.

THE THIRD RING OF SATURN.

(To the Editor of the ILLUSTRATED LONDON NEWS.*)*

The statement in the ILLUSTRATED LONDON NEWS of Saturday last respecting the performance of Mr. Lassell, of Liverpool, on the planet Saturn conveys the impression that the slate-coloured ring was not seen in England till brought to light by that surpassingly powerful instrument. The facts, however, are very different, as appears from the printed records of the Royal Astronomical Society, and they are briefly as follows:—On the 25th of November, 1850, the faint light of this new ring was discerned by the Rev. W. R. Dawes, of Wateringbury, near Maidstone, by the help of his 8½ foot Munich refractor, having an aperture of 6¾ inches; and on the 29th the same month the form of this appendage was comp etely made out by him. This discovery preceded the arrival of the intelligence of Mr. Bond's observation on the same phenomenon, and was, therefore entirely independent. On the 2d of December the new ring was also seen by Mr. Lassell, of Liverpool, in Mr. Dawes's telescope, Mr. Bond's discovery being still unknown to either of these gentlemen; and, subsequently, it was frequently observed by them, and micrometrical measures of the breadth of the new ring were obtained by Mr. Dawes, who also announced his conviction that it was *divided into two*, which was confirmed in the following year by the observations of Mr. Otto Struve, with the large Munich refractor, at Pulkova, in Russia; that telescope being of the same size as Mr. Bond's, namely, about 15 inches in aperture. Several other Englishmen have since succeeded in making out this new ring; among whom may be especially mentioned Mr. Warren De la Rue, with his reflector of 13 inches aperture. Last year Mr. Lassell had a lithograph made of the appearance of Saturn in his 20-foot reflector, as seen on Sept. 10, 1851, in which the slate-coloured ring is plainly shown. In the *Monthly Notices* of the Royal Astronomical Society for Nov., 1851, are contained details of observations of the Planet by Mr. Lassell, Mr. Dawes, Dr. De la Rue, and Mr. Isaac Fletcher, in all of which the faint ring is distinctly noticed. The latter gentleman observed with a 10-foot refractor of 7½ inches aperture (made by Mr. Thomas Cooke, of York; the property of Mr. Patinson), at Newcastle-upon-Tyne.

It is, therefore, obvious, that this slate-coloured ring has been observed in England since November, 1850, and was discovered here before it was known to have been seen in America.

There are, however, several very interesting particulars respecting this most wonderful of the planets, for which we eagerly look to the munificent telescope on Wandsworth-common for information; such as the division of the exterior bright ring into two, and the still more curious subdivision of the interior bright ring into several narrow ones of different degrees of brightness, which was observed by Mr. Dawes in Oct., 1851, who mentions the fact in a paper, published in the Astronomical Monthly Notices for November of that year. The same phenomenon was distinctly seen by Mr. Bond about the same time, as stated in a note from him in the "Monthly Notices for March" of the present year

London, Oct. 19, 1852. F.R. Ast. Soc.

Note of the Editor.—The paragraph in our last week's paper, which was called forth the letter of our Correspondent, and several others, which we cannot publish, came to us upon the authority of the Rev. Mr. Craig. That gentleman has since headed us the following letter:—

(To the Editor of the ILLUSTRATED LONDON NEWS.*)*

LEAMINGTON, October, 1852.

SIR,—May I request your permission to state that the third ring in Saturn has been seen, by Mr. Dawes, with his six-inch achromatic; by Mr. Lassell, of Liverpool, with his two feet reflector; and also by another amateur, W. De La Rue, Esq., with his twelve-inch reflector. The latter, therefore, of the third ring belonging to that planet, is beyond doubt. I may be permitted to enquire how it is that the very excellent telescopes at Greenwich Observatory, and especially the Northumberland Telescope, at Cambridge, have not been able to discover what is so very obvious and palpable in the telescopes of amateurs? And if they have discovered it, why have they not given the public the advantage of the information, like the above gentlemen? Permit me respectfully to add, I neither claim, nor wish to claim, any peculiar merit from the circumstance of [illegible] being so evidently visible on favourable evenings, and this is one [illegible]

Query No. 1.—Is the [illegible] a formation?

Faithfully yours, JOHN CRAIG.

FOREIGN AND COLONIAL NEWS.

FRANCE.

We give full particulars (with Illustrations) of the triumphal entry of the French President into Paris on the 16th inst., in another part of our Paper. The Prince, after the grand business of the day, went incognito to the Elysée, where he slept, and on the next morning went to St. Cloud. On Sunday, also, a council of Ministers was held, the result of whose deliberations was to issue a decree convoking the Senate for the 4th of November, whose business it will be to promulgate a *plebiscite* for re-establishing the Empire in the person of Louis Napoleon. There is some little difficulty, however, yet to be overcome before the work in hand can be satisfactorily accomplished, owing to a division of opinion as to the appointment of a successor to the Prince in case he should die without issue. It is well understood that there has long been a sort of rivalry between the Jerome and Lucien branches of the family for the future Imperial honours, and the system of the President has been not to impart excessive hope to one, nor give excessive fear despair to the other. In certain circles, however, it is believed that a decision may by this time have been come to, and that this decision is in favour of a son of the Prince of Canino, now at Rome.

In addition to the titles of "Napoleon III., Emperor of the French, and King of Algeria," the future assumption of which is attributed to Louis Napoleon, it is said that he will assume that of "Protector of the Holy Places."

It is said that a decree will shortly appear for a considerable reduction in the army.

The proclamation of the Empire will be the signal for the creation of a number of new titles. M. Fould is to receive that of Count de Roquancourt, and M. de Baroche is to become Count de Meulan. It is said to be decided that in case of M. de Persigny, the family of Fialin will become *une maison princière*. M. de Morny also, it is said, will receive the same high honours. M. Drouyn de Lhuys and M. Fortoul are to be made Counts.

Prince Poniatowski, the Minister Plenipotentiary from the Grand Duke of Tuscany; and M. de Villamarina, the new Minister Plenipotentiary from the King of Sardinia, arrived in Paris on Tuesday, for the purpose of complimenting Louis Napoleon. The arrival of these personages gives great satisfaction to the French Government; but it is still uneasy as to the course to be pursued by the Northern Powers, whose attitude gives ground for some uneasiness.

The Prince President marked the termination of his tour by a tardy act of justice, in the liberation of Abd-el-Kader. Stopping at the Château d'Amboise, he had an interview with the Emir, and announced his intentions with regard to him in the following terms:—

Abd-el-Kader,—I come to announce to you that you are set at liberty. You shall be conducted to Brousa, in the States of the Sultan, as soon as the necessary preparations shall be made; and you will there receive from the French Government a salary proportionate to your former rank.

For a long time past, you are aware, your captivity has caused me a veritable pain, for it reminds me inasmuch that the Government which preceded me did not keep the engagements given to an unfortunate enemy, and there is nothing in my eyes more humiliating for the Government of a great nation than to disyow its strength to the extent of not keeping its promise. Generosity is always the best counsellor, and I am convinced that your residence in Turkey will not disturb the tranquility of our possessions in Africa.

Your religion, like ours, forbids you to submit to the decrees of Providence. But if France is mistress of Algeria, it is God that has willed it, and the nation will never give up that conquest.

You have been the enemy of France, but I do not on that account render the less justice to your courage, to your character, and to your resignation in misfortune; it is on this account that I consider myself bound in honour to put an end to your captivity, having full faith in your word.

The *Moniteur* adds:—

These noble words made a deep impression on the ex-Emir. After having expressed to his Highness his respectful and eternal gratitude, he swore on the sacred book of the Koran, that he would never attempt to disturb our domination in Africa, and that he would submit without reserve or *arrière pensée* to the will of France. Abd-el-Kader added that it would be to misunderstand egregiously the spirit and the letter of the law of the prophet, if any one thought that it permitted him to violate engagements given to Christians, and he showed the Prince the verse of the Koran which formally condemns, without exception or reserve, whoever violates his oath, even to infidels.

The Prince, in his turn, we may presume, was deeply touched on discovering so keen an appreciation of the sanctity of an oath entertained by an African heretic. It is said that the Emir will remain at the Château d'Amboise till measures are taken for his removal to Brousa.

M. Morlot, Archbishop of Tours, late Bishop of Orleans, is elevated to the dignity of Cardinal. It was Louis Napoleon who first announced the news to him on Friday afternoon last.

Four fresh arrests have been made at Marseilles, in connexion with the affair of the "infernal machine" discovered in that town. It is said that some important documents have likewise been seized.

Typhus fever is raging with extraordinary violence at Thiers, in the Puy-de-Dôme. There are more than 800 persons, mostly women and children, lying ill at present in that small town.

Accounts from Algeria state that, on the 28th ult., a strong force was marched against the tribe of the Ouled Mahboub, twelve leagues to the south of Constantina, who had given frequent cause of complaint to the French by their revolts and their refusal to pay their taxes. The tribe was completely surrounded. It resisted; but, after a combat, in which it had fifty killed or wounded, it was entirely defeated, and several thousand oxen, sheep, and camels were seized. The loss of the French was two killed and four wounded.

A letter from Paris says:—"The project of erecting Algeria into a Viceroyalty is more than ever talked of, and it, it seems, one of those on which the President is particularly tenacious. Prince Lucien Murat is again spoken of as the future Viceroy. This is not the only plan in contemplation with reference to the development of the natural resources of the colony, as Louis Napoleon meditates the organisation of an association on a grand scale, in some respects similar to that of the East India Company."

BELGIUM.

The Ministerial difficulties still continue, without immediate prospect of removal. M. de Brouckere has definitively resigned the task of forming a Ministry. This condition of affairs becomes the more critical, as it is out of the power of the King to prorogue the Chambers a second time; and they must, therefore, meet on the 26th inst.

SPAIN.

The Queen's 22d birthday was celebrated at Madrid on the 10th, with the usual festivities.

The Duke and Duchess de Montpensier returned to Seville on the 7th. The postal convention with England is now again before the Consejo de Ultramar. It was first submitted privately, and it is now before the body officially. All the arrangements here seem intended to kill time rather than to dispose of business.

PORTUGAL.

By the Royal mail steam-ship *Tay*, Captain Moss, we have accounts from Lisbon to the 10th inst.

The Royal decrees regulating the electoral process upon the direct system, and calling the Cortes to meet on the 2d of January next, had given satisfaction to all parties.

Field-Marshal the Duke of Terceira and a staff of Peninsular war officers had been selected to proceed to England by the *Tagus* steam-packet, expected at Southampton about the 23d inst., in order to attend the funeral of the Duke of Wellington, on behalf of the Portuguese Government and army, which would wear mourning for three days at the time of the funeral.

Hostilities have not yet ceased between the Government and the Bank of Portugal, although several conferences have taken place between the directors and the Ministers.

ITALY.

The *Chronicle* correspondent, under date Rome, October 10, says:—

"Viterbo, which is fifty-two miles distant from the Roman capital, is occupied by a French garrison. The French have taken too solid a footing in the Roman States to allow the presumption of their entertaining any idea of abandoning the dominions of his Holiness the Pope, whom they honour and support, and who in return is profuse in benedictions." To this may be added that the Pope has made one or two moves, under pretence of seeking change of air, to get out of the hands of his protectors, but without success. Some days ago he mentioned to the French commander a wish to go to Naples for a short time, and was politely informed in reply, that an armed escort would attend him to guard him from danger. Upon this intimation the trip was abandoned

It is stated that the French Government is about to establish a Consulate at Chambery.

The *Assenr* of Rome, of the 13th, states that a considerable number of French refugees, who had stopped at Nice after the events of December 2, have been removed into the interior by order of the Piedmontese Government.

Later accounts state that M. Henry Dameth, editor of the *Avenir* of Nice, had himself been ordered to quit the Sardinian dominions at the request of the French Government.

The *Opinione* of Turin announces that a deputation was expected at Florence for the purpose of imploring the pardon of M. Madiai and his wife, both sentenced, for reading the Bible, to four years' imprisonment. It was, however, considered doubtful whether the Grand Duke would accede to their prayer, having already refused to grant their pardon to the Prussian Envoy, who demanded it in the name of his King.

A funeral service was celebrated at Verona on the 12th, by order of Marshal Radetzky, in honour of the Duke of Wellington, who was Marshal of the Empire.

GERMANY.

Letters from Vienna state that, in consequence of the inundations in Croatia, which had interrupted the communications, the Emperor had relinquished his plan of travelling through the whole province, and returned to Vienna early in the morning of the 15th.

Upon this the *Times* Correspondent says:—The general inundation in Croatia is probably the true cause of his Majesty's sudden return to the capital; but this natural explanation, which has been given by the official *Gazette*, appears only to strengthen the public in the belief that the Emperor had been disgusted by the lukewarm and indifferent behaviour of his Croatian subjects.

It is stated that the States, on whom the door of the Berlin Congress has been shut, find another opened to them in the Austrian capital. On the 20th they will meet in another series of conferences at Vienna, at which the question of their admittance as a "commercial group" of the States in a commercial alliance with Austria will be more fully debated.

It is stated by persons known to be in the confidence of the Frohsdorf Legitimists, that Chambord's hopes of an heir are likely to be fulfilled.

The King of Prussia's birthday was celebrated on the 15th at Berlin and at Potsdam, with more than ordinary manifestations of loyalty, not only by the civil and military authorities, but by the inhabitants.

The Senate of Frankfort, supported by a resolution of the German Diet, has cancelled the article of the law securing equality of political rights to citizens of all persuasions, that dates from 1849, and excludes the Jews from all share in the elections for the free city; new elections will take place on the 18th and 19th, at which only the votes of Christians will be received.

TURKEY AND THE EAST.

News has been received from Trapezunt, by way of Constantinople, of a landing of British troops, to the number of 9000, at Bender Buscha, on the Persian Gulf. The object of the expedition is stated to be the deliverance of Herat from the Persian yoke. Vienna journalists, who draw largely upon the imagination in dealing with questions of foreign policy, express some anxiety at this British demonstration. They view it as an encroachment likely to advance the purposes of the Anglo-Indian Railway, and at the same time to lead to a collision between Russia and England. The English fleet, which for some time lay off Smyrna, in connexion, perhaps, with the above expedition, is now in the Straits of Salamis.—Vienna Correspondent of the *Morning Chronicle*.

A private letter from Constantinople, dated the 5th of October, announces the dismissal, by the Sultan, of the Grand Vizier, Aali Pacha, and the nomination to that eminent office of the Capidan Pacha, Mehemet Ali, an individual looked upon as very inferior in talents and ability to his late predecessors. By the same accounts, the Porte has refused to sanction the recent money loan contracted in Europe; a refusal which may lead to considerable embarrassment—not only in Turkey, but in the commercial world in general.

The *Cologne Gazette* publishes the following intelligence from Egypt, under date of Alexandria, the 7th of October:—

Count Bacciochi's mission to the Pacha is stated to be essentially directed to three points. The first is relative to Abd-el-Kader's reception in Egypt, where the President of France desires he should be under the supervision of the Pacha. Secondly, a concession in favour of Said Pacha, relative to which some unintentional misunderstanding has occurred on the part of the Sublime Porte. Thirdly, upon the transport to Paris of some antiquities discovered by a French *savan* in the neighbourhood of Memphis, but which could not be removed in consequence of some prohibitory statute.

AMERICA AND THE WEST INDIES.

The steamer *Africa* brings advices from New York to the 6th inst.

The Washington correspondent of the *New York Herald* states that Mr. Webster, anxious to obtain advantages for the United States fishermen, is about to propose to Great Britain a new commercial convention.

The British subjects residing in Boston were to meet at the British Consulate on the 6th, to arrange some demonstration of respect to the memory of the late Duke of Wellington. Those at New York had already met for the like purpose.

Advices from Havannah, announce that the execution of Signor Facciola, one of the proprietors of the *Voice of the People*, the secret issue of which created so much consternation among the Government officials, took place at Cuba, on the 30th ult. He was publicly garotted. He died with much fortitude, and wished to the last to exonerate any person with him, or divulge the least secret connected with the revolutionary movements. The execution caused considerable excitement. So great was the shock experienced by his mother, who had been denied an interview with him, that she died of grief a short time after the execution had taken place. The arrests continue in Cuba, but it is hoped that there will be no more executions. The arrests of Count de Dors Dulces and Jose Farias had created much alarm.

By the Royal mail steam-ship *Orinoco*, Lieut. Philip Hast, R.N., we have the usual British and foreign West India mails; and also mails from the west coast of South America, received at Panama (Sept. 21), by the Pacific Steam Navigation Company's ship *Santiago*.

All was quiet in Peru and business there was considerable activity. The excitement in Peru on the question of the Lobos Islands had diminished considerably, but the Government had not withdrawn the garrison from the island under the orders of General Destua, and two vessels of war were stationed at Lobos d'afuera. The Minister of Finance of Peru, General Mendiburn, had been nominated Minister Plenipotentiary to London, and, with his suite, is among the passengers by the *Orinoco*.

The intelligence from New Granada is to the effect that General Oband had been popularly elected President of the Republic for the proximate constitutional period of four years, to commence on the 1st of March next. He obtained 1158 votes, against 260 votes given to General Herrera, and 110 to other candidates.

From Jamaica our dates extend to the 27th ult. inclusive. The island papers exhibit a great dearth of intelligence. Emigration to Australia had already commenced, the adventurers being chiefly of the middle class. The crops were unprecedentedly low.

CAPE OF GOOD HOPE.

The Royal mail general screw-ship *Bosphorus*, Captain H. B. Benson commander, arrived in the Plymouth Great Western Docks at seven o'clock on Saturday morning, having left the Cape of Good Hope on the 6th ult.

On the 7th, Mr. Patterson, R.N., died on board the *Bosphorus*, of consumption.

The news brought by this mail is of the same character as that which has come home hitherto. The war still "drags its slow length along," and the latest intelligence from the frontier states that outrages are still committed on the burghers, even in the very proximity of the towns and posts. Both parties still war with cattle—the Kaffirs managing generally to hold their own remarkably well.

The principal event of the war during the past month has been the advance of Lieutenant-General Cathcart, at the head of a strong column of troops, and about 1000 burghers, across the Kei, into the territory of Kreli, his burning the deserted kraal or "great place" of that chief, and his return to head-quarters at King William's-town, and disbandment of the burghers there, after capturing 18,000 of the enemy's cattle.

It was understood to be the intention of the Governor to make another inroad into Kreli's country at a suitable opportunity.

THE NEW ORDERS OF THE POOR-LAW BOARD.—At a meeting of the Board of Guardians of the Strand Union, held on Tuesday, Mr. Hillmas Moseley in the chair, a resolution was proposed by Mr. Joseph George, churchwarden of St. Ann's, Soho, seconded by Mr. Cooper, and agreed to, that a memorial, embodying the objections of the board to the new order of the Poor-law Board for regulating the administration of out-door relief, and prescribing a labour-test for able-bodied male paupers, should be presented to the Poor-law Board.

THE SOUTH DEVON MILITIA.—The South Devon Militia [illegible] in Plymouth on Monday, for twenty-one days' training [illegible] being no barrack-room, the men were billeted [illegible] mess at the Royal Hotel. The clothing was [illegible] Baker, the Colonel, and the officers attended with the men at the Royal William Victualling-yard on the occasion.

METROPOLITAN NEWS.

Prorogation of Parliament.—Thursday being the day to which Parliament had been prorogued, the Lord Chancellor, attended by the officers of the House, entered the House of Lords at about half-past two o'clock, and went through the usual ceremony of informing both Houses that her Majesty had been graciously pleased to issue her Commission under the Great Seal for the further prorogation of Parliament until the 4th of November; on which day they were commanded to attend for the despatch of business. The meeting of Parliament on Thursday, the 4th of November, will be for the election of Speaker and the swearing in of members, which will occupy some days. The Queen's speech, it is said, will not be delivered until the following week, when the real "business of Parliament" will begin. The precedent of 1847 will be followed pretty closely.

British Beneficent Institution.—A meeting of the subscribers and patrons of this institution was held on Wednesday at the offices of the society in Lincoln's-inn-fields, for the purpose of choosing fifty pensioners on the fund. The chair was taken by Sir Felix Agar, one of the vice-presidents. There were fifty candidates, the greater number of whom were widows or daughters of military officers and merchants. The result of the polling, which ended at three o'clock, having been announced, and the names of the successful candidates declared, the proceedings terminated.

Horticultural Society.—This society held their autumnal meeting on Tuesday, at their rooms, in Regent-street; Dr. Royal in the chair. From the statement of Dr. Lindley, the secretary, it appeared that the principal novelties exhibited were specimens of the bino vaula, from India; of Sea Island cotton, from the coast of America; of a plant called skuma, from Japan; and of cinchona callisaya, from Peru—the latter being the plant from which the genuine Peruvian bark is obtained. Some splendid pears were shown by foreign and native growers; the palm amongst the latter was carried away by the Scotch gardeners. There were, also, miscellaneous specimens of vegetables. The show was pronounced good, considering the season of the year, and the meeting was very fully attended. Medals were awarded to the gardeners of the Earl of Stair and Sir A Dunbar, for pears; to Mr. Barnes, of Chevening, for pears; to Mr. Butcher, Stratford-on-Avon, for grapes; to Standurt and Noble, and to Messrs. Backhouse, Kerr, and Prince, for plants.

Distribution of Examples of Art to Schools.—The following minute has been lately made by the Board of Trade on this subject:—"The Lords of the Committee of Privy Council for Trade, having had under their consideration several applications from the managers and masters of national and other public schools for grants to be made to them of drawing copies and examples used by the Department of Practical Art in teaching elementary drawing, think it necessary to adopt some general principle which shall regulate the decision of the board in reference to such applications. Their Lordships already have fully recognised the great importance of elementary drawing to all classes of the community in all relations of life, and have expressed their opinion that the first step to be taken to elevate public taste in the appreciation of correctness of form is to cause drawing to become a part of national education. Their Lordships are, therefore, desirous that the Department of Practical Art should assist, as far as possible, in promoting the distribution of the means of accomplishing this object; but, as the indiscriminate gift of examples to all applicants might lead to abuse, it is necessary to require some guarantee that the examples will be duly appreciated, which the mere request to have them does not imply. The principle which governs the whole proceedings of the Department in all its branches is to afford partial aid, and to encourage, but not supersede, public exertions in promoting education in art. Thus, the museum of ships in the Museum of Ornamental Manufactures are afforded, lectures are given, and students are enabled to obtain the best instruction in all the schools by payment of low fees in aid of the expenses; and my Lords consider that the same principle should be observed in the distribution of examples. They have, therefore, resolved that the Department shall have the power to assist schools with examples for teaching drawing, upon the condition that the applicants are willing to pay half the prime cost of them. By this means, when a school is willing to subscribe £1, the Department will furnish examples of the value of £2, and so on as far as the Parliamentary grants will permit. A list of the examples of drawing copies, models, casts, and materials which the Department will be prepared to furnish on these terms, may be obtained of the secretary of the Department of Practical Art, Marlborough House, London."

Removal of Her Majesty's Stationery-office.—In consequence of the lease of the Portman-street Barracks, in Oxford-street, having shortly expired, it has been determined by the Government that her Majesty's Stationery-office in Great James-street, Westminster, shall be pulled down, and that has hitherto been called the Royal Mews, in Princes-street, near the Abbey, fitted up for the transaction of the business.

Customs Reform.—The attention of the Board of Customs having been called to the expense to which the Crown has been subjected for the attendance of landing-waiters upon the weights of articles charged with ad valorem duty, and the board being of opinion that the import weight of various articles, as ascertained by the dock companies and wharfingers, may, without risk to the revenue, be taken for the purpose of levying the duty; and finding that the dock companies and wharfingers will have no objection to allow the weights to be copied from their books, the board have directed the proper officers to return henceforth, observing that the same goods are to be subjected to the usual examination, and that such particulars be inserted in the official books as may be required.

The London Conveyance Company.—On Monday the sale of the entire stock of the London Conveyance Company commenced, on their premises in St. Alban's-place, Paddington. The stock comprises 508 horses, 65 omnibuses, and an immense quantity of harness, &c 125 horses, in separate lots, as also a quantity of harness, were sold on Tuesday. The horses fetched from five to twenty guineas each, but the average price may be quoted at ten guineas.

Death from the Bite of a Serpent in the Regent's Park Gardens.—At eight o'clock on Wednesday morning John Gring, the keeper of the reptiles in the Zoological Gardens, Regent's Park, with almost incredible folly began to amuse himself and his fellow-servants by playing with some of the most venomous serpents. Having removed one of these (the Indian Cobra), from its case, he allowed it to crawl round his breast, when it bit him on the nose. He had sufficient presence of mind to replace and secure the cobra in its case, and to despatch his fellow-servant for the head-keeper. The unfortunate man was immediately conveyed to the University Hospital in Gower-street, where he arrived in a state of insensibility; and expired shortly after nine o'clock. The unfortunate man was in possession of a preparation or *Liquma cobræ*, said to be a specific against serpent poison, and was acquainted with the method of applying it; but it appears that, although sensible of his danger, he forgot to resort to this means of assistance.

Births and Deaths.—The births registered in the metropolis for the week ending on Saturday, the 16th inst., were 1,507, and the deaths 1,067. The deaths last week were 1,067, so that there is an increase of 40 on the mortality of the previous week of 109. The increase seems to arise among the younger part of the population. Fatal cases of epidemics rose in the last two weeks from 216 to 264; those smaller, from bronchitis, pneumonia, and other pulmonary complaints rose from 144 to 196; while pythas, which is not included in the latter class, destroyed 111 and 131 persons. In the epidemic class the deaths of 7 children and 4 adults are returned as small-pox: only 4 children died with measles, 22 of hooping-cough, 14 of croup, while 69 children and 4 adults were carried off by scarlatina. 31 persons died of diarrhœa and dysentery, 5 of influenza, and 3 of purpura. No deaths occurred from cholera in the week. Typhus, common fever, &c., were fatal in 54 cases; remittent fever in 1, rheumatic fever in 2, erysipelas in 5.

Meteorological Observations.—At the Royal Observatory, Greenwich, the mean height of the barometer on Sunday (the 10th) was 29 876, and on each of the six following days it was above 30 in.; the mean of the week was 30 108 in. The mean temperature of the week was 48 2 deg., which is 2 deg. below the average of the same week in 10 years. The mean daily temperature was below the average, more or less, on every day of the week. The wind blew generally from the north-east.

Sheffield School of Design.—The annual meeting of the friends of this institution and the distribution of prizes to the pupils took place on Tuesday last at the Music-hall, under the presidency of his Grace the Duke of Newcastle. The large hall was well filled by a respectable assemblage of ladies and gentlemen. Among the nobility, clergy, and gentry in the immediate vicinity of the hall, we noticed Viscount Milton, M.P., the mayor (Mr. Carr), the master cutler (Mr. M. Hunter), the vicar (the Rev. T. Sale), the Rev. Dr. Jacob, &c. The report, which was read, amongst other facts, stated that the system adopted in that school embraced the universal diffusion of a knowledge of art throughout the entire population. The mode in which that system was proposed to be carried out was by the establishment, under the auspices of the Board of Trade, of elementary drawing schools throughout the kingdom, and a series of schools having for its centre a school of design. The school continued to maintain the satisfactory position it had occupied for some years. The debt had decreased materially; the attendance of pupils continued steady; 7 exhibitions were carried on in the same manner as heretofore, and would be rendered more complete by the addition of a class for colour, which it was intended to establish forthwith. Of the artistical progress of the pupils the prizes had ample abundant proofs in witnessing the number of medals distributed among the pupils, and which were awarded to them at the recent exhibition of their works at Marlborough House. In the opinion of the council, the most gratifying and conclusive testimony to the value and efficiency of the school was to be found in the recently-published report of the jurors of the Great Exhibition. The Duke of Newcastle having addressed the meeting at considerable length in a speech replete with eloquent and classic allusions, the report was unanimously adopted. Several other gentlemen having spoken on the occasion, the noble chairman called up Mr W. B. Tarten, who had obtained the prize of ten guineas for a design for an article of polished manufac ure. In handing him the purse of sovereigns the noble Duke made the young man cordially by the hand. The Montgomery prize was awarded to Mr. C. Green, and, at the request of the noble Duke, the venerable poet presented it himself. In handing it to the successful candidate Mr. Montgomery said, "Let me give you a word of advice. Always do your best, and you will do better every time, and that is the way to succeed." The various prizes were then awarded by the chairman, and the meeting separated.

EPITOME OF NEWS.—FOREIGN AND DOMESTIC.

At the Privy Council held on Saturday last, it was ordered by her Majesty in Council that the Lord High Chancellor do issue writs for further proroguing the Parliament from Thursday the 21st day of October to Thursday, the 4th day of November, and a supplement to the *London Gazette* of Friday se'nnight appeared the usual proclamation far calling Parliament together on the latter day "for the dispatch of divers urgent and important affairs."

A Cabinet Council was held on Wednesday afternoon, at the Foreign Office, Downing-street. The Ministers present were—the Earl of Derby, the Lord Chancellor, the Earl of Lonsdale, the Marquis of Salisbury, Mr. Secretary Walpole, the Earl of Malmesbury, Sir John Pakington, the Chancellor of the Exchequer, the Duke of Northumberland, the Right Hon. J. W. Henley, the Earl of Hardwicke, Right Hon. J. C. Herries, and Lord John Manners. The Council sat two hours and a half.

The Queen has appointed his Royal Highness the Duke of Cambridge Ranger of St. James's Park, the Green Park, and Hyde Park, in the room of the late Duke of Wellington.

Her Majesty, as an especial mark of honour, has conferred on the Marquis of Londonderry, G.C.B., G.C.H., the companion in arms of the late Commander-in-Chief, the Garter held by the illustrious Duke.

The Marquis of Winchester, it is reported, will be the new Lord-Lieutenant of Hampshire, vice the Duke of Wellington.

Apartments have been engaged at one of the principal west-end hotels for the Duke of Terceira, on a special mission from the Queen of Portugal, with a staff of Portuguese general officers, who are expected to arrive by the next mail-packet, to attend the funeral of the Duke of Wellington.

Captain Bourgourd, of the *Hornet*, just arrived at Havre, from Callao, has brought with him the remains—a man, a woman, and a child—which were found at Pisco, in a complete state of preservation. He has sent them to the museum of Paris.

A very extensive fire took place at Messrs. Turner's iron foundry, Ipswich, on Tuesday night. The damage is estimated at between £2000 and £3000.

In an orchard in Limerick, belonging to Mr. John Wilson Vokes, there is at present an apple-tree, a second time in blossom for this year, and emitting a perfume nearly as strong as in the month of May.

A few weeks ago we noticed the melancholy death of a Mrs. Kirwan, who was described as a young and beautiful woman, the wife of an artist, her body having been discovered close to a small island near Dublin, called "Ireland's Eye." It was then supposed that the unfortunate lady had been drowned while bathing off that place. In consequence of certain suspicious circumstances that have since come to light, an inquiry into the mysterious affair was ordered by the Government, the result of which was the committal of the husband of the deceased lady for trial at the next commission on a charge of murder.

On Saturday last the Commissioners of Woods and Forests completed the enclosure of Kennington-common for the formation of a new park, and the workmen will now be busily employed in laying down the walks and flowerbeds, and planting shrubs, preparatory to its being opened to the public in the spring.

His Excellency the Lord-Lieutenant of Ireland and the Countess of Eglinton have been graciously pleased to become patrons of the Dublin Auxiliary Society for the Prevention of Cruelty to Animals.

The Queen has appointed Captain the Earl Talbot, C.B., &c., to be one of her Majesty's naval aides-de-camp. The noble and gallant officer obtained his decoration of the Bath for commanding her Majesty's ship *Philomel* at the Navarino action.

Among other presents accepted by the President of the French Republic while at Tests, is a bee-hive, which was offered to him by a deputation of young girls, and which has been carefully packed up to be forwarded to Paris. A pair of slippers in crimson velvet, richly embroidered in gold with his arms, was also presented to him by one of the sisters of the hospital in that town.

All the telegraph lines in the west, north-west, and south of America have just united their undertakings under the title of the National Telegraph. This union embraces 17 lines, representing 10,524 miles of telegraph, the chief office being in Cincinnati; and these 10,524 miles connect indirectly with wires extending over thousands of other miles to every city and leading town in the States.

There are seven individuals now living in the neighbourhood of Matlock, in Derbyshire, whose united ages amount to 617 years. The youngest of the family is in his 64th year, and regularly follows the occupation of a quarryman.

The Right Hon. C. P. Villiers, M.P., in answer to an invitation to the Great League banquet, at Manchester, writes that he will endeavour to be present, but that the state of his health and is under medical treatment, in the hands of a German physician.

The *Athenæum* states that "the Christmas revels of the olden time will be again held at Windsor this year, and with a novelty which recalls the times of the Great Rebellion. Victoria will open her dramatic campaign with a new poetical-prose comedy of English life, from the pen of Douglas Jerrold."

A steam company has been formed from Limerick to Plymouth, taking in the commerce of the west of Ireland. The boats will be accommodated at Mullaq, under the agency of Mr. H. J. Warng.

The *New Gazette*, of Rotterdam, states that a bottle has been found in the waters of Harlingen, and sent to the Dutch Consul at London, containing a note, with the following words, scarcely legible: "Sir John Franklin has been found, with fifteen of his crew, in the Arctic regions . . . which has been shipwrecked . . . . and two ship-buoys. . . . Mr. . . . has seen him." The note is signed "J. G.," to which are added the words, "in haste."

Fourteen of the French political prisoners sent by Louis Napoleon to Cayenne, lately attempted to escape in a boat. They proceeded to the south, but were driven back by the weather, and thrown ashore at Dutch Guiana, the Governor of which had cast them into prison.

On Sunday afternoon a fire broke out in the premises of Mr. John Wigan, known as the Bloomsbury Dining-rooms, in Broad-street, which destroyed upwards of £400 worth of property. It was not insured.

On Sunday forenoon a small boat, containing three persons, was upset, near Blackfriars-bridge, and one of the party was unfortunately drowned.

At Manilla, in the Philippine Islands, a suspension-bridge, 390 feet in length, has just been constructed. Horses are two carriage-ways and a foot-path on it. The bridge is very solid, and of great elegance.

It is a curious fact, that only a century ago but one of the bridges existed which now cross the Thames. Westminster-bridge is now the oldest.

The Lords Commissioners of her Majesty's Treasury have recently issued special instructions to the Commissioners of Customs to give every facility to the importation of the cases of sculpture and ornaments which are expected very shortly to arrive from the various galleries of Europe for the decoration of the Crystal Palace at Sydenham, and for the illustration of the different periods and styles of art.

On Monday the old station in Maiden-lane, lately occupied by the directors of the Great Northern Railway as a temporary passenger and goods station, was opened as a potato-market. There was a great number of salesmen and dealers present, and a rather brisk trade was done at good prices.

The Earl of Ellesmere, a few evenings ago, delivered in the Courthouse, at Worsley, an interesting lecture to the members of the Worsley library and reading-room, on the "life and character of the late Duke of Wellington." The room was crowded on the occasion; several of the members of the noble Lord's family being among the audience.

Lady Sykes has given £100 to the Leicester-square Soup Kitchen, at the same time expressing it as her opinion that it is "one of the best charities in London."

William Jackson, aged 50 years, stoker at the works of Messrs. Thomas Bury and Sons, Adelphi, Salford, having last week approached the machinery while in a state of intoxication, was caught by the work and his body was torn into twenty pieces. Death was of course instantaneous.

The Paris correspondent of the *Atlas* mentions that the *danseuse* Cerito vowed a chalice to "Our Lady" should she be fortunate enough to secure an engagement this year at the French Opera of Paris. Having been reengaged, she has fulfilled her undertaking, and presented to "Our Lady" a chalice of Gothic pattern, bearing on its foot an inscription which tells of the vow, and begs a blessing on the future efforts of the dancer to please the indulgent public, which has already bestowed such praise upon her endeavours.

On board the *Sentinck*, which arrived at Portsmouth on Wednesday, are two Arab horses for her Majesty, as a present from Abbas Pasha. Both these beautiful animals are thorough-bred, one of them being 16½ hands high, while the other is a little smaller. Both are pure Arabian horses throughout. One is four years and the other seven years old.

The arrivals of potatoes from abroad have, within the last few days, been more numerous and extensive than at any time during the last or previous year.

At a Special General Court, held at the Trinity-house on Tuesday, his Royal Highness Prince Albert was, by the unanimous vote of the elder and younger brethren, elected Master of that ancient corporation, in room of his Grace the late Duke of Wellington.

CHURCH, UNIVERSITIES, &c.

Appointments and Preferments.—The following preferments and appointments have recently been made:—*Bishopric:* The Ven. J. H. Singer, to Meath, Ireland. *Rectories:* The Rev. Sir B. W. Boothby, to Welwyn, Herts, the Hon. and Rev. — Kemble, to Knipton, Leicestershire. *Vicarages:* The Rev. — Mills, to Thorpe Arnold, Leicestershire; the Rev. A. M. Ashworth, to St. Mary Bishopshill Junior, York; the Rev. T. T. Hearn, to Roxwell, lately separated from Writtle, Essex; the Rev. W. B. Tritton, to Cloford, Somersetshire.

Testimonials.—The following clergymen have recently received testimonials of esteem and regard:—The Rev. J. Consterdine, late curate of Christ Church, Salford, from his late congregation, on his promotion to Alderly; the Rev. H. L. Davies, curate of Troedyrair, from his parishioners; the Rev. F. Hutton, from the parishioners of St. James's, Wednesbury, Staffordshire, on quitting that curacy; the Hon. and Rev. — Pelham, late rector of Burgh-Apton, Norfolk, from the congregation, on his removal; the Rev. W. Roberts, curate of Llandovery, Cefneesclymmer, from his friends; the Rev. E. H. Robson, late curate of Upper-and-Over-Chalbrey, from his parishioners; the Rev. J. Dewing, rector of Dolbrook, from some members of his congregation; the Rev. N. Paskowics, late curate of Rushock, Gloucestershire, from his former parishioners.

The New Chancellor.—In a convocation held on Tuesday, at Oxford, the degree of Doctor of Civil Law was conferred by diploma on the Right Hon. the Earl of Derby, Chancellor of the University. At two o'clock on Thursday the heads of colleges of the University of Oxford, preceded by the Vice-Chancellor, the Rev. Dr. Plumptre, Dr. Galsford, Dean of Christ Church, the four Pro-Vice-Chancellors, &c., attended at Downing-street, where they formally announced to Lord Derby, by the vote of the House of Convocation, his election as Chancellor of the University, in the room of the late Duke of Wellington. The ceremony having been concluded, the deputation withdrew.

The Bishop of Exeter and the Confessional.—Mr. Greaves and the Plymouth Committee have replied to the Bishop of Exeter's challenge to them to produce the documents Mr. Frynne in the Arcana of Popery. These accept the bishop's challenge. Their main reason is, that no decision which could be thus obtained would restore peace to the Church, or place the point at issue beyond dispute.

THE ROYAL VISIT TO WALES.

In our Journal of last week, we recorded the return of her Majesty from Scotland, describing the leading incidents of the route, reserving for Illustration the Royal reception at Chester and Bangor; the Inspection of the Britannia Tubular Bridge; and the passage through Conway and Shrewsbury. Of the Royal reception at Chester and Bangor, on Wednesday, will be found with the Illustrations, at page 336.

THE ROYAL VISIT TO THE BRITANNIA BRIDGE.

On Thursday the Britannia tubular bridge was the object of a special visit, and a minute inspection by her Majesty and the Royal family. Mr. Robert Stephenson, the engineer, and the Chester and Holyhead Railway Company, the proprietors of the gigantic structure, may well feel proud of the compliment paid to them. In the case of Mr. Stephenson it marks with the highest sanction the genius which enabled him to conceive, and the executive ability which he displayed in completing a work so stupendous.

The Royal party left the Penrhyn *Arms* at half-past nine o'clock, in carriages, and proceeded by the turnpike-road to the suspension-bridge. Standing at the north end of the Britannia tube, and looking along the Straits towards Telford's great work, for some minutes nothing could be seen of the illustrious travellers; and the salutes fired from different points on either shore, the echoes of which were prolonged among the hills, alone indicated that they were coming. It was a most magnificent October morning, the night-mist being lifted up like a veil from the face of the landscape; and the mountains, with Snowdon chief among them, being clear and well defined on the horizon to their remotest summits. The faint sound of a cheer reaching the tube indicated that the Queen was crossing the suspension-bridge, which is about a mile off, as the crow flies. Straining the eyesight at that distance, the Royal carriages could just be seen, four in number, and diminished to a size appropriate to Queen Mab's, rather than Queen Victoria's. A cheer was announced by the arrival of her Majesty in Anglesea; then, after a few minutes waiting, the scarlet-coated outriders were observed heading the *cortège*, which received, as it passed along, the greetings of the peasantry, picturesquely grouped at different points. Then on to Llanfair Gallt, where a halt was made with a three-quarters of a mile from the north entrance of the tube; and there, on alighting and entering the train, the Royal party were received by a guard of honour belonging to the Welch Fusiliers; the regiment which, very shortly after, at Bangor received other guests—the Principality performed the military duties attendant on the Queen's visit. The Fusiliers exhibit at their head, with characteristic Cambrian pride, a very fine white goat, presented to them some years ago by her Majesty. At Llanfair Gallt station, Mr. Stephenson met the Royal party, and it was arranged that her Majesty should go through the tube in the state carriage, detached from the engine, and drawn by men, while Prince Albert the Prince of Wales, and a portion of the suite would ascend to the roof of the tube and walk along to the Welsh end. This was accordingly done, but before the Royal party separated, some little time was spent by her Majesty and the Prince in conversation with Mr. Stephenson, who explained to them on the spot the mechanical principles on which the bridge was constructed—its strength, the distribution of the material, and the leading details by which so vast an undertaking was successfully completed. While the Queen passed slowly through the tube to the Carnarvonshire end, the Prince, accompanied by Mr. Stephenson, traversed the roof in the same direction. *(See the Illustrations on the following page.)* The view from it is magnificent. Arrived at the south, or near end of the bridge, the Royal party descended to the water's edge, and surveyed from beneath the gigantic proportions of the whole structure. *(See the Illustration on the front page.)* Except from beneath there is no way of inspecting it as a whole close at hand. There you can look up and see what it is. We need not here describe the stupendous work, as its leading details have already appeared in the Illustrated London News, Nos. 418 and 451. Our readers will recollect the burning of the hydraulic press a few days after the raising of the tubes had been commenced; and on Thursday week Mr. Stephenson showed to her Majesty and Prince Albert the fractured cylinder, which has been placed upon a pedestal near the bridge. On leaving to resume their seats in the carriages, her Majesty and Prince took with them several bits of stone and brick as mementos of their visit, and Prince Albert, turning to Mr. Stephenson, said to him, "It is a stupendous work, and an honour both to you and the Company."

On leaving Bangor station the train was stopped for about four minutes, in the course of which time some books in the Welsh language, and a series of views of Welsh scenery were presented to her Majesty, by the committee of the Eisteddfod. At ten minutes past twelve Bangor station was left the Royal train, on their journey to Windsor, amidst the cheers of the multitude assembled.

CONWAY.

At Conway, the Royal train halted for a few minutes under the old tower, on the return from Bangor, and the Queen received an address from the Corporation of that place, which was presented by Mr. Williams, of Boddhaven. Her Majesty made a gracious reply; then Mr. Morgan, rector of Conway, called for three cheers for the Prince of Wales; whereupon Prince Albert introduced the youthful Prince to the persons assembled. *(See the Illustration.)*

A portion of the fine old Castle is shown in the Illustration. It stands upon a high rock, and was built by Edward I. in 1284, from designs by Henry de Elreton, the architect of Caernarvon Castle. The grand features of Conway are four towers, of forty feet in diameter on either side, the thickness of the walls and towers varying from twelve to fifteen feet. The railway passes immediately beneath the "broken tower," which is a very striking object, the upper half remaining perfect, and rising to a great height. It is greatly to be regretted that this splendid monument of mediæval grandeur should not receive the same judicious treatment as that lately bestowed by the Crown on the Castle of Caernarvon.—Cliff's "Book of North Wales."

Chester and Saltney Junction.—Her Majesty was received with military honours by the troops from Chester Castle; the Artillery fired a salute during the shunting of the train on changing the line and the engine. At Saltney, the terminus of the Shrewsbury Railway, and new port of Connah's Quay, a valuable document, the original charter was exhibited; and the indefatigable Rector of St. Mary's selected this day to mark the event of the roofing in of the Saltney Church School, by the assembling of the children of the parish in the school, to witness the visit of her Majesty. The church stands nearly on the confines of England and Wales that one standard to the west of the building was raised on Welsh ground, with the inscription "Wales;" and another to east on English ground, with the inscription "England," marking the junction of the territories from which the youthful heir to the Crown derives his titles as "Prince of Wales" and "Earl of Chester."

Her Majesty arrived at Saltney at about a quarter to one, being a quarter of an hour later than was originally contemplated. This arose partly from a delay contingent upon the more extended inspection of

THE ROYAL RAILWAY CARRIAGE ENTERING THE BRITANNIA TUBULAR BRIDGE.

PRINCE ALBERT, THE PRINCE OF WALES, AND MR. STEPHENSON, UPON THE ROOF OF THE BRITANNIA TUBULAR BRIDGE.

the Tubular Bridge than was expected, and also from the fact of her having graciously waited at Conway to receive an address from that place, which had not been arranged in the programme of proceedings. From this cause, the Chester and Shrewsbury Company were requested to accelerate the journey between Saltney and Shrewsbury ten minutes faster than was previously intended, so that they were not able to pass the respective stations on the line at so slow a pace as would otherwise have been done. At Wrexham it is computed that 30,000 people were collected, who cheered most vehemently as the Royal party passed along. At all the stations festoons of verdure, laurels, flags, &c., were abundantly and tastefully exhibited; but, for the reason stated, her Majesty was compelled to give them only a cursory glance, and her loyal subjects a rapid salutation in passing. At Ruabon, there was a countless throng; the same at Gobowen and Whittington, and so the Queen passed on to Shrewsbury. The train did not stop between Saltney and the capital of Salop; but it was very perceptibly "slowed" when passing the delightful vales of Gresford, Llangollen, and Chirk. The time kept was precisely that directed by the Queen, namely, one hour and ten minutes; and it must have been most grateful to the directors and officers of the company when the Hon. Colonel Gordon, the Equerry in Waiting, pronounced "the entire arrangements of the Shrewsbury and Chester line very satisfactory." Admiral Moorsom, Robert Stephenson, Esq., the Hon. Arthur Kinnaird, and Messrs. Trevethick and Norris, and other gentlemen of the North-Western Company, also went over the Shrewsbury line.

RECEPTION OF HER MAJESTY AT THE CONWAY STATION.

SHREWSBURY.

From Saltney the Queen proceeded by the Shrewsbury and Chester Railway through the beautiful scenery of the Gresford, Wrexham, Ruabon, Llangollen, and Chirk districts, to Shrewsbury, where the Royal party arrived about two o'clock, and alighted there for refreshment. The Shropshire regiment of Yeomanry Cavalry formed a guard of honour, and the loyal inhabitants entered into all the necessary arrangements with zeal and liberality. The station was very tastefully decorated, and fitted up with sloping platforms for the accommodation of 1000 spectators of the exhilarating scene; the Royal party received a very warm-hearted welcome from the inhabitants, collected in great numbers in and around the station, which was most tastefully fitted up for the occasion. A loyal address was presented to her Majesty, who was received by the Earl of Powis and the Yeomanry Cavalry of the county. The band of the Shropshire Militia played "God save the Queen."

The Royal tourists passed over the lines of no less than six railway companies, the management of each assuming the responsibility of so precious a freight in turn, and all discharging their duties with the most praiseworthy punctuality, and without the slightest *contretemps*. As far as the Saltney Junction, on the Chester and Holyhead line, Mr. Trevithick and Mr. Binger of the London and North-Western Company, who work the line, had the charge. Then the care of the train passed to the Shrewsbury and Chester Company's officials, who brought it to Shrewsbury through fine romantic scenery, and glimpses of beautiful valleys like that of Llangollen.

From Shrewsbury her Majesty travelled along the Shrewsbury and Birmingham line to Wolverhampton, where the most active preparations were made for giving her a suitable reception. A sum of £300 was voted by the Town Council towards the incidental expenses; loyal addresses were adopted; the Marquis of Anglesea, Lord-Lieutenant of the county, the members for the borough, and a large party of the nobility and gentry of the district, united with the local authorities and inhabitants in giving due effect to the loyal demonstration. The 77th Regiment formed a guard of honour; and the Wolverhampton troop of yeomanry cavalry assembled on the occasion.

From Wolverhampton the Queen proceeded by the Stour Valley Railway, through a wild-looking district of flaming forges and tall chimneys, to Birmingham, where the Royal train ran along the "new extension" branch through the town to Camp-hill station, at which point her Majesty left the narrow guage, and then proceeded, in the Royal saloon of the Great Western Railway, by the recently-opened broad gauge line from Birmingham, *viâ* Leamington and Oxford, to Windsor

RECEPTION OF HER MAJESTY AT THE SHREWSBURY STATION.

REMINISCENCES OF "THE DUKE."

THE WELLINGTON TESTIMONIAL IN PHŒNIX PARK, DUBLIN, AS PROPOSED TO BE COMPLETED.

BUST AND PORTRAIT OF THE DUKE OF WELLINGTON, BY MESSRS. WEIGALL.

The bust and portrait of the Duke of Wellington, by the Messrs. Weigall, were taken under circumstances so favourable to truthfulness and minute accuracy, that they already possess great historical value. The artists were Mr. Henry Weigall, of 27, Somerset-street, Portman-square, a sculptor of eminence, whose busts are noted for their spirit and fidelity; and his son, Mr. Weigall, jun.

The Duke's determination to sit no more to artists was so well known that some account of the circumstances under which he was induced to waive his objections may reasonably be expected. The Duke, then, had seen at the house of Mr. David Jones, M.P., where he was a frequent visitor, a bust of his Grace, made without sittings, which seemed to him to convey a characteristic expression that had eluded other artists. As the Duke's admiration of this bust was pretty frequently expressed, Mr. Jones very kindly availed himself of one of these opportunities to request his Grace to sit to the son for his portrait. He expressed great reluctance, but at length gave his consent, the argument which prevailed being the important influence which his Grace's condescension would be likely to exercise on the fortunes of a young and rising artist. He promised to call upon Mr. Weigall the next day, and was as good as his word. He was shown a portrait which had been commenced by Mr. Weigall, jun., from the bust previously modelled by the father, aided by such opportunities as the artist had enjoyed of seeing the illustrious hero at Mrs. Jones's evening receptions. The Duke admired the portrait, and promised to give the artist a sitting. This was on Thursday, August 7, 1851; and on the Saturday following the Duke, punctual to his appointment, arrived at Mr. Weigall's at twelve o'clock. The artists had been fortunate enough to secure the attendance of an esteemed friend of the Duke, possessing great conversational talents; so that being relieved from the necessity of themselves engaging his attention, the sculptor and painter plied their tasks with an assiduity and steadiness which the Duke more than once noticed approvingly. The Duke kindly permitted Mr. Weigall, senior, to take minute and frequent measurements of every feature and every part of the face and head. He assisted the artists in every way, showing a profound knowledge of what they were doing, and of the best mode of facilitating their labours. We may mention one example in illustration. As the sculptor and painter worked simultaneously, it will be seen that one side of the face was in shadow; the circumstance was not pointed out, but his Grace's kindness and thoughtfulness made him aware of it, and when the sculptor turned to examine the side of the face that was in shadow the Duke immediately, and unasked, turned it round to the light for him. With these aids and encouragements the artists laboured zealously and successfully in their work. "Very steady; I like that," said the Duke.

His Grace not only came in full evening dress, but had further consulted the convenience of the painter by putting on his decorations. He wore the red riband of the Order of the Golden Fleece over his white neckcloth, the blue riband of the Garter over his white waistcoat, with the star on his coat, and the blue garter round his knee. The sitting lasted two hours, and as the artists had "worked with a will" they had made great progress. The Duke examined what had been done, and, not less to the surprise than the delight of the artists, said he would come again.

On the following Monday, August 11th, the Duke again arrived at Somerset-street, and honoured the artists with another sitting of more than two hours' duration. Before taking his leave, the Duke, as usual, examined with great particularity the bust and the portrait, and very kindly offered to come again if they wished it. The offer was declined, of course with due acknowledgements, both artists being satisfied with the opportunities they had enjoyed. The Duke left, saying, "I will come again with a great deal of pleasure, if you wish me."

THE WATERLOO GOLD VASE PRESENTED TO THE DUKE BY THE MERCHANTS AND BANKERS OF LONDON.

On Monday, the 17th November, the Duke, having heard that the bust was not cast or the picture engraved, sent word to Mr. Weigall that he should come again the next day, and give them another sitting. The Duke had named twelve o'clock for this unexpected visit, and apologised for arriving at a quarter past eleven, saying, that if he had not come then he could not have come at all. During the interval which had elapsed since the last sitting, his Grace had been in the country, and the pure air of Walmer and Stratfieldsay had sent him back to town in increased health and vigour. He was, indeed, looking remarkably well, and our sculptor observed that even the slight indications of wrinkles which had previously been seen on the forehead had disappeared.

Great, as well as little, critics would probably call a sculptor a bungler who should make an old man's forehead without a wrinkle; but, incredible as it may appear, the Duke's forehead was without the trace of a wrinkle, and the sculptor drew the attention of his Grace's friend to the circumstance.

This sitting lasted two hours and three quarters. The Duke again examined the picture, and approved of it; but said that in one particular it was not historically accurate. The artist had placed a glove in his left hand; "and I never wear gloves," said the Duke; "but it's of no consequence; I don't wish it to be altered. I ought to have them."

It was then intimated to the Duke that the artist's family had never had an opportunity of seeing him, and that it would be a gratification to them to be introduced to him. He immediately said, "By all means; let them come in." Mrs. Weigall, her two daughters, and younger son accordingly entered the room, and were addressed by his Grace with a kindness and urbanity truly gratifying. The Duke then took his departure; and thus ended these *séances*, which have left behind them the

THE LAST OFFICIAL VISIT OF THE DUKE TO THE WORKS AT DOVER HARBOUR.

valued and enduring contributions from the sister arts of painting and sculpture, of which it is now our duty to say something.

The bust of the Duke, made by Mr. Weigall, senior, is of life-size and admirable truthfulness. A sculptor may make the most plentiful use of his compasses, and may yet miss the likeness. But Mr. Weigall's bust unites with scrupulous exactitude of measurement in every feature, the peculiar character of the lower part of the Duke's face, which we have nowhere seen reproduced with so much fidelity; so that it will probably become the authentic likeness adopted in all those statues of the Duke about to be erected in the provinces, which represent him in the "sere and yellow leaf." It is indeed, a noble face, worthy of a bygone age of heroism and "high emprise." "He was the noblest Roman of them all." The nose and eye express valour and lofty daring; the mouth and lower part of the face, strength of purpose, steadiness, and determination. The extraordinary breadth of the lower part of the face, at the point where the lower jaw is the broadest, gives a massive grandeur to the bust alike full of character and truth.

The Duke's portrait, by Mr. Weigall, junior, is a miniature. The Duke is standing in an easy and graceful attitude, in full evening costume, with his decorations. While the sculptor has given to the marble a severe and classic grandeur worthy of the great Duke's self-reliance and heroism in the field, the painter has chosen to represent the amiable and benignant expression which he habitually wore in private life, when engaged in conversing with those whom he loved. The large blue eye, undimmed even in old age, has in its clear and thoughtful depths a thousand eloquent memories of chastened joy and sorrow. The statesman has left the halls of legislation, the soldier has left Kaffir wars and Burmese expeditions behind him at the Horse Guards, and we have here the perfectly well-bred old gentleman, beloved in his social circle, who is certainly reciprocating at this moment all sorts of kind and affectionate thoughts. Some blushing young beauty surely stands before him, whom he is remarking that he stood sponsor for her at the font, and that he understands he is very soon to have the pleasure of giving her away at the altar. A subtle and breathing emanation of kindly feeling and amiability is passing over the Duke's face, and renders it difficult to tear one's self away from a portraiture so life-like and engaging.

THE WELLINGTON TESTIMONIAL AT DUBLIN.

It appears, by a statement in the *Dublin Evening Post*, that arrangements are in contemplation to complete the Testimonial to the Duke of Wellington, which stands on a rising ground in the Phœnix Park, within view of the terminus of the Great Southern and Western Railway at Kingsbridge, adjacent to Dublin. In 1813, the first step for the erection of this testimonial was taken at a meeting held in the Rotunda, at which the Earl of Roden presided. The subscriptions amounted to £26,000: the design was submitted to competition, when that of Mr. (now Sir Robert) Smirke was chosen; consisting of an obelisk and pedestal, upon a platform, to which there is a quadruple flight of steps. The entire height of the testimonial is 205 feet; it is entirely of hewn granite from the Dublin mountains. It was proposed to add to the principal front an equestrian bronze statue of the Duke upon a pedestal; and to fill the panels of the obelisk pedestal with metal bas-reliefs of the Duke's principal victories; and the names of many of his well-fought fields are carved on the *façades* of the pyramid. The Illustration shows the entire group, as intended to be completed. After nearly forty years, the work remains in a rude and incomplete condition, although a second attempt was made, on the passing of the Roman Catholic Emancipation Act, to relieve the country from the stigma of leaving such a work unfinished. The *Evening Post* adds:—

It were needless now to refer to the causes that led to the failure of this second movement. Recurring, however, to the object with which we started, we feel confident that prompt exertion alone is required to raise a fund quite ample for the completion of the Wellington Testimonial in the Phœnix-park, as a record of the nation's gratitude and pride in her greatest son; for, spite of him all in all, we never have seen, and may never see again, an Irishman whose military reputation and achievements have been so honourable to his country.

It is estimated that about £5000 will be required to complete the testimonial in a manner creditable to the country.

THE WATERLOO VASE.

Among the many splendid testimonials to the Duke of Wellington, and assembled in Apsley House, is the magnificent Waterloo Vase, presented to his Grace, by the merchants and bankers of the city of London, shortly after the great event which it commemorates.

The Vase is silver-gilt: it is circular in form, and Grecian in style; the lower part of the body is richly ornamented with foliage. The handles are composed each of a figure of Victory and Fame: on one side is a representation, in very bold relief, of a *square* of Infantry; and on the other, a grand charge of Infantry.

The Vase was furnished by Mr. Lewis Vulliamy, and executed by Messrs. Smith, of Duke-street, Lincoln's-inn-fields, for the late firm of Greens and Ward.

The Vase is two feet high, and eighteen inches in diameter at the mouth: it will hold about four gallons. Upon the days of the Waterloo banquets, this splendid Vase was, naturally, one of the most observed ornaments displayed upon those memorable occasions.

THE DUKE'S LAST OFFICIAL VISIT TO DOVER.

It has been well observed, that, while the rest of the nation is engaged in counting up the public services of the Duke, the people around Walmer speak and judge of him by a narrower and more trying standard. The victorious commander and the arbiter in state affairs are considerations of secondary importance with them compared with what he did to promote local interests. Had these been neglected, it is probable that the Duke's death would have been less felt in the neighbourhood in which it occurred than in any other part of the kingdom. It was by strict attention to details, however, that the sum of his greatness was made up: and the care which he took of the local interests of the Cinque Ports is loudly acknowledged. The incident pictured on the preceding page is an illustration of this special discharge of duty, in the last of his official visits to Dover, and in the circumstances attending which there is a melancholy interest.

The Duke arrived at Walmer Castle on Thursday evening, August 26, from town: "His Grace," says the record, "will now remain for a permanency at the Castle, and receive a succession of visitors up to the assembling of the new Parliament." How short-sighted was this anticipation!

The immediate object of the Duke's return to Walmer Castle was to receive a visit from his Imperial Highness the Grand Duchess Dowager of Russia and her Consort, his Serene Highness Duke George of Mecklenburg-Strelitz. The illustrious guests arrived on the following evening, when a select party had the honour of meeting them at dinner, by the invitation of the noble and gallant host. On Saturday afternoon, after luncheon, the Grand Duchess and the Duke George proceeded to Dover, accompanied by the Duke of Wellington. A Royal salute from the heights announced the arrival of the august party, who proceeded to Birmingham's Royal Ship Hotel, where the Duke took a farewell of his illustrious guests. His Grace then, attended by S. M. Latham, Esq., and John Irons, Esq., inspected the works in progress at Dover Harbour, and left for Walmer shortly after four o'clock.

In the *Dover Telegraph*, Sept. 4, wherein the movements are chronicled, we also find recorded the following public tribute to his Grace's strict attention to his official duties. At a "Reform Banquet" at Dover, on Thursday, Sept. 2, the chairman, in giving "His Grace the Lord Warden," said he trusted the day would never come when England would forget the debt it owed to its greatest General; and who, in his official connexion with Dover, had proved to be the most able, zealous, and most useful Lord Warden they ever had. The toast was drunk with three times three; and the band played "See the Conquering Hero comes," Within a few days the man of truth lay lifeless in his lonely chamber at Walmer!

Testimonial to the late Duke of Wellington.—On Thursday evening, a preliminary meeting was held, at the Freemasons' Tavern—Sir Peter Laurie, Esq., in the chair—at which it was resolved to establish a national institution, under the title of "The Wellington and United Services Benevolent Institution," for the relief of non-commissioned petty officers, soldiers, sailors, and marines of her Majesty's and the East India Company's service who may have been and orphans, and that a public meeting, to further consider the subject, should be convened for the day following the lamented Duke's funeral.

Revival of Convocation.—Memorials are in course of signature amongst the clergy of Manchester—one addressed to the Queen, and the other to the Earl of Derby—against the revival of convocation at the present juncture.

Aberdeen Railway.—On Thursday the half-yearly meeting of this Company was held at Radley's Hotel, Blackfriars—Lord James Bayne in the chair—and the directors were authorised to promote a bill in Parliament for the conversion of arrears of preference interest into a further preference capital.

CALENDAR FOR THE WEEK.

Sunday, October 24.—Twentieth Sunday after Trinity
Monday, 25.—St. Crispin. Battle of Agincourt, 14.9.
Tuesday, 26.—Dr. Doddridge died, 1751. Hogarth died, 1764.
Wednesday, 27.—Captain Cook born, 1728.
Thursday, 28.—St. Simon and St. Jude.
Friday, 29.—Sir W. Raleigh beheaded, 1618.
Saturday, 30.—Fire at the Tower of London, 1841.

BANKERS.

Messrs. Masterman and Co.; Messrs. Robarts, Curtis, and Co.; Messrs. Barclays; and the London and County Bank, London
Messrs. Garfit, Claypons, and Garfit, Messrs. Gee and Co.; and the Stamford, Spalding, and Boston Joint Stock Banking Company, Boston.

ENGINEERS—George Parker Bidder, Esq.; George R. Stephenson, Esq.; William Lewis, Esq.
SURVEYOR—Mr. Robert Reynolds.
SOLICITORS.
Messrs. Staniland and Chapman, Boston; and 3, Verulam-buildings, Gray's-inn, London.
SECRETARY—Mr. Robert Stainbank.
COMPANY'S OFFICES—3, Verulam-buildings, Gray's-inn, London.

The link in the chain of direct Railway communication between Nottingham and Boston being still unsupplied, the important Manufacturing Towns of Birmingham, Derby, and Nottingham, as also the Potteries, are yet compelled to avail themselves of the Ports of Grimsby or Hull for their means of Export and Import to and from the Baltic and Dutch Ports.

The Port of Boston being nearer to the Dutch ports than either Grimsby or Hull, and the latter ports being each about thirty miles further distant from Nottingham (the key of the Midland districts from the east) than the port of Boston, it follows that, for many articles of export and import, this latter place, as a shipping port, has over the other two an indisputable advantage, while at the same time the new line of communication proposed to be provided would also give to those ports additional access to the midland districts.

At this time vessels of 500 tons burthen (a class of vessel usually employed in the Baltic trade) discharge their cargoes at the quays in Boston; and the navigation offers facilities for great improvement, which, if found expedient to carry out, would enable vessels of considerably larger tonnage to enter the port.

By means of dock accommodation also great advantages will be afforded to the shipping of the port.

To secure the important results which will unquestionably arise by connecting the port of Boston with the Ambergate Railway at or near to Grantham, from whence an unimpeded line of Railway extends to Nottingham and all the midland districts of the kingdom, this undertaking is submitted to the favourable consideration of the public.

The cost of construction will, perhaps, be less than that of any Railway yet formed; and the formation of the Docks, from the favourable nature of the site selected, will also be constructed at comparatively small cost.

The anticipated Traffic from this Line and Revenue from the Docks promises to pay a considerable per centage to the Shareholders.

An act for carrying out the undertaking will be applied for in the next session; and, if obtained, the works will be completed within a very short period.

Application for shares to be made in the subjoined form, either to the Company's Solicitors or Secretary, or to Messrs. Oswin, Tootal, and Co., 10, Angel-court, Throgmorton-street, London; Mr. Thomas Roberts, Manchester; Messrs. Smilson, Liverpool; Mr. Pearson, Birmingham; and Pearson Peet, Nottingham.

FORM OF APPLICATION FOR SHARES.
TO THE DIRECTORS OF THE BOSTON AND MIDLAND COUNTIES RAILWAY AND DOCK COMPANY.

Gentlemen, I request you to allot me Shares in the above Company, and I hereby undertake to accept the same, or any less number that may be allotted to me, and to pay the sum of £1 per Share thereon, and execute the Deed of Settlement of the Company when required so to do.

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, OCTOBER 23, 1852.

A Royal Proclamation has definitively fixed the day on which the new Parliament will commence its legislative labours. The meeting will take place on the 4th November, but the real business of the session will not commence before the 11th, the intervening period being occupied with swearing in the members and electing the Speaker. The various prophecies which have been hazarded as to the relative strength of parties will, therefore, soon be confirmed or falsified. Upon the first two questions that come before the House, there will, it is presumed, be no division, or even a difference of opinion. The strength of parties will not be tried on the election of Speaker, nor upon the sacred duty of the last honours to be paid to the illustrious Wellington. These will occupy but little time; and after the funeral of the hero, with a pomp and solemnity never before exhibited in this country, the business of the session will begin.

The new Parliament will have serious difficulties to encounter; but the path of duty is plain before it. To advance, and, if possible, to complete the financial and commercial revolution commenced by Sir Robert Peel, is the task reserved for it. The peaceful triumph of Free Trade, and a hearty acquiescence in its principles will be best secured by the practical extension of the doctrine. Protection only lingers among those who are compelled to sell, but are not permitted to buy, freely in the markets of the world; and it is only just that all the productive classes should be placed on the same level. As Customs duties no longer raise the price of the goods which the farmer takes to market, so neither ought they to raise the price of the commodities which he desires to purchase, and he is entitled to possess himself of tea and sugar, wine and tobacco, exempt from the fiscal imposts which they now bear. By reducing the cost of what he seeks to consume proportionately to the reduction of his income, he would participate in a general scale of cheapness, which is now only exceptional, and from the benefits of which he is, as a consumer, is debarred. The fact is, that the whole scheme of taxation, which, when first established, adapted itself to a restrictive system of commerce, must be thoroughly revised, reconstructed, and brought into harmony with Free Trade.

The attention of the Legislature will also be vigilantly directed to our colonial policy, not merely in extending the principle of self-government to the colonists, as the best means of attaching them to the mother-country, but in reference to the supply of wool and cotton, so essential to the prosperity of our manufacturing districts. As respects the first point, the Government, of whatever party it be composed, must wholly abandon the system of regarding our transmarine dominions as mere sources of patronage, and must view them as markets for the products of our industry. The local administration must be vested in the permanent inhabitants, or natives, who best understand colonial wants; and not in men who have no knowledge of the country, and whose only desire is to realise fortunes, and return to Europe. Our destructive war at the Cape, and the hostile demonstrations still more recently exhibited in Australia, very significantly warn the country to renounce the exclusive policy hitherto acted upon. The Government will be the more strongly admonished to adopt a just and conciliatory course in consequence of the vast emigration which is carrying away a skilled and energetic population to the regions of the gold mines; and who, impressed with British feelings of independence, are not likely to submit to the mandates of Downing-street, when they interfere with the internal administration of the colony.

The rule of England in these distant possessions should assume a federal, rather than an Imperial, character.

Political foresight rarely characterises the proceedings of Administrative or Legislative bodies, and it has generally, if not invariably, required the strong pressure of immediate danger to compel any onward movement. Frequently has the Government been warned that a day would arrive when the supply of raw cotton might prove deficient, and that the culture of the plant should be revived in British India, and encouraged in the West Indies. This advice has invariably been disregarded. Not only England, but the whole of Europe, now mainly depends on the southern states of America, and the latest returns show that while the Continental demand is annually increasing, and America itself is retaining more and more of domestic consumption, the price of the raw material is rising and the supply becoming scanty, so that the failure of the crop in a single year might be attended with industrial calamities which it is uncomfortable to contemplate. There is also cause to apprehend that the supply of Australian wool will fall short in the ensuing year, as the chief labour of the colony is withdrawn from the sheepwalks to the gold mines. It is, therefore, to be hoped that the new Parliament will anxiously deliberate on these subjects before any catastrophe occurs.

Our foreign policy will demand a delicate and skilful guidance. We sincerely trust that the commercial interests of Europe, fostered and promoted by a long peace, may be sufficiently powerful to avert war. Yet the position of France, and that of Europe generally, is sufficient to inspire anxiety. An enormous standing army is not readily disbanded, nor can huge naval armaments be suddenly got rid of, even if Louis Napoleon's speech at Bordeaux should prove to be sincere. The revival of an imperial dynasty cannot easily disconnect itself from the ideas and principles in which it was originally founded, and it is incumbent upon British statesmen, under such circumstances, to be vigilant, if not suspicious.

THE COURT.

WINDSOR CASTLE.

The Queen held a Court and Privy Council at three o'clock on Saturday afternoon, at Windsor Castle. The Privy Council was attended by his Royal Highness Prince Albert, the Earl of Lonsdale, the Marquis of Salisbury, the Earl of Derby, Mr. Secretary Walpole, the Earl of Malmesbury, Sir John Pakington, the Chancellor of the Exchequer, the Duke of Northumberland, the Right Hon. J. W. Henley, the Earl of Hardwicke, the Right Hon. J. C. Herries, Lord John Manners, Viscount Hardinge, and the Earl of Jersey. The Right Hon. Lord Raglan, Master-General of the Ordnance, was, by command of the Queen, sworn of her Majesty's Most Hon. Privy Council, and took his seat at the board.

Parliament was ordered to be further prorogued from Thursday, the 21st day of October, to Thursday, the 4th of November; and a proclamation was issued, announcing the Parliament to meet on that day for despatch of public business.

At the Court, the Duke of Norfolk (Earl Marshal) had an audience of the Queen. The Dean of St. Paul's and Sir Charles Young (Garter King of Arms) were in attendance.

Mr. J. R. Ingersoll, Envoy Extraordinary and Minister Plenipotentiary from the United States, had an audience of the Queen, and delivered his credentials.

A special train on the Great Western Railway conveyed the Ministers to town, after the breaking up of the Court.

His Serene Highness the Prince Hermann of Hohenlohe arrived at the Castle on Saturday, on a visit to her Majesty.

Her Royal Highness the Princess of Wales, the Princess Royal, Princess Alice, and the Princess Adelaide of Hohenlohe, attended divine service in St. George's Chapel on Sunday morning. The sermon was preached by the Rev. Lord Wrotheseley Russell.

On Monday the Duke and Duchess de Nemours paid a visit to her Majesty and the Prince Consort. The Duke and Duchess of Northumberland and the Marquis of Exeter arrived at the Castle on the same day, on a visit to her Majesty.

On Tuesday morning his Royal Highness Prince Albert, attended by Colonel Hon. Charles Grey and Lieut.-Colonel F. H. Seymour, went to town, returning to the castle at a quarter before two o'clock. In the evening the Royal dinner-party consisted of her Royal Highness the Duchess of Kent, her Serene Highness the Princess of Hohenlohe-Langenbourg, his Serene Highness the Prince Hermann of Hohenlohe, the Duke and Duchess of Northumberland, the Lady in Waiting to the Duchess of Kent, the Baroness de Speth, the Earl and Countess of Derby, and Colonel the Hon. C. B. Phipps.

On Wednesday morning the Prince Consort, accompanied by his Serene Highness Prince Hermann of Hohenlohe, went out shooting, attended by Colonel the Hon. C. B. Phipps, Colonel the Hon. N. Hood, and Lieut.-Colonel F. H. Seymour.

On Thursday morning the Prince Consort drove to Eton in an open carriage, and laid the foundation-stone of a new chapel for that parish. His Royal Highness afterwards lunched with the Rev. Dr. Hodgson, Provost of Eton. In the afternoon the Queen and his Royal Highness drove out in an open carriage. His Serene Highness the Prince of Hohenlohe-Langenbourg has arrived at the Castle on a visit to her Majesty.

The Hon. Matilda Paget has succeeded the Hon. Mary Seymour as Maid of Honour in Waiting to the Queen.

Her Royal Highness the Duchess of Kent, accompanied by Prince Herman of Hohenlohe-Langenbourg, and attended by [illegible] Sir Geo. Couper, honoured the Haymarket with [illegible] evening.

His Excellency Lord Howden, her Majesty's Envoy Extraordinary and Minister Plenipotentiary at Madrid, left London, on Monday, for Paris, *en route* to the Spanish capital, to resume his diplomatic functions.

POSTSCRIPT.

FUNERAL OF FIELD MARSHAL THE DUKE OF WELLINGTON.

(From the Supplement to the *London Gazette* of Tuesday, the 19th of October.)

Earl Marshal's Office, 1, Parliament-street, 21st Oct., 1852.

Her Majesty having signified her Royal pleasure that the public solemnization of the funeral of Field Marshal the Duke of Wellington shall take place as soon as practicable after the assembling of Parliament,—

This is to request that all Privy Councillors under the degree of the peerage, the Vice-Chancellors, the Barons of the Exchequer, the Justices of both Benches, Knights Grand Cross, Knights Commanders, and Companions of the Most Honourable Order of the Bath, and her Majesty's Law Officers, desirous of being present at the Cathedral Church of St. Paul on the occasion, will signify the same to me, by letter addressed as above, on or before the 4th day of November next (after which no application can be received), in order that places may be reserved for them. NORFOLK, Earl Marshal.

THE FATAL DUEL NEAR WINDSOR.

An inquest was held on Thursday at Egham, by C. J. Woods, Esq., coroner, and a jury, on the body of Frederick Cournet, but which had not terminated at the rising of the court at half-past six o'clock. The coroner, therefore adjourned the further inquiry to Tuesday next. Several witnesses were examined, but scarcely anything important was elicited from them beyond the facts we have already recorded in another part of our paper. M. Gustave Nagute, of 38, Charlotte-street, Pitzroy-square, who appeared to be much affected while giving his evidence, stated that he knew the deceased well, who resided in London, at 41, Knightbridge-street; that he was forty-three years of age. He last saw the deceased alive on Sunday evening the 17th, having dined with him there. Deceased told him he was going to fight a duel. The witness having peremptorily declined to mention the names of the parties, or to give any further information relating to the unfortunate event, was removed in the custody of the police.

It appears that the cause assigned for this tragical affair is solely a political difference, and that the unfortunate deceased is a married man, whose wife and family are at present residing in France, and who held a high appointment in the French naval service. From the interpreters and others present at the hearing yesterday, we also learn that the foreigners in custody give as a reason for being mixed up in this transaction, that they came to Windsor on pleasure, and were proceeding on the road to Egham from Windsor, intending to visit Virginia Water, when on the road the deceased left the party and got over the hedge, and when there he shot himself. This version of the story is, however, totally at variance with the evidence given by the various witnesses.

The following note was handed to the reporters by a foreign gentleman, a friend of the deceased, which will throw some light upon this mysterious affair:—"It is truly to be regretted that a certain class of exalted and misguided men, who have found a safe and hospitable asylum in England, should abuse the hospitality granted to them, and take upon themselves the right of avenging their political squabbles by pistols or swords. The unfortunate deceased was an intimate friend, from the Republic, of Ledru Rollin; an honour also claimed by two of the gentlemen now in custody, Etienne Barrunuez and Edmund Allain. The other two parties in custody, Philippe Eugene de Morney and Emmanuel Barthélemy, claim to be friends of Louis Blanc. We do not know if these two Republican chiefs are or are not the friends of the unfortunate men who infringed the laws of the country that gave them shelter."

THE DEAN AND CHAPTER OF ROCHESTER, AND THE REV. MR. WHISTON.—The Rev. Mr. Whiston, who it will be recollected, was removed by the Dean and Chapter of Rochester, from the Head Mastership of their school, in October, 1849, in consequence of his having published a pamphlet entitled "Cathedral Frauds and their Fulfilment," had appealed to the Bishop as visitor against such decision. On Thursday morning, Mr. Whiston received an official document, announcing his re-instatement in the office of Head Master, from the 1st of January next, but declaring that he shall have no right or claim against the Dean and Chapter, or any one else, for any profits or emoluments accruing from the time of his removal from the office to the 1st of January next.

THE MINISTERS AND THE LORD MAYOR'S DINNER.—At the Court of Common Council, on Thursday, Aldermen Challis (Lord Mayor elect) informed the Court that it had been intimated to him that if her Majesty's Ministers were invited to the entertainment on the 9th of November, the nearness of that day to the time appointed for the funeral of the Duke of Wellington would prevent their acceptance of the invitation. The banquet would therefore be postponed to some day subsequent to that appointed for the funeral to take place.

A NEW CHAPEL-OF-EASE AT ETON.—On Thursday his Royal Highness Prince Albert laid the first stone of a new chapel-of-ease at Eton. The Provost and Fellows of Eton gave the site, together with the munificent sum of £500. Her Majesty and Prince Albert subscribed £100; the Rev. E. Coleridge and pupils, £51; the Rev. Dr. Hawtrey, £100; the Revs. W. A. Carter, H. Hippisley, F. E. Durnford, C. O. Goodford, J. W. Cox, and J. Wilder, £50 each; Rev. S. F. Marshall, £105; and other liberal sums—in all, to the amount of £1000 were enclosed. His Royal Highness, after the ceremony, proceeded to Eton College, where, after inspecting the Queen's Scholars and other portions of the College, partook of an elegant luncheon at the Provost's lodge, provided for the occasion.

SEAMEN AND MARINES' ORPHAN SCHOOL.—The eighteenth annual meeting of the Portsmouth Seamen and Marines' Orphan School was held on Thursday afternoon, at the rooms of the institution, Lion-terrace, Portsea. The chair was occupied by the Commander-in-Chief, Admiral Sir Thomas Briggs, G.C.M.G., and a large number of ladies and gentlemen were present. The report (which was read) was of a generally satisfactory character: the endowment fund had increased from £850 to £1150, principally through the munificent donation of £500 from Admiral Sir Thomas Ogle and Henry Dacres, Esq., the executors to the will of the late Mrs. Henry Ogle. A series of resolutions having been passed, the children of the schools were regaled with dinner of roast beef and potatoes.

BUTCHERS' CHARITABLE INSTITUTION.—The twenty-fourth anniversary of the Butchers' Charitable Institution was celebrated on Thursday, by a dinner at the Freemasons' Tavern, which was attended by upwards of 200 of the friends and supporters of the charity. Sir John Villiers Shelley, Bart., M.P., took the chair. In the course of the evening a subscription list was announced, in which Sir John Shelley's name was down for £10 10s. to the institution, and £10 10s. to the building fund; Sir De Lacy Evans, £10 10s.; Mr. Sheriff Croll, £10 10s.; &c. &c. Total, £5 5s.; Mr. D. Scott, £10 10s., &c.

MEETING FOR THE PROMOTION OF DIOCESAN SYNODS.—A meeting of the clergy and laity of the Church of England was held on Thursday, at the Town Hall, Warrington, to deliberate on the best means of restoring to the Church, on organic action through the means of her ancient Diocesan Synods. The Rev. T. Colins presided. A great number of clergymen were present. A series of resolutions in connection with the object of the meeting were agreed to.

FIRE.—On Friday morning a fire broke out on the premises of Messrs. Lewis and Son, wholesale wine and spirit merchants, No. 37, Drury-lane, which did considerable damage, not only to that building, but also to the house No 36, and to the painters' shops connected with Mr. Kesterton's coach factory, in Long-acre. The total loss it is supposed will reach to £2000.

LATEST FOREIGN NEWS.

FRANCE.

PARIS, Thursday Evening.

There is very little stirring to-day in the way of news. The accounts from Belgium alone excite interest. It appears that the Belgian Minister here has informed the Minister for Foreign Affairs officially, that the mission of M. de Brouckere, to form a Cabinet, had failed, and that the Church party has been applied to. The Minister for Foreign Affairs has declared that, let whatever party come into power in Belgium, the French Government will treat with it, provided a proper spirit of concession be displayed.

You have seen by some of the Paris journals that the circumstance of the Expiatory Chapel in the Rue de l'Arcade for Louis XVI. having been illuminated on Saturday evening last has excited particular remark. It appears that the Government architect, looking only at the general order for the public buildings to be illuminated, and considering the Expiatory Chapel to be a public building, ordered it to be lighted. This blunder was certainly unfortunate, particularly when it is considered that the 16th was the anniversary of the execution of Marie Antoinette.

It is generally said that the coronation of the inchoate Emperor will not take place before May, in consequence of the reluctance of the Pope to travel in winter, or rather of his objection to call upon his Cardinals, most of whom are old and infirm, to take so long a journey at that season of the year.

An Imperial guard, it is said, of 10,000 men, is to be formed immediately after the restoration of the Empire.

THE IONIAN ISLANDS.

Letters from Corfu, of the 8th, in the *Piedmontese Gazette*, announce the arrival there of her Britannic Majesty's frigate *Spiteful*, Captain G. Parker, from Malta. The British fleet was expected at Corfu about the 15th from remaining, the prevalence of the small pox at Corfu having prevented it from coming sooner. The Lord High Commissioner was expected back at the same time. During the last ten days there have been 380 new cases of small-pox at Corfu, 71 of which proved fatal. The thermometer was at 82 Fahrenheit, and the drought was excessive

THE DUKE'S FUNERAL.

The following programme of proceedings at the funeral of the Duke of Wellington has been published:—

"The remains of his Grace will remain at Walmer until four days before the funeral, which will take place between the 17th and 19th of November. They will then be removed to Chelsea Hospital, where the body will lie in state for three days, and on the evening before the solemnity it will be removed to the Horse Guards.

"On the morning of the funeral, the funeral *cortège* will be formed at the Horse Guards, and will proceed by Charing-cross, the Strand, Fleet-street, and Ludgate-hill, to St. Paul's.

"Six regiments of infantry, eight squadrons of cavalry, and 17 guns, will take part in the procession, that being the number of troops to which his Grace was entitled by his rank in the army.

"A body of Marines will also form part of the *cortège*, which will be headed by 83 veterans from the Chelsea Hospital, who shared in the Duke's campaigns, the number 83 representing the years to which his Grace had attained.

"We have also reason to believe that the Field Marshal's *bâton* of the deceased Duke will be borne on the occasion by the Marquess of Anglesey, his companion in arms; and that representatives from those foreign Sovereigns in whose armies his Grace born the rank of Field-Marshal will assist at the solemnity, each bearing the *bâton* of the deceased.

"With a view of diminishing as much as possible the delay inseparable from a long file of carriages, it is intended to make the procession, as much as possible, a walking one, and to dispense, as far as consistent with the solemnity of the occasion, with an unnecessary train of vehicles.

"It is also hoped that the good sense and good taste of the City will on this occasion, consent to waive its claim to precedency, and that the Lord Mayor, after meeting the *cortège* at Temple-bar, will fall into the procession after the Prince Consort.

"Finally, it is not intended to line the streets through which the procession will pass with military. The guardianship of the thoroughfares will be left to the police, and to the good feeling of the public, who will thus have an opportunity of beholding the mournful spectacle without the interruption of a line of soldiers, and of testifying their respect for the mighty dead by their decorous and orderly demeanour."

Messrs. Cubitt, the eminent builders, have received instructions to fit up the interior of St. Paul's Cathedral for the accommodation of from 15,000 to 20,000 spectators.

Four galleries will be erected—one running from the western entrance along the central aisle, two others in the eastern and western aisles, and a third in front of the entrance of the chapel. This last is intended for the exclusive accommodation of a very large choir. The gallery running along the central aisle will be forty feet in height, while those on the eastern and western wings will be upwards of sixty feet; and the latter will be so arranged as to form an amphitheatre round the space underneath the dome, in the centre of which the remains of the late Duke will be lowered to their last resting-place.

The whole of the galleries will be hung with black cloth, and the number of persons they are intended to contain is upwards of 10,000.

In the centre of these galeries will be erected, so as to occupy as little room as possible, the machinery for lowering the coffin, and over the chasm in the pavement will be a gorgeous catafalque. The nature of the decorations to the canopy have not yet been ascertained.

It is not intended to admit the public to the whispering-gallery, nor to the two small galleries over the terminations of the central aisle, as it would be impossible to see from such an elevation.

A temporary pulpit will be erected near the place of interment, but the precise locality has not yet been decided on. There will be a gallery, separated by barriers from the rest, for those members of the Upper and Lower House who will attend the funeral.

The performance of the daily service in the cathedral has been discontinued for the present, and it will not be resumed until the works are removed, subsequent to the ceremony.

At a meeting at Guildhall on Tuesday, of the City Commissioners of Sewers, it was ordered that notices should be forthwith printed and extensively circulated among the inhabitants in the line of the intended funeral procession within the City, prohibiting the erection of any balcony or other projecting seat for the solemn occasion.

Amongst the arrangements that are being made throughout the kingdom to do honour to the remains of the late illustrious Duke, we learn that it is intended to run special boats and trains from Dublin to London, with a view of affording an opportunity to the numerous persons in Ireland who are desirous of paying their last mournful tribute of respect to the memory of the late Duke, of their being present at the funeral. At a large and influential meeting of the Corporation of Dublin on Monday, it was unanimously resolved—

That the Right Hon. the Lord Mayor and the Corporation officers, together with such members of the Corporation as may think proper, shall proceed to London at the proper time, to attend the funeral of our illustrious countryman and fellow citizen, the late Field Marshal his Grace the Duke of Wellington.

FATAL DUEL NEAR WINDSOR.

On Tuesday afternoon a duel was fought at Englefield Green (which lies about half-way between Chertsey and Windsor), between two Frenchmen, which terminated in the death of one of them, named Cournet, who resided at 41, Lisle-street, London. The deceased was a remarkably fine man, about 40 years of age, and was formerly a captain in the French navy. There are two causes assigned for the duel, viz. a lady and a political quarrel.

A telegraphic communication having been received on Tuesday evening at the Waterloo-road station, from Windsor, advising the police authorities that three Frenchmen, who had been engaged in a fatal duel, were on their way to London by the express train, these individuals, immediately upon their arrival, were taken into custody, and conveyed to Tower-street police-station. Upon them were found two small swords, beautifully mounted, a pistol case, and a knife with blood upon it. They were conveyed back to Windsor for the purpose of being examined before the Chertsey magistrates. On Wednesday, they were accordingly brought up at the Town-hall, Chertsey, together with another of the party who had been apprehended near the spot where the fatal encounter took place. The names of the four individuals are — Baronea, of 41, Lisle-street, Edmund Allain, of 28, Lichfield-street, Soho; Eugene Philippe Mornain, and Emanuel Barthelemy.

The magistrates on the bench were Mr. J. I. Briscoe (chairman), Captain Cavendish, Captain Seymour, and Mr. I. Debnson. The case created the most intense interest, and the large room was densely crowded. French counsel attended on behalf of the prisoners. The following facts were then elicited:—On Tuesday, about a quarter past one, as Dr. Hayward, of Egham, was coming up Priest-hill by Englefield-green, he passed three foreigners, and a little further up he saw another coming out of a field towards the road; this led him to believe that something serious had happened, and he went to the field adjoining, where he found a person lying on the ground bleeding. He returned to him immediately, and afterwards went to the Barley Mow, an inn about half a mile distant, and desired them to make some preparation for a person who had been wounded. The unfortunate man was removed to the inn on some hurdles and straw. Dr. Hayward attended to him until near five o'clock. He lived about three hours, being nearly the whole of the time in dreadful agony. Dolbonon, Esq., a magistrate, living at Egham, came to the inn mean time attended, with M. Laun, a teacher of foreign languages, also living at Egham, and the dying man's deposition (which has not as yet been made public) was taken. The ball had passed through deceased's chest, going in at the right side and coming out at the left. Mr. Biddlecombe, the superintendent of police, having been informed of the circumstance, went to the Barley-mow, and found the dead body lying on the bed. He stripped the body, with Dr. Hayward, and found a ball—which he produced, and which was much flattened—had passed through his coat, waistcoat, shirt, and the drawers, and shirt. He was satisfied that the discharge took place at some distance, as there were no symptoms of powder on the coat. The bullet was found on the chest of the bed. He examined the pockets, and found 2s. 6d. in silver, 3½d. in copper, three keys, a pair of gloves, and a passport, in the name of Richard Flunkett, dated the 16th May last. He also found a life preserver in his pocket. He took Allain into custody, and in his great-coat pocket he found a powder-flask, with some powder in it, nine bullets, and some caps. On the person of deceased he also found half a return ticket, being a second-class one from London to Windsor. He also found in the pocket of Allain a similar ticket to that which he found on the deceased.

The prisoners were remanded until the inquest on the body had terminated.

JEWS' AND GENERAL LITERARY AND SCIENTIFIC INSTITUTION.—The session 1852-53 of this admirable institution was opened on Thursday evening, at Sussex Hall, Leadenhall-street, by a *conversazione*, at which was collected a very brilliant company of ladies and gentlemen, to the number of 1000, which is about the present number of members.

INCENDIARY FIRES.—The farm-yard of J. Faulkner Wood, Esq., at Doddington, Whitchurch, was last week set on fire by some diabolical miscreant, and several stacks of wheat, oats, and hay, worth £900, entirely destroyed. A large reward was offered for the discovery of the guilty party.—On last Saturday night, a second incendiary fire broke out upon the premises of Mr. Pelley, known as Overland-court farm, in the parish of Ash, about four miles from Sandwich, in Kent. The whole of the live stock, with the exception of two sows and twenty-three pigs, was saved, but the cries of the latter, as the fire literal progress them alive, were painful in the extreme. There were also [illegible] wheat, two stacks of oats, two stacks of clover, and one stack of beans, peas, and hay, with two large barns, nearly filled with corn, two lodges, the whole of the stabling and the farming implements. The loss sustained cannot be estimated at less than £1800, and Mr. Pelley is insured for only £800.

NAVAL AND MILITARY INTELLIGENCE.

LIBERAL DONATIONS.—His Grace the Duke of Northumberland has presented the Sailors' Home at Devonport with £400; and Commodore Superintendent Seymour has given a second donation of ten guineas, with an annual subscription of five. The Royal Naval and Military Free Schools have also been the objects of his Grace's bounty, having been presented with £100; and the Royal British and Dockyard Female Orphan Asylums were severally presented by his Grace with £100 and £50. Sir Thomas Herbert also gave a donation of £50 to the Dockyard Asylum.

TRIALS OF ANCHORS.—The breaking of Mr. Aylen's anchor took place at Woolwich, last Saturday morning, when it defected 5ft. of an inch on 20 tons strain being applied. It resisted at 44, and broke in the shank, near the crown, at 47¼ tons; the time occupied being six minutes. The following gives, at one view, the final result of the experiments, the breaking of the anchors, and the time occupied in breaking each:

Anchors.	Weight.	Proof Strain.	First Crack.	Broke.	Time in Breaking
	Cwt. qr. lb	Tons.	Tons.	Tons.	Minutes.
Lieutenant Rodgers's ..	19 0 8	19½	45	73½	21
Mitcheson's	21 0 0	21½	—	—	—
Brown and Lennox's ..	20 3 14	21½	44½	47	7
Isaac's	21 0 14	21½	58	63	10
Trotman's	21 1 10	21½	51	53½	18
Hounhall's	20 3 7	21½	54	75½	42
Admiralty's	20 2 7	21½	40	56½	26
Aylen's	21 1 0	21½	44	47¼	6

ALLEGED SAFETY OF SIR JOHN FRANKLIN'S VESSELS.—The following brief announcement appears in the *San Francisco Herald* of August 21, received this week under a letter from its correspondent at Monterey, dated August 19, 1852:—"We learn that the English discovery ships, *Erebus* and *Terror*, have arrived at Santa Barbara, with many of their crews down with the scurvy."

PHILLIPS'S PATENT FIRE ANNIHILATOR.—A series of experiments with Phillips's patent fire annihilator was tried on Saturday evening last upon Hat Island, in Portsmouth harbour. An immense quantity of coal tar was emptied into a trench and ignited. The flames were immediately put out with as much apparent facility as a candle; the experiment was equally successful on a more extensive scale. A pile of tar-barrels was filled with shavings, was then ignited, and emitted an immense body of flames, but which was subdued and extinguished immediately on the annihilator being brought into play upon it. A wooden building, 24 feet square, recently constructed, was then set on fire, and, on the flames having firm hold of the structure, the annihilator was applied, when the entire body of flams was put out in about three minutes. The experiments were deemed successful.

QUARANTINE.—By an order of the 8th of the Tuscan Government all vessels arriving from the ports of Prussia, the United States, and any other ports beyond the Straits of Gibraltar, are to be subjected to a quarantine of six days, in order to ascertain that they have no cholera on board.

THE SCREW-STEAMER "FORERUNNER."—Intelligence has been received that the African Steam Company's screw-vessel *Forerunner*, which left Plymouth at 4 P.M. on the 24th of September, arrived at Teneriffe at 10 P.M. on the 1st inst.; being the quickest passage ever made to that island. Excluding the stoppage at Madeira, her speed averaged ten knots for the whole distance.

LAUNCH OF A SCREW STEAMER.—On Saturday afternoon last another of those splendid 1800 ton screw-ships, built by Mare and Co., for the General Screw Steam Mail Company, was launched from the extensive building premises at Orchard Wharf, Blackwall. She is named the *Hydaspes*.

LAUDABLE REGULATION.—The Peninsular and Oriental Company insist on officers appointed to their ships in India, and who have families dependent on them, insuring their lives in order to make provision for their families in case of death.

The *Runnymede*, Government emigration vessel, has made the quickest passage yet to the Antipodes. She quitted the Mersey on the 21st February, and arrived at Adelaide in 73 days.

SHIPWRECKED FISHERMEN AND MARINERS' SOCIETY.—The sum of £6 has been awarded by the above institution to George Rumney (pilot) and two Fill men, for their praiseworthy and perseveing conduct in saving the whole of the crew (six in number) of the *Primrose*, of Truro, off Boscastle; in addition to £5 by the Royal National Institution for the Preservation of Lives from Shipwreck.

COLLISIONS IN THE CHANNEL.—SINKING OF A SCREW STEAMER.—The brig *Zollverein*, from Bristol, of and for Danzig, in ballast, came into Portsmouth on Monday night, about 7 o'clock, and reported that Lloyd's representative there that, about three o'clock on that morning, when off Beachey Head, she ran into the steamer *Metropolitan*, Captain Maclean, from London, of and for Glasgow. The brig *Zollverein* struck her right quartership, and stove a hole as wide as will go about 37 fathoms water. The crew had time to save a few necessaries, and were taken on board the brig (all saved - 23 in number), and landed at Portsmouth. The brig has apparently sustained but little damage.—A second collision took place on Monday night between the barque *Fytshire*, from Falmouth, for Antwerp, and the *Buzick*, from Falmouth, for Littlehampton, when the latter vessel sustained so much damage that she foundered, at 9.30 P.M., in 23 fathoms, St. Anthony's Light bearing west, distant about six miles. All hands on board the *Buzick* were saved by the *Fytshire*, and were landed at Falmouth on Tuesday morning.

WRECK OF THE BARQUE "HECTOR," AND LOSS OF LIFE.—Information has just been received of the loss of the barque *Hector*, Brooks, master, of London, on a voyage from Batavia to Bremen. From the accounts received, it appears that the *Hector* went on shore on July 27, about 20 miles to the south-west of Port Natal, between the Umhlanhi and Umhwanmi rivers. For several days previously the vessel had made a great deal of water, and the crew were much exhausted by pumping. As there was a tremendous heavy sea running at the time, it was with great difficulty that the following persons were saved: Captain Brooks; Edward Hedger, mate; George Buck, second mate; Mr. Benjamin Hore, son of the owner, an apprentice; William Nicholson, Samuel Harris, Hermann Lobe, Frederic Wilkinson, seamen; John Gillard, and Thomas Bowles. The names of those who perished were:—Mr. John Bellis, of D'Urban; Lamb, the cook; Jones and Ray (a man of colour), seamen; an Anglo-boy named Pearson; and a coloured boy, whose name is not given. The vessel became a total wreck; the ship's papers however were saved. It is understood that the ship and cargo were insured.

REPORTED REVIVAL OF CONVOCATION.—The *Morning Herald* (Ministerial organ) gives an authorised contradiction to the reports which appeared in the *Times* and other papers, that it was the intention of her Majesty's Ministers to sanction the revival of the active powers of Convocation.

LAMBETH NEW VESTRY HALL.—On Wednesday the first stone of the Lambeth New Vestry Hall was laid by the Rector of Lambeth, attended by all the officers of the parish, on a triangular spot to the right of the road leading from Westminster-common to Westminster-bridge. The new vestry hall is intended to be of Roman architecture, with a come pedimented portico in the centre, and two wings. The centre is to contain the hall, which will be 47 feet by 43 feet 6 inches, and capable of containing 800 persons. One of the wings will contain a ball-room for general purposes, with a lobby, waiting-room, and closets thereto. The other wing to contain the vestry-clerk's offices, with porter's room, &c. Under the wing, in the basement story, will be a residence for the porter, a fire-proof room for records, and a chamber for heating apparatus. The estimated cost is below £4000, and the edifice is to be completed in twelve months.

HER MAJESTY'S VISIT TO NORTH WALES.

(*See also page* 331.)

THE ROYAL RECEPTION AT CHESTER.

THE STATION was handsomely decorated throughout its whole length with flags. About 200 flags, Union Jacks, St. George's, the flags of Great Britain generally, and those of Saxe-Coburg-Gotha floated from the palasters on each side of the line of rails. In the centre of the Station platform, a space of 84 feet in length was covered with red baize, and chosen as the spot opposite which the Royal carriage should stop. The display of trophies, banners, and heraldic panels was very superb. Upon this central platform, at three o'clock, the noblemen, officials, gentlemen of the corporation, and others, assembled to do honour to their Sovereign. At two minutes past four precisely, the brass band raised the first note of "God save the Queen," as her Majesty passed the Earl of Chester's Yeomanry, which received the Sovereign and their youthful Colonel, the Prince of Wales, with colours drooped, saluting with the Queen's Standard. The trams passed slowly on to the Reception platform, welcomed with the most earnest cheering.

The Lord-Lieutenant (the Marquis of Westminster) then stepped forward and welcomed her Majesty to her ancient city of Chester. The Marchioness of Westminster presented the Queen with a *corbeille* of fruit, and the Marchioness of Cholmondeley with a bouquet of flowers. The Mayor of Chester, attended by the sword and mace, and city officers, then presented a loyal address, which her Majesty received into the carriage, and replied to as follows:—"Mr. Mayor,—I am very much obliged—very much obliged—by the kind expressions of my loyal citizens of Chester."

The Lord Bishop then presented an address, which her Majesty

RECEPTION OF THE QUEEN AT THE CHESTER STATION.

graciously received. The Queen, the Prince, and the Princess Royal, then turned to the opposite side of the station, where the troops and the railway workpeople and their families were placed. This mark of courtesy drew down the most enthusiastic acclamations.

The Royal party having resumed their seats, the train was set in motion at a quarter past four for Bangor.

THE ROYAL RECEPTION AT BANGOR.

Twenty years since, her Majesty, then the Princess Victoria, with her Royal mother, the Duchess of Kent, spent three weeks on the other side of the Strait, at Beaumaris and Plâsnewydd. The memory of that visit has not been forgotten, and is affectionately referred to by many of the inhabitants of Bangor. The visit of last week is of necessity of a very different character. Short as the stay was, however, the loyal inhabitants of Bangor eagerly availed themselves of it to show their respect and attachment to her Majesty; and there has seldom been a town which, in proportion to its size, has made more extensive preparations for a Royal reception. The Penrhyn Arms Hotel, which was engaged for the Royal lodging, is situated a little way out of the town, and at the opposite extremity from the railway station, so that the Queen had a drive through the long, quaint street of Bangor. Every house along this narrow causeway (nearly a mile long) was decorated with evergreens, and gay with flags of all colours, sizes, descriptions, and devices, with English and Welsh legends; while there were no fewer than eight or nine triumphal arches between the station and the hotel: one of them very prettily representing in evergreen the great span of the Menai suspension bridge. The day was observed as a complete holiday, all the shops being shut.

The arrangements were superintended by a committee of the municipal authorities and gentlemen of the district. The road-line was kept by about 250 of the more respectable inhabitants of the town, sworn in as special constables; next were the members of the different local clubs, the Freemasons, Odd-Fellows, &c., which abound in Wales. And between 2000 and 3000 children of the day and Sunday-schools were present, in their holiday attire.

At the bridge, on the Carnarvonshire side, were the 23d Royal Welsh Fusiliers, with the band of the regiment, as a guard of honour, and also the pensioners. Some years ago two white goats were presented to the regiment by her Majesty and were sent to Canada: one of the goats died in Canada, but the other survives and marches at the head of the band. The goat was present on Wednesday week, having marched with the soldiers from their quarters to the Bangor station, and thence proceeded with them by railway to the bridge. The goat wears on its forehead a silver plate attached by means of straps to its horns, and the plate has on it an inscription, with the date of the presentation. *(See the Illustration.)*

On her Majesty's arrival addresses were presented by the Mayor and the Bishop. The Queen appeared greatly to enjoy the scene through which she passed to the Penrhyn Arms. Next morning her Majesty visited the Britannia Bridge, as described at page 331, where the Royal standard was hoisted, with other national flags.

At night many of the private houses, and some of the principal inns banks, and shops were illuminated.

RECEPTION OF HER MAJESTY AT BANGOR.

ARRIVAL OF THE PRESIDENT AT THE TRIUMPHAL ARCH AT THE PONT D'AUSTERLITZ, AT PARIS

RETURN OF THE PRINCE PRESIDENT TO PARIS.

THE Prince President, according to previous announcement, made his triumphal entry into Paris, on his return from his tour through the south, on Saturday last, the 16th instant. It has been remarked by the correspondent of one of the morning papers, as a "curious coincidence," that the day in question was the anniversary of the arrival of Napoleon, captive, at the dungeon rock of St. Helena, in 1815; whilst the correspondent of another morning paper remarks, as a "curious coincidence," that it was the anniversary of the execution of Marie Antoinette in the sight of an infuriate Paris mob. The *Moniteur* also makes a significant observation upon the latter coincidence, and draws a parallel between Paris mobs of 1793 and 1852. But how vain are such speculations! Is there a day in the whole calendar which, in French history, is not the anniversary of some crime, misfortune, or absurdity?

Great were the preparations made for the reception of the chosen of the people throughout the line of road he was to pass. Ministers of State, upholsterers, and artificial florists co-operated with common accord to produce what has been pronounced to be one of the most splendid spectacles seen in the streets of Paris within the memory of man.

To give a detailed description of the numerous structures along the President's passage would be difficult. The one that surpassed all the others—with the exception, perhaps, of that at the entrance to the gardens of the Tuileries—was that in the Place Wallerbert. This arch was composed of two series of pillars, in the Corinthian order, placed one above the other. On the frieze of the first series were seen the arms of all the towns through which the President passed; and in the upper part, the statue of France, holding a scroll in one hand, on which the words "Vox Populi, Vox Dei," were inscribed. In the centre of the upper arch was the image of a ship, with two rivers, no doubt representing the Seine and Marne. The arms of Paris, a ship in full sail, were also conspicuous. Over the centre arcade was the following inscription, in two lines:—"La ville de Paris à Louis Napoleon, Empereur." Surmounting the whole was an immense eagle with outstretched wings, and various allegorical figures, and at both extremities a medallion with the effigy of the Prince. The whole was adorned with flowers, garlands, flags, and the initials of the President repeated in various directions. The length of the triumphal arch is about 90 feet, its height 75 feet, and its depth about 30 feet. On one side a tent was erected, similarly adorned with flags and streamers, reserved for the authorities who received the Prince on his arrival. Immediately in front of the gate of the Jardin des Plantes another tent was raised, similarly decorated, capable of containing 1500 persons.

A smaller arch was erected in the middle of the Boulevard de Bourdon, leading from the Pont d'Austerlitz by the Quai de Mazas to the Place de la Bastille; and another in the same Boulevard at the corner of the Rue Bassompierre, encircled with wreaths of laurel, and crowned with tricolor flags. The inscriptions on these arches were simply "Vive l'Empereur!"

Descending the Quai Bourdon towards the Boulevards another mag-

DEPUTATION OF YOUNG WOMEN TO THE PRESIDENT AT THE ARCH OF THE TUILERIES, PLACE DE LA CONCORDE.

nificent arch was erected, spanning the quay, surmounted by a huge eagle and various emblems of the Empire; a few yards farther on another arch, "to the honour of Louis Napoleon, Emperor," erected by the inhabitants of the 9th arrondissement. Before reaching the Place de la Bastille another and less gaudy arch bore the inscription, "The 8th arrondissement to Louis Napoleon." At the opening of the Boulevard Beaumarchais the musical artists of the *Arènes* had erected a handsome arch, entirely composed of evergreens. Passing on to the Boulevard du Temple, were seen two immense triumphal arches erected within a few yards of each other nearly opposite the Théâtre Gaieté. Before arriving at the Porte St. Martin might be seen a simple Oriental arch, covered over, or rather formed of rich velvet; and between the Porte St. Martin and Porte St. Denis two handsome arches stood—the one surmounted by a representation of the Imperial arms of Charlemagne, while the other was remarkable for another huge eagle which hovered over it with extended wings.

Right across the Boulevard des Italiens, between the Rue Lepelletier and the Rue Favart, was erected a grand triumphal arch, whose summit reached to the topmost stories of the houses on both sides. An immense canopy of crimson stuff, studded all over with bees, covered about two-thirds of the way up, and the tassels of the supporting poles were surmounted with eagles. Crimson stuff enclosed the corners to the same heights; clusters of tricolor flags, surmounted each by the eagle, enclosed the base, and that part which formed the front, looking down towards the Boulevard Montmartre, was ornamented with shields and escutcheons, bearing the President's initials, and one larger than the rest with "Vive l'Empereur!" while long streamers floated from the summit. This ornamental archway, or canopy, was erected at the joint expense of the directors of the French Opera and the Opéra Comique; the former of which is in the Rue Lepelletier, and the latter on the opposite side of the Boulevards. On one side was a huge medallion, with the words, "Entrée de l'Opéra Comique Impérial" on the other, words, "Académie Impérial de Musique." At its base were collected various "Académie Impérial de Musique." At its base were collected various designs, emblematical of music and the arts. On the Boulevard des Italiens, and as far as the Madeleine, the decorations were of a less massive kind—canopies, or arches, composed principally of devices, armour, and foliage, with the initials of the President, Imperial emblems and flags. In fact, the whole line of the Boulevards was similarly ornamented, and flanked at regular intervals with lofty poles with floating streamers. The large balcony in front of the house at the corner of the Rue Lepelletier, and belonging to the club-rooms on the first floor, was ornamented with drapery, gold fringe, flags, medallions, and eagles.

The front of the great carpet warehouse of M. Sallandrouze, which was riddled with cannon, and where a score of innocent victims were slaughtered on the 4th of December last, was hidden from view by a rich carpet, ornamented with the Imperial eagle. In short, in every direction the eye met with emblems of the Empire, eagles, initials, and in some places the numbers, "7,500,000," alluding to the electors that voted Louis Napoleon President for ten years. The inscriptions were everywhere the same that the President is described to have beheld in his journey, viz. "Vive l'Empereur!" "Vive Napoleon III.!" Some bore the words, l'Empire c'est la Paix;" others "l'Empire est fait." At the entrance of the principal streets Imperialist inscriptions might be read, and at that of the Rue Vivienne the words "Le Tribunal et la Chambre de Commerce à Louis Napoleon." The theatres and the public edifices were remarkable for their decorations.

The inscription on the arch that stood at the entrance of the gardens of the Tuileries was to the following effect:—"A Napoleon III., Empereur. Sauveur de la civilisation moderne. Protecteur des sciences, des arts, de l'agriculture, de l'industrie, et du commerce. Les ouvriers reconnaissants. Constitution de l'an 8. Constitution de 1852. Conversion des rentes. Crédit foncier. Travaux d'utilité publique. Chemins de fer. Continuation du Louvre. Rue de Rivoli." The Place de la Concorde was also ornamented with lofty poles, with gilded balls, from which long streamers floated. A house in the Rue de Rivoli, corner of the Rue du Dauphin, until lately the Rue de la Convention, was surmounted with an immense eagle, with outstretched wings, and an inscription to the following purport encircled it:—"Aux Tuileries! J'Aigle Impérial! Vive l'Empereur! S'ils ne crient pas, les pierres crieront."

The ornamental canopy at the corner of the Rue de la Paix bore the words:—"Le Premier Bataillon de la Garde Nationale à Napoleon III., Empereur!" The arch erected at the entrance of the Rue Basse de la Paix, parallel to the Boulevard des Capucins, had the inscription—"A Son Altesse Impérial, Napoleon III., Empereur des Français!"

At the early hour of eight in the morning, the Boulevards, but more particularly that part which extends from the Bastile to the Porte St. Denis, became, not gradually, but most rapidly, filled with eager crowds. At each moment multitudes of persons poured in from the neighbouring departments, and even from distant ones, brought by the successive railroad trains, filled the streets; and, it is stated that on the previous evening not less than 42,000 peasants from Burgundy, Champagne, Touraine, &c., arrived in the capital. All these formed in regular file, and with their wives and children traversed the Boulevards, or took their stations at the Pont d'Austerlitz. At that hour, too, the omnibuses hoisted their flags, with the inscriptions, "Vive l'Empereur!" or, "Vive Napoleon III." Ignorance of them, and each passed under as they approached the Imperial emblems, the driver took off his hat and shouted "*Vive l'Empereur!*"

About half-past eleven the National Guard of the Banlieu, and the troops of the line, with flags at their head, began to take up their positions on the Boulevard. The place of honour, the right of the President, was allotted to the civic force, and the left to the troops of the line.

The line, beginning from the head of the Pont d'Austerlitz on the right bank of the river, was formed by the National Guard and the infantry of the army of Paris, and extended to the Place de la Concorde. Two battalions of the Gendarmerie Mobile formed in order of battle in the courtyard of the Tuileries, together with the companies of Engineers. The batteries of the artillery of the army of Paris were stationed in the Cours de la Reine towards the Bridge of Jena, their right resting on the Place de la Concorde, leaving the bridge free, and at the entrance of which was raised a triumphal arch: the passage of the Quai de la Conference, between the Pont de Jena, and the Pont de la Concorde, the Tuileries, were also open. On arriving at the Place de la Concorde the Colonel of the mounted National Guard of Paris moved with his first squadron and two of Guides towards the gate of the Pont Tournant, and cleared the way for the President and his branch. On arriving in front of the Palace the squadrons broke into two, whirled rapidly to right and left, and formed into line on both sides, through which the President was to pass up the grand avenue. They then formed in the grand avenue of the garden. The five other squadrons of the mounted National Guard, eight squadrons of Lancers, and the 12th Dragoons, advanced at a rapid trot, with General Count Partouneaux at their head, and moved at the same rapid pace along the Quay of the Tuileries to the Place du Carrousel, where they drew up and formed in order of battle. The squadrons, under the orders of General Korte, formed in close column in the Place de la Concorde, and extended to the avenue of the Champs Elysée. A battery of artillery was stationed at the Rond Point of the Barrière du Trône, under the orders of General Rieffel, to give the signal of the Prince's arrival.

At a few minutes past one o'clock General Magnan, Commander-in-Chief of the army of Paris, accompanied by a numerous and brilliant staff, and followed by an escort of Guides, rode along the Boulevards, in the direction of the Madeleine.

Meantime deputations from Issy and many other communes of the Banlieu made their appearance, moving towards the Madeleine, with the green banners covered all over with imperialist devices. The commune of Montrouge, headed by its mayor and deputy-mayors, and followed by others in due order, and preceded by bands of young girls dressed in white, all with green sashes, crowns of laurel on their heads, and bouquets of violets in their hands, and preceded by a splendid band of music, moved in the same direction. The deputation of one commune alone, that of the Batignolles, near the Pont de Jenes, is stated to have consisted of the hundreds that marched in procession, nearly all preceded by young girls, bearing green flags with Imperial inscriptions, most of the men headed by their mayor

The various trades of Paris, also, all deputations, who poured in in one continuous stream towards the Tuileries, each having its appropriate, with Imperial inscriptions and emblems.

... the first, it not the first, came a band of girls, representing the market of Vaise. They descended the Pont de Jenes, as above mentioned, preceded by a cushion, both of a violet colour, and the others wearing sashes, carrying bouquets of violets, the cords of the flags being borne by men. The Market d'Arnouseau followed next; and then came the Batignolles and Marché de Poissy of mixed colours, wearing the *cordon* ... The deputies of the market of the Blancs Manteaux followed, ... oft standards half of green, the other half blue, and all studded over with bees. They were followed by the representatives of the ... market: but their banner did not quite correspond with their name; it was the most tastefully formed of all. It was composed of violet-coloured velvet, embroidered in gold, and covered with bees of the same material. The representatives of the Veal-market came next; and then the Marché St. Germain. In the market of the last-mentioned corporation the bust of the President was inaugurated last spring. The women of the market had, at an early hour, given notice to their customers that all traffic would be closed at eleven o'clock. At that hour they adorned their fountain with flowers, placed an Imperial crown on the head of the bust, the face of which they turned towards the church of St. Sulpice, which is near at hand, and prepared for joining in the *cortège*. The market of the Poor next. While these and many other processions passed, the bands of the different regiments played favourite airs; and, as each deputation passed under the arch of the Boulevard des Italiens, they saluted the effigy of the President. The last of the deputations—those most distant from Paris—had hardly arrived, when symptoms of the approach of the President were apparent.

The weather, it should be stated, was magnificently fine; a sort of May-day out of season; and the balconies, windows, house-tops, besides various galleries erected for the purpose, along the line of road, being filled with company all in holiday attire, the *coup d'œil*, even before the event of the day commenced, may be pronounced to have been magnificent.

At a quarter to two the bugles of the Light Infantry, the drums of the Line, and the trumpets of the Cavalry were heard giving the signal of preparation. The men fixed bayonets and dressed up. At a few minutes past two the first gun was heard from the Barrière du Trône, which announced that the President had arrived at the Orleans terminus. The bands of the National Guard of the Banlieu struck up old Imperial airs, one in particular, which was composed in 1814, and the "bon Roi Dagobert" was cheered again and again. The guns of the Barrière du Trône—they were to fire a salute of 121 guns—continued. At a quarter to three the old soldiers of the Empire—*les vieux de la vieille*—made their appearance from the slope which leads from the Boulevard Montmartre to the Italiens. About 200 wore their ancient uniforms, preceded a still more numerous band of old soldiers who were no uniform, but bore each in his hat a green branch inscribed with the name and number of the regiment in which he had served in the Imperial armies As the head of the column advanced between the ranks of their younger brethren in arms, a shout arose on all sides of "*Vivent les vieux de la vieille!*" and the veterans cheering. As they reached the arch of the Boulevards Italiens they saluted the effigy of the President, and moved on to the Tuileries by the Place de la Concorde.

At three o'clock the head of the advancing column that formed the President's *cortège* was discovered in the distance. A detachment of mounted National Guards galloped down the Boulevard Montmartre, and drew up for a few minutes opposite the Rue Lepelletier to get their ranks, which were somewhat discomposed, into order. Another squadron followed behind, and then the President, General Lawestine, who commands the National Guard, next came with his staff; General Magnan, also with his staff, and followed by an escort of Guides, followed next. The mounted Chasseurs came after, and then the squadrons of Guides, preceded by their bugles, and with colours fluttering in the breeze. The President of the Republic, riding alone, full fifteen paces in front of his staff, dressed in the complete uniform of a Lieutenant-General, came next. The moment he was seen advancing at a slow pace down the slope of the Boulevard Montmartre, with his hat in his hand, a shout arose from the multitude in the street and in the houses. The women waved their handkerchiefs, and bouquets and violets were flung at his horse's feet as he passed

Between the Porte St Martin and the Porte St. Denis three women elegantly dressed, made their way through the crowd, and advanced to the centre of the boulevard. The Sergens de Ville attempted to prevent them, but the Prince waved them off with his hand. Each of the women presented him with a bouquet, and the last made some observation, which of course was not heard. He smiled and bowed. The women then retired, and the President bore the bouquets in his hand for some time, and then delivered them to an orderly. Near the Rue Vivienne another woman advanced from the crowd with a paper in her hand. The President stopped for an instant, stooped from the saddle, and, again waving off the guard, took the paper. Orderlies rode on both sides, their arms full of crowns and bouquets, and papers which doubtless contained petitions. During the whole time he moved along, minute guns taking the signal given from the Barrière du Trône, resounded him from the esplanade of the Invalides, and the bells of every church in Paris pealed out in accompaniment. A regiment of Dragoons immediately followed the brilliant staff that accompanied the President; then came the *Chasseurs à Cheval*, the Hussars, Artillery, and, lastly, the regiment of Carabiniers, in their light blue uniforms, and their cuirasses glittering in the evening sun. As this magnificent *cortège* cleared the boulevard, the National Guard and troops of the line that lined the way formed into close column in the centre; and, after a short pause, the continuous stream of deputations of every kind that still poured along towards the Tuileries, and the crowds that pressed on both sides, gradually moved off to their quarters.

In the meantime the President made his way to the Tuileries by the Place de la Concorde. On the Place de la Concorde were assembled the deputations of the numerous trades' corporations of Paris already mentioned, with their banners at their head. There also were drawn up in two lines the sapeurs, dressed in white, and placed in front of the troops. The scene was certainly of the most exciting kind; the beautiful *place* itself—the gushing fountains—the noble avenue of the Champs Elysées—the gardens of the Tuileries, with crowds of spectators lining their terraces, the palace, the buildings at each end, and the quays at the other. The President advanced towards the gate of the Tuileries, passed under the triumphal arch of the Pont-Tournant, and rode up the grand avenue of the gardens to the gate of the Palace, where he alighted.

The deputations with the banners followed him from the Place de la Concorde. The two first that entered the space before the Palace acclaimed him in the most enthusiastic manner. They were of the Seine and Seine and Oise. The President appeared in the grand balcony and bowed his thanks. The others, believing that he was going to review them, all followed hard, and the crowd soon became so great that the three gates had to be thrown open, and they pressed through to the Place de Carrousel, still shouting, "*Vive l'Empereur!*" "*Vive Napoleon I.!*"

Before concluding this account of this day's proceedings it remains to be stated, that the President was received at the terminus of the Orleans Railway, by all the dignitaries of State, the judges, and many of the clergy. The Prefect of the Seine and the Prefect of the Municipal Commission of Paris made a speech to him on congratulatory and complimentary addresses, to which he replied; remarking that the cheers with which he was received at the end of his journey were the more gratifying, as they were but a continuation of those which had accompanied him throughout the country. At the Church of the Madeleine, the *cure* and his clergy were drawn up on the steps to salute the hero of the day as he passed.

MONUMENT TO THE LATE THOMAS HOOD.—We are glad to learn that a subscription has been commenced for erecting a monument in Kensal-green Cemetery to the memory of the late Thomas Hood. Amongst the subscribers are the Duke of Devonshire, Mr. Macaulay, M.P., Lord Brougham, the Earl of Carlisle, Dr. Charles Mackay, Mr. T. K. Hervey, Mr. S. Rogers, Mr. D. Jerrold, Mr. Westland Marston, Mr. Phelps, Miss Eliza Cook, and others. It is, we believe, chiefly owing to the powerful and touching appeals to the public made by Miss Eliza Cook—a poem to whom Hood himself would have been proud to hail as a sister—that this movement has proved so far successful. Miss Cook, we believe, acts as treasurer to the fund; but we shall be happy to receive any subscriptions, and forward them to that lady.

VISCOUNT HARDINGE, G.C.B.—A military Correspondent sends us the following interesting addendum to our memoir of this eminent commander:—"At the time that his Lordship was Secretary-at-War, a strong suspicion existed that enormous frauds had been committed in the pensions of discharged soldiers. The moment the information reached Sir Henry, he ordered the regimental books of the whole army to be inspected by different courts of inquiry, each court having the assistance of a clerk from the War-office, and ... bring up with them the returns from those departments. ... perseverance and severity in this arduous investigation ... beyond belief; he frequently studied a case throughout an entire night, and never ceased until he had accomplished ... information states he had from the Wrekin ... which he was a member ... Hereford ... of £70,000 a year"——Another Correspondent informs us that Lord Hardinge was born at the Vicarage-house, Wrotham, Kent, in 1785. On his Lordship's return from India, the inhabitants of that village forwarded to him a congratulatory address on his safe return and on the laurels he had won. This his Lordship ... acknowledged with a handsome present, which was appropriately ... ... ter and the address ... ... ce of the church at Wrotham.—His Lordship's reception at Penshurst is engraved in the ILLUSTRATED LONDON NEWS No. 310.

... MENT OF A RIVER POSTMAN.—In consequence of a representation having been made to the Post-master-General of the very great inconvenience to which passengers and others on board ships at Gravesend were subjected owing to the non-delivery of letters, &c., a river postman has been appointed, whose duty it will be to deliver letters, newspapers, &c., that may arrive by post addressed to persons on board of vessels in the river off Gravesend.

MUSIC.

JUNIOR UNITED VOCAL AND INSTRUMENTAL SOCIETY.—The first evening concert of this new society, the object of which is to afford young native and foreign students an introduction to the musical world, is announced for Monday, at the Store-street Music Hall, under the direction of Herr Anschuez.

THE ITALIAN OPERA AT MADRID.—The *Coliseo de Oriente* was opened on Sunday, October 10th, for the Italian Opera season, with Rossini's "Semiramide." The house was crowded to excess, the Queen of Spain, the King-Consort, the Queen Mother Christina, the Infante Don Francisco, and other members of the Royal family being present. Madame Clara Novello (who was to have made her *début* on the 2nd of October, and arrived in the Spanish capital in time to commence her engagement, to the great astonishment of the Spanish director, who had calculated that she could not be in Madrid at the epoch indicated in her contract, from the English musical festivals) made her first appearance in *Semiramide*, and achieved a complete triumph. Notwithstanding the Court etiquette not to applaud when her Majesty attends in state, the English *prima donna* was called on the stage after her cavatina, "Bel raggio," and after the duo with *Arsace*, in the second act, which were the only calls on the first night. The Madrid papers praise in the highest terms the abilities, vocal and histrionic, and the personal attractions of Madame Novello. Madame Angri's reception in *Arsace* was also most rapturous. Bettini was *Idreno*, Coletti *Assur*, and Echevarria the *Priest*; so that the cast was strong in every part; and the mounting of the opera was on a scale of Oriental splendour. Cuzzani, Vitale, and Selva were to appear in Verdi's "Ernani."

THE ITALIAN OPERA IN LISBON.—Letters from the Portuguese capital dwell on the *furore* produced at the Italian Opera by the *débuts* of Mdme. Castellan, as *Amina*, and of Mr. Swift, the English tenor, as *Elvino*, in the "Somnambula." Mr. Swift has been known in London as a concert-singer, with a very sympathetic tenor voice. He was a pupil of Signor Schira, who has had the good fortune to have had Miss Louisa Pyne and Mario studying under him.

THE ITALIAN OPERA IN ST. PETERSBURGH.—The Russian official journal announces the definitive completion of the Italian company as follows:—*Prima donna*: Mdlle. Sofie Crevelli, Mdme. Murray, and Signora Medori. Contralto: Mdlle. de Meric. *Seconda donna*: Mdme. Cotti. Tenori: Sigs. Mario and Tamberlik. Second Tenors: Sigs. Nemorino and Davide. Barytones: Ronconi and De Bassini. Basses: Lablache and Tagliafico. Second Basses: Polonini and Ceconi. Owing to the interesting state of Grisi she will remain in England, and is not able this year to fulfil her engagement in the Russian capital. Mario, after visiting Florence, where he has an estate, will go to St. Petersburgh.

MUSIC IN PARIS.—Signor Corti, the new director of the Italian Opera, is actively engaged in preparing for the season, which will begin in November. It is proposed to remove next year the Italian performances from the Salle Ventadour to the edifice known as the Timbre in the Rue de la Paix, and the Salle Ventadour is to be appropriated to a third French lyric establishment. M. de Berlot, the violinist (husband of Malibran), is about to fix his residence in Paris, and to open a school for tuition. MM. Scribe and Germain are occupied in preparing a new comic opera, "The Mysteries of Udolpho," with music by Clapisson, for the Opéra Comique.

MUSIC IN ITALY.—At the theatre "Alla Cannobiana," a new opera by Pedrotti, "Fiorina," has been produced with great success, Mdle. Foroni (sister to the composer) being the *prima donna*, and the tenor. The composer was called for several times. The *début* of Miss Crichton, of Drury-lane Theatre, at the Scala, is anticipated with interest. Signor Consilini's new opera, "La Finta Puzza," has been well received at Genoa.

CONCERT IN AID OF THE SUFFERERS BY THE RECENT INUNDATION AT WORCESTER. The Rev. E. Sarjeant, the Rector of St. Swithin and of Spetchely, having kindly taken upon himself the responsibility of a concert to alleviate in some degree the sufferings of the poor creatures who lost their all in the late flood, near Worcester, the gentry of the town and county, including Miss Lygon, Pearson, and Parsons, the Mayor, the Sheriff of the city, the members of Parliament, Sir John Pakington (the Colonial Secretary), General Lygon; Messrs. Knight, Laslett, Records, and Rushout, &c., took up the matter spiritedly, and it is anticipated that last night's concert in the Music Hall will realize about £400 towards the general subscription. Miss Louisa Pyne, Miss Dolby, Mr. Frances, Mr. Land, and Mr. F. Bodda, of the English Glee and Madrigal Union, were the singers on the occasion, the second part of the programme containing songs and duetts by Mendelssohn, Sir H. R. Bishop, Balfe, Linley, and Land.

MUSIC IN WALES.—It is with great pleasure that we announce the the first performance of Handel's "Messiah" in its entirety, in South Wales. This event took place last night (the 22d), at Newport, by the Choral Society, under the direction of Mr. Groves, with Mr. Price at the pianoforte. The principal vocalists were Mrs. P. J. Smith, of the Bristol Classical Harmonist Society; Miss Julia Parkes, of Gloucester; Mr. Hemmons, tenor of Bristol; Miss Clowes, and Mr. H. G. Groves, of Newport. We regret that we were unable to be present on this interesting occasion, which augure well for the future prospects of music at Newport. The chorus was formed of the members of the Choral Society, with about a dozen local instrumentalists, who were aided by players from the band of the 48th Regiment. The oratorio was given under the patronage of Sir Charles and Lady Morgan, O. Morgan, Esq., M.P., and Crawshay Bailey, Esq., M.P., and Mrs. Bailey. The hon. secretary of the Newport Choral Society assures us that music is progressing in South Wales. There is in the archdeaconry of Monmouth a Church Music Improvement Society, and great pains are taken, at one of the meetings held by Mr. Price, the organist of the old and about twenty amateurs, to secure an effective musical service. The honorary secretary is quite right in his remarks on the slovenly and inferior style of execution observed in some of the country churches, but every year improvement is penetrating into all districts. We accept with pleasure the declaration of the hon. secretary that there is an extensive dealer in musical instruments in Newport; and, giving the Choral Society every credit for its excellent intentions, we ask, in conclusion, if it will award a helping hand to the gifted young harpist, Pollick, whose case has been so generously taken up by Sir Charles and Lady Morgan, and who, by a public concert at Newport, might be enabled to enter the Royal Academy of Music as a pupil. We have great pleasure in announcing to the Newport amateurs that Mdme. Fiorentini, the *prima donna* of her Majesty's Theatre, has generous y offered her gratuitous services to sing at a concert in Newport, in aid of the funds now raising on behalf of Pollock; and Mr. Brinley Richards, the pianist and composer, has also kindly consented to assist in any way. We entertain no doubt that other distinguished artists, vocal and instrumental, would consent to visit Newport on such an artistic mission as that of rescuing from obscurity a most promising young musician, who might eventually do honour to his native country.

THE HARMONIC UNION.—The prospectus of this new and important association for performance of sacred and secular music, both of the ancient and modern schools, has just appeared. The meetings will be held at Exeter Hall. Mr. Benedict, the pianist and composer, is the conductor, Mr. Blagrove the leader of the band, and Mr. G. W. Morgan the organist. The Harmonic Union purposes to occupy ground unoccupied by any other society, by performing not only the popular oratorios, but also by introducing secular music of the highest class. The union will afford to living composers every opportunity to produce their works, thus filling up a void long felt open to merit. Whilst the band and chorus will be carefully selected, amateurs, at the discretion of the conductor, as to their capability, will be admitted to participate in the execution. Peculiar advantage will be given to the subscribers for the series of concerts, which will begin next month with Mendelssohn's "Christus" and "Lobgesang." Evenings will be specially appropriated to secular compositions; such as Alexander's "Feast," Mendelssohn's "Walpurgis Night," Beethoven's Choral Symphony and Pianoforte Fantasia, Handel's "Acis and Galatea," &c. Sebastian Bach's "Passione," will be one of the earliest notices. On the whole the prospectus is promising—to carry it out ought to be the primary object of the living composer, tried and untried.

MOURN FOR THE MIGHTY DEAD.—The Ulverson Philharmonic Society's eighth public performance was given on Friday week, in the Victoria Concert-hall, to a numerous and fashionable audience, and went off admirably. A chorus from "Judas Maccabeus;" "Here, in cool grot;" Lutzer's "Wild Hunt;" and the Swiss Morning Hymn

were given, with great precision and effect. The piano movements were beautifully executed The most attractive feature of the evening was the performance of Bishop's "Mourn for the mighty dead." This solemn composition was very effectively sung, especially the last movement in G major, which, arranged as a chorus, was most exciting The members have much improved since their last concert, which was given for the benefit of the *Amazon*'s sufferers, when upwards of £35 were raised for the fund. The society may now be said to be fully established in the public confidence; and its present flourishing position is owing mainly to the indefatigable and efficient management of its talented and worthy conductor, Mr. William Salmon.

THE THEATRES.

LYCEUM.

This theatre re-opened on Monday with two new pieces and a revival of M. Planché's best burlesque drama, "The Golden Fleece." The leading production also of the evening was from the same well-practised pen. It is entitled "The Mysterious Lady," and is in two acts. The dialogue is composed in easy blank verse, and the action is exceedingly simple. The idea is also elegant. The scene is laid in Antwerp, whither comes *Sir Amaranth Fitz-Ape* (Mr. Frank Matthews), who makes inquiry into *Valentine*) Mr. Belton), his nephew's conduct, and is surprised that he has not been actively engaged in amorous exploits, with the consequent quarrels and perils; but is much pleased with his other nephew, *Hector Fitzape* (Mr. C. Mathews), who boasts of his many victories, the trophies of which he displays from a casket. His triumph, however, is short-lived; for *Dorothea* (Miss M. Oliver), with her uncle, *Blackstone* (Mr. Basil Baker), appear on the scene as Corsican travellers; the latter being described by his niece to *Hector* and *Sir Amaranth* as a regular Blueheard for jealousy and cruelty. The tale is told in a romantic and bombast style, throwing *Hector* into a most horrible fright, and exciting his uncle to heroic expectation. Poor *Hector*, in conclusion, is proved to be a coward; and *Valentine* to merit the young lady. Whether owing to the refined interest and too delicate structure of this very graceful and well-acted drama, or the increase of the prices of admission, the house appeared dissatisfied. Even after the performance of the "Golden Fleece" there were manifestations of displeasure. Madame Vestris, however, in *Madge*, was warmly welcomed, and looked magnificent. The concluding entertainment was a new farce, called "A House out of the Windows," in which all the action takes place in the balconies and at the windows of an immense hotel in a retired street; *Mr. Paul Potter* (Mr. Roxby), an artist, being the hero. By means of a rope-ladder he descends from the upper story to the balcony below, and makes his way over to the adjoining balcony, by means of a flower-stand, where for some time he enjoys a *tête-à-tête* with the lady of his love, under an umbrella in a shower of rain. To escape the vindictive temper of the crabbed landlord, he has to slide down the lamp-post; after which, having regained his own room, he turns the table on the interfering old hunks, who has procured a policeman, and dexterously causes him to be involved in a row with the officer. The result is, that the young lady's aunt is compelled to consent to the match. There curious and novel incidents created much laughter, and the piece was decidedly successful. It is rendered from the French by one of the Brothers Brough.

SURREY.

A new piece, entitled "Off to the Diggins; or, London Schemes in 1852," has been produced here. The scene is laid both in London and in California; and, in the second act, the diggers are shown at work, with all the picturesque accompaniments of dingy linen, spades, pick-axes, cradles, and lynch-law weaponry. The bustle, excitement, and fun of the piece are extreme, and promise much success.

STRAND.

An amusing trifle, by Mr. W. Brough, was produced on Monday, under the title of "Uncle Tom's Cabin; or, Negro Life in London. It is a piece well suited to the African opera *troupe* at this theatre; and, though offering nothing in the way of plot, proved highly satisfactory to the audience.

LAW AND POLICE INTELLIGENCE.

IMPORTANT RAILWAY DECISIONS.—In the Sheriffs' Small Debt Court, Glasgow, last week, a case was brought before Mr. Sheriff Bell, in which Mr. Robert Dunlop, writer, Glasgow, sued the Edinburgh and Glasgow Railway Company for damages, the plaintiff having been detained from business on Saturday, the 27th of September ult., in consequence of the train in which he was travelling being about an hour and a half behind its time. The defence set up was, first, that the delay in question had arisen from the breaking-down of the engine on the line; and secondly, that the company's time-bill expressly stipulates that the company do not guarantee the hours of arrival and departure of the trains being kept under all circumstances, and do not hold themselves responsible for delays. After the evidence had been heard, Mr. Sheriff Bell, in giving the first plea, by saying there was proof that the engine which broke down was not in a proper state of repair, and the company must therefore be held responsible for the accident; and in the second plea, that it was quite competent for the stipulation referred to as expressed in the time-bills, but no such stipulation could shelter the company in all circumstances from their responsibility as public carriers, and it could only confer such benefit on the company as might be reasonable in the case of the delay, and of their contract with the public not being implemented, was the deficiency of their own engine; the Sheriff, therefore, decreed against the Railway Company for the damages claimed, and whole expenses.—A second interesting decision in connection with the present complaints of the want of punctuality of railway trains has just been pronounced in the Yorkshire County Court. The plaintiff was Mr Baker, the barrister, and the defendants the York and North Midland Railway Company. It appears that one of the company's trains, being heavy, arrived at the Milford Junction half an hour after the Great Northern fast train for London had started. The case having been gone into, the jury returned a verdict in favour of the plaintiff, damages £5.

CASES AT RAILWAY STATIONS.—In the Southwark police-court, on Saturday last, a case of considerable importance to the public was brought before Mr. Arnold, the magistrate. A cab-driver named Thomas Hall, a privileged cabman at the London, Brighton, and South Coast Railway Terminus, was summoned by another cabman, named Whitmans, who is not privileged, for plying for a fare inside the railway terminus, that not being a place appointed by the Commissioners of Police, according to the 13th and 14th Victoria. On the part of the defendant, it was admitted that he was plying for fare at the place in question; but it was contended that the commissioners of Police had no jurisdiction over the railway terminus, it being private property. They had the appointing of public standings for cabs, and these places were printed and fixed in all police courts. The railway stations were not mentioned, and they had never contemplated that they should have any authority in those places. Mr. A'Beckett reiterated the opinion he had pronounced in a case brought before him in the previous week, and in which the same point was raised, namely, that this was a plying for hire within the meaning of the Act, and therefore the defendant was liable to the penalty described in the following words:—" Every driver of a hackney carriage who shall ply for hire elsewhere than at some standing or place appointed for that purpose shall for every such offence forfeit 20s." He observed that it seemed very unfair that a most important, and perhaps the most profitable, portion of this traffic should be given over by the railway companies to privileged hands -a practice which, though it had for some time existed, he knew of no law to justify. Some consideration was, however, due to the railway company in the present case, as it was the first in which such a complaint as the present had been made. Taking into consideration these circumstances, as well as the extreme inconvenience to which the public would be put by the sudden termination of the existing regulations as to hackney carriages at the London-bridge terminus, he would not at present inflict any penalty on defendant, but would call on him to appear on the 15th November next, with the view of affording time and opportunity for the making of such regulations respecting hackney carriages at a railway terminus as the law would authorise and the public convenience require.

ROBBERY AT LORD LONSDALE'S.—At the Middlesex sessions, on Thursday, John Pennington, aged 29, was tried, before Mr. Serjeant Adams, Arthur Bridge, and found guilty, upon an indictment charging him with stealing twelve snuff boxes (two of which were gold and valued at £100), and other articles of value, the property of the Earl of Lonsdale. The robbery was effected while the prisoner was being employed by an upholsterer, who was doing some work in his way of business, at the residence of his Lordship, 15, Carlton-house-terrace. Sentence on the prisoner was deferred until the next session.

THE RECENT COLLISION ON THE SOUTH-EASTERN RAILWAY.—At the general quarter sessions for the county of Kent, held at Maidstone on Tuesday, Thomas Ayre, late an engine driver in the service of the South-Eastern Railway Company, was arraigned before the Recorder, charged with feloniously and greatly driving an engine attached to an express train, whereby two serious collisions took place, and the lives of her Majesty's subjects had been considerably jeopardised. The defendant, who surrendered in discharge of his bail, appeared to have recovered from the injuries he had sustained. He was thrown from his engine, and his escape is stated to have been almost marvellous. After an hour and a half's deliberation the jury returned into court with a verdict of "Guilty," but recommended the prisoner to mercy, on the ground that the mischief which the accident occurred was very slight. The sentence of the Court was that the prisoner be imprisoned for six calendar months, without hard labour, the prisoner's delicate state of health preventing such addition to the punishment.

CHESS.

*** Our customary Notices to Chess Correspondents are postponed until the next Number.

SOLUTION OF PROBLEM No. 454.

WHITE.	BLK.	WHITE.	BLACK.
1. R takes R	Q to E sq or (*)	3. Kt takes Kt (ch)	Q takes Kt
2. Kt from K 6th to Q 7th (ch)	K takes Kt	4. Q to K 8th	Mate.

WHITE.	BLACK
*. 1.	R to K B 5th (ch)
2. Q takes R (ch)	K takes Q
3. R to K 7th—Mate	

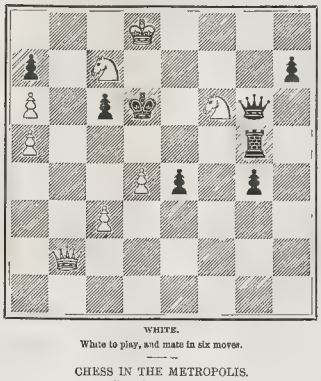
PROBLEM No. 455.

In the diagram of this position, White's Queen's Bishop's Pawn should stand at White's Q B *second*, instead of Q B third. We shall withhold the solution until next week.

PROBLEM No. 456.

For this beautiful little stratagem we are indebted to the unpublished Chess MSS. of the Rev H. BOLTON.

BLACK.



WHITE.

White to play, and mate in six moves.

CHESS IN THE METROPOLIS.

(King's Bishop's Gambit.)

Instructive specimen of the Bishop's Gambit played between Mr. Wyvill, M.P., and Captain Kennedy.

WHITE (Mr. W.)	BLACK (Capt. K.)	WHITE (Mr. W.)	BLACK (Capt. K.)

21. R to K B 4th	Q R to K sq	43. R takes Kt	K takes R
		And Black wins.	

(a) This defence to the attack of the Bishop's Gambit, though touched on both by the German and English Handbooks, has yet to be satisfactorily analysed. As far as our present experience goes, it does not appear so intrinsically sound as the customary line of counter-play, beginning with 3 Q to K 8 6th (ch); but it leads to many novel and beautiful combinations, and demands the greatest possible vigilance on the part of the first player to prevent his attack being wrested from him at the very outset.

(b) Better than taking with the Pawn, which would double the centre Pawns and mask the Bishop.

(c) The "Handbuch" recommends Q to K 2d, but the move in the text may be safely played.

(d) We should have preferred playing Q to K 2d. In that case, if Black Castled, we believe the Kt might have been taken with the Queen advantageously, notwithstanding the apparent danger of the advsed Rook being thus moved to K's square. The variations arising from this mode of play abound with interesting situations.

(e) Ingenious. Yet we doubt whether the advance of the Kt to K 5th was not premature.

(f) The struggle now waxes more and more animated and interesting every move.

(g) Can it not the Pawn be taken securely? Suppose—

WHITE.	BLACK	WHITE	BLACK.
34.	Kt takes Q B P	35. R takes R	Kt to Q 8th (ch) &c.
35. R to Q B 8th	Kt to K 7th		

Instead of paying R to Q B 8th, White might, however, have captured the K R Pawn; so Captain K's move of Kt to K B 3d, was, perhaps, the better one.

CHESS ENIGMAS.

No. 768.—By an AMATEUR.

White: K at K B 4th, R at Q 4th, B at K 3d, Kt at Q B 2d; P s at Q B 3d, Q Kt 3rd, and Q K 4th.

White to play, and mate in four moves.

HOUSES FOR EXPORTATION.—The extensive factory at Cliff-house, Bristol, formerly occupied by the eminent firm of Acramans, Morgan, and Co., has been engaged by a gentleman named Hemmings, who is carrying on the manufacture of portable houses, sump n its construction, perfect in arrangement, efficient in character, and easy and inexpensive of carriage. The first which he has completed is an extensive family mansion, containing a sitting-room, measuring 18 feet by 10½ feet; three bedrooms, measuring 12 by 9½ feet; a kitchen fitted with cooking stove, &c., and a loft for stores, which, if necessary, can be used as an additional sleeping apartment. The whole concern, when taken to pieces, does not weigh more than two tons, and, when packed for the voyage, comprises a packing case 7 feet long, 2 feet 4 inches wide, and 2 feet 6 inches deep, which carries all the walls, flooring, doors, sashes, &c., and a book of wood 18 feet long and 18 inches square, into which compass all the framework goes. In the arrangement of these houses there are kept in view durability, economy of space, and aptitude for erection. The outer walls are of highly galvanised iron, which, it is calculated, will keep free from corrosion at least half a century. The cost of the whole affair is no more than about 100 guineas.

NATIONAL SPORTS.

The Houghton, or "Hay and Straw" Meeting at Newmarket—the wind-up of the campaign at head-quarters—commences on Monday next, and will occupy the whole week; it promises to be a remarkably busy one. We have nothing else in the calendar until the following week, in which the autumnal and steeple-chase *réunions* at Epsom, Warwick, &c., are likely to show plenty of sport. The coming fixtures for the ensuing week are few in number, and of little interest; they stand thus:—Monday, Middleton; Tuesday, Southminster, Thirsk, and the Border.

TATTERSALL'S.

MONDAY.—A very dull afternoon, and Babette, who was made first favourite for the Cambridgeshire, the only animal in any force. We give the subjoined quotations, chiefly from offers:

CAMBRIDGESHIRE.			
5 to 1 agst Babette	100 to 8 agst Kat. of the Lake	20 to 1 agst Lady Evelyn	
12 to 1 — Weathergage	18 to 1 — Convulsion	20 to 1 — Hungerford	
13 to 1 — Azael	18 to 1 — Byzantia	25 to 1 — Bardolph	
14 to 1 — Ephesus	20 to 1 — Bobbie Noble	25 to 1 — Le Juif	
DERBY.			
20 to 1 agst Cinesa	20 to 1 agst Umbriel	20 to 1 agst The Rise	

THURSDAY.—A close fight for the premiership of the Cambridgeshire between Babette and Azael was the sole feature of the betting this afternoon; both were in high force; and, saving Ephesus and Convulsion, nothing else was really in the market. The following were the closing averages:—

CAMBRIDGESHIRE.			
5 to 1 agst Babette (t)	16 to 1 agst Convulsion	25 to 1 agst Le Juif	
11 to 2 — Azael (t)	20 to 1 — Knight of the Shire	25 to 1 — Hungerford	
11 to 2 — Ephesus	20 to 1 — Bobbie Noble	30 to 1 — Lady Evelyn	
14 to 1 — Weathergage	20 to 1 — Hyacinth (t)	40 to 1 — Manifold	
CRITERION.			
7 to 4 agst Sittingbourne	2 to 1 agst Filbert		

PONTEFRACT RACES.—MONDAY.

TRIAL STAKES.—Audubon, 1. Trousseau, 2.

HANDICAP of 5 sovs.—Little Davie, 1. Ch f by Don John, 2.

FARE HILL STAKES. Tickton, 1. Master Norton, 2.

VISITORS' PLATE.—Florence, 1. Don John filly, 2.

TUESDAY.

PONTEFRACT STAKES.—Audubon, 1. View Halloo, 2.

MATCH: Tickton beat Eliza Middleton.

CASTLE STAKES.—Jacquenetta, 1. F. by Liverpool, junior, 2.

NEWBRIDGE GARRISON RACES.—MONDAY.

The officers of the Newbridge garrison got up an excellent day's sport on Monday on the Curragh, which was attended by a large number of military men and sporting characters. The day was beautifully fine, and the running carried on in the following order:—

MATCH, 25 sovs.—Sir Hylton (Mr. Dick), 1. Bachelor (Mr. Hutchinson), 2.

QUEEN'S HAYS STAKES.—Banagher (Mr. Sullivan), 1. Prince Eugene (Col. Campbell), 2.

FIFTH DRAGOON GUARDS STAKES.—Black Prince (Major Bell), 1. Silvertail (Mr. Swinfen), 2.

PROMOTION STAKES.—Venison (Major Bell), 1. The Miller (Capt. Keene), 2.

"TRIA JUNCTA IN UNO" STAKES.—Black Prince (Capt. Johnson), 1. Bendigo (Major Bell), 2.

SCOBEY STAKES Prima Donna, 1. Banagher, 2.

CONSOLATION SCRAMBLE. Costume (Major Bell), 1. Silvertail (Mr. Swinfen), 2.

HOLYWELL HUNT RACES.—TUESDAY.

MOSTYN (HANDICAP) STAKES.—Kohl-noor, 1. Kitefyer, 2.

WEDNESDAY.

HOLYWELL HUNT PURSE of 50 sovs.—The Little Fawn, 1. Bethgelert, 2.

A HANDICAP was won by Henrietta, beating Deceitful.

RICHMOND RACES.—WEDNESDAY.

ASKE TRIENNIAL STAKES.—Comfit walked over.

FARMEY STAKES.—Exact, 1. Comfit, 2.

HAT STAKES.—Farmer's Boy, 1. Child of the Mist, 2.

RICHMOND HANDICAP.—Little Davie, 1. Lindrick, 2.

SELLING STAKES.—Shagreen, 1. Flycatcher, 2.

THURSDAY.

WRIGHT STAKES. Hatchett, 1. Fitzalan, 2.

GOLD CUP.—Radulphus, 1. Farmer's Boy, 2.

THE YACHT "AMERICA."—In our last Number we announced the fact of the challenge thrown down by Lord De Blaquiere, the proprietor of this celebrated yacht, having been taken up by two parties. We have now to add that a third party is in the field, in the person of Lord Londesborough, who, in a letter to the *Times*, proposes to race the *America* with a schooner of 180 tons O. M., just laid down for his Lordship by the Messrs. Inman, of Lymington, upon any course which Lord De Blaquiere might name; the match to be for 1000 guineas, and to be sailed in the month of September next, that being the earliest period at which his vessel can be built, and her proper trim found.

FREEMASONRY.—On Tuesday afternoon the ceremony of constituting and consecrating a new chapter of arkmasons, under a warrant from the grand chapter of England in connexion with the Enoch lodge of craft masonry, took place at the Freemasons' Tavern. The ceremony of consecration was performed by Comp John Savage, P.Z., assisted by Comp. Biggs.

LONSDALE SOCK AND GREEN LANE COPPER MINE COMPANY.—On Thursday the annual meeting of the company was held at the Queen's Arms, Poultry—John Webster, Esq., in the chair—when a report was presented, which showed that the company were in possession of property to the value of about £1000, free of all liabilities.

ANNATTO BAY AND LIGUANEA MINING COMPANIES.—On Thursday a meeting of these two companies was held at the offices in Mincing-street; J. Prinsep, Esq. in the chair; and an amalgamation agreed upon, under which £12,000 additional capital is to be raised, such of the old shareholders as wish to do so having the option of retiring from the company.

BOSTON AND MIDLAND RAILWAY.—The Marquis of Bristol, through whose land this line proceeds for above seven miles, has given in his adhesion to the project which is now supported by every landowner from end to end. The land will be disposed of to the Company at agricultural value. No expensive bridges, or other works, will be required; and there is no doubt that the line will be made at a lower cost than any that has hitherto been constructed. On one part of the line the bank of the great drain will be used by trains; and thus all expense, except that of rails and ballast, will be for that distance, saved. Should the traffic prove to be equal to that even now obtained on the undeveloped Ambergate line, of which this line is the natural continuation—and, if anything, more valuable—a dividend of 7½ per cent. will be realised, after deducting 50 per cent. for working expenses. The Ambergate has cost nearly £30 000 per mile. The line will cost, exclusive of the proposed docks, less than £8000 per mile.

THE GREAT NORTHERN RAILWAY.

THE buildings for the passenger traffic of this railway at King's Cross are fast approaching completion; and the principal, or south, front, next the Pancras-road, presents the imposing appearance represented in the Illustration upon the next page. To obtain the sits, the Small-pox Hospital and Fever Hospital were cleared away, together with several houses, including those on the west side of Maiden-lane, which road has been greatly widened, as an approach to the Goods Station. In the main *façade*, which we have engraved, the two main arches mark the end of the arrival and departure platforms, and have each a span of no less than 71 feet. These are separated by a clock-tower. The smaller arch on the right, which is over the entrance from the departure platform, has a span of 34 feet: the headway is filled with an iron *grille* of rich design. The width of the *façade* from the side towers is 216 feet; the extreme width of the terminus is 305 feet; the height of these towers 71 feet.

The clock tower stands 112 feet from the level of the rails, 22 feet across at its base, and 16 feet across above the level of the roof, from which it springs. It is square, surmounted by a slanting beaded roof, ornamented with rolls of iron over the cornice, from the edge upwards, and surmounted by a large and handsome gilded vane. The tower is fitted internally with rooms and staircases leading to the clock room. The clock, the outside of which has just been completed, has four faces, which are of slate: it is by Dent, and stood in the centre of the British avenue of the Great Exhibition. The dials are ninety feet from the ground, and each dial is nine feet in diameter. The clock will strike hours, half-hours, and quarters: the principal bell, from an Irish foundry, stood at the Great Exhibition, and received a medal. It weighs 29 cwt.

The architect is Mr. Lewis Cubitt. "In this new station, it will be seen," says the *Builder*, to which work we are indebted for the above details, "great plainness prevails: the architect depends wholly for effect on the largeness of some of the features, the finess of the structure for its purpose, and a characteristic expression of the purpose"

The vast terminus, at King's-cross, was opened for public traffic on Thursday week. Captain Laffan, the Government inspector, accompanied by Mr. Seymour Clarke, the general manager; Mr. Lewis Cubitt, the architect; with Mr. Brassey, the engineer; and other gentlemen

THE KING'S-CROSS TERMINUS OF THE GREAT NORTHERN RAILWAY.

connected with the railway, went over the line and the tunnel under the Regent's Canal, near the Imperial Gas-works, on Wednesday; and the gallant officer having given the necessary certificate as to the soundness of the lines of rail, the first train, with one of Crampton's engines, started for York on Thursday morning, from the new terminus, at seven o'clock, in the presence of a very large number of persons. No ceremony took place, but the platforms and the vicinity of the station throughout the day were much crowded. Notwithstanding the incomplete state of the general building, the waiting-rooms are elegantly fitted up and furnished. The entire station was lighted up on Wednesday evening, and, from its vast magnitude and the immense number of lights, the appearance was that of a grand illumination.

The goods station of this terminus covers a surface of ground of about forty-five acres—laid out for the receiving, sorting, and despatching goods, minerals, merchandise, and produce of every kind from every place, and to any destination communicating with the railway—is situated in Maiden-lane, Battle-bridge, north of the Regent's Canal, by which it is bounded on two sides, and from which water-communications are made to the docks constructed in the station. By this canal, timber from the Baltic is brought in floats to the railway, and barges with deals—both for the use of inland towns on the line—as well as wool, hops, casks of sugar, or other merchandise of a heavy or bulky character, are lightered and delivered into waggons, for "the rail," and from it.

SLIP ON THE GREAT NORTHERN RAILWAY.

On Wednesday morning (last week), the traffic on the main line of the Great Northern Railway was suddenly interrupted by an extensive slip of earth at the Spittal-gate cutting, about a mile to the south of Grantham. The stratum through which the cutting is formed consists of marl and clay and alluvial soil; and, the late heavy rains having penetrated into the cracks and fissures at the top of the cutting, and expanded the soil at the bottom, it suddenly gave way under the vibration caused by a heavy goods-train, which was proceeding northwards, at about four o'clock on Wednesday morning. Some thousands of tons of earth fell upon both lines of rails, almost burying the engine and first trucks of the train, which, of course, was brought to a standstill. The engine-driver escaped unhurt, and the guard immediately proceeded to Grantham to give the alarm.

On examination, it was found that the down rails had been completely forced from their bed, and, with the engine, deposited on the other line. The slip extended about 100 yards, and such was the amount of obstruction on the line, that it was feared some days at least must elapse before it could be cleared for traffic. Mr. Denison, the chairman of the Great Northern Company, visited the scene of the accident the same morning, and a large force of men was employed to clear the line. Trains were run as usual from Retford to Grantham, but the through passengers from the north to the metropolis and *vice versâ* were forwarded by the train round the loop. By dint of very great exertions day and night, they contrived to open a passage for the up-line, which was cleared so as to allow of the morning express, which conveyed the Duchess of Kent and her suite to town, being forwarded by the main line.

SLIP OF EARTH AT THE SPITTAL-GATE CUTTING OF THE GREAT NORTHERN RAILWAY.

NOOR GOOL.

(From a Correspondent.) PESHAWUR, Aug., 1852.

THIS is no less a personage than the renowned Chief of the Halimzyes, one of the most troublesome and powerful, though not most numerous of the Momund tribes. Noor Gool bore an active part in the recent

NOOR GOOL, CHIEF OF THE HALIMZYES, MOMUND TRIBE.

disturbances on this frontier. He is quiet at present; but how long to continue is more than the wisest of us can say. It appears that Noor Gool, with some other chiefs, had come in to treat with the civil authorities, and advantage was taken of this circumstance to obtain his evidence at the trial of an European officer for alleged misconduct during a night attack by a party of Momunds on the village of Shubkudder, in the month of March, as mentioned in the ILLUSTRATED LONDON NEWS of the 5th June. The accompanying Sketch was taken during the sitting of the Court in the cause alluded to. After describing the above attack, and animadverting on the supposed cowardice of a detachment of the 7th Light Cavalry, you assert that this is only another instance of the small dependence to be placed on the native army. I leave the public to judge of the value of this assertion, when told (on Momund authority: better could not be) that 30 or 40 troopers dispersed a body of some 500 armed men, killing and wounding 15 of the party; and this on a dark night. You also allude to an unfortunate occurrence near the Kohat Pass, when a small party of the same regiment was set upon by a gang of Affreedies, and deprived of their *horses* and arms, whereas the troops were on foot. The cowardice of the havildar commanding the party was the chief cause of this disgraceful occurrence, and his offences have been severely atoned for.

TESTIMONIAL TO DR. JEREMIE.

THE members of the civil service of the three Presidencies of India have presented Dr. Jeremie, the Regius Professor of Divinity at Cambridge,

TESTIMONIAL PRESENTED TO DR. JEREMIE.

with a magnificent piece of plate, in grateful recollection of the faithful and zealous care exerted by him in their behalf for the space of twenty years, Dr. Jeremie having filled the office of Dean and Professor of Classical Literature at the East India College, Haileybury, during that period. A fund of £450 was subscribed for the purchase of the plate, and its selection was entrusted to Mr. M. Williams, one of the professors at the College; and the execution to Messrs. Hunt and Roskell. It consists of a column, supporting a figure of India, personified as a Hindoo woman; and at the base are three emblematical figures of Religion, Philosophy, and Literature. There are branches which may be fitted to the column when it is required to form a candelabrum. The plate, which is executed in the first style of art, bears the following inscription:—

JACOBO AMIRAUX JEREMIE, S.T.P.
IN COLLEGIO JUXTA HERTFORDIAM HAILEYBURIENSI,
LITERARUM GRÆCARUM ATQUE LATINARUM
NUPER PROFESSORI,
AD REGIAM IN ACADEMIA CANTABRIGIENSI
THEOLOGIÆ CATHEDRAM NUPER EVECTO,

The cost was £250, and the remaining portion of the sum subscribed (£100) is to be expended in books, which are also to be presented to Dr. Jeremie.

The presentation has been accompanied by a very gratifying letter, to which there is appended a long list of names, of those of the civil servants of India, who recollect, with esteem and gratitude, the services of Dr. Jeremie.

A Testimonial of such a nature, and accompanied by an address expressing the affectionate gratitude of not less than 150 of the civil servants of the East India Company, including many who hold distinguished positions in the Indian service, and some who left the college so long as seventeen years ago, must be a *souvenir*, the value of which none but the distinguished man thus honoured can duly estimate. Few are the instances in which the instructor is found so deserving, and the pupils so grateful. The exquisite emotions which such a tribute were calculated to excite in a generous and sensitive mind are fitly expressed in the answer which Dr. Jeremie had addressed to his old friends and pupils.

Some time since a Testimonial was presented to Dr. Jeremie by the students resident in Haileybury College; and the East India Company have also shown their appreciation of his services by presenting him with a splendid silver vase and salver.

CELEBRATION OF THE BIRTH OF LORD INVERURY.

IN the ILLUSTRATED LONDON NEWS of last week, page 317, we fully described the very interesting *fête* at Inglismaldie, to the tenantry on the estates of the Earl of Kintore, to celebrate the birth of a son and heir to his Lordship, the infant scion assuming the title of Lord Inverury. We likewise Engraved the exterior of the ancient mansion, and the dinner pavilion erected especially for this festive occasion. Of this tastefully decorated hall, we now Engrave the interior, showing its south end, with the mottoes within an arch of flowers and evergreens, surmounted by a golden eagle, and flanked by lofty trees, reaching to the pavilion roof; which, with the sides, is wreathed with heather, evergreens, and flowers; a range of Chinese lanterns being suspended from the centre, which, with the wax-lights in the side branches, fully illuminated the pavilion. The after-dinner proceedings were reported at length at page 317. During the festival, the Chairman intimated that a poet residing on the lands of Inglismaldie had prepared a song for the occasion; when George Balfour rose and sang an appropriate ditty.

FESTIVAL AT INGLISMALDIE, TO CELEBRATE THE BIRTH OF LORD INVERURY.

"WEATHERGAGE,"

WINNER OF THE CESAREWITCH STAKES, AT NEWMARKET

WE this week Engrave Mr. T. Parr's "Weathergage," by "Weatherbit, 3 yrs. 6st. 11lb., the winner of the Cesarewitch, at Newmarket, on Tuesday week. Twenty-three started—Weathergage with the lead; but he was pulled back as soon as possible to "bide his time." At the New-ground, however, Weathergage, with a resolute rush, took full possession of the lead. At the Bushes-bill, Lord Wilton's Lady Evelyn running wide on the left, appeared to be gaining ground on Weathergage at every stride; and thenceforth the contest was reduced to a match between the two. As Lady Evelyn gradually drew upon Weathergage, the interest greatly increased; the "6lb. extra," however, effectually told upon her efforts, and Weathergage won a good race by half a length, the spur marks on both sides giving evidence of anything but an easy victory.

Weathergage is a strong and unusually compact horse; and, from his large bone, strong pasterns, and great muscular development in his arms and thighs, would hardly look bloodlike but for his fine head which, together with the neck, is well and gracefully set on. His shoulders are rather upright, but clean and muscular: he is deep in the brisket; has long back-ribs, short, powerful back; wide hips; quarters rather short, but displaying great power, and well let down; altogether giving indications of great strength. He has fine sweeping action; and his height is 15 hands 2 inches.

"WEATHERGAGE," WINNER OF THE CESAREWITCH STAKES, AT NEWMARKET.

PROGRESS OF THE NEW CRYSTAL PALACE AT SYDENHAM.

On the 1st of November the last load of materials will be removed from the site of the Great Exhibition Building of 1851, and will reach Sydenham

The removal of the Crystal Palace from Hyde Park to Sydenham has been effected at the average rate of 150 tons *per diem*

It has been estimated that the annual rent of the exhibition space in the new Crystal Palace will amount to £145,050. It has also been estimated that the contracts for the supply of refreshments to visitors, and the sale of catalogues, will realise £10,000 per annum. The terraces in front of the new Palace are now being levelled rapidly. Already erect columns mark nearly the entire length of the Palace.

Six steam-engines have been ordered to work the water that is to adorn the Palace and grounds.

The small artificers of Birmingham have expressed a hearty determination to avail themselves of the space offered by the Crystal Palace Company, as affording them the means of making public, and profiting by, their own works.

Messrs. Owen Jones and Digby Wyatt, have arranged to prolong their Continental tour, with the view of adding to the valuable contributions they have already secured for the People's Palace.

Sir Joseph Paxton has ordered 50,000 scarlet geraniums to be supplied for the grounds next spring.

The projectors of the obelisks and blocks of marble and stone which stood outside the Great Exhibition Building, have presented these to the Crystal Palace Company.

Among the models already secured by Messrs. Owen Jones and Digby Wyatt for the People's Palace, are those of the celebrated Ghibardi gate; and the principal figures from the chapel of the Medici, at Florence. These figures rank among the master-pieces of Michael Angelo.

The Crystal Palace Company have purchased the celebrated collection of palms belonging to the Messrs. Loddiges, of Hackney.

Authentic drawings of the Crystal Palace and grounds are in course of preparation by the company; those drawings already issued are neither authentic nor correct. The grounds are now everywhere undergoing with hands of workmen, and on the site of the Palace the greatest activity prevails.

The Egyptian models are being rapidly advanced under the direction of Mr Bonomi. Among these are specimens of the various orders of Egyptian columns, twenty-four high, each occupying a space on the floor of four feet square; and a model of the rock-hewn temple of Abusimbel.

The Crystal Palace will also contain an Egyptian Court. Here will be arranged specimens of the various styles of architecture, which distinct epochs of Egyptian history. Here will be sphinxes and crisphinxes, the papyrus architecturally treated; obelisks, temples, and those strange paintings which abound in the tombs of ancient Thebes. These will be chiefly from the ruins of this mighty city of old.

MONETARY TRANSACTIONS OF THE WEEK.

(From our City Correspondent.)

During the whole of the week a full average amount of money business has been transacted in the Consol Market. The payment of the dividends, and the pacific tendency of the news from abroad have tended to give strong support to prices, the effect of which, however, has not been large. The favourable state of the foreign exchanges has likewise tended to give stability to the quotations; whilst the extraordinary accounts from the gold districts in Australia and California—the yield in the latter being quite fabulous—continued to add to the general confidence in the market.

Large supplies of the precious metals still continue to arrive, the imports having amounted to £550,000, chiefly from the Pacific and the United States. The exports have been extensive, viz. £238,000 in silver to India, £38,000 in gold to Alexandria, Ceylon, and Calcutta, £100,000 in gold to the Cape; and £100,000 in coin to Australia, besides several parcels to the Continent.

Consols were very steady on Monday, and prices were well supported. The Three per Cents for money, were 100⅞ ⅛; Three per Cents Reduced, 100⅝ ⅞. On Tuesday and Wednesday, a slight improvement took place in the quotations; the Three per Cents for money having marked 100⅝ ¾. The Market on Thursday was by no means active, and prices gave way ¼ per cent The Three per Cent. Consols were 100, ⅜, ⅝, ½; the Three per Cents Reduced, 99⅝ ¾; New Three-and-a-Quarter per Cents, 103⅜; Consols for Account, 100½; Bank Stock was 221½ to 220½; Long Annuities, 1860, 6⅝ 7-16; Ditto, 6⅜; India Bonds, under £1000, 88s.; South Sea Old Annuities, 99½; Exchequer Bills (March), £1000, 78s.; Ditto, Small, 75s. (June), 77s. to 75s premium.

Considerable fluctuations have taken place in the prices of Foreign bonds and scrip. Brazilian Bonds have advanced to 81, owing to the receipt of the Diligence to the effect that the navigation of the rivers Paraguay, Paraná, and Uruguay has been opened, and that vigorous reforms are contemplated in the currency. The Russian Loan has declined to 4¾ and 6 premium, in consequence of the delay in the new Loan at Constantinople, and the unwillingness of the part of the Ministers to ratify the loan. Swedish Scrip has touched on the part of the Ministers to ratify the loan. Swedish Scrip has touched on the part of the Ministers to ratify the loan. Swedish Scrip has touched on

AMUSEMENTS, &c.

ROYAL PRINCESS' THEATRE, OXFORD-STREET. Under the Management of Mr CHARLES KEAN—MONDAY, OCT 25, will be performed the PRIMA DONNA, the CORSICAN BROTHERS, and the SPITALFIELDS WEAVER. B. LINDSAY and Co., 8, Austin Friars, London

ALBERT DOCKS, for Steamers, Colliers, and General Commerce. Provisionally Registered. Capital £500,000 in 20,000 shares of £10 each, deposit 10s 6d per share.—The Albert Docks are intended to be for [illegible] in the Greenwich marshes on the north bank of the river Immediately opposite the Victoria Docks. Interior entrances at Bugsby's Hole or Blackwall on the east and Greenwich Reach on the west, by the Commercial Road Railway with branches to each of the North Kent, South Eastern, and Brighton Railways which all discharge south of the Thames, thus affording general accommodation for the shipment and transit of goods and merchandize to the benefit of the great mass of the population of England; and when it is considered [illegible] the south side of the river within the last forty years, and the great [illegible] which has since taken place, this is a very favourable opportunity of a handsome dividend on the capital required. Detailed prospectuses will shortly be prepared, in the meantime applications for shares may be addressed to the Provisional Committee, 17 Poultry

October 19 1852. THOS. JAS. SWAINE Sec

THE NOISELESS LION SAUSAGE-MEAT CUTTING and FILLING MACHINE, only sixteen inches square. The above machine has been exhibited at work several times at Mr Pigou's, Poultry Saloons, Newman-street, and can be seen at work daily, at 4 Lyon s, Devonshire Pou ry Warehouse, 32 Windmill-street, Finsbury-square, the inventor and maker, where it received the most unqualified approval of the many hundreds who witnessed the rapidity, simple, and clean mode of working it. It s most being put into the machine in pieces of two inches, came out in the skin, en ve y fine, at the rate of one pound per minute. It has been admired by many eminent sausage engineers and sausage-makers that there is not anything to compare with it, it doing the work of two machines in one, and by which one makes not the least noise. It can be worked by a hand on the end of a counter, dresser or table, and is of so small a size as to be more ornamental than inconvenient, being that of a small brass mounted box, and is a great improvement on the present many and expensive chopping machines, the price being from Two Pounds to Six Guineas. It is also in great use among the Pastry-cooks and Restaurants for cutting and pastry [illegible]

THE GREAT INDUSTRIAL EXHIBITION BUILDING AT DUBLIN: FRONT ELEVATION TO MERRION-SQUARE WEST.

THE GREAT INDUSTRIAL EXHIBITION AT DUBLIN, 1853.

The works of the building for this grand display are proceeding rapidly. The lawn of the Royal Dublin Society House presents a scene of the most animated character. The entire of the vast space fronting Merrion-square is surrounded with huge masses of timber piled in balks, one over the other, to a height of 20 feet, whilst the centre of the lawn is covered with some of the principal portions of the wood work, now nearly completed. The massive semicircular girders which are to sustain the sides and roof, at an elevation of forty feet at their apex above the level of the roof of the Royal Dublin Society House, are composed of ten layers of deal plank, of two inches and one-and-a-half inch thickness, connected by eight radiating struts of plank of the same substance, bound together by 3000 screws and 100 iron bolts; each of these huge half circles weighs eight tons. The iron trellis work for the support of the galleries is also completed; and we learn, as the heavy and most important parts of the building are nearly finished, the erection and completion of the entire edifice will be accomplished in a very short space of time. Mr. Roney, the honorary secretary, is at present on the Continent, arranging for the exhibition of the more interesting portions of the French arts and manufactures in the ensuing Exposition, and he has met with promises of the utmost support of the manufacturers.

The Illustration shows the adopted design, by Mr. Benson, completed: presenting a front to Merrion-square of 300 feet, the main or centre feature of the elevation consists of a semicircular projection, which forms the eastern termination of the central hall. This will be a noble apartment, 425 feet in length, and 100 feet in height, covered by a semi-cylindrical roof upon trellis ribs, in one span of 100 feet. On each side of the central hall, and running parallel to it for the same length, are two halls 50 feet wide, with domed roofs, similar to that which covers the main nave of the building. The height from the floor to the roof of each of these halls will be 65 feet. They are approached through passages from the centre hall. In addition to these are four compartments, 25 feet wide, running the whole length of the building: two are placed between the centre hall and the side halls, and two on each side of the latter, divided into sections of 25 feet square. Over these compartments are spacious galleries, also running the length of the building, and affording increased space for exhibition and promenade. There are also external galleries, which will be attractive features. The termination of each of the principal roofs to the east and west is semi-spherical, giving strength as well as effect to the building. There will be three entrances in the front facing Merrion-square, under a range of verandahs. The materials of the building will be iron, timber, and glass. The roofs at each side of the lights will be timber, covered with waterproof cloth, manufactured by Messrs. Malcomson, of Portlaw, county Waterford. The trellis girders which support the galleries will be of wrought iron, supported on cast-iron pillars. Access to the building can also be had by the spacious courtyard of the Royal Dublin Society; whose suite of apartments, including the Museum, will be thrown open to the public during the Exhibition. The available area of ground floor will be 147,704 feet. Of wall space there will not be less than 87,000 feet.

From the activity and energy displayed, it is calculated that the building will be approaching completion in the latter end of the first month of next year.

STATE AND PROSPECTS OF IRELAND.

WERE it not for Ireland, Great Britain would be in the condition of the Grecian Sovereign in the ancient legend—too happy to deserve a friend. The principle of compensation is continually at work. We are great, renowned, thriving, and free; but we have Ireland at our side to keep us humble, and to preserve us from arrogance and conceit. It is scarcely seven weeks ago since the public journals recorded the assassination of Mr. O'Callaghan Ryan, an Irish landlord. The fiat of the agrarian Vehmgericht went forth and was obeyed. The murderers of the unfortunate man as yet remain at large, though it is highly probable that they will speedily be discovered and brought to trial. Whether they will receive the punishment due to their crime is another question, the solution of which will depend not upon law and justice, but upon the temper of the particular jury upon whom the investigation may happen to devolve. But scarcely has the public horror excited by the event subsided into an earnest prayer for the eradication of the foul blot of murder, and sympathy with murderers, from the name and fame of the Irish peasantry, than indignation and alarm are again aroused by the perpetration of another murder equally atrocious. It is the old and sad story over again. We have the ordinary description of victim, the ancient feud, the customary vengeance, and the usual accessories. All are repeated to the life;—and to the death. In this case, which occurred last week, Mr. Manifold, the person condemned to die, and executed accordingly, was an agent for the collection of rents and of poor-rates. He had performed an unpleasant duty, but not in a harsh or vindictive manner, by serving with process a number of persons, who indulged in the peculiarly Irish fancy of occupying and ruining other people's land without paying or intending to pay, rent for it; when he was fired at from a ditch, in the darkness of the night, and shot dead. He expired almost instantaneously, having "received thirty-four square leaden slugs in his head, neck, and shoulders, and nine in the brain." Within a few yards of the spot where the crime was committed are several houses occupied by the peasantry. Not one of these persons—not even a woman—looked out, at the report of the blunderbuss, to ascertain what mischief was doing, or had been done. This, it will be seen, is but a repetition of a very ancient and familiar history. There is not the slightest novelty about it. We have but to change the victim's name, and the date of the murder, to have a record which we may find in any newspaper in any year for the last quarter of a century. Pestilence and famine have thinned the land of its superabundant population; emigration and the gold mania have contributed largely to denude Ireland of the daring and the reckless spirits who might be supposed most capable of deeds like these; but all these causes, separately and in combination, have failed to deprive the country of her indigeneous assassins. The aboriginal trait remains, and even cholera and famine have been lenient enough to spare a sufficient number of murderers to perpetuate the race, and to retard the improvement and the prosperity of the country.

Were it not for this dreadful system—bad as the condition of Ireland has been—there would, at the present time, be good foundation for the hope, that the worst had passed away, and that a new era of peace, industry, and happiness had dawned upon the land and its inhabitants. It is true that our unhappy neighbour has ever been the great difficulty with the statesmen of England; and the condition of the people the problem which, with all their patriotic anxiety, they have been unable to solve. How was Ireland to be improved? was the question continually asked. How could we excite among her peasantry a spirit of emulation? How should we induce them to consider beggary a degradation, and self-sustaining independence, however humble, a blessing to be attained? To arrive at a solution, commissioners were appointed, blue books were printed, money was squandered, parties were subsidized, and noisy demagogues were silenced by place or pension; yet, until the time of the potato failure, and the consequent famine and plague, the masses of the Irish people lay in a state of degradation—reckless, thriftless, hopeless. The bane of the country was not the idleness of the people, for nowhere could be found a more industrious class than the Irish peasantry, when placed under favourable circumstances. The bricks and mortar of nearly all London were carried on Irish shoulders. Half our railways and public works were executed by Irish labour; and a great portion of our crops were year by year reaped by itinerant Irish reapers. Theirs are the myriad hands which are now labouring to construct the fabric of American power. Abroad, they are faithful, generous, and grateful. At home, however, they are moody and revengeful whenever they are not listless and dispirited. Whence then the bane of the country?

Leaving out of view the religious element, the great and paramount evil has always been the want of properly-remunerated labour. At the root of all her grievances, destructive to her peace and prosperity, was an absentee, insolvent land-proprietory. Famine, and all its terrible accompaniments, commenced the cure of this inveterate disease. A law, severely wise, dispossessed these insolvents of the property which was but nominally theirs, and land gradually passed from the possession of spendthrifts into the hands of careful and industrious traders. For the first time in the history of Ireland a healthy landowning middle-class was planted on the soil. Heretofore there were only the high and the low—the lord and the peasant. The great lord was replaced by a dozen small ones. The land was cleared of what was deemed its idle population, and a new race sprang up. Operatives from England and farmers from Scotland were introduced, and the people were trained in the principles and practice of profitable

LIBERATION OF ABD-EL-KADER, BY THE PRESIDENT, FROM THE CHATEAU OF AMBOISE.—(SEE NEXT PAGE.)

industry. And what is the result up to the present time? Recent tourists report most favourably of the change that has been operated. They state that from Dublin to Waterford, no distress is to be seen; that from Dublin to Galway, enterprise is obvious; that the wilds of Connemara are becoming covered with sheep; that the class of industry which brought capital and comfort to Kelso and Howick, and the high lands of Yorkshire, is at last taking root in Ireland; and that various kinds of knitting are largely offered for sale through all the district between Galway and Westport. They state, moreover, the remarkable fact that, out of the seven millions of pounds sterling expended in the purchase of land in the Encumbered Estates Court, more than six millions have been invested by Irishmen living in Ireland—a part of the surplus of their industrial pursuits; while less than three quarters of a million sterling has been advanced by the capitalists of England and Scotland. In addition to all this the last harvest has proved an abundant one; and the labourer, no longer "a drug in the market," or "an excrescence on the soil," has been well paid for gathering in the produce, and allowed to share in the wealth around him. "The rapid increase in the Irish butter and provision trade," says a recent letter, "is attracting much attention, as the exports from Cork, Limerick, and other ports are becoming greater, perhaps, than at any former period. In fact, this most valuable traffic is now quite revived, and has become once more a source of great wealth to our agricultural classes. The enormous increase in the produce of butter is an evidence of the far greater extent of pasturage in districts where tillage had prevailed almost exclusively in former years. On account of this change in the system of husbandry, comparatively little inconvenience has been caused by the decrease of population, and the continued "exodus." Still, however, tillage farming is carried on generally throughout the country, to a vast extent, on sounder principles than heretofore; and the remunerating prices of produce are calculated to check the tendency to devote the soil to the rearing of cattle and sheep merely. Altogether, the country, as regards all branches of agricultural enterprise, is making a decided rally, and the confidence of both landlords and farmers is much improved."

Every account received, whether public or private, is to the same effect. Another letter, with more immediate reference to commerce than to agriculture, says that "there is general activity in business, resulting from the growing confidence amongst the public after an abundant harvest; and from the remunerative prices for agricultural stock and produce. The condition of landlords and farmers is steadily improving; money is much more freely circulated; and the effect of this great change for the better is manifest in the gradual increase of demand in most branches of trade. In Dublin the wholesale merchants are doing a far better business in foreign and colonial produce—the consumption of teas, sugars, coffees, &c., has augmented, and there has been a decided advance in prices."

If Ireland would but wipe from her hands the blood of secret murder—if the priesthood who administer the consolations of religion to the majority of the people, would but employ the requisite zeal and eloquence in the denunciation, not only in the next world, but in this, of the men who commit or connive at assassination, there would be a strong reason for the belief that the prosperity of this long-suffering land would not be a transient gleam, but a permanent sunshine. The potato blight has passed away; but not until the murder-blight shall be finally eradicated, will it be possible for Ireland to enjoy the blessings that might be hers. The law has done justice upon the insolvent landlords. Law and public opinion must do equal justice upon the insolvent tenantry, who question not to get rid of the obligation of rent-paying by the operation of the blunderbuss;—or the severe lessons of the late famine and pestilence will have been read in vain.

NAVAL AND MILITARY INTELLIGENCE.

HORSE GUARDS LEVEES.—It is stated that the new military secretary, Colonel Airey, will usually hold a levee on Tuesdays, as was formerly done by the late Military Secretary.

COLONELCY OF THE 67TH REGIMENT.—Major-General Ewart, C.B. who former y commanded this regiment, will, we hear, succeed the late Lieut.-General Clitheroe, as Colonel.

JERSEY GARRISON.—The military and artillary force at the garrison in Jersey is said to be considerably augmented. The militia force at Jersey is now 30,000 strong.

CONVICTS FOR VAN DIEMEN'S LAND.—A splendid ship, the *Oriental Queen*, has lately sailed for Van Diemen's Land with no less than two hundred and eighty convicts, nearly all of whom have obtained tickets of leave, and will therefore be set at liberty the moment they reach their destination.

THE FISHERIES AND HER MAJESTY'S CRUISERS.—A New York paper says:—"The American schooner *Cora* has arrived at Portsmouth, N. H., from Prince Edward's Island, with information that she had been twice fired at by the British steamer *Devastation*, and forbidden to enter Gaspe Bay. Our vessels are also excluded from the Bay of Chaleur."

LOSS OF AN ENGLISH VESSEL.—By the arrival at Liverpool of the brig *Richard*, from Pernambuco, intelligence has been received of the loss of the *Enchantress*, Captain Buckland, of Yarmouth, on her passage from Pernambuco for Yarmouth. The *Enchantress* struck on a sunken reef three days after leaving that port, and immediately went to pieces. The captain, two mates, one man, and a boy, were washed off the reef and drowned. The remainder of the crew, six in number, succeeded in constructing a raft, and, after d eadful sufferings for several days, they were picked up by the above-named vessel.

THE MILITIA.—The following circular memorandum has been issued from the Horse Guards: "It having been represen ed to the General Commanding in Chief that it would be greatly for the advantage of the militia about to be enrolled if facilities were afforded to the officers of acquiring a knowledge of their duty by being temporarily attached for instruction to regiments or details of the line, Viscount Hardinge desires that such instruction may be readily and without hesitation afforded by all commanding officers of infantry in England and Wales, upon the application of colonels of militia; and he begs to hope that the best understanding may prevail on all such occasions between the services, and that during the period that officers of militia may be thus attached to particular corps for instruction they may be admitted as honorary members of the regimental or depôt mess."

DESERTERS FROM THE MILITIA.—A man named John Pardoe has been apprehended at Tewkesbury, charged with having deserted from the South Gloucester Regiment of Militia. He had volunteered to serve in the battalion at Gloucester, and after he had received his ten shillings he went direct to Worcester, and volunteered to serve in the Worcester Militia; and, after he had received his ten shillings there, absconded. He has been ordered to be detained in custody until a court-martial can be held upon him. On Wednesday a list of forty-six deserters from the militia regiments was forwarded to Mr. Mayer, the police-officer of the Marylebone workhouse, in order that he might hand over to the police any of those who should apply for parochial relief.

INSPECTION OF DOCKYARDS, &c.—A Board of the Admiralty, composed of the Duke of Northumberland, First Lord; Commodore Sir Thomas Herbert, K.C.B., M.P.; Mr. Stafford, M.P., Secretary; Captain Sir Baldwin W. Walker, C.B., surveyor of the navy; Colonel Freeman, R.E., Admiralty Director of the Works, and Captain Pelham, Private Secretary to the First Lord, have been occupied during the week on a tour of inspection through the dockyards, and the various Admiralty departments of the country.

NATIONAL DEFENCE.—We understand that ten line-of-battle ships being built, or ordered to be built, in the Royal dockyards, are ordered to be fitted with screw machinery.—*Herald* (Ministerial paper.)

THE "ROYAL ALBERT."—A number of workmen have been placed on the *Royal Albert*, at Woolwich, to make her water-tight above the launch line of immersion, in order that she may be ready for launching early in the spring of 1853. When launched, she is to be taken into the east dock, next the saw mills, and will there be lengthened 35 feet which will give her a capacity of upwards of 4,000 tonnage, render it her the largest ship in the Royal Navy, affording ample room for superior new engines of 1,000 horse power.

Lord Leigh has been appointed Provincial Grand Master of the Freemasons of Warwickshire, in the room of Earl Howe, resigned.

LIBERATION OF ABD-EL-KADER.

IN our Journal of last week we recorded the formal liberation of Abd-el-Kader from the Château of Amboise, by the French President. Upon the preceding page we have engraved that portion of the interesting interview at which he is taking the oath on the Koran, that he would never attempt to disturb French domination in Africa, and that he would submit, without reserve or *arrière pensee*, to the will of France.

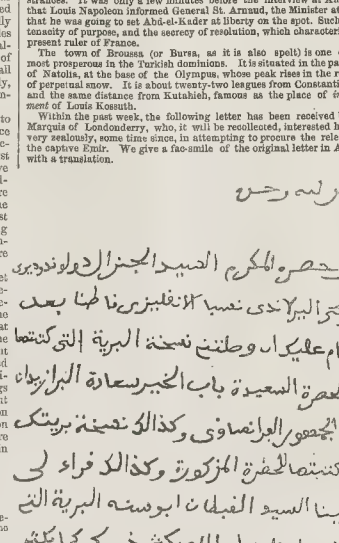
The *Moniteur du Loiret* gives the following details of the visit of the Prince President to Abd-el-Kader, at the château:—

At the moment at which the President arrived at Amboise, and during the reception at the railway station, Abd-el-Kader was on the terrace of the château. With a telescope he attempted to distinguish the movements of the *cortège*. Mustapha, one of his agas, and several persons of his household, also watched them with great interest. The Prince, accompanied by the Minister of War, entered a carriage which was waiting at the station, and proceeded direct to the château, from which one of the finest views of the course of the Loire is obtained. The Emir and his attendants entered their respective apartments at the approach of the Prince and the Minister of War. Informed that the Prince wished to speak to him, Abd-el-Kader presented himself, accompanied by his faithful Mustapha. It was then that his release was announced to him. The suite of the Emir is composed of 30 persons. it was 70 a few months ago. This visit of Louis Napoleon to Abd-el-Kader lasted three-quarters of an hour.

It is stated that negotiations had previously been carried on by the French Government with the Porte, for the purpose of obtaining the consent of the Sultan to the reception of the Arab chief in his dominions. Broussa had, accordingly, been named by the Porte as the most suitable place of residence, that being the city to which prisoners of state and disgraced officers of the Turkish Government are usually sent; but it would appear from Louis Napoleon's speech at Amboise, that Abd-el-Kader is to be considered as a free resident at Broussa on parole. It *is* a remarkable circumstance, that the intention of the President to liberate the Emir had been strongly opposed by all his advisers, civil and military; and they imagined that he had yielded to their remonstrances. It was only a few minutes before the interview at Amboise, that Louis Napoleon informed General St. Arnaud, the Minister at War, that he was going to set Abd-el-Kader at liberty on the spot. Such is the casualty of purpose, and the secrecy of resolution, which characterise the present ruler of France.

The town of Broussa (or Bursa, as it is also spelt) is one of the most prosperous in the Turkish dominions. It is situated in the pachalik of Natolia, at the base of the Olympus, whose peak rises in the regions of perpetual snow. It is about twenty-two leagues from Constantinople, and the same distance from Kutahieh, famous as the place of *internement* of Louis Kossuth.

Within the past week, the following letter has been received by the Marquis of Londonderry, who, it will be recollected, interested himself very zealously, some time since, in attempting to procure the release of the captive Emir. We give a fac-simile of the original letter in Arabic, with a translation.



[TRANSLATION]

LETTER FROM THE EMIR ABD EL-KADER TO THE MARQUIS OF LONDONDERRY.

PRAISE TO THE ONLY GOD!

To his Lordship the Cid, General Marquis of Londonderry! Irishman by birth, dwelling in England.—Greeting!

I have received a copy of the letter written to you by his happy Lordship, the source of good, his Lordship the President, Chief of the French Republic, and also a copy of that which you formerly wrote to him

Our brother, the Cid. Captain Boissonnet, has also communicated to me the letter which transmitted your greetings. May God reward you! and also his happy Lordship, the President of the Republic, and his Lordship the Minister of War, whose generosity procured me the honour of your visit and the favour of your letter.

Beginning of Redjib, year 1267.
This is written according to my intentions,

ABD-EL-KADER BEN MAHHI EDDIN.

The following lines were addressed to Prince Louis Napoleon in behalf of the Emir Abd-el-Kader, by an English lady, during the summer of 1851.

The aged Emir bows to Life:
His sorrows claim a peaceful grave;
He seeks no ransom from the State,
Save the, which valour grants the brave.

Then speed him to his native tents:
Say to the old man, "Rise, be free!"
The victor, when his soul relents,
Ho da is his grasp divinity.

Did Philip's m ghty son subdue
The soul of Porus, with a chain?
Are vows exacted from the true?
Hath faith, hath gratitude—no claim?

God of the captive! wait his sigh
Unto the ear of gentle France,
Then, who ordainest destiny,
Misdeward dash the sight glance.

Hath he not watched, from Ham's stern tower,
The golden summers fleeting by?
Doth he re. all the keeper hour,
So lonesome in captivity?

He sees his home; his mother's smile,
In the soft twilight calm, appears:
He greets his wife, he claps his child,
Then melts, subdued in woman's tears.

Oh, Freedom! empire of the soul!
Proclaim thy boundless sovereignty.
From earth to heav'n, from star to pole,
The primal law was *Liberty!*

When from its depths the burning light
Spread through the world a sheet of flame,
Forth swept the winds, the airs of night,
The pathless seas in *Freedom* came.

As proudly, noble France, arise!
Say to the old man, "Rise, be free!"
This deed shall *live* when marble *dies*,
To be as thee to posterity.

Is there pre lough y spu t in thy breast,
Which tyrant fe rs inspired not more,
The strong man fails, as memory wakes
Within his breast a dream of love.

Then, France, Prince, a greater far,
Than a. d ge ed p aps of fame,
Thy race were dom ods in war.
Be thou the day-star of their name!

FOREIGN AND COLONIAL NEWS.

FRANCE.

PARIS, Oct. 27.

(From our own Correspondent.)

Last week the talk of the day was the triumphant entry of Sa Majesté Impériale Napoleon III., Roi d'Algerie, into his faithful capital, which faithful capital, despite all the faithful (*plus ou moins*) journals, was a signal failure.

However, let by-gones be by-gones: for, here, last week's events are always affairs *de l'ancienne histoire*; and let us try to glean a little of what is passing at present—though, really, that is as little as may be, either in the way of politics, which is not our province, or gossip, which is. Everybody that has a *chasse* or a *château* of his own or anybody else's to go to, is gone there; and everybody that has not, pretends he has, and disappears accordingly, or vegetates *en attendant* that something turns up to arouse him.

Even at the risk of turning back a page of the *ancienne histoire* above alluded to, we must chronicle some of the events of the grand representation at the Théâtre Français; an occasion which certainly has had more narrators and describers than the *solennité* of the 16th October, and excited immensely more interest and applause.

The *affiche* of the performance began by exciting the mirth of its readers—by an unconscious epigram contained in the heading of it, which stood thus:—"*Cinna; ou, la Clémence d'Auguste.—L'Empire c'est la Paix.*—In my own names be it!" Then came the grand affair itself, which really was surpassingly magnificent; the decorations, the flowers, the lights, the brilliant toilettes of the women—who, contrary to all custom in France, appeared in full dress; the extraordinary profusion of violets, which perfumed the whole *salle*, made an *ensemble* really beyond description.

We need not dwell on the *succès* of Mdlle. Rachel in *Cinna*: the principal part of her performance lay in the recital of the verses of M. Arsène Houssaye. "Cette jeune et jolie femme," as one of the papers says—a phrase which reminds us of the lady tourist who found Niagara very pretty—"Cette jeune et jolie femme," who a few years ago was "un squelette décharné," grasping the staff of the tricolor flag, and muttering through her set teeth the "Marseillaise," came forward from the group formed by all the actors and actresses of the Français, attired principally in the costume of their favourite parts, and, saluting the President's box like a muse—like an Apollo—like a tragedy queen—in short, like Mdlle. Rachel (Mdlle. Rachel *on the stage bien entendu*), and half read, half recited "L'Empire c'est la Paix" midst thunders of applause for herself and the author. It is, however, admitted on all hands, that her performance of the "Marseillaise" was far more *com amore*. The pretty "Proverbe" of Alfred de Musset wound up the performances, which was altogether highly successful.

The Grand Opéra is going to offer to Louis Napoleon, on Thursday, a grand representation of the *reprise* of "Moïse," on which occasion a cantata in his honour will be executed by all the artists, composed by M. Victor Massé, the young and popular composer of "Galathée," and written by M. Philoxbe Boyer.

It is currently reported that one of the acts of the Empire will be the decoration of women who have rendered themselves remarkable by the performance of any great act, the creation of any noble work, &c. Napoleon I. (according to the present mode of counting) set the example, by admitting into the Legion of Honour certain heroic *cantinières*, and as all things—civil—seem disposed to take the same forms as those in his time adopted, we think the idea by no means an improbable one.

Here is one of the *canards* of the *Bourse*:—The Emperor of Russia is coming to Paris to present his son-in-law, the Duc de Leuchtenberg, to Louis Napoleon, to be designed, in the letter placed before the Senate, as the successor of the Prince, in case of his having no heirs!!

The Opera Comique is preparing a work on the "Mysteries of Udolpho," the *livret* from the indefatigable pen of Scribe; the music by M. Clapisson. It is to appear very shortly, and is, we hear, to be followed by a succession of other new compositions. But we venture to predict that the success of the season will be at the Théâtre Français, where a drama is in preparation from the fair hands of a certain *belle dame*, whose reputation for wit and beauty has for some time been well established, both in the *beau monde* and the world of literature. Discretion forbids us to say more than that the piece, which is of remarkable force and *verve*, is a bold and vigorous satire on the vices and follies accepted and permitted in modern society.

In the way of books, nothing in any way remarkable is appearing. What are become of the novelists of a very few years back? Why is it that no works of striking interest or merit now come forth, to occupy public attention in France? Where are the Monte Christos, the Mystères de Paris, the Juif Errant, the Notre Dames de Paris, which, however questionable might be their worth on the score of morals, possessed at all events a power to excite intense interest and attention? If you ask any one to recommend you a book now, he sends you back to a work some eight or ten years old, of Balzac, George Sand, Victor Hugo, or Eugène Sue; and yet all these writers, with the exception of the first, are, or ought to be, in the vigour of their genius. Politics—politics—there lies the paralysing influence! All these people, instead of turning their imaginations to fictions on papers, employ them on fictions in action, in the shape of dreams of impossible political reforms, Utopian theories—principles that won't set, whether from some vital defect in their construction, or from their being wilfully opposed to the course of events and circumstances. In this line, there is a certain and a great gain. There is no question but that the works we have alluded to exercised a corrupting influence on the minds of their readers. It is not the works themselves we lament: it is the genius which, cultivated and purified, might have given to the world books of equal merit and interest, without the dark taint of immorality which soiled their brightest pages.

The plan for the proclamation of the Empire seems to be completely settled. The operation which the Senate has to perform is so much a matter of course that it can be arranged so as to suit the convenience of the higher powers. The vote on the *plébiscite*, which is to be the result of the Senatus-Consultum, will take place on the first Sunday and Monday in December, and the proclamation of the Empire itself will take place on the 20th of December.

It is stated that when the appeal is made to the nation to sanction by their votes the act of the Senate, the Republican party will take no part in the ballot.

Forty members in addition to the Senate are now spoken of, and amongst them will be some Legitimist names of no small importance in the departments. Two of those who have already intimated their intention to accept the honour are the Marquis de la Rochejaquelein and the Marquis de Pastoret. There are also rumours of the creation of a new nobility soon after the Empire. According to the latest *on dit*, all the Generals of Brigade will be named Barons, all the Lieutenant-Generals, Counts; and to the highest rank of the Peerage, that of Duke, 20 members will be added. These rumours may appear somewhat extravagant, but what absurdity is too extravagant for our mercurial neighbours

The preliminary steps to the formation of an Imperial Guard out of the choice corps of existing regiments are already taken.

MM. Ehrert, Brunck, Sundherr, and Motsch, lately elected members of the new Municipal Council of Mulhouse, have refused to accept their seats.

Amongst the decrees which have appeared in the *Moniteur* in the course of the week, is one forbidding all leaseholders of mines (*concessionnaires des mines*), of whatever nature, to unite to his or their concession, other concessions of the like nature, either by partnership or purchase, unless with the authority of Government; another, by which an extraordinary credit of 200,000f. is appropriated to the Church of St. Geneviève, formerly the Panthéon; another nominating the presidents of different mutual aid societies; another giving formal authorisation to the Crystal Palace Company in Paris for National Industry; and another promulgating the convention with the Duchy of Brunswick relative to literary property.

The *Constitutionnel* announces that great additions are to be made to the port of Havre: the harbour is to be increased, docks are to be established, and new works are to be constructed for the defence of the roads and port.

Although the rumour that the French Government has resolved to suppress all the journals in Paris, except three, has been frequently contradicted, and apparently from authority, it is still current even in high quarters. It is pretended that there are to be only three French journals the *Journal de l'Empire* (to be formed by the fusion of the *Constitutionnel*, the *Pays*, and the *Patrie*), the *Moniteur*, and the *Gazette des Tribunaux*. The English journal, *Galignani's Messenger*, will be allowed, it is said, to continue, as an accommodation to the English in France and on the Continent generally. It is said that the journals to be suppressed would receive an ample indemnity.

BELGIUM.

The Chamber re-assembled on the 26th. The contest for the Presidency was very animated, and resulted in the triumph of the Liberal party.

On the termination of the sitting, a courier was despatched to M. H. De Brouckere, who has been summoned by King Leopold.

The *Emancipation* says, "The Ministry, with the construction of which M. De Brouckere is charged, will appear to-morrow or on the next day in the *Moniteur*."

GERMANY.

The *Journal de Frankfort* states that the first meeting of the plenipotentiaries of the states of the coalition took place at Vienna on the 20th instant.

It is currently rumoured at Vienna, that his Imperial Majesty intends laying down the command in chief of the army, in order to attend more exclusively to the affairs of Government. The Archduke Albert is spoken of as his probable successor in the chief command, and is to be raised to the dignity of Field-Marshal on this occasion.

From an article in the *Presse* of Vienna of the 19th inst, it would seem that this Government does not intend to recognise the title of Napoleon III. A tacit acquiescence will be given to the choice of the French people, and the Empire, as such, will be tolerated; but in the question of succession and pedigree, the Northern powers are likely to be more susceptible. To assume the title of Napoleon III. would be, in the eyes of the Austrian organ, to set openly at defiance the treaty of Vienna, the act of abdication of the first Napoleon, and other State documents.

DENMARK.

Among the bills just laid before Parliament by the Finance Minister, is one which has long been looked for, empowering the Government to abolish the Customs line between Schleswig and Holstein; or, in other words, making the southern Customs line of the Danish monarchy the Eibe, instead of the Eider. One section of this bill reduces the duty on refined sugar into any part of Denmark, Schleswig Holstein, from 6rbd. 24sk. to 4rbd. 66sk. per 100 lb.; on coffee from 6rbd. 64sk., to 5rbd. per 100 lb.; and the present Holstein duty of 80sk. per 100 lb. on the export of rags is extended to the rest of the monarchy instead of the present oppressive rate of 2rbd. 80sk. per 100 lb., which altogether prevents the exportation of this useful article on the disagreements of England. Should these reductions be adopted by the Diet, the advantage to English commerce will not be small, although the duty on woollen goods might advantageously fall to a still lower figure. As to the export duty on rags, of which immense quantities might be collected here, in addition to the amount required by the Danish paper-mills, the day will soon dawn when it will be totally abolished

The budget for the year April 1, 1853-4, sets forth a total income of 13,821,736 rbd., and an expenditure of 13,960,400 rbd., leaving a surplus of 861,336 rix bank dollars.

SPAIN.

Rumours are again afloat that, encouraged by the success of Louis Napoleon in his war against constitutional liberty in France, the Spanish Government are meditating a *coup d'état*, in modest imitation of that of Dec. 2.

The course that things will take is conjectured to be thus:—That the Cortes will probably be called together towards the end of November, and a general bill of indemnity, or something of the kind, will be proposed, so as to legalise all the measures which the Government have enacted by decrees during the long period in which the legislative sittings have been suspended. There will no doubt be a violent, if not a very numerous, opposition, which will refuse such a vote; and it is believed that the first opportunity afforded by violence of debate, ending, as is likely, in a scene, will be taken advantage of for again closing the Chambers, and making the desired modifications in the present system. Some think that the Ministers will content themselves with a dissolution and new elections; but the more general idea is, that a curb will be put upon the Cortes, assimilating their powers to those at present enjoyed (in the sense in which people are said to enjoy bad health) in the neighbouring country, whose example it has long been the fashion to copy, and occasionally to parody, on this side of the Pyrenees.

General Aupick, the French Ambassador had returned from Bordeaux. Whither he had gone to compliment Prince Louis Napoleon. The General stated that the Prince professed the deepest interest and sympathy for Spain, and that he several times expressed to him his earnest desire of drawing still closer the ties of friendship and cordial understanding which already exist between the two nations and the two Governments.

PORTUGAL.

The *Tagus* arrived at Southampton on Saturday, bringing advices from Lisbon to the 18th. Among the passengers by the *Tagus* were the Duke of Terceira and some staff officers, deputed by the Portuguese Government to attend the funeral of the Duke of Wellington.

A decree for the abolition of the Porto Wine Company, and the equalisation of the export duties, has at length been promulgated. This important measure will conciliate the interests of the wine-grower, at the same time that it satisfies the reiterated demands of the British Government. The decree enacts that, in future, each pipe of port-wine shall pay an export duty of 2400, exclusive of the additional charges, about 25 per cent., amounting altogether to nearly 16s., without any distinction, whatever part of the world the wine may be destined for. Now, if we suppose the lowest quality to be worth £12, this rate of duty is not exorbitant, and there is no longer any inducement to evade the payment by sending wines to the United States for transhipment to Great Britain, as was constantly the case so long as a differential duty of £3 5s. was levied out of the pockets of their best customers, the British public. This fraud on the revenue must cease.

The contest between the Government and the Bank was becoming more violent and uncompromising than ever. An arbitrary, and, it must be added, unjust, decree had just been issued by the former, ordering the tobacco contractors not to continue the monthly payment of 25 contos which they had engaged to deliver to the Bank, but to apply the amount to the purchase of Lisbon bank-notes. The decree was based upon the false pretext that the Bank had refused to cancel 9 contos of their notes, according to the provisions of the decree of the 30th of August, whereas it was notorious that the directors had tendered double the amount, as were ordained by preceding laws, which was rejected by express command of the Ministe r. The Bank has commenced legal proceedings against the tobacco contractors; and on the 14th a meeting of the Bank proprietors was held, and resolutions were passed to resist to the utmost.

In the midst of the confusion the Government is sorely pressed for the sinews of war. Rumour has it that the Minister of Finance is reduced to the last extremity. Since the loan of 60 contos, raised on the eve of the publication of the obnoxious decree for the abolition of the special fund of amortization, the coffers of the Bank have been closed against him.

ITALY.

At the last accounts, the Duke of Modena was shortly expected to return to his dominions from Rome, where he had had two interviews with the Pope. The King of Naples, whose guest the Duke had been upwards of a month, had charged him with a confidential mission to his Holiness, who subsequently despatched to Naples General Count de Romirez. The latter had come to Rome to organise the Pontifical army. Two opinions relative to the composition of that force were entertained in Rome. Count d'Astier proposed to re-establish the order of Malta for the defence of the Court of Christendom against the revolutionists. Count de Montreal, on the other hand, wished to form a Swiss guard; and his departure for Naples would seem to indicate that he was commissioned to negotiate with the King the cession of some Swiss regiments to the Holy See.

The *Opinione* quotes a letter from Milan of the 20th, mentioning that a military funeral parade was performed the day before, in honour of the Duke of Wellington.

The *Chronicle* correspondent says:—"With respect to the case of Murray, I am happy in being able to assert, upon most trustworthy authority, that the British negotiators have succeeded in obtaining his pardon. At the beginning of this month, 28 persons were shot at Sinigaglia. The Ancona executions are on the eve of taking place. This tragedy seems positively to be drawing to a conclusion. Murray will, however, certainly be set at liberty."

The *Augsburg Gazette* has the following, under the head of "The Po," but without naming the place:—"An Englishman, who had purchased bouquet and fixed it to his breast, was arrested by the gendarmerie, who probably regarded it as a political emblem."

TURKEY AND THE EAST.

"The pretext for the extraordinary demands made by the French Government on the Porte has been the protectorate (as it is inaccurately termed) of certain sanctuaries and churches of the Latin rite in the Holy Land. The capitulations of 1604 between France and the Ottoman Empire secured to the Latin monks living in Jerusalem, and officiating in the Church of the Holy Sepulchre, the right of residing there. In 1635 Amurath IV. confirmed the former treaties, and gave an order by which the Frank monks were put in possession of the grotto of Bethlehem and two neighbouring hills, reserving to them likewise the custody of what is termed the "Stone of anointing," the vaults of Calvary, and the leaden domes which cover the Holy Sepulchre. These capitulations were further confirmed by subsequent treaties in 1640, 1673, and in 1740; and the religious orders of the Latin rite were further secured in the enjoyment of what they already possessed, without, however, any distinct reservation of exclusive privileges to them, as the policy of the Porte seems to have been to concede to all Christian nations alike the right of visiting in safety these places of devotion. As the Greek Church gained strength in the East by the influence of Russia, the exclusive claims of the Latins were more and more disputed; and in 1808, when the Church of the Holy Sepulchre was accidentally burnt, it was rebuilt by the Greeks, to the exclusion of the Franks. M. de Lavalette was instructed by his Government to demand the restitution of these alleged rights to the French religious orders in their most absolute form; and he demanded that eight of the most remarkable spots in and about Jerusalem, including the Holy Sepulchre itself, the tomb of the Virgin, and the Church of Bethlehem, should be surrendered to the Latin Church; that is, to the French mission. At the end of January in the present year, Redschid Pasha, then Grand Vizier, consented to these excessive demands; a firman was issued accordingly, and the French Ambassador returned to Paris. During his absence, however, Redschid was displaced, and the Greeks obtained a counter firman, more favourable to their religious rights, to the great indignation of the French Embassy. But, in truth, to give any exclusive privileges to the Latin Church in the East is to exasperate nine-tenths of the Christian subjects of the Porte, and to kindle a religious conflagration.

"Meanwhile, on the 6th of August, Redschid Pasha was definitively succeeded in the highest post in the Government by Ali Pasha, who had filled the office of Foreign Minister with considerable ability for the six preceding years. But this slight change was destined to last but a very short time. M. de Lavalette was not long in hastening back, when the altered state of affairs became known in Paris; and he returned in the *Charlemagne*, 90-gun screw line-of-battle ship, in defiance of the provisions of the Convention of the Dardanelles. The permission granted to this ship to pass the castles was obtained upon the most frivolous pretexts, backed by positive threats, to which the Porte was unfortunately weak enough to give way. The Cabinet of Ali Pasha contained several members who belonged to the Liberal or Reforming party, and the Grand Vizier himself was still favourable to the alliance of France. He had made these concessions on the subject of the sanctuaries, and Nafiz Pasha, the Finance Minister, had contracted the loan which threatened to lead to such deplorable consequences, not only at Constantinople, but in London and Paris. But, in spite of these friendly dispositions on the part of the Turkish Ministers, the French Embassy seemed to court their overthrow, for it neither strengthened them against their opponents nor extended to them its own forbearance. The prejudices of the old Turkish party had been wounded by the proposed loan, which was held by some of the Ulemas to be contrary to the provisions of the Koran against usury; the Sultan himself was alarmed by the exactions of M. de Lavalette, and public opinion even began to point to Abdul Aziz, the Sultan's brother and heir apparent, as a Prince better qualified to preserve the independence of the Empire. Under these circumstances, Nafiz Pasha, the Finance Minister was first dismissed. All, the Grand Vizier, still made a struggle in favour of the loan, to which the good faith of the Turkish Government was engaged. He was vehemently supported by the French Ambassador, who, on this occasion, undoubtedly defended the cause of good policy and public duty. But, on the 3rd instant, Ali Pasha fell, and was succeeded by Mahommed Ali Pasha, heretofore Minister of Marine—a man of considerable energy of character, but adverse to the reforming party, and relying on the support of Russia in preference to that of France or of this country. The consequence of the change is likely, we fear, to be the repudiation of the loan, on which no satisfactory assurances have been offered by Messrs. Devaux or the Turkish Ambassador in Paris; for, although the Ottoman Consul-General in London entreats us to suspend our judgment until the case be more fully known, and the most peremptory instructions have been sent out to the French Ambassador to insist on the performance of the contract, little value can be placed upon the reluctant acquiescence which may be forced by such means upon the Turkish Government.

"Without attempting to follow the secret and inexplicable course of intrigue in the Divan, the result of these transactions appears to be that the Porte, intimidated and weakened by the bullying attitude of France, has thrown itself once more under the protection of Russia; and that already a direct and active conflict may be traced between the agents of those two countries on the stage of Eastern politics."

Intelligence from Constantinople to the 16th, and from Smyrna to the 17th of October, confirms the news already transmitted of the repudiation by the Ottoman Porte of the loan lately raised on its account in Paris and London; but, nevertheless, the Government was putting as a bit disguise of the Bank suspension to cover all liabilities in Europe until some better plan be devised to place that establishment on a more satisfactory and solid footing, until which be effected the present Bank is to carry on operations in liquidation. This is an official arrangement, and the *Telemaque*, French steamer, which left the capital on the 15th October, but was windbound at Malta on the 23rd October, is bearer of bullion and bills to the amount of £400,000, chiefly raised by voluntary loans, free of interest, from several very wealthy Pachas. This has restored to a certain degree public confidence, and the exchange has risen rapidly. The Turkish Ambassador in London, it is stated, has been recalled for having so mismanaged the matter of the loan.

It is said that M. Lavalette had given seven days to the Turkish Government to re-consider their measures, and declared that if within that time the loan was not ratified he should demand his passport.

We have advices from Alexandria to the 19th inst.

The rise of the Nile this year has been below the average height, and next year's crops will be affected by it.

The railroad between Alexandria and Cairo is progressing most satisfactorily, and much beyond the anticipations of the most sanguine. It is confidently expected that a portion as far as the Nile will be completed by next year.

By the last French steamer a new French Consul-General for Egypt, M. Sabatier, arrived at Alexandria, and he is to endeavour to regain for the French that influence in the country which they have lost since the time of C. A. Murray has been English Consul-General.

The last intelligence from Damascus announces the defeat of the insurgents in the Hauran; but the insurrection was not over, as the rebels had retired into the fastnesses of the famous rocky Ledja.

AMERICA.

By the United States mail steam-ship *Hermann*, we have dates from New York to the 9th inst.

There is no news of importance, with the exception of that relating to Cuba, the Spanish authorities having refused to permit the steamer *Crescent City* to land her passengers and mails at Havannah, or to have any communication with the port.

The pretext for the refusal of the Spanish authorities was, that Mr. Smith, the purser, was still retained on board, and he had been in the habit of supplying the American journals with that description of exaggerated and high-pressure news from Cuba which appears to suit the palate of a great portion of their readers

A tremendous "indignation" meeting had been held in New Orleans, 10,000 persons being present, at which resolutions were adopted, calling upon the Government to demand immediate satisfaction for this outrage on the American flag.

The *New York Herald* publishes particulars of another "outrage" on the American flag:—

The barque *Cornelia*, Captain Ward, from Havannah, whence she sailed on the 24th ult., arrived at this port last night. This is the vessel that was boarded by the Cuban authorities at Havannah, after she had left the moorings, and had her mails and two of her passengers seized and taken ashore, where the mails were rifled and the passengers imprisoned.

The passengers so seized on board the *Cornelia* and taken ashore were disposed of in the following manner:—The engineer, Samuel Hearkness is confined in gaol for attempting to leave Havannah without a passport; the other, Mr. Gunsan, who had a passport, is confined in a dungeon, *incommunicado*, for carrying letters to parties in New York.

The American papers are still occupied with reports of General Scott's receptions and speeches in the course of his tour through the

A dreadful accident happened on the Montreal Railroad, near Concorn, N.H. Six lives were lost, and 16 persons injured.

A destructive gale prevailed at Cape Breton on the 14th inst. Four English barques, a brig, and a schooner, were wrecked

By the steam-ship *Canada* we have advices from New York to the 12th inst., and Boston to the 13th.

Advices from Vera Cruz to the 16th of September state that the political condition of the country had not changed. The formation of a new Cabinet was not completed.

The *New York Herald* contains the following intelligence from the Lobos Islands:—The ship *Manilla*, Captain Baker, of Boston, arrived at the Lobos Islands from Acapulco about the 12th ult, and was ordered off by a Peruvian brig of war. Captain Baker refused to leave, and was lying off and on, awaiting the arrival of Commodore M'Ainley, in pursuance of instructions from his owners, who had letters from Secretaries Webster and Graham, of which he had certified copies.

The *Canada* brings intelligence from California *viâ* New Orleans. The steamer at that port had on board two millions of gold on its way to New York from the gold regions of California. The accounts from the mining districts are of a very satisfactory character. Considerable excitement prevailed in California against the Chinese, and frequent murders by the Indians were occurring. The Chinese were in great request by other settlers for occupations requiring the hardest application of labour. The cholera was still prevalent in California, and at the latest dates was extending. The small-pox was also prevalent, and it is reported making great ravages amongst the Indians. The railroad from Sacramento city to the Zaba River was commenced on the 14th ult., and other arrangements for making a canal, connecting the northern mines, was steadily proceeding.

The reported discovery of some valuable old copper mines in the region of Lake Superior had been fully confirmed.

The steam-ship *El Dorado* arrived at New Orleans on the 9th with advices from San Francisco to the 16th of December, brought to Panama by the steam-ship *Golden Gate*, which vessel had on freight two millions in gold dust. According to the telegraphic advices the mining intelligence was very favourable. The finding of several large lumps of gold is mentioned. There had been some further movements at the mines against the Chinese, and a public meeting was about to be held on the subject.

At the meeting of British residents in New York and Boston, convened for the purpose of taking into consideration the best means of testifying respect for the memory of the late Duke of Wellington, it was resolved that a sermon should be preached in Trinity Church on the day of the funeral, and that mourning should be worn. The houses of the Consuls were placed in mourning for fourteen days, and every testimony of patriotic feeling towards the illustrious deceased was manifested on the occasion.

INDIA.—THE OVERLAND MAIL.

Letters and papers by the Marseilles route, in anticipation of the overland mail, have been received. The dates are—Bombay, Oct. 1; Calcutta, Sept. 30; and Alexandria, Oct. 19.

The latest accounts from Rangoon extend to the 10th of September. The only important intelligence that they contain is an order of General Godwin for an immediate advance on Prome. It runs as follows:—

The Major-General commanding proposes to resume active operations about the 18th instant. The following regiments will be held in readiness for embarkation on service at that date:—Her Majesty's 18th Royal Irish, her Majesty's 80th Regiment, and the 35th Regiment Madras Native Infantry, under the command of Brigadier Reynolds, C.B.

These corps, with a detachment of Madras Artillery, and a field battery, and two 8-inch howitzers, and a detail of Engineers and Sappers, will form the first division. [These follow instructions as to baggage, doolies, &c., and directing weak and sickly men to be left here under the charge of an officer, who is also to look after the surplus baggage.]

In about three weeks after the departure of the first division, the Major-General hopes to embark a second one, consisting of her Majesty's 51st Light Infantry, 40th Regiment Native Infantry, and 9th Regiment Madras Native Infantry, under the command of Brigadier Elliott, K.H.; with a detachment of Bengal Artillery and a light field battery.

The General accompanies the first division to Prome, and, after seeing it firmly established, returns for the second. The Burmese troops have burned down Prome, and retired to a strong stockaded position eight or ten miles distant. The last we heard that they can only muster about 7000 of all arms, and are almost destitute of artillery.

Upwards of 20,000 tons of rice, on its way to the upper country, have been intercepted, and sent down the Irrawady to Rangoon by our steam flotilla, which completely commands the river to some distance above Prome. Throughout the upper province rice has borne a famine price for many weeks, and the greatest distress is said to prevail in consequence. It is reported that, owing to the want of food, the Burmese levies are losing by desertion as fast as collected.

The letters of all the officers with General Godwin's force fully confirm the high estimate Major Snodgrass has expressed of the capabilities of the country and its inhabitants. The organs of the civil, military, and mercantile classes of the Indian community urge the expediency of annexation with a degree of unparalleled unanimity. It is believed that the annexation of at least the district south of the Aing pass would consolidate our territory, strengthen our frontier, increase the revenue of British India, and open new and extensive markets to our manufactures.

The *Friend of India* gives the following account of the feeling of the natives in our favour:—

The friendly feeling of the inhabitants towards us continues to manifest itself in a variety of ways. Some of the steamers got aground, through ignorance of the navigation of the river, and the villagers hastened down to assist in getting them afloat. The people appear, indeed, to have settled it as an incontrovertible fact in their own minds, that we shall never again resign them to the tender mercies of their oppressors, but continue to retain possession of their country. According to the accounts now received, they attribute it to the signal interposition of a higher power in our favour, and for their deliverance, that the river has risen big, as the present year that it has been known to rise for many years, in order to enable our steamers to navigate the creeks and the rivers without any obstruction.

The north-west frontier, the Nizam's dominions, and the King of Oude's territories, are in the usual disturbed state.

THE FRENCH PRESIDENT AT THE THEATRE FRANCAIS.

On Friday evening (last week) the President paid what should be termed a "State" visit to the Theatre Français. The preparations customary on such occasions were made: the street was sanded over, and the *façade* of the theatre was splendidly illuminated. The *foyer* displayed its new decorations, and the walls were hung with portraits of the eminent actors of the old Comédie Français, and complete the series of the busts of the poets.

Accompanied by the usual escort of Cuirassiers, the Prince arrived in an open carriage drawn by four horses, followed by another of the same kind, and containing the officers of his household. The President was cheered on entering his box, which was hung in front with crimson velvet drapery, embroidered with bees in gold. The interior of the theatre displayed a profusion of tri-coloured flags in clusters. The President, who was dressed in black, and wore the cordon of the Legion of Honour, was conducted to his box by the director, M. Houssaye. He was accompanied by most of the Ministers. On his entrance the performance was suspended for a few moments, but on a sign from the President, it proceeded. All the passages in the piece "Cinna, ou la Clemence d'Auguste," which seemed to have reference to present circumstances, were warmly applauded. As soon as the tragedy was over, the curtain drew up, and Rachel, clad in white, her waist encircled with laurel, as the *Muse of History*, appeared, with the entire strength of the house drawn up behind her. At the bottom of the stage was a flag, with an imperial crown surmounting the words, "Napoleon III." Rachel advanced, and bowing to the President's box, recited, as Rachel only can recite, an ode, of which the following is the opening:

L'EMPIRE C'EST LA PAIX.

I.

Je suis la Muse de l'Histoire,
Mon livre est de marore ou d'airain;
Quand vient l'heure de la victoire,
Je prend mon stylet souverain.

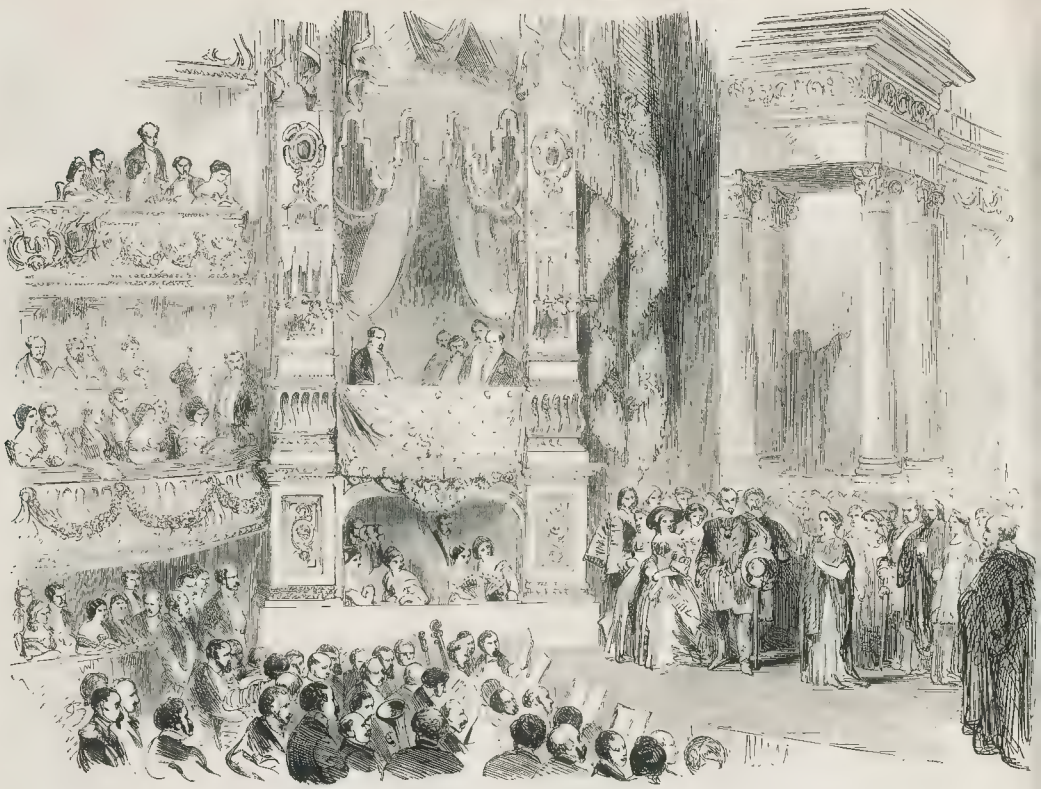
Phidias, l'autre Prométhée,
Qui des hommes a fait des dieux,
Et mon Parthénon m'a pu prêter
Pieds sur terre et front dans les cieux.

Un nouveau cycle recommence,
Le vieux monde s'est révélé;
Déjà, dans l'horizon immense,
L [illegible] sélénite.

[illegible]

L'Empire c'est la paix [illegible]
Quand bien qu'il ait de du N[illegible]
Ce n'est débordant par [illegible] ropes
L'Aigle a déployé pour [illegible]

After the recital of the ode, which was of mediocre merit, the name of



MDLLE. RACHEL RECITING THE ODE BEFORE THE PRESIDENT, AT THE THEATRE FRANCAIS.

the author was called for, and M. Arsène Houssaye, the director of the theatre, was declared to be the man. The President soon after withdrew.

PARIS FASHIONS FOR WINTER.

ALTHOUGH somewhat later in the season than usual, we are now enabled to Sketch the Fashions for the approaching winter.

Bonnets have undergone but little change; the fronts are still broad, and fit tightly to the head; they are not so close to the forehead as heretofore; and the front is turned up a little at the extremities, to make room for the ornaments underneath, which thus makes them more becoming round the face; the underneath, &c., is much trimmed either with flowers or ribbons. The most fashionable colours are black, blue, green, and a new shade—the *light red currant*—which, mingled with black, makes a very Light bonnet, and rather dressy. Lace and velvet will be the materials most used for bonnets. The season is not yet sufficiently advanced for plain velvet bonnets: at present they are worn with lace puffs alternate with velvet twists. Even last year, during the severe frosts, very few bonnets were seen entirely covered with velvet; and this year the taste appears to be the same. Besides lace, we have already announced *guipure*: what was then but a novelty is now quite a fashion: it mingles well with velvet and other head ornaments; even blond disappears before it. Flowers are still worn: for winter, they are made of velvet, skilfully intermixed with rich ribbon.

For some time it was feared that short waists would be re-assumed; let us hope it is but a panic in the world of fashion; at all events, if they are re-admitted in Paris, we hope that the English ladies will show their good taste by not submitting to this absurd and ridiculous fashion.

Dresses with points are still generally worn. The other evening, however, we beheld at the theatre a charming *cantatrice*, in a dress with a belt, and perfectly round; the petticoat was in flat folds, and the front of the body and sides were gathered; but from behind, the skirt seemed rather narrow and bare, somewhat reminding one of the Empire dresses.

The *basques*, or skirts, have been changed for dents, shorter or by a row of lace or fringe. The sleeves are now trimmed up to the shoulder-seam, but towards the top this trimming is rather short.

The new stuffs for dresses are very thick watered silks, with velvet ornaments woven in the stuff itself, and disposed in different ways, such as stripes, like the Albanaise dresses; or in wreaths or groups of flowers. Nothing can be richer than these magnificent stuffs. Very thick taffeta silks, with rich patterns, called *brochés*, are also worn.

The in-door *pardessus* are much in favour: they can be made as elegant as possible by embroidering them with braid. Black is preferred when the *pardessus* is not made of the same stuff as the dress. The novelty of the year consists in keeping the *pardessus* closed up to the top, and square at the end. Last year it was open, and rounded at the bottom.

Mantelets are not yet decided on. Talmas are still in existence, but are worn a little shorter, either plain or trimmed, with a wide ribbon put on flat, either of watered silk or velvet patterns. Some are also trimmed with two rows of lace in front, but nothing behind.

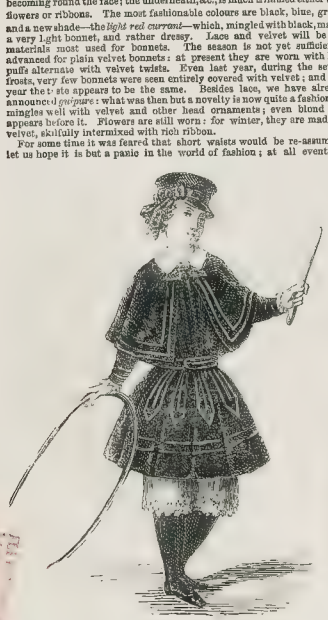
We have omitted to mention an innovation, which consists in making the bodies of dresses of the same stuff as the dress, very open, and in the aperture a piece of velvet, which forms a high dress, closed in the middle by a single row of buttons of metal or diamond.

THE ILLUSTRATIONS.

Taffeta dress, with flounces, and plaid trimming woven with the stuff. The mantelet has a small collar, imitating a hood.

Girl.—Blue taffeta dress, with flounces; trousers with English embroidery; white taffeta bonnet.

Boy.—Black velvet dress, with black cloth gaiters; for winter, a cloth talma, cut round, and reaching a little above the knee only.



PARIS FASHIONS FOR WINTER.

DON PEDRO II., EMPEROR OF BRAZIL.

At a time when the attention of Europe is directed to the important events in the River Plate, a brief notice of the most powerful state in South America, and of the Prince who rules it, may not be uninteresting to our readers, the majority of whom may not be aware of its unobtrusive but gradual and irresistible approach to take its place among the leading powers of both hemispheres. This country is the Empire of Brazil, bordering the ocean for nine hundred leagues, and traversed in every direction by the finest rivers in the world; a country rich and fertile in the highest degree, with a mild and healthy climate, and already making vigorous steps towards the splendid future reserved for it by Providence. Its coasts extend from 2 deg. of north latitude to the 31 deg. of south latitude, and 500 leagues inland. Its soil produces almost without culture all the plants of Europe, Asia, and Africa. Its climate is milder than that of Naples or Cadiz. It includes among its towns Rio de Janeiro, the capital of the Empire, one of the most commercial ports and the most magnificent harbour in the world, with a population of near 300,000 souls; Bahia, with 140,000; Pernambuco, with 80,00; Maranham, with 35,000; Para, Santos, Porto Allegre, Ceara, Maceyo, Rio Grande, Espirito Santo, Cottinçuiba Campos, and many other populous, active, and flourishing towns. Its annual income is at present £5,000,000, which has been regularly augmenting one-tenth at least every year since the accession of the present Emperor; and, when one considers the number of expenses which are decentralised, and that each province has its own particular budget, it is not astonishing that with such a revenue, Brazil pays all its internal expenses, the dividends of its debts, and has a surplus revenue of from £300,000 to £400,000.

The Constitution of Brazil, given to it by Don Pedro I., is admirably adapted to the feelings, and customs, and requirements of the inhabitants of this vast Empire, and has continued fresh and vigorous in the mild exercise of its laws over the Brazilian nation. It is a singular fact that in the midst of all the Republican institutions of South America, the Brazilian alone has flourished great and free; while the others have fallen to tyrants, or crumbled to pieces from the defective elements which composed them. And, curiously enough, this Constitution of a new empire has at this time only two Constitutions in the Christian world more ancient than itself—the English and the Federal Constitution of the United States.

The present Emperor of Brazil is the son of Don Pedro I., of Braganza and Bourbon, and of the Archduchess of Austria, Leopoldina. He is the legitimate descendant of the three great Royal houses in Europe—Braganza, Bourbon, and Hapsbourg; and was proclaimed, upon the abdication of his father, at the age of five years and some months. A Council of Regency composed of three members, took the reins of Government, which shortly passed into the hands of one Regent; and so truly had statesmen of every political shade the good of their country and the rights of their Prince at heart, that during this critical period, from 1831 to 1835, when France, Italy, Spain, Portugal, Poland, Greece, and all American states were in a general state of disturbance, and had lost their institutions, or modified them violently, Brazil preserved its Constitution with only some modifications legally established in its municipal or provincial councils.

The education of the young Emperor was perfect. In every branch of learning that it was thought necessary to teach him, he made remarkable progress. His two sisters—Donna Januaria, married, in 1844, to the Count of Aquila, brother of the King of Naples; and Donna Francisca, married, in 1843, to the Prince de Joinville—shared with equal ardour in his high and varied studies.

In July, 1840, the Emperor Don Pedro II. was (although he had not yet attained his majority) declared by the Chambers to be of age, and assumed the sovereign power when not quite fifteen. His Imperial Majesty was united in marriage, on the 30th of May, 1843, to the Princess Theresa-Christina-Maria, sister of the King of Naples, eminently distinguished for her accomplishments, her patronage of the fine arts, unbounded generosity, and amiable disposition. From the above union were born two princes, who died young, and two princesses, the eldest of whom Christina Leopoldina—bears the title of Imperial Princess, as heir-presumptive to the Crown.

DON PEDRO II., EMPEROR OF BRAZIL.—(FROM A PAINTING BY ALMEIDA.)

Don Pedro is tall and stout; he has large blue eyes, fair and abundant hair and beard—a northern type which seems to have come from fair Germany rather than the warm latitudes of the brown Rio. He is an expert horseman, and delights in athletic exercises. When at Rio, he is constantly in public. The summer season he passes at his palace of Petropolis, a German colony of his creation, eight leagues from Rio, an eagle's eyrie elevated on high mountains overlooking the bay—a rich and picturesque country, inferior in nothing to the finest parts of Switzerland. The Emperor receives twice a week his subjects and foreigners who desire to be presented to him. He speaks to every one, and listens with the courteous manners of a gentleman, and converses with each in his own language; writing and speaking fluently English, French, German, Spanish, and Italian. Strongly attached to literature, the young Prince presides assiduously at the sittings of the Historical and Geographical Institute of Rio, and his interest is never more vividly excited than when he hears the reading of historical or literary papers concerning the origin of his empire. His private library, enriched by more than 20,000 volumes, has been selected with exquisite taste and discernment. He devotes himself to the encouragement of all industrial enterprises by encouraging public works, and perfecting the navigation of the rivers, natural canals by which commerce will carry life into the most retired parts of the interior. But the great work of Don Pedro II., a work at once of humanity and policy, and which will be his indelible title of glory in the eyes of Europe, is that of having openly attacked the national prejudice of the necessity of black slaves, and having overcome it. Thanks to him, thanks to his Ministers and the Legislative Chambers of Rio, the traffic is henceforth definitively suppressed in Brazil; for the people have understood and accepted the Imperial policy, which has for motto—"No more traffic in slaves — European colonisation!" Such is at this moment the cry of all Brazil. The agriculturists themselves, until lately insensible to the anathemas of philanthropy, have opened their eyes, and join the Government and the Chambers in demanding the deliverance of the country from the living leprosy of the slave traffic. It was imperative that it should be so. It was indispensable that the country should associate itself with the measures of the Government; for up to this time the laws that were made were not carried out, and the people, who thought them prejudicial to their interests, did not scruple to infringe them. The policy of the Emperor and the Brazilian Chambers was very simple and sensible. It was not sufficient to decree the suppression of the traffic, but it was necessary to open up to the agriculturists new ways and means, by which they should, within a longer or shorter delay, dispense with black labourers. The Legislature, to provide for this necessity, took proper means to attract European colonists to Brazil. Two very effective laws to this end were passed in 1850: one, concerning the concession of territorial properties; the other, settling the mode of colonisation. Several attempts tried on this new basis have been attended with the happiest results. Little colonies have sprung up, especially in the south of the empire, and are in a flourishing

THE REGIMENT OF LOODIANAH (GORDON'S SIKHS) ON THEIR VOYAGE DOWN THE GOOMTEE FROM LUCKNOW, TO EMBARK AT CALCUTTA FOR RANGOON.—(SEE NEXT PAGE.)

condition. The planters and landed proprietors throughout the empire give a decided preference to free over slave labour, as experience teaches them that it is infinitely to their advantage.

To form a correct judgment of the young Emperor, to appreciate his good sense, prudence, sagacity, and firmness, one must study the history of Brazil for the last ten years. No one, even of his most eminent counsellors, is more thoroughly informed on all the secrets of policy in international questions, as well as in questions of party created by the constitutional mechanism. No one has studied more or knows better the workings of the Administration in its minutest details. It must be observed, *en passant*, to the honour of the Prince, Don Pedro I., who endowed the empire with the constitution, that these operations are simplified as much as possible by an intelligent system of decentralisation, which leaves to provincial governors and councils the arrangement of affairs not possessing a general interest.

Kings seldom write for the public; and it is difficult to form an opinion of them by their literary productions: however, Brazilians of every rank speak of their Sovereign with the enthusiasm of legitimate pride. From diplomatic papers published at Buenos Ayres on the subject of the quarrel of Brazil with Rosas, some scraps of a conversation of the Emperor with General Guido, Minister Plenipotentiary of Buenos Ayres, will tend to confirm the prepossessions entertained of this Prince. The General himself has given his Government an account of the interview; and certainly no one can suspect him of flattery towards his august interlocutor. Face to face with a diplomatist of the most consummate ability, this young Prince does not for one instant lose ground. He sums up the question with wonderful clearness, and with the adroitness of an experienced statesman. Finally, he recommends a peaceable settlement, allowing it to be understood that he will have recourse to the sword only at the last extremity.

THE BURMESE WAR.—CONVEYANCE OF TROOPS.

We have been favoured by a Correspondent, an officer of the Regiment of Loodianah, Gordon's Sikhs, with the original Sketch of the Illustration engraved upon the preceding page; accompanied by a letter, whence the following is an extract:—"The war in Burmah must, of course, excite considerable interest in England; and this will not fail to be increased by the fact that a regiment of Sikhs—men who have fought so gallantly against us in two campaigns—are for the first time to be employed in foreign service. I send you, therefore, a Sketch of our voyage down the Gountee, *en route* to Burmah. It was the original intention to march us from Lucknow to Cawnpore, and there to embark; but, in consequence of the great number of boats required on the Ganges for the transit of regiments, we embarked from Lucknow. The boats are flat-bottomed, and occupy from 1000 to 2000 maunds tonnage, and with crews of from 7 to 14 men. Whenever the nature of the banks admit, they are tracked by a portion of the crew (*see Illustration*), in the same way that horses draw barges on a canal in England. Each boat carries, on an average, 25 Sikhs; and generally half the number are seated on platforms of bamboo, over the thatch of the boat. Our fleet consists of 49 of these boats." On their arrival at Calcutta the troops were to embark for Rangoon.

The intelligence subsequently received from Burmah, will be found at page 347.

CALENDAR FOR THE WEEK.

Sunday, October 31.—21st Sunday after Trinity. John Evelyn born, 1620.
Monday, November 1.—All Saints. Sir Matthew Hale born, 1609.
Tuesday, 2.—All Souls. Michaelmas Term begins
Wednesday, 3.—Sir Samuel Romilly died, 1818.
Thursday, 4.—King William III. landed at Torbay, 1688.
Friday, 5.—Gunpowder Plot discovered, 1605.
Saturday, 6. St. Leonard. Princess Charlotte died, 1817.

BOSTON and MIDLAND COUNTIES RAILWAY
and DOCK COMPANY.—Provisionally Registered
CAPITAL, £300,000 in 30,000 Shares of £10 each.
DEPOSIT, £1 per Share

Supported by Landowners on, and in the Neighbourhood of the proposed line, and by the Mercantile, Trading, and other Interests of Boston and Nottingham, and the intermediate districts; including, amongst others—

LANDOWNERS

The Most Noble the Marquis of Bristol.
The Right Honourable the Lord of Wiseblech and Nottingham, Baverhalme Priory, Sleaford
The Right Honourable the Earl of Dysart, Buckminster Hall, Grantham
Sir Gilbert Heathcote, Bart., M.P., Normanton Park, Stamford
Sir Claude Edward Scott, Bart., Cavendish-square, London

Charles Allix, Esq., Willoughby, Grantham
Anthony Wm. Hall, Esq., Hall-Souther
J. M. Tunnard, Esq., Grosvenor Terrace, Hoddesdon, Lewis
Herbert Ingram, Esq., 15, Hertford-street, May-fair, London; and Nicknamesworth, Herts
H. W. Hartley, Esq., Boston
John Cooper, Esq., Sleaford
Caswell Ingall, Esq., Swinesbead
William Wareham, Esq., Sleaford
J. W. Dudding, Esq., Howell, Sleaford
Richard Gideon, Esq., Kirkington
John Tomlinson, Esq., Helpringham, Sleaford

BOARD OF MANAGEMENT.

The Hon. Fitzbardinge Henry Berkeley, 1, Victoria-square, Belgravia
John Sadler, Esq., M.P., Chairman of the London and County Bank, Lombard-street, London
Herbert Ingram, Esq., 15, Hertford-street, Mayfair, London; and Nicknamesworth, Herts
T. S. Cooke, Esq., Merchant, Boston
Henry Tootal, Esq., London
Edward Newbull, Esq., Oak-place, Sleaford
W. Gardner Thompson, Esq., 83, Gloucester-terrace, Hyde-park, London
Edward Monk, Esq., The Park, Nottingham
John Rawson, Esq., Magistrate and Banker, Boston
Thomas Wise, Esq., Magistrate and Banker, Boston
C. P. Money, Esq., Hanover Cottage, Regent's-park
Alexander Brogden, Esq., Manchester

BANKERS

Messrs. Masterman and Co., Messrs. Robarts, Curtis, and Co.; Messrs. Barclays; and the London and County Bank, London.
Messrs. Garfit, Claypons, and Garfit; Messrs. Goe and Co.; and the Stamford, Spalding, and Boston Joint Stock Banking Company, Boston.

ENGINEERS.—George Parker Bidder, Esq.; George R. Stephenson, Esq.; William Lewin, Esq.

SURVEYOR.—Mr. Robert Reynolds

SOLICITORS

Messrs. Staniland and Chapman, Boston; and Messrs. Venables, Gray's-inn, London.

SECRETARY.—Mr. Robert Stainbank.

OFFICES OF THE COMPANY, 26, Parliament-buildings, Gray's-inn, London.

The link in the chain of direct Railway communication between Nottingham and Boston being still unsupplied, the important Manufacturing Towns of Birmingham, Derby, and Nottingham, as also the Potteries, are yet compelled to avail themselves of the Ports of Grimsby or Hull for their means of Export and Import to and from the Baltic and Dutch Ports.

The Port of Boston being nearer to the Dutch ports than either Grimsby or Hull, and the latter port being each about thirty miles more distant from Nottingham (the key of the Midland districts from the east) than the port of Boston, it follows that, for many articles of export and import, this latter place, as a shipping port, has over the other two an indisputable advantage, while at the same time the new line of communication proposed to be provided would also give to those ports additional access to the midland districts.

At the time vessels of 400 tons burthen (class of vessel usually employed in the Baltic trade) discharge their cargoes at the quays in Boston; and the navigation offers facilities for great improvement, which, if found expedient to carry out, would enable vessels of considerably larger tonnage to enter the port.

By means of dock accommodation also great advantages will be afforded to the shipping of the port.

To secure the important results which will unquestionably arise by connecting the ports of Boston with the Ambergate Railway at or near to Grantham, from whence an uninterrupted line of railway now extends to Nottingham and all the midland districts of the kingdom, this undertaking is submitted to the favourable consideration of the public.

The cost of construction will, perhaps, be less than that of any Railway yet formed; and the formation of the Docks, from the favourable nature of the site selected, will also be constructed at comparatively small cost.

The anticipated Traffic from the Line and Revenue from the Docks promises to pay a considerable per centage to the Shareholders.

An act for carrying out the undertaking will be applied for in the next session; and, if obtained, the works will be completed within a very short period.

Application for shares to be made in the subjoined form, either to the Company's Solicitors or Secretary, or to Messrs. Robarts, Curtis, and Co., 10, Angel-court, Throgmorton-street, London; Mr. Thomas Roberts, Manchester; Messrs. Neilson, Liverpool; Mr. Pearson, Birmingham; and Pearson Fest, Nottingham.

FORM OF APPLICATION FOR SHARES.

TO THE DIRECTORS OF THE BOSTON AND MIDLAND COUNTIES RAILWAY AND DOCK COMPANY.

Gentlemen, I request you to allot me ..... Shares in the above Company, and I hereby undertake to accept the same or any less number that may be allotted to me and to pay the sum of £1 per Share thereon, and execute the Deed of Settlement of the Company when required so to do.

Name .....
Profession or Occupation .....
Address .....
Date .....

*** Applications must be accompanied by a Letter of Credit for £1 per Share on the Provisional Number to be allotted.

Early in November will be published, price 1s.,

THE ILLUSTRATED LONDON ALMANACK
FOR 1853,

being the Ninth annual issue of this publication; with splendid ENGRAVINGS, by B. FOSTER, Esq., and other eminent Artists. The Astronomical Department by JAMES GLAISHER, Esq., F.R.S. and of the Royal Observatory, Greenwich. The Notes of the Month by Mrs. ALARIC A. WATTS.

London: Published by WILLIAM LITTLE, 198, Strand.

*** Country orders supplied for cash only.

TO CORRESPONDENTS.

N—As the Great Duke is to be laid by England's immortal naval hero, it may be interesting to state that Nelson was eighteenth, in a direct descent from King Edward I., Wellington being, as shown in the Royal Pedigree we published some weeks since, nineteenth in a direct line from the same monarch

A Constant Reader.—The prefix of the husband's Christian name is not required to be used by the wife of the existing head of a family. The mother should be distinguished as Mrs ——, senior

J P makes enquiry about the family and property of a wealthy gentleman named Dudley, who died intestate in England so recently as twenty-five years ago, possessed of great riches. Can any of our readers aid our correspondent's researches?

S A M—Edward, present Viscount Exmouth, was born 14th February, 1811, and is consequently in his 42d year. His seat is Canonteign, Chud eigh, Devon.

A Subscriber.—The patronage rests in the Lords-Lieutenant

A and C—The daughter of a Baronet has precedence of the wife of a general officer; and all the sons of a Baronet take higher precedency rank than a General

P O—Lord Charles Wellesley has two sons and two daughters living. To the elder daughter her Majesty stood sponsor in person

Walson—A Correspondent informs us that he has heard the Duke of Wellington often mention that his right name was "Wesley," and that as such he signed his Indian despatches. In old records, the name occurs as De Wesley, de Wesley, and de Wellsly, but never as Wellesley

A M W corrects an inaccuracy in the tabular Royal pedigree of the Duke. Mary Queen of Scots was daughter of James V. by his *second* wife, Mary of Lorraine.

A Subscriber—Archdale's old "Irish Peerage" gives Sussex as the place of residence from which the first De Wesley migrated to Ireland; and he further states that the original ancestor was of Saxon origin. The only descent from this ancient family which the Colleys (who assumed their name) had, was through the marriage of Sir Henry Colley, of Castle Carbery, with Catharine, daughter of Lord Chancellor Cusack, who was maternally descended from the Wellsys. The Duke of Wellington's grandfather succeeded to the Wesley estates by the will of Garret Wesley, Esq., of Dangan

R C—Wellington, in *Somersetshire*, is the town from which the Duke took his title. There is a monument erected to him on the top of a hill there; we shall in a week or two engrave the town and memorial

W W R—An index to the "Visitation" was compiled by the late indefatigable Sir Harris Nicolas, and an admirable guide to the families contained in them, has been published by Mr. Sims, of the British Museum. See the "Patrician," vol. i, page 112

I T H—The price of the "General Armory" is, we believe, £1 5s. The arms of Lord Ward are—Chequy or and az, a bend ermine. *Crests:* 1st. Out of a ducal coronet or, a lion's head az. 2d. A lion sejant guardant az. *Supporters:* Two angels ppr. hair and wings or, under robes sanguine, uppermost az. *Motto:* Comme je fus.

Z—The arms of King, of Leicestershire, are—Sa. on a chev. arg. three escallops of the field. *Crest:* A lion passant erm. ducally crowned or.

Mercury.—Arms of Holdex: Sa, a fesse between two chev. erm., between the fesse and upper chev. a covered cup or. *Crest:* A pheasant ppr.

THE ILLUSTRATED LONDON NEWS.

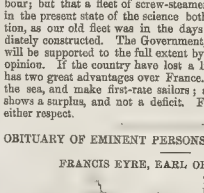
LONDON, SATURDAY, OCTOBER 30, 1852.

Louis Napoleon is not crowned Emperor; but a war, in which he will be a principal party, seems impending. The state of Turkey creates uneasiness; and a financial crisis, aggravated by intestine feuds between the ultra-Conservative and anti-European party on the one side, and the progressive and pro-European party on the other, threatens, unless great care and prudence be displayed by the Sultan and his advisers, as well as by the great European powers, to hasten a consummation most earnestly to be deprecated. The French Government is largely implicated in these events. But it is not simply the financial crisis—although that is grave enough—but the extraordinary assumption of title and power in Syria by the French President, or Emperor—whichever it may be right to call him—which has raised a storm in the East. Louis Napoleon, it appears, is not only to be Emperor of the French, but he is to be King of Algeria, and "Protector of the Sanctuaries." The last title is one that at its first mention excited surprise, if not ridicule. It was not, however, selected without consideration, or without a purpose. Emperor of the French he may certainly be, if the French people please to make him so; and King of Algeria he may be by the same authority, whether Europe consent or refuse to recognise him; but the Protectorship of the Sanctuaries, or Holy Places of Judea, is an office, real or nominal, the assumption of which requires something more than the consent of the French nation. It was not without an object that the President revived at Marseilles the threat of Louis XIV., that the Mediterranean should sooner or later be converted into a French lake; and the Royalty of Algeria, and the Protectorate of the Sanctuaries are both directly connected with the realization of that idea. One of the favourite cities of the early French Sovereigns—dating, according to some authorities, not long after the period when Louis VII. joined the second Crusade in the Holy Land—was this very title of Protector of the Holy Places. The Bourbon Princes, up to the time of Louis XVI., and subsequently of Louis XVIII., assumed the title, although practically it was of no more real value than that of King of France, which we find appended to the other dignities of our James I., in the dedication to the authorised translation of the Scriptures. The title was not, however, in late years, assumed without the authority of the Sultan, the actual Sovereign of Judea, and was affirmed by treaty between France and the Ottoman Porte, in 1604. Louis Napoleon, as will be seen from an article in our foreign intelligence, which we have extracted from our contemporary the *Times*, has revived the question and the title in a manner that imperils the tranquility of Eastern Europe. Pending that question, the financial storm has burst; and late accounts—that, however, require confirmation—inform us that the repudiation of the loan contracted by the Turkish Government has led to insurrection, if not to revolution, in Constantinople. But the manner in which France is mixed up with these events is sufficient to excite alarm. In the close councils of the extraordinary person who rules that country, no one knows what schemes of aggrandisement and aggression may be silently fermenting. Ambitious himself in the highest degree, and with an equally ambitious army at his absolute control and disposal; restlessly desirous of doing something to justify his own unparalleled, but as yet baseless, good fortune; and supreme ruler of a proud and sensitive people, that appear to love dominion and glory better than moderate and wise liberty, we may be assured that he will take any safe opportunity that presents itself for feeding them with the pabulum they require, and for giving them the sound of military triumph instead of the bread of constitutional freedom and solid progress. He told the Bordelais—and through them the world—that his Empire "meant peace;" but he added the remarkable qualification—that peace was only possible when France was satisfied. France—whatever her President or her Emperor may assert or, for a temporary purpose, affect to believe—is not satisfied with her present position in Europe. She may talk of peace; but she craves more power, more influence, and more territory; and the very name of Emperor—which the French have, in a manner, compelled Louis Napoleon to revive—possesses its principal, if not its only charm, because it is synonymous, in the minds of the bulk of the population, with ideas of conquest and aggrandizement, derived from the career of the first of the Bonapartes.

It has been already stated, on more than one occasion, that not only has the real state of the French navy been purposely concealed, and even falsified in official documents, but that an extraordinary degree of activity has prevailed in the dockyards and arsenals for the last four years. The information that is permitted to reach the public, through the usual channels, fixes the number of seamen and marines ready for active service in the ports of France at 27,000, and the number of ships of war, as we stated last week, at 328, including 102 armed steam-vessels. Many of the latter are first-rate ships, fitted with screw propellers, that they may be more available in warlike evolutions than vessels built on the old plan, with cumbrous and unmanageable paddles. And what—as Englishmen may be permitted under such circumstances to inquire, without being justly liable to be condemned as alarmists, or Anti-Gallicans—is the condition of the British navy? As far as the complement of men is concerned, it falls short of that of France by at least a thousand. But this is a small matter, and easy of remedy; for Great Britain possesses a mercantile reserve, from which, in case of danger and necessity, she could at a few days' notice draw supplies that would double or treble our effective force. But, as regards armed steamships, the case is different. A want in this department is not so readily supplied; although, even in this respect, our first-rate passenger and traffic steam-boats could be made largely available. We therefore rejoice that the attention of the British Government has been aroused to the necessity of keeping pace with the progress of science; that we are no longer to rely upon the old and effete system of ship-building pursued in our Dockyards; that paddle steamers, and those of no great power and efficacy, are not to be the only defences we have, in case of quarrel with a maritime neighbour; but that a fleet of screw-steamers, as powerful and effective in the present state of the science both of warfare and of navigation, as our old fleet was in the days of Nelson, is to be immediately constructed. The Government, in taking this resolution, will be supported to the full extent by Parliament, and by public opinion. If the country have lost a little time in the business, it has two great advantages over France. It has a people that love the sea, and make first-rate sailors; and it has a revenue that shows a surplus, and not a deficit. France is not so fortunate in either respect.

OBITUARY OF EMINENT PERSONS RECENTLY DECEASED.

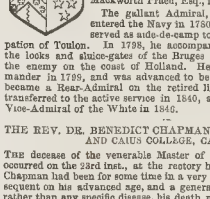
FRANCIS EYRE, EARL OF NEWBURGH.



This nobleman died on the 15th inst., at his seat, Hassop Hall, Derbyshire. His Lordship had completed his 88th year. He was younger son of Francis Eyre, Esq., who succeeded his cousin, Anthony James, 5th Earl, and assumed the additional surname of Radcliffe Livingstone; and grandson of Francis Eyre, Esq., of Hassop, by Mary, his wife, daughter of Charles Radcliffe, styled Earl of Derwentwater. The wife of the ill-fated Charles Radcliffe, who was beheaded in 1746, was Charlotte-Maria, Countess of Newburgh, in her own right, and thus comes to the present family of Eyre their right to that Earldom.

Lord Newburgh never having married, his eldest sister, Lady Mary Dorothea Leslie, of Balquhain, becomes his heir.

VICE-ADMIRAL BULKELEY MACKWORTH PRAED.



The death of Vice-Admiral Praed occurred on the 6th instant, at Acton Castle, Cornwall, at the advanced age of 82. The family of Praed was seated at Trevethow, in Cornwall, *temp.* James I. A fine monument in Lelant Church records the decease of William Praed, of Trevethow, in 1620. The last male heir, John Praed, Esq., M.P., in 1708, left an only daughter and heir, Martha, who married William Mackworth, third son of Sir Humphrey Mackworth, Knight, and had three sons—1, Humphrey Mackworth Praed, ancestor of the London branch; 2, Bulkeley Mackworth Praed, who died *s. p.*; and 3, William Mackworth Praed, father of Mr. Serjeant Praed.

The gallant Admiral, whose death we announce, entered the Navy in 1780, on board the *Canada*, and served as aide-de-camp to Lord Hood, during the occupation of Toulon. In 1798, he accompanied the expedition against the locks and dykes of Bruges Canal, and was captured by the enemy on the coast of Holland. He received the rank of Commander in 1799, and was advanced to be Post Captain in 1802. He became a Rear-Admiral on the retired list 10th January, 1837, was transferred to the active service in 1840, and promoted to the grade of Vice-Admiral of the White in 1846.

THE REV. DR. BENEDICT CHAPMAN, MASTER OF GONVILLE AND CAIUS COLLEGE, CAMBRIDGE.

The decease of the venerable Master of Gonville and Caius College occurred on the 23rd inst., at the rectory house, Ashdon, Essex. Dr. Chapman had been for some time in a very delicate state of health, consequent on his advanced age, and a general decay of nature, to which, rather than any specific disease, his death may be attributed. He was born in 1769—the memorable year to which the Duke of Wellington and Napoleon Bonaparte owed their nativity. In 1792 he took, as sixth Wrangler, his B.A. degree; and shortly after was elected Fellow, and, next, Tutor of his College. In 1813 he was presented to the living of Ashdon, Essex, which is in the gift of the Society of Caius; and, in 1839, he was chosen to succeed the late Dr. Davy in the Mastership. Dr. Chapman never served as Vice-Chancellor of the University: at the period of his election, his advanced age entitled him to claim exemption from the arduous, though honourable duties of the office.

The reverend gentleman has died unmarried. He was much beloved by all classes in College; and was distinguished for his unostentatious charity.

HENRY WHITELOCK TORRENS, ESQ., OF THE BENGAL CIVIL SERVICE.

The Civil Service in India has lost, in Mr. Torrens, one of its ablest servants. In addition to the high distinction he had gained in his official career, he was well known in the literary world as a profound and accomplished scholar, and a writer of considerable ability, as shown in his valuable work "on the Sources and Uses of Military Literature and History." His original and brilliant novel, "Madame de Mulgnet," has scarcely obtained so extended a reputation as it merits.

At the period of his deeply-lamented death, which took place at Calcutta, on the 16th of last August, Mr. Torrens, Sheriff, Esq., of Willesborough, Kent, have duly proved the same in the Prerogative Court of Canterbury. The personalty alone was sworn to as not exceeding £260 000; the probate duty thereon was £3000, but the legacy duty will be but £20, bequests to the Royal Family not being subject to duty. The will runs thus:—"This is the last will and testament of me, John Camden Neild, of Lincoln's-inn and Chelsea, Esq. I desire to be buried in Battersea Churchyard, in a vault, near to my beloved father. I bequeath to each of my executors £100 for their trouble; and subject to the payment of these legacies, my funeral expenses, and my debts (which are of a very trifling description), I give, devise, and bequeath, all my real and all my personal estate, which at the time of my decease I may be entitled to, either in law or equity, to her Most Excellent Majesty Queen Victoria, for her own sole use, and to her heirs, executors, and administrators; and I pray her Majesty to be most graciously pleased to accept the same. Dated 16th August, 1848. (Signed) J. Camden Neild. Witnesses—Charles Shadwell, solicitor, Gray's-inn, and George Stratton, his clerk." The will is in the testator's own hand, and written clearly, and on one side of foolscap.

EPITOME OF NEWS.—FOREIGN AND DOMESTIC.

Her Majesty has been pleased to grant a yearly pension of £75 to Dr. Charles Richardson, "in consideration of his services to literature as the author of a new Dictionary of the English Language."

The Lord Chancellor has directed an inquiry into a series of frauds an extensive nature upon the "fee fund" of the suitors of the Court of Chancery, which are alleged to have been perpetrated.

Mr. Keate, now Civil Commissioner of the Seychelles Islands, is promoted to the governorship of Grenada, West Indies.

The people of Liverpool are about to erect a suitable monument in the "good old town," as a mark of their esteem for the character and gratitude for the splendid military services of his Grace the late Duke of Wellington.

Last week a man named James Holland, the occupant of the ground floor of a house in John-street, Stepney, while in the act of cleaving a piece of wood which originally formed the trunk of an aged tree in the garden, was astonished by discovering a collection of gold and silver coins of the reign of Elizabeth and James, as well as a silver crucifix.

The *San Francisco* has arrived from Sydney, whence she sailed on the 27th of June, with about 13,000 oz of gold, valued at £52,000.

It is stated that Bristol will be the port selected for the departure and arrival of the immense ocean steamers which an important metropolitan company is about to build for the Australian, the American, and, it may be, the East Indian trade.

The directors of the Royal West India Mail Steam Packet-Company are about to erect a monument in the cemetery at Southampton, to the memory of Captain Symons and the officers and crew of the ill-fated *Amazon* steam ship, in record to the services many of them rendered on the lamentable occasion of the burning of the ship, who, by remaining by her until the last moment in the hope of saving her, perished in the conflagration.

John Strong, a porter employed at the new station of the Great Northern Railway, at King's-cross, slipped off the platform on Saturday last, when several of the carriages of the three o'clock train, which was then approaching, passed over him. Many of his limbs were broken, and he died in about an hour and a half afterwards.

From returns recently published, it appears that 29,000,000 persons in America consume annually more than two yards of our linens per head: while 288,000,000 persons in Europe take but one-thirty-eighth part of a yard per head.

The *Nouvelliste* of Hamburg states that the expedition of the Russian Geographical Society to Kamschatka, for which MM. Golatchkow have given 30,000 roubles, and Count Heiden 27,000, is about to be carried into execution.

The daughter of General Rosas, ex-Dictator of Buenos Ayres, was married to a Spanish gentleman, at the Roman Catholic chapel in Southampton, on Saturday last.

The Envoy from Pitcairn's Island, now in this country, married Sarah Christian, granddaughter of Fletcher Christian, of the *Bounty*, who planned and carried into effect the memorable mutiny in the South Sea.

The people of the Orkney Iron Works, Dunfermline, have received a second rise of wages, with the promise in a short time of a third. The damask weavers of Dunfermline and suburbs are also to receive an allowance of a penny per spindle.

The tea-market was animated last week, but the deliveries were about the same in London, amounting to 543,000 lb.

The accounts of the general trade of the country during the past week show for the most part a tendency to increased activity, notwithstanding the advanced prices lately reached by many of the most important articles of raw material.

The *Weser Zeitung* publishes an appeal on behalf of Neesvon Esenbeck, one of the most learned German naturalists, who, having lost his professorship in consequence of his political activity in 1848 and 1849, is now living in the most extreme destitution and misery in Breslau.

A man named Jenkins, recently arrived from California, was last week robbed of £650 in £10 notes, and a draft on Rothschild's banking-house for £400, by some sharpers.

The Vernon Gallery at Marlborough-house, Pall mall, which has been closed to the public for the last six weeks, was re-opened on Monday, and may be visited on the first four days of every week, between the hours of ten and five. The Gallery of Practical Art, at Marlborough-house, is in addition to the Vernon Collection, free to the public on Mondays and Tuesdays.

The Rev. J. H. Pollen, Fellow of Merton College, and late Senior Proctor of the University of Oxford, has been received into the Roman Catholic Church by the Archbishop of Rouen.

Telegraphic communication is now complete between Florence, Leghorn, Lucca, Pisa, and Sienna, and between these places and England, by means of the submarine telegraph. The telegraph, for a distance of 105 leagues, is now completed in Switzerland, uniting Geneva, Zurich, Berne, and other towns.

On Sunday morning, between three and four o'clock, two houses, which were in the course of erection, in Sutherland-place, Bayswater, suddenly fell with a tremendous crash. Fortunately no personal injury was sustained.

A young woman in one of the Dunfermline factories last week wove 10 cloths in 13½ hours. The web had 50 shots to the inch, 3375 to the cloth, 33,750 to the whole 10. This sum, divided by 13½ hours, gives a quotient of 2500 shots flung through the shade every hour, together with the same number of tramplings of the treddles, and the same number of strokes of the lay in the same space of time—making, in all, 100,000 independent operations in the 13½ hours.

Among the passengers by the last Peninsular packet was a civil engineer, who is gone to Spain to lay out a railroad between Cadiz and Seville.

A man named Mitchell, a celebrated rat-catcher in the county of Kent, died a few days ago in great agony, in consequence of a bite he received from one of the ferrets employed by him in his extraordinary profession.

In the *North British Advertiser* of last Saturday there are advertisements for nearly eighty situations vacant, whilst only seven persons advertise for situations! This is the reverse of the rule which has held good for many years, where the candidates for situations far exceed the vacancies advertised.

The *Kreuz Zeitung*, the organ of the cavalier party, publishes in its impression of the 23d a notice, stating, that as all its printers and writers will be engaged in performing their duty as electors on that day, subscribers must not be disappointed if no newspaper is produced next morning.

The Imperial and Royal Commissioner of the district of Milan has issued the following circular:—The Emperor wishes that all the officers of the state should shave off their beards from the corner of the mouth downwards, so as to leave the chin and lower part of the face uncovered.

By a return lately laid before the Commissioners of Sewers, it appears there are 230 cows kept in various sheds in the City of London.

The barque *Liona*, of Dundee, consigned to Mr. James Clark, has arrived from Melbourne, with a cargo of wool, and has also on freight 34,813 ounces of gold, valued at £140,000.

Sir Charles Fox, partner in the house of Fox, Henderson, and Co., of London, arrived at Copenhagen on the 21st, for the purpose of making a contract for the construction of the railway from Rothschild to Korsoer.

By a return made of the salaries, wages, and allowances of the Post-office department in Ireland and Scotland, it appears that the total number of persons employed by the Post-office in Ireland on the 5th of January, 1851, was 1927, receiving £73,111; and that in Scotland the number of persons was 2190, receiving £75,909.

Besides a large amount of gold coin, more than three million pieces of silver coin, to the value of upwards of £160,000, have been issued from the Mint to the public, through the Bank, since the commencement of July, and the most energetic measures are being adopted at the Mint to increase the supply.

Her Majesty's ships of war, in going up or down Channel, continue to drop their colours half-mast high on passing Dover Castle, and the same ceremony is also observed in passing Walmer Castle, in respect to the memory of the late Duke.

An official communication has been received, by the proper authorities of Southampton, from the Emigration Commissioners, appointing the port an emigration depôt.

Mr. Anstey, the late M.P. for Youghal, was entertained on Tuesday by the working-men, electors, and non-electors of Bedford, at a dinner and tea-party, and was presented on the occasion with a piece of plate, consisting of a cup, cover, and salver, together with a purse containing ten sovereigns, as a token of their respect, and "as a small return for the services" he rendered to them.

The Rev. R. Boyle, delivered an interesting lecture, on Wednesday evening, at the Hanover-square Rooms. The subject was "The Elementary Sounds of the English Language; with remarks upon, and elocutionary readings from, the first act of 'Hamlet.'"

POSTSCRIPT.

THE DUKE OF WELLINGTON'S FUNERAL.

The following is the Official Programme, as it has been arranged, for the Procession to St. Paul's Cathedral:—

Six Battalions of Infantry of 600 men each.
Eight Squadrons of Cavalry.
A Detachment of Foot Artillery with 17 guns.
A Detachment of Horse Artillery.
A Detachment of Horse Artillery, with —— Nine-pounder Batteries.
Marshalmen on Foot.
Messenger of the College of Arms on Foot.
Eight Conductors with staves on Foot.
Chelsea Pensioners, in number eighty-three.
Trumpets and Kettle Drums
Two Pursuivants of Arms in a Mourning Coach.
The Standard of Pennon, carried by a Lieut.-Colonel, supported by two Captains in the Army on Horseback.
Servants of the Deceased.
Trumpets.
Lieutenant and Deputy-Lieutenant of the Tower.
Deputations from Public Bodies.
Merchant Tailors' Company.
East India Company.
Corporation of the Trinity House.
Barons and Officers of the Cinque Ports, with the
Lieutenant and Deputy-Lieutenant of Dover Castle.
Captains of Deal, Walmer, Sandgate, and Sandown Castles.
Board of Ordnance, and Ordnance Department.
Delegation from the University of Oxford
Deputation from the Common Council of the City of London
[After the Procession has passed through Temple Bar, will fall in here.]
Trumpets
Two Pursuivants of Arms in a Mourning Coach.
The Guidon,
Carried by a Lieutenant-Colonel, supported by two Captains in the Army on Horseback.
Physicians to the deceased, Chaplain of the Tower, Chaplain General of the Forces, } In a Mourning Coach.
Attendants on the Body at the Lying in State.
High Sheriff of the County of Southampton.
Sheriffs of London.
Aldermen and Recorder of London; a Deputation consisting of Three Carriages.
Companions of the Order of the Bath, represented by three.
Knights Commanders of the Order of the Bath, represented by three.
Knights Grand Cross of the Order of the Bath, represented by three.
Trumpets.
Herald
Banner of Wellesley,
Carried by a Lieut.-Col., supported by two Captains in the Army on Horseback.
Officers of the late Duke's Household with Staves.
The Lords Justices of Appeal.
Master of the Rolls.
Chief Baron of the Exchequer.
Chief Justice of the Common Pleas.
Lord Chief Justice of the Queen's Bench.
Chancellor of the Duchy of Lancaster.
Chancellor of the Exchequer.
The Right Hon. the Secretary-at-War.
The Right Hon. the Judge Advocate-General.
Secretaries of State under the degree of a Baron.
Speaker of the House of Commons, if not with the House.
Barons.
Bishops.
Viscounts.
Earls.
Marquises.
Dukes.
First Lord Commissioner of her Majesty's Treasury.
Earl Marshal of England.
Lord Great Chamberlain.
Lord Privy Seal.
Lord President of the Council.
Lord Archbishop of York.
Lord High Chancellor.
Lord Archbishop of Canterbury.
[At Temple Bar, the Lord Mayor, carrying the City Sword, will join in the procession.]
His Royal Highness PRINCE ALBERT, attended by
On Horseback. Assistant Quartermaster-General. Assistant Adjutant-General. On Horseback.
Aide-de-Camp to the deceased. Aide-de-Camp to the deceased.
Deputy Quarter-master-General. Deputy Adjutant-General.
Quartermaster-General. Adjutant-General.
Four Trumpets.
Sergeant Trumpeter.
Herald.
The Great Banner,
Carried by a Colonel, supported by two Lieutenant-Colonels on Horseback.
[Here on reaching the Cathedral, the Dignitaries of the Church, meeting the Body at the West Door, fall in]
The Spurs borne by York Herald.
The Helmet and Crest borne by Richmond Herald.
The Sword and Target borne by Lancaster Herald.
The Surcoat borne by Chester Herald.
Norroy King-of-Arms.
Foreign Princes.
Austria.
Hanover.
Netherlands.
Prussia.
Portugal.
Russia.
Spain.
The Baton of the Deceased, as Field Marshal, borne on a Black Velvet Cushion in a Mourning Coach, by the Marquis of Anglesey.
Gentleman Usher. } The Coronet of the Deceased borne on a Black Velvet Cushion in a Mourning Coach, by Clarenceux King of Arms. } Gentleman Usher.

THE BODY,

Five Buccaneers borne by Officers in the Army on Horseback. Covered with a Velvet Pall Five Standards borne by Officers in the Army on Horseback.
Adorned with Escutcheons,
in a
Funeral Car drawn by Eight Horses.
The Pall Bearers, Eight General Officers, in Mourning Coaches.
Gentleman Usher. Garter Principal King of Arms, In a Mourning Coach. Gentleman Usher.
THE CHIEF MOURNER,
Supporter. In a long Mourning Cloak, his Train borne by Assistants to the Chief Mourner. Supporter.
Kinsmen.
Relations and Friends of the Deceased.
The late Duke's Horse led by a Groom.
Officers and Men from every Regiment in the Service; with Bands, representing every such Regiment.
Carriages of the Queen and of the Royal Family.
Troops to close the Procession.

It is now definitively settled that the body will lie in State at Chelsea Hospital for five days, and be conveyed thence to the Horse Guards on the night previous to the funeral.

The *Morning Herald* (Ministerial Organ) has the following:—"We hear that the address will be moved in the House of Lords by the Marquis of Bath, and will be seconded by the Earl of Donoughmore."

LICENSED VICTUALLERS' ASSOCIATION.—On Thursday, at twelve o'clock, the foundation-stone of the Liverpool Licensed Victualler's Association, Asylum, and Schools, intended to be erected in the West Derby-road, was laid by Thomas Littledale, Esq., Mayor of Liverpool, in presence of a large and respectable concourse of persons

THE CRYSTAL PALACE.—MEETING OF THE CLERGY.—An aggregate meeting of the clergy of the diocese of London took place on Thursday at Sion College, "to consider in what manner the clergy may best express their opinion upon the encouragement which will be given to increased desecration of the Sabbath, if the Crystal Palace, at Sydenham, shall be opened as a place of public recreation on the Lord's day." There was a numerous attendance. Archdeacon Hale presided. After a prolonged discussion resolutions, strongly condemnatory of the opening of the New Crystal Palace at Sydenham on Sundays, were unanimously adopted.

SHIPWRECKS AND LOSS OF LIFE.—On Wednesday morning, during a strong easterly gale, just as the *Napoleon* brig was crossing the bar outside the harbour of Sunderland, she was caught by an immense wave, and dashed with great violence upon the south pier. In a few minutes her masts went by the board, and she immediately sank. The crew, six or seven in number, were all drowned, with the exception of one man, who, having got upon one of the masts, was saved by a coble. Soon afterwards, the *Melancholie*, a French lugger, in attempting to enter the harbour, met with a similar fate, and broke in two. The whole of the crew, consisting of six men, perished. While the *Zukah* was coming up the harbour, about the same time, the mate, who was at the helm, was washed overboard by an immense sea and drowned. Considerable damage has been done to several other vessels along the coast, by the terrific storm which prevailed during the whole of Wednesday night.

DESTRUCTION OF THE SOUTH LONDON CHARTIST HALL.—On Friday (yesterday) morning, about half-past two o'clock, a fire broke out in Webber-street, Blackfriars-road, which resulted in the total destruction of the lecture and assembly-rooms, well known as the South London Chartist Hall.

LATEST FOREIGN NEWS.

FRANCE.

The *Moniteur* of Thursday confirms the news of the refusal of the Turkish Government to ratify the Loan. It is announced that an indemnity will be paid by the Turkish Government to the holders of stock. It appears that the intelligence respecting an insurrection in Constantinople is not correct. No movement has taken place, nor has the French Ambassador demanded his passports. Prince Callimaki, the Turkish Minister, is recalled, and Yely Pasha appointed as his successor as Turkish Ambassador to Paris.

On Thursday evening the Prince President was to go in state to the Opera. The demand for tickets was almost beyond precedent. Any money was offered for them, and many who happened to be fortunate holders of them resold them at a most exorbitant rate. A report was in circulation that Abd-el-Kader (said to be in Paris) intended to be present, which increased the desire of numerous persons to obtain admission.

BELGIUM.

The journals concur in stating that M. H. de Brouckere has declined to re-undertake the task of forming a new Ministry.

The Chamber of Representatives on Wednesday elected its questors. The election fell upon MM. de Baillet-Latour and de Ségus—one of the Liberal, and the other of the Clerical party.

TUSCANY.

A private letter, dated the 22d October, says:—"Yesterday, the Prime Minister, Baldasseroni, was stabbed at four o'clock P.M., in Via De Martelli, going past the Cathedral at his usual hour. It was on the spot where Madier was cut down. The wound is in the side, and would have been fatal but for a thick paletot. The assassin has not been taken, but the police are on his track. The Grand Duke is at Elba."

The accounts from Germany state that four more publications had been seized for giving too free an expression to their opinions upon the political and commercial questions of the day.

Letters from Stockholm to the 20th state that the King of Sweden had been attacked with rheumatic fever, but was getting better.

THE COURT.

WINDSOR CASTLE.

There has been nothing to disturb the ordinary quiet routine of Court life during the past week. The Royal hospitality has been dispensed to a select circle almost daily, and the Queen and the Prince Consort have taken their accustomed walking and driving exercise when the state of the weather allowed.

On Sunday the Queen and Prince, the Princess Royal, and the Princess Alice, with the Duchess of Kent, and the Prince and Princess of Hohenlohe-Langenburg, attended Divine service in the Castle: the Rev. Lord Wriothesley Russell officiated.

On Monday the Queen and the Prince Consort walked in the Home Park. The Prince and Princess of Hohenlohe-Langenburg, with the Princess Adelaide and Prince Hermann of Hohenlohe, visited the Duchess of Kent, at Frogmore House, on the same day, and remained to luncheon with her Royal Highness. In the evening the Earl of Malmesbury arrived at the Castle, on a visit to the Queen

On Tuesday the Duke de Terceira, on a special mission from Portugal, to attend the funeral of the Duke of Wellington, arrived at the Castle on a visit. The Duke was accompanied by the Portuguese Minister, Count Larradio.

On Wednesday his Royal Highness Prince Albert, accompanied by Prince Hermann of Hohenlohe, the Duke of Terceira, and the Earl of Malmesbury, went out shooting, attended by Colonel the Hon. Charles Grey and Lieut.-Colonel F. H. Seymour.

On Thursday the Prince Consort, accompanied by Prince Hermann, of Hohenlohe, went out hunting, attended by Colonel F. H. Seymour.

The Earl of Morton has relieved Lord Byron as the Lord in Waiting, and Captain the Hon. Mortimer West has succeeded Lieutenant-Colonel the Hon. N. Hood as Groom in Waiting to her Majesty.

The Countess of Desart has succeeded Viscountess Canning as Lady in Waiting, and the Hon. Flora Macdonald has relieved the Hon. Matilda Paget as Maid of Honour in attendance on the Queen.

The ex-Queen of the French, accompanied by the Prince de Joinville, has returned to Claremont, from a brief tour on the Continent.

A private letter from Rome, of the 19th instant, mentions the arrival of the Hereditary Grand Duke and Duchess of Saxe-Weimar in that city, and the splendid *goute* given them the day before by the Prince and Princess Doria.

MARRIAGE IN HIGH LIFE.—The fine church of St. Martin-in-the-Fields was on Tuesday the scene of unusual gaiety—the occasion being the marriage of the beautiful Lady Hermione St. Maur, daughter of Lady Seymour (the Queen of Beauty at the Eglinton Tournament), and grand-daughter of the Duke of Somerset, with Capt. F. Graham, eldest son of the Right Hon Sir Jas. Graham, of Netherby. The marriage ceremony was performed by the Rev. W. Graham, brother of Sir James Graham, and uncle of the bridegroom. Lord and Lady Seymour gave a magnificent breakfast in Spring Gardens, after the marriage, and early in the afternoon the young couple left town for Maiden Bradley, one of the Duke of Somerset's seats, in Wiltshire, where they will pass the honeymoon.

GRAND STATE FUNERAL OF THE DUKE OF BAYLEN.

THE translation of the ashes of the Duke of Baylen from San Isidro to the Church of the Atocha took place with a solemnity really Royal, on the 1st instant, at Madrid. The streets from the palace to San Isidro were lined with troops, and the new uniform of Guardias de la Reina, the uniform of which is copied from our Horse Guards (Blue), formed their sovereign's escort.

The four corners of the pall were held by Marshal Concha, Admiral Ulloa, and the Lieutenants-General Villalumpa and Lobera. The King, Don Francisco d'Assis, and his father, Don Francisco de Paulo, were on the occasion the grand uniform of Captain-General. The bearing of the population of Madrid on the passage of the *cortège* was most dignified. The most profound silence was observed. The people uncovered their heads respectfully in pre ence of the mortal remains of the old warrior.

Upon the next page we have Engraved this magnificent procession, from a Sketch by our Artist at Madrid, showing the *cortège* passing the street called "Carrera de St. Geronimo," leading to the Prado, on its way to the Church of Atocha.

The King, supported on his right by the Minister of the Crown, and on his left by his father, Don Francisco de Asis, headed the procession, which was followed by the whole nobility, grandees of Spain, high dignitaries and public functionaries of the Church, both civil and military: the whole of the Ecclesiastical Courts and clergy of the capital, the troops of the garrison, and an immense concourse of people. The funeral of a Sovereign could not have been more grand or imposing. To give the reader an idea of the immense length of the procession, it will be enough to say that it lasted three hours in passing before the Carrera. On its arrival at the church of Atocha, a salute of twenty-one guns was fired, as usual.

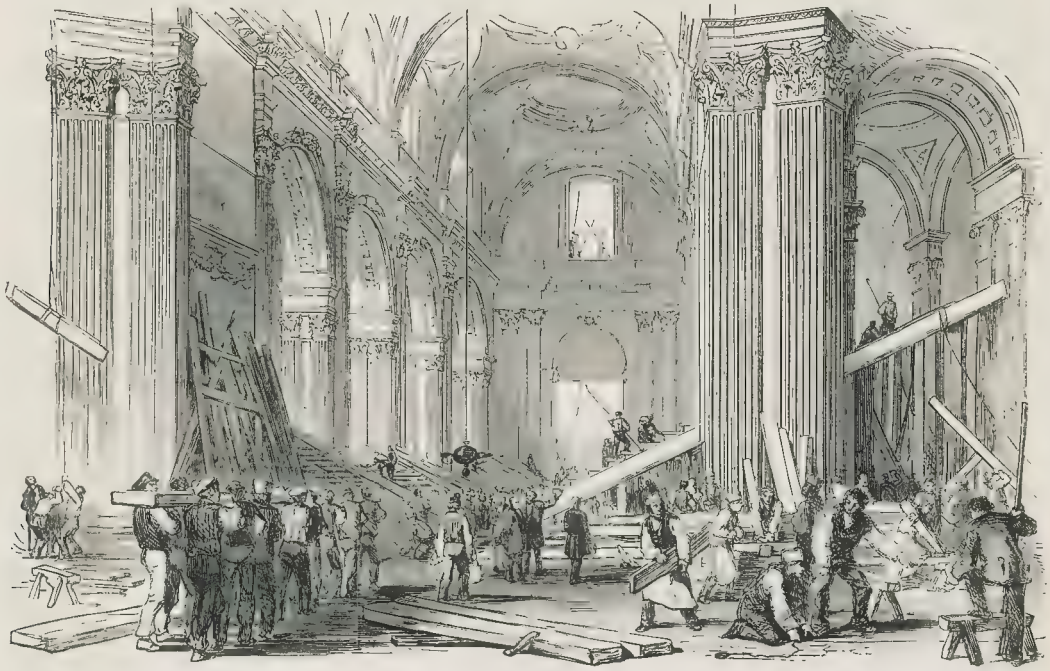
The Pantheon at the church of Atocha, where the corpse of the Duke is now lying, was first declared to be secured to the Crown, and to be used exclusively for Royal personages and such others as the Sovereign might designate, by a Royal *cedula* issued by Philip III. in 1602, date from the Palace at Valladolid. It was reproduced by Philip IV. in 1648, and again by Ferdinand VII. in 1817. Here the remains of the venerable Duke were deposited by the side of the grave of his master, whence they will hereafter be removed to a splendid mausoleum, to be erected at the expense of the Spanish nation.

In the centre of the foreground of our Illustration is shown the splendid funeral car, wherein the remains were placed: at the head is the figure of a guardian angel; and at the four corners of the c...y are vases of burning incense. The car is drawn by horses covered with black drapery.

The Illustration is from a Sketch by R. Bumpass, Esq., of Madrid, from whose pencil, also, is the characteristic Portrait of the Duke of Baylen, engraved in the ILLUSTRATED LONDON NEWS for Oct. 16.

THE STATE FUNERAL PROCESSION OF CASTANOS, DUKE OF BAYLEN, IN MADRID.—(SEE PRECEDING PAGE.)

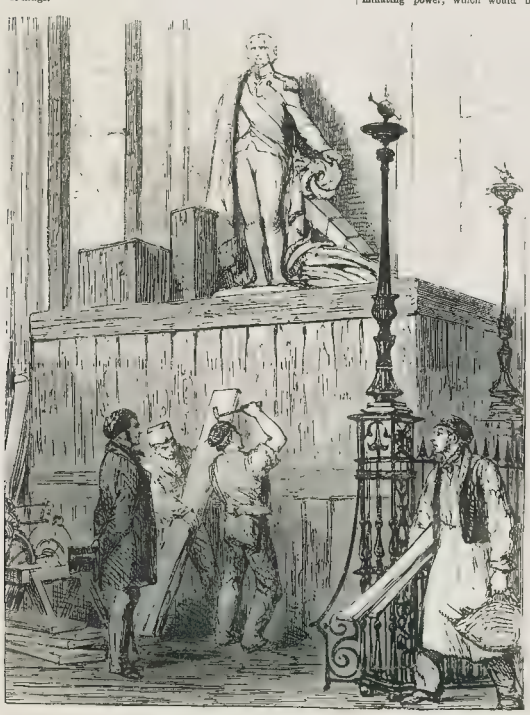
PREPARATIONS FOR THE FUNERAL OF THE DUKE OF WELLINGTON, IN ST. PAUL'S CATHEDRAL.



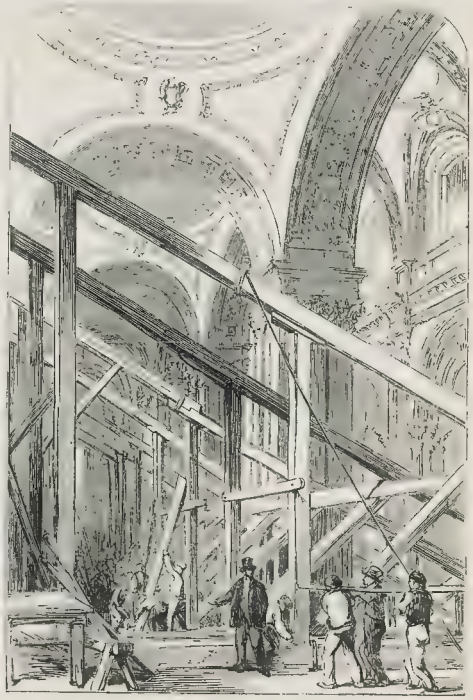
VIEW IN THE NAVE—LOOKING WEST.

WHAT the Crystal Palace in Hyde Park was, in the summer of 1851, our sublime Protestant Cathedral has now become. It is the spot of English ground around which English sympathies are becoming concentred. For a few days longer that lonely moonlit chamber by the sea-shore, which has been consecrated for all time by the death of our Great Captain, will divide with St. Paul's the interest which attaches to his memory. But soon beneath that mighty dome will be congregated a vast crowd of England's greatest, noblest, and most distinguished sons; and then will the great metropolitan cathedral be invested with a new grace, and rear its lofty head with a prouder sublimity. The ashes of the truly great dignify the grandest mausoleum; and the towering, glittering fane which is not hallowed by memories of genius, virtue, and heroism, is wanting in its greatest charm, although it be the sepulchre of kings.

It is time we saw St. Paul's under new aspects of beauty and grandeur. We are all familiar with its cold, gloomy, and somewhat austere interior, seen through the gloomy medium of London smoke and fog. But the superb richness of the massive cornices, shields, chaplets, and festoons, which form its internal decorations, have never yet been admired as they deserved to be. Let the reader imagine the effects of a brilliant beading of gas running in one uninterrupted line of living light over the magnificent cornice of the nave, and under the Whispering Gallery! It is by no means intended to illuminate the building by a flood of light, which shall emulate the "garish eye of day." But the vastness of the building, the funeral habiliments of the audience, and the black cloth with which the seats will be hung, will absorb so much light, that an amount of illuminating power, which would be dazzling and overpowering at Guildhall, will be requisite to impart an air of solemn and chastened magnificence suited to the scene. It is not proposed at present to suspend any light in the centre of the mighty dome; and artists and connoisseurs are already beginning to ask whether a line of light around the whispering-gallery, or a great central light, will best show the stupendous proportions of the edifice. At Lord Nelson's funeral, the probable necessity of lighting up the building having only occurred to the architect at the last moment, an octagonal lantern frame was formed by nailing some planks together; and this frame, being studded over with lamps, was suspended under the centre of the dome. The gradations of light and shade, and the sombre of the deep perspective hereby shown in the nave, choir, and side aisles, roused the dullest fancy, and excited a feeling of artistic enthusiasm among the greater portion of the distinguished assemblage



THE NELSON MONUMENT.



VIEW IN THE SOUTH AISLE.

At the present moment this great temple, usually so silent and deserted, presents a most striking spectacle. The nave is transformed into one vast carpenter's shop. Hundreds of artisans are hurrying about within a hive of bees. Here half a hundred men are staggering under the weight of some long and heavy balk of timber. Everywhere carpenters are plying the hammer and the saw in busy and ceaseless activity. No words can describe the deafening reverberation kept up within the dome by the din of a hundred hammers, and the music of as many saws. Now and then even this vast thunder gives place to the strokes of some mighty Titanic mall employed to drive in the larger bolts, which, like Aaron's rod, swallows up all the rest. Grander than all is the fall of some large balk of timber from its fellows, the concussion of which slowly reverberates through the edifice, gathering strength as it proceeds, until it resounds like the astounding discharge of a whole park of heavy ordnance. As evening wears on a row of blazing jets of gas along the entire length of the nave, temporarily placed to light the workmen, bring out with startling distinctness the ornaments and decorations of cornices, chaplets, and devices; and, so to speak, completely uproot the old shadows of the place. The side aisle of the nave, which cost Wren some bitter tears, for they were no part of his original plan, are an almost impassable forest of deal planks and vertical timbers supporting the seats overhead.

The works are being executed by Messrs. Wm. Cubitt and Co., of Gray's-inn-road, under the direction, however, of the First Commissioner of Woods and Works, and according to the designs of the architect of that public department. The seats will accommodate about 10,000 persons, but, including the military, it is expected that as many as 20,000 persons will be assembled in the edifice The monuments of the distinguished men who are interred in the Cathedral, are inclosed in deal boxes to protect them from injury—the statues of Nelson and Cornwallis alone excepted. The lower portion of these two monuments are covered in, and will be hung with black drapery. The musical arrangements will be on a scale of great completeness The choir of St. Paul's will be of course assisted by the choirs of Westminster Abbey and the Chapel Royal, and will be further reinforced by choristers selected from the cathedrals in the provinces. It is also rumoured that some of the best voices from the Royal Academy of Music and Exeter-hall will be invited to take part in the musical services.

The arrangements contemplated in connexion with the funeral of the Great Duke have undergone a slight modification. It was intended that, on the night previous to the interment, the body should be removed to the Horse-Guards, and that the funeral procession should be formed at that point. In this the precedent of Nelson's interment was followed, for his remains rested, on the night preceding the burial, at the Admiralty. But it has been justly considered that Nelson had no town-house like the Duke, and that Apsley House, therefore, is the proper point at which to form the procession. In accordance with this view, the body will remain at Chelsea Hospital till the morning of the 18th, and when it reaches Apsley House those of whom the *cortège* is to consist will fall into their right places. The military escort of the funeral will consist of detachments from every regiment in the service—of three battalions of the Guards, 84 pensioners (representing the age to which the Duke had attained), the 33d Foot, the Rifle Brigade, six squadrons of cavalry, and 17 guns. The artillery will head the procession, but it is intended that the firing should be at the Tower, which is sufficiently near for the purpose, and is the more appropriate from the Duke having been Constable. Deputations of 100 men, with their proper complements of officers, will also attend on the occasion from each of the five continental armies in which the Duke held the rank of Field-Marshal; and thus, in addition to a complete representation of the military force of this country, there will be assembled on the occasion types of those of Russia, Austria, Prussia, Spain, and Portugal. It is not believed that more than 40 equipages will be required in the procession, which will be mainly conducted on foot.

At Chelsea Hospital the preparations for the approaching ceremonial are in rapid process of execution. The hall of the hospital has been completely cleared, preliminary to the arrangements for the lying in state; and the additional facilities required for ingress and egress are also being provided for.

The arrangements for lighting St. Paul's Cathedral with gas are in active preparation. The City of London Gas Company have laid down three large "mains," the largest of which will be appropriated entirely to the supply of the whispering gallery, the nave, and the burners along the cornices; and as no other lights will be attached, there can be no flickering or unsteadiness caused by variation of pressure. The number of lights, it is calculated, will be from 5000 to 7000. The arrangements in this department have been entrusted to Mr. Stephens, the general superintendent of the company's works.

The following appeared in a Supplement to the *London Gazette* of Tuesday:—

Earl Marshal's Office, 1, Parliament-street, Oct. 27, 1852.

All Peeresses desirous of being present in St. Paul's Cathedral, at the solemnity of the Funeral of Field-Marshal the Duke of Wellington, are hereby requested to send in their names and addresses to me, on or before the 6th day of November next (after which no application can be received), in order that places may be reserved for them respectively; and it is hereby ordered that, be sides a ticket for each Peeress individually, one other ticket for a lady, to accompany such Peeress, will be issued. NORFOLK, Earl Marshal.

THE FUNERAL CAR.

The preparation of a suitable design for the Car upon which to convey the remains of the Duke of Wellington from Chelsea Hospital to St. Paul's Cathedral, was in the first instance entrusted to Messrs. Banting, of St. James's-street, the undertakers to the Royal household. In consequence of the imperfect instructions given by the authorities as to what was really required, several very effective designs, prepared at great labour and cost, were, after much consideration, pronounced unsuited to the purpose for which they were required. In this difficulty, at the suggestion of the Lord Chamberlain, the new Governmental Department of Practical Art, recently organised at Marlborough House, undertook the preparation of a design, which, on submission to his Royal Highness Prince Albert, has been finally approved, and is now in course of construction. It has been determined that the Car shall not be of merely temporary character, but that it shall be built of the strongest and most permanent materials, with a view to its preservation as an interesting national heir-loom. In the design the object has been to preserve as much as possible the military character suitable to the occasion, and, at the same time, to secure the twofold effect of simplicity and grandeur. For these purposes the materials used will all be of what they appear. There will be no tinsel or gimcrack work introduced. The frame, or stage, which will be 27 feet long by 11 feet wide, and the axle-trees supporting the Carriage, are to be cast in solid bronze. This portion of the Car will be remarkable as a specimen of severity of style, and it will also afford an instance of the remarkable rapidity with which the most elaborate works can be manufactured in the gigantic establishments of Sheffield and Birmingham. Each of the wheels have been called in to assist. Above the framework there will be a pediment seven feet wide, the sides of which will present a mass of gilt carving, enriched with circular panels, within which the names of the Duke's principal victories will be emblazoned. In the centre, and at each end of the pediment, will be shown trophies of arms and flags. These trophies will consist of real arms and war banners, selected and arranged in chronological order by Mr. Stacy, of the Tower Armoury. The side trophies will be surmounted by the ducal coronet, the whole being considerably above the pediment. Upon the pediment will be erected a bier, six feet high and four feet wide, which will be covered by a pall of black velvet richly powdered with silver ornaments, the Duke's crest and motto alternating with two Field-Marshal's bâtons crossed and entwined with laurel. The fringe of the pall will be of silver, six inches deep. Upon the bier will rest the coffin, covered with crimson velvet. The hat and sword of the deceased Duke will be placed upon the lid. From the framework will rise, at each of the four corners, massive halberts, which are to form the support of a gorgeous canopy of rich Indian kinkhol, hanging over and partly covering the coffin. This rich material, which is of a very beautiful pattern, and worked in silver and gold, is now in process of manufacture in Spitalfields. It is a most magnificent fabric, and will form an agreeable contrast to the sombre character of the rest of the funereal paraphernalia, at the same time preserving the military character of the pageant. The Car will be 17 feet high; the utmost limit having been taken, in order to increase its magnitude, and consequent effect. As the arch of Temple-bar is barely 17 feet 6 inches, the bier is so arranged that, by the application of some ingenious machinery the whole can be lowered a couple of feet while passing under the bar, and raised again after entering the City.

The extraordinary size and massive character of the Car will necessitate its being drawn by twelve horses, which will be arranged three a-breast. These animals will be magnificently caparisoned in rich black velvet, powdered with silver, as upon the bier.

The bier will be arranged on a turn-table, so that upon the arrival of the Car at the west front of St. Paul's Cathedral, it can be readily moved round. The platform now erecting in front of the west door will be so arranged, by the application of machinery, that a portion of it will descend to a level with the bottom of the bier, which will then move on to the stage, gradually rise, and pass into the sacred edifice.

The interior of St. Paul's is rapidly approaching completion. Thursday night Lord John Manners, as the head of the Woods and Forests, paid a visit to the Cathedral, and was afforded an opportunity of witnessing the effect of the gas illumination. His Lordship expressed himself much gratified Mr. Pluckneit, a member of the firm of Messrs. W. Cubitt and Company, was in attendance to conduct his Lordship over the works.

It is now finally settled that the remains of the Duke will not be deposited in the Audience-Chamber at the Horse Guards. The funereal procession will leave Chelsea College at an early hour on the morning of the funeral, under charge of the Lord Chamberlain's officers, and proceed as far as Apsley House. The mourners and military will have been previously marshalled in Hyde Park; and, on the arrival of the Car, they will fall into their proper places in the procession. There will be at least forty mourning coaches, all covered with black velvet, and powdered with silver ornaments.

THE FUNERAL OF THE DUKE OF WELLINGTON.—A Correspondent states:—Chance has thrown me in the way of several old soldiers, wearing with laudable pride their Waterloo medals, and I find there is a positive clamour that no arrangements appear to be making for them to have the honour and gratification of following the remains of their late distinguished Commander to their last home. Surely the man who has an enemy left, for who so proudly bear a prominent part in the funeral procession as those men who added so materially in gaining the memorable battle of Waterloo? I cannot but think that if these wishes were made known to her most gracious Majesty, through the medium of the public press, she would at once enter into the feelings of these veterans, and add additional lustre to her bright and glorious name as "Queen of her people," by giving an order for the parties in question to attend at the obsequies of the lamented Duke, of course at the national expense. I do not wish my name to be attached to this letter, but I shall feel gratified by your inserting it in your valuable paper. I shall be delighted if my suggestion is approved of.

LAW AND POLICE INTELLIGENCE.

CHARGE AGAINST THE REV. J. BERRINGTON.—This gentleman, who was remanded to Brighton by the metropolitan magistrates last week, underwent a lengthened examination before the Brighton bench of magistrates, on the charge of obtaining money under false pretences from Miss Richardson, formerly residing with the family of Sir Charles Habin, of Denton Hall, on pretence of going to Australia on a religious mission. After hearing the case at great length, the prisoner was remanded for further evidence, preparatory to his committal for trial.

COURT OF CHANCERY.—The new orders, which are to regulate the alterations in the practice of the Court of Chancery consequent upon the act for the abolition of the masters' offices, were issued on Monday. They relate to summonses, appearances, orders, and directions, proceedings in chambers, deposit of deeds, power of judge, commencement of orders, and interpretation.

ABOLITION OF CHANCERY OFFICES.—This week, several chancery offices ceased to exist. Amongst those abolished are the offices of the patentee of the subpœna-office, the deputy of the patentee of the subpœna-office, the clerk of affidavits, the assistant-clerk of affidavits, the second assistant-clerk of affidavits, the clerk of reports, the door-keeper of the Court of Chancery, and the office of usher of the Court of Chancery.

SALARIES OF THE JUDGES.—From the 10th inst. the salaries of the Judges of the Court of Chancery, by one of the new acts, are to be paid out of the Consolidated Fund, instead of out of the suitors' fund.

THE FATAL DUEL NEAR WINDSOR.

The Coroner's inquest on the body of M. Frederick Cournet, killed in a duel near Englefield-green, on the 19th instant, was resumed on Tuesday before C J. Woods, Esq., at the Barley Mow Inn. The inquiry created the most intense interest. Amongst those present were General Sir John Cathcart, Bart.; Colonel Salwey, Captain Seymour, J. Bonnell, Esq.; W. Newnham, Esq.; T. R. Ware, Esq.; J. Dobinson, Esq., county magistrates, and many others of the neighbouring gentry. The four prisoners taken in custody—MM. Barthélémy and De Mornay (friends of the survivor), and MM. Baronnet and Adain (friends of the deceased)—had been lodged in Horsemonger-lane gaol. In addition to the evidence given on the first day, the following was elicited at our previous Number, it was proved that three foreigners had entered Mr. Green's shooting-gallery on the Monday previous to the duel, and had hired a brace of rifle-pistols, for which they left £3 deposit. They also purchased about three dozen of balls, and a quantity of percussion-caps. The pistols were returned on the evening of Tuesday. One of them, however, was found to be loaded; but the charge had to be drawn, as there was a cap in the pistol when the gunpowder ought to have been. These pistols were identified as having been used by the combatants on the field. After the examination of several witnesses the jury returned a verdict that the deceased came to his death by pistol-shot.

The examination before the magistrates, which was suspended until the inquest had terminated, was resumed on Wednesday at the Town-hall, Chertsey, and terminated in the committal for trial of the four friends of their rivals. Mr. Parry appeared as counsel for Baronnet and Adain, and Mr. Huddestone for the other two defendants. Application to admit them to bail was refused by the magistrates.

The following facts relating to the unfortunate affair will show the real nature of the case:—Cournet, the deceased, in the autumn of 1851, and before he had been promoted to the Russian service, came over to this country on a visit, and engaged to deliver a parcel to Barthélémy, who was then an exile here, and to whom he was personally unknown. On his arrival he heard reflections made upon the character of Barthélémy which induced him not to present the parcel in person, and to avoid making Barthélémy's acquaintance. Barthélémy, having become apprised of the circumstance, demanded satisfaction from Cournet; and, after many explanations and interruptions, the parties met in deadly combat.

The terms of the duel were that it should commence with pistols; the combatants being 40 paces apart, and to advance upon each other, firing once, and having two shots each, miss-fires not counting; that the choice of position, the choice of pistols, and the signal for firing, should be determined by tossing up; and that if the pistols proved ineffectual, swords should be resorted to to terminate the affair. With the understanding, the fatal *rencontre* took place. Cournet has the choice of position and of pistols, and his seconds, also, were to give the signal; so that the luck seemed to run in his favour. He advanced his 10 paces, and fired; but, though on fourteen similar occasions he had never failed to hit his opponent, this time he missed. Barthélémy then told him that he had his life in his hands, but would surrender his right to fire, if Cournet would agree to terminate the duel with swords. Cournet declined to do so, saying he must have his chance of a fire, and take his second shot. Barthélémy then levelled his pistol, but it snapped. He put a fresh cap on it, and it snapped a second time; and it was then agreed that he should fire his pistol, which was loaded and handed to him. Before discharging it, however, he again offered, unsuccessfully, to terminate the contest with swords. He then fired; and with fatal precision.

The remains of Mons. Cournet were deposited in the interval on Sunday afternoon in Egham Churchyard. The funeral procession, which was chiefly composed of Frenchmen, followed the body from the Barley Mow inn. The corpse was borne on the shoulders of six countrymen of the deceased; and the distance being something more than a mile and a half, five different parties relieved each other on the way. At the head of the procession was carried a large red flag, hung with black crape, and bearing the inscription, "République Démocratique et Sociale." M. Deleschize pronounced an *éloge* in French over the grave of his deceased friend. The Frenchmen made a remarkable demonstration of their Republican principles upon the occasion. M. Ledru Rollin was present.

THE DRAINAGE OF TOWNS AND HOUSES.—The General Board of Health have just issued a document for the use of local boards and their officers engaged in the administration of the Public Health Act.—"Minutes of information collected with reference to works for the drainage of dwelling-houses and the sewerage and cleansing of the sites of towns; which is intended to embody the main results of the late investigation."

RAILWAY COLLISION AT THE CAMDEN-TOWN STATION.—An accident of a very alarming character, though fortunately unattended with fatal consequences, occurred on Monday morning to the 10 a.m. down mail-train, while passing through the Camden-town station. The train left Euston-square about five minutes after ten, and was assisted up the incline by a pilot, which had "hooked off" only a few seconds, when a goods engine improperly attempted to cross the main line at a point just beyond the ticket platform, and, striking first the engine of the mail, ground three or four of the leading carriages, and cut the train in two about midway. The escape of the passengers may be considered most providential, two or three of the carriages having been shattered to fragments, and three others terribly damaged. The Archbishop of Anglesey, the Bishop of Litchfield, and one of the foreign Ministers resident at the Court, with his wife, who were in the carriages, proceeded on their journey by the next train. The only passengers at all injured, as far as could be ascertained, are Lady Blayney, who, being considerably shaken, preferred remaining at the "Euston" a few hours before continuing her journey; a Mr. Deere, of Stone-buildings, who sustained a slight incised wound on the ear; and a Mr. and Mrs. Matis, who have since left London. The driver of the mail engine, Benjamin Baker, received a blow on his chest, by being thrown against the reversing lever, and fainted shortly after the accident, though it is believed more from fright than from having sustained any serious injury.

MUSIC.

SACRED HARMONIC SOCIETY.—The season will be commenced next Friday at Exeter Hall with Spohr's oratorio, "The Last Judgment," under the direction of Mr. Costa. Mrs. Endersohn, Miss Williams, Messrs. Lockey, H. Baruby, and Phillips being the principal singers. The Dead March, preceded by the contralto air from Handel's "Samson," and Mendelssohn's "Christus," will also be performed.

THE CONCERT AT WORCESTER IN AID OF THE SUFFERERS FROM THE LATE INUNDATION. The proceeds of this musical entertainment amount to £70, including £10 from the Hon. R. H. Clive, M.P.; the Dean of Worcester, £5; the Rev. Robert Sargeant (to whose active exertions the beneficial result is mainly owing), £5; J. H. Foley, Esq., M.P., £5, &c.

WHITTINGTON CLUB CONCERTS.—On Thursday night the first musical entertainment of the season was given; Mr. G. A. Cooper, director, and Herr Anschuez, conductor; the vocalists were the Misses Poole, Dolton, and Albyn Stewart, Mrs. G. A. Cooper, Messrs. A. St. Albyn, Barsham, and Cooper; the solo instrumentalists, Miss Case, Messrs. J. and G. Case, and L. Bertate.

THE YOUTH POLLOCK, THE HARPIST.—Is is with pleasure we announce that the principal amateurs of Newport (Monmouthshire) are raising a subscription, to enable the young harp-player, Pollock, to pursue his studies at the Royal Academy of Music. Lady Morgan, of Tredegar Park, has kindly given £5; and Sir Charles Morgan £5. To these sums we have to add two guineas from Viscount Raneligh, two guineas from Lord Alfred Churchill, one guinea from C. L. Grüneisen, &c. Any persons desirous of rescuing a promising talent from obscurity, by aiding in this subscription, can send to the Rev. W. Cazalet, the Superintendent of the Royal Academy of Music, or to Mr. Grüneisen, 16, Surrey-street.

ORCHESTRAL CONCERTS AT BRIGHTON.—These excellent musical entertainments terminated on Monday night, at the Town-hall; Mr. and Mrs. Sims Reeves singing at the final concert. To show the march of public taste, it is only necessary to mention, that the dance-music was gradually withdrawn from the programmes, and that latterly nothing but the finest works of the great masters were performed. Mr. Alfred Mellon and his colleagues deserve the greatest praise for their spirited undertaking, which, it is stated, has proved financially as well as artistically successful.

FOREIGN MUSICAL NEWS.—Berlin letters state that the *Lucrezia Borgia* of Mdlle. Wagner, at the Royal German Opera, had created such a sensation that the *Lucrezia* of the representative of the Italian version, at the Wilhelmstadt Theatre, was regarded as a failure by the side of the Teutonic *prima donna*. Signora Fodor had appeared as *Linda*; she has a magnificent voice, but is a most unpoetic-looking heroine of Scott's romance. Signor Brignoli was the *Edgardo*; he was known in the London concerts as a pleasing, but not powerful tenor. *Don Pasquale* was an especial favourite at Berlin. The arrival of Madame Piccolomini is again erroneously announced for Berlin; she remains in England, on the contrary, for oratorio and concert engagements, and will shortly commence a provincial tour under Mr. Beale's direction. Rossini's "Moise" (Zora) has been revived in Paris, at the Grand Opera, sustained by Madame Laborde, Mdlle. Poinsot, Mdlle. Duez, MM. Gueymard, Obin, Morelli, and Chopins.——The Italian Opera in Paris will be opened on the 15th of November by Signor Corti, who has engaged, say the Paris papers, Mdlle. Cruvelli, whose name equally figures, however, in the promises of the directors of the Italian Opera-houses at St. Petersburgh and Vienna. Bottini, the tenor, who is at Madrid, is mentioned for Paris; as also Belletti, who is now in Italy, and M. Massol.——On the birth-day of the King of Prussia, Madame Beer, the mother of the illustrous Meyerbeer, the composer of "Robert le Diable," the "Huguenots," and the "Prophète," gave a grand banquet to the invalids of the army then in Berlin: on the same day Meyerbeer's "Camp of Silesia" was performed, with Mdme. Herrenburg-Tuczek as *Vielka*, the part created by Jenny Lind.——Thalberg has been performing lately at concerts in Vienna.——Conradin Kreutzer's posthumous opera, "Aurelia," was produced recently at Frankfort; Mdme. Anschuez and Mdme. Beck sustained the chief parts. The opera was quite successful, although not regarded equal to his "Night at Grenada."

THE THEATRES.

PRINCESS'

"Anne Blake" is the simple name of a new and original five-act play by Mr. Westland Marston, produced last Thursday evening. It is a beautiful conception, and executed with inimitable delicacy. The story is highly moral, and, as the title might import, full of domestic interest. This it has been the aim of the author to treat poetically, in short, on an imaginative pedestal, that it may appeal to the mind, however humble the subject of the portrait, as a work of art from the hand of genius. How far the author has succeeded in this aim, the audience had to decide. A more intelligent audience than that afforded by the frequenters of this theatre cannot be found; and on this occasion it was strengthened by the addition of many individuals whose own claims as artists, authors, or critics, are not to be doubted. This testified to the general sense of the dramatist's merits, and to the more than common expectation excited by the announcement of a new production from a mind at once original and refined. On the rise of the curtain, all was attention while the opening action was unfolded. The first act was exceedingly simple and brief. It merely illustrated the position of the heroine (Mrs. Kean), as a dependant in the house of her uncle, *Sir Joshua Toppinton* (Mr. Addison), by whose treatment and the studied insolence of the servants, her temper is rendered sour and repellent. She has an accepted lover, travelling in the disguise of an artist, *Thorold* (Mr. Kean); and a rich suitor, *Lumston* (Mr. W. Lacy), who holds a mortgage on *Sir Joshua's* estate. The last circumstance induces *Sir Joshua* and his lady (Mrs. Winstanley), to change their conduct towards her, and in the second act she appears handsomely dressed, to attract *Lumston's* attention, whose suit *Lady Toppinton* intrigues to make successful. She works on *Anne's* mind, until she induces her to doubt of *Thorold's* love, whose unexplained absence gives colour to suspicion. A lonely walk in the park is seen to kiss aside to the proofs against him. In the third act all the parties are engaged in rehearsing a play, during which *Anne* affects to flirt with *Lumston*, and dismisses *Thorold*; soon after which she finds that the latter is not what he appears, but a rich gentleman connected with India, and her guardian; she is thus led to vow that she never will as a dependant wed with him. In the fourth act she has contrasted to wed *Lumston*: but *Thorold*, seeks an interview, and remonstrates with her on the guilt of marrying a man whom she cannot love; exhibiting, as a last resource, the portrait, which proves to be her mother's. Act the fifth discovers that *Anne Blake* is an heiress, and rightful owner of some Indian mines belonging to her father, and, therefore, not dependent; which circumstance *Thorold* declares to be sufficient to absolve her from her vow—presenting her, at the same time, with *Lumston's* mortgage-deed as her dowry, and thus punishing *Sir Joshua*, who, in his anger, had threatened to turn her out of doors. This outline of the action presents but little of the real merits of this very fine drama, which overflows with eloquence, sentiment, and poetry; the dialogue, nevertheless, being restrained within the strictest limits. The structure is nearly perfect, with the point and completeness of the Greek drama. Mr. Marston has been this time remarkably fortunate in his performers; the part of *Anne Blake* herself, by Mrs. Kean, was enacted with exquisite grace, refinement, delicacy, and sometimes with statuesque grandeur. Altogether, it is decidedly the best of Mr. Marston's dramas; and will, we have no doubt, acquire extensive popularity. At the end of the fourth act a storm of applause greeted the fall of the curtain; and, on the conclusion of the play, the author was called for with great and deserved enthusiasm.

OLYMPIC.

"Sarah la Creole," by MM. A. Dumanoir and Jaimes, lately performed at the Ambigu Comique, has been produced on this stage, under the title of "Sarah Blanqui," in a very clever adaptation, by Mr. Morris Barnett. With an English audience, there was undoubted peril in the production of such a piece, but the translator, with remarkable talent, has evaded every difficulty. The conception of a creole having a slain father to avenge on a whole family, and pursuing her work in the spirit of *Zanga* and *Iago*, forms the basis of a very powerful and exceedingly well-acted *drame*. Ultimately *Sarah Blanqui* (Miss Fanny Wallack), proceeds to poison her victim, *Miss Diamond* (Miss Harriet Gordon); but, in all her attempts, meets with strange opposition, in one *M. Vendôris* (Mr. Compton), who arrives from Rio de Janeiro with the intelli-

pence of the death of *Faubrice Dumont*, *Colonel Dumont's* (Mr. Farren) brother, and the embezzlement of his property by one *Dr Robert*, who was suspected of having poisoned him. The Doctor had been an agent of *Sarah's*, and the latter uses the intelligence to break off the marriage of *Alice* with *M. Julien Duplessis* (Mr. W. Farren), whom she loves heroically. She next procures her victim's marriage with a rake named *George de Cerney* (Mr. Hoskins), who turns out to be a good husband, and thus disappoints the purpose of the avenger. In vain she attempts to make him jealous of *Julien*, and *Alice* jealous of herself; for *M. Vaudrin* contrives to set matters to rights. When they become desperate, he succeeds in substituting *M. Robert* as *Sarah's* elected physician, and administers a sopor-ific instead of poison. It then transpires that he is *M. Faubrice* himself in disguise, and that *Colonel Dumont* is the father both of *Alice* and *Sarah*. Remorse seizes on the latter at these disclosures, and the curtain falls. The part of the heroine was a difficult one to sustain—*for a debutante*, not without danger. But Miss Fanny Wallack succeeded in marking the salient points, and supported its great length with untiring spirit. The house was full, and the applause frequent.

SADLER'S WELLS.

"Henry V." on Monday, again revived stage-illustration and spectacular adornment. Mr. Phelps, following in the steps of Mr. Macready, has reproduced this court history and war drama with superb accessories and scenic effects. Harfleur and Agincourt again flourish on the canvas, and the boards are crowded with military supernumeraries. Mr. Marston was charged with the part of *Time*, as *Chorus*, and delivered the poetic descriptions with appropriate point. Mr. Phelps as *Henry V.* was pleasing and effective. Some of the subordinate parts were well filled, particularly that of *Fluellen*, by Mr. Lewis Ball, and that of *Mrs. Quickly*, by Mrs. Marston. The want of dramatic interest, however, is terribly felt, the place of which is hardly supplied even by the magnificent appointments employed on the present occasion. The revival was attended by a crowded house; and as it was honoured with great applause, we trust it may have a considerable run.

MARIONETTE THEATRE.

Mr. W. S. Woodin, a new candidate for public favour, made his first public appearance as a reviver of that humorous species of monologue which the late Mr. Mathews rendered so popular, and which served as a vehicle for a great variety of characters, with one prominent eccentricity each, and imposed on their common representation the necessity of changing his make-up and costume with such rapidity as to astonish the spectator. Mr. Woodin's entertainment is divided into two parts, each aided with scenic illustrations of the places where the lecturer met with the worthies whom he delineates. The first part consists of "a Trip down the Line," and describes and personates the oddities to be met with on such a voyage: among them *Martha Mevins*, a maid of all work out of place; *Major Blusher*, the all-experienced traveller; *Sir Benjamin Bungle*, the blunt joker; *Mr. Sampson Rusty*, and others. Mr. Woodin then proceeds to give several characters in combination, representative of the "last and final shilling day at the Crystal Palace," in which he both speaks and sings in the united parts of three gentlemen and two ladies. The second portion, consisting of a visit to Wapping, introduces us to a country cousin, a teetotal lecturer, and a Yankee clipper. The whole concludes with an amusing pic-nic party, the life of which is a *Mr. Woggles*, conundrum maker; and some clever imitations of actors and orators. Mr. Woodin is a young man, and his performances, though displaying great volubility and command of feature, have, as yet, some want of finish; but they possess so much indisputable merit as to afford the largest promise of perfection. They are, at all events, most laughter moving: and will command considerable encouragement. We may add that they deserve and justify public support. The delivery of this budget of comicalities occupies about three hours.

NATIONAL SPORTS.

The racing and steeple-chase meetings next week will be confined to Worcester, on Tuesday and Wednesday; and Epsom on the two following days: there is every prospect of good sport at both places.—That there will be no lack of amusement for the "lovers of the leash," the following list of the week's arrangements will show:—Monday, Newcastle, Newmarket, and Workington; Tuesday, Market Weighton; Wednesday, Baldock; Thursday, Hilton, Wolverhampton, and Ridgway; and Friday, Belsay.

BETTING AT NEWMARKET.—THURSDAY EVENING.

5 to 2 agst Exact
2 to 1 — Abbotsville

THE NURSERY STAKES (FIRST CLASS).
5 to 1 agst Bell Boniface
10 to 1 — Eaton
| 10 to 1 agst Game Tommy

THE NAPLESH STAKES (SECOND CLASS).
5 to 1 agst Michaelmas Maid
| 6 to 1 agst Tattersall (taken)
15 to 1 agst Little Swift
| 15 to 1 agst North Pole

DERBY.
18 to 1 agst West Australian
| 20 to 1 agst Umbriel (taken)

NEWMARKET HOUGHTON MEETING.—MONDAY.

The sport, as our returns will show, was ample; although, the Criterion excepted, not remarkable either for interest or severity of competition. The weather was miserably cold, wet, and misty, and the ground muddy and deep: the attendance, nevertheless, was large, embracing most of the influentials of the turf.

CRITERION STAKES.—Speed the Plough (Flatman), 1. West Australian (F. Butler), 2.

HANDICAP PLATE of 50 sovs.—Gladiole (Flatman), 1. Trousseau (F. Allison), 2.

MATCH, £100.—Don John filly (Flatman), 1. Pensioner (F. Butler), 2.

SWEEPSTAKES of 10 sovs each.—Vivandière (Bartholomew), 1. Florence (J. Osborne), 2.

SWEEPSTAKES of 10 sovs each.—Gold Dust (Flatman), 1. Lady Vernon, (Basham), 2.

MATCH: £100.—Walnut (Norman), 1. Gossip (F. Butler), 2.

MATCH: £200.—Poodle (F. Butler), 1. Ilex (Norman), 2.

SWEEPSTAKES of 10 sovs each.—Canmore (J. Osborne), 1. Guy Mannering (Bartholomew), 2.

TUESDAY.

A gale of wind, incessant and heavy rain, and ground ankle deep in mud, made this one of the most wretched "Cambridgeshire" days it has been our lot to record. The attendance was barely up to the average, either in number or quality.

FIFTY POUNDS.—Tickton (Carroll), 1. Maria (T. Sherwood), 2.

SWEEPSTAKES of 10 sovs.—Guy Mannering (Bartholomew), 1. Old Rowley (Flatman), 2.

CAMBRIDGESHIRE STAKES. Knight of the Shire (Harding), 1. Hobbie Noble (Pettit), 2. Lady Evelyn (Flatman), 3.

SWEEPSTAKES of 10 sovs.—Janina (Charlton), 1. Heroine (Bartholomew), 2.

SWEEPSTAKES of 10 sovs.—Sextus (Dockeray), 1. Vesi (Norman), 2.

SELLING HANDICAP SWEEPSTAKES of 15 sovs.—Faux-pas (Flatman), 1. Beauclerc (S.), 2.

HANDICAP SWEEPSTAKES of 15 sovs.—Child of the Mist (Wells), 1. Dividend (Charlton), 2.

HANDICAP PLATE of £100.—Lerryhent (Aldcroft), 1. Ilex (S. Steggles), 2.

WEDNESDAY.

SWEEPSTAKES of 10 sovs each.—Good Deal, 1. Lapidist, 2.

HANDICAP PLATE of £50. Glen Isla (Harding), 1. Sir Rowland Trenchard (Arnull), 2.

MATCH: £200.—Nicotine (Charlton), 1. Mountain Flower (Norman), 2.

SUBSCRIPTION PLATE of £50.—Sextus (Wells), 1. Jack the Giant-killer (A. Lowley), 2.

HANDICAP SWEEPSTAKES of £15 each.—Michaelmas Maid (Cearlton), 1. Game Tommy (G. Oates), 2.

MATCH: £100.—Flutter (Flatman), 1. Don John filly (F. Butler), 2.

SWEEPSTAKES of 10 sovs each.—Lady Vernon (Basham), 1. Buccatcher filly (Templeman), 2.

SWEEPSTAKES of 10 sovs each.—Chorus (Rogers), 1. Guy Mannering (Bartholomew), 2.

SWEEPSTAKES of 10 sovs each.—Trinket (Crouch), 1. Euphony (Wells), 2.

THURSDAY.

HANDICAP for Two-Year-Olds. Molasses walked over.

MATCH: Hispania, 1. Sophronia, 2.

MATCH—Pensioner, 1. Angelo, 2.

SWEEPSTAKES of 50 sovs.—Pharold, 1. Nicotine, 2.

SWEEPSTAKES.—Plunkett, 1. Molasses, 2.

GLASGOW STAKES.—West Australian, 1. Filbert, 2.

MATCH. Knight of the Garter, 1. Hotforpe, 2.

SUBSCRIPTION PLATE of £50.—Carboo, 1. Le Juif, 2.

FRIDAY.

MATCH.—Presto, 1. Pan, 2.

MATCH.—Diomedia, 1. Pearl, 2.

MATCH.—Feltspar, 1. Hermit, 2.

SWEEPSTAKES, T.Y.C. Hermit, 1. Solyman, 2.

HANDICAP. T.Y.C. Sir R. Peel Grand, 1. Koh-i-noor, 2.

SWEEPSTAKES of 10 sovs each.—Ephesus, 1. Grief, 2.

SWEEPSTAKES for Two and Three-Year Olds.—Sextus, 1. Billy Richards, 2.

FIRST-CLASS NURSERY.—Exact, 1. Wanton, 2.

SWEEPSTAKES.—Dulcet, 1. Russborough, 2.

SWEEPSTAKES of 10 sovs each.—Dexterous, 1. Desdemona, 2.

SECOND-CLASS NURSERY STAKES.—Treacherous, 1. Potentia c, 2.

PLATE of £50.—Trinket, 1. Cutler, 2.

AUDLEY END STAKES.—Weathergage, 1. Adine, 2.

THE ILLUSTRATED LONDON NEWS.

CHESS.

TO CORRESPONDENTS

ONE OF THE OLD SCHOOL.—It is satisfactory to learn that our efforts to put an end to the degrading practice of shilling play which threatened to reduce the public rooms devoted to Chess to a level with the abominable "bulling-offices," and our game itself to a mere vehicle for petty charging—have had a salutary effect. If the respectable frequenters of the Divan will second our endeavours, *by resolutely refusing to play in a public room for the "customary stake,"* we shall no only put down the system but of the whole race of "bulling individuals" who prey on and others to support themselves.

T. M. P. Bury. You will see by the report of the Hastings Chess Association that it has changed its title and constitution, and has expanded into THE NORTHERN AND MIDLAND COUNTIES CHESS ASSOCIATION. It will now embrace, not only the shires on the other side of Yorkshire, but those of Lancashire, Lincolnshire, Warwickshire, Northumberland, and Nottinghamshire. The next great meeting—so it is expected to be by far the largest ever known—is appointed to be held at Manchester, in the spring of 1853.

SOLUTIONS OF ENIGMA BY JOSHUA, J H, Jack of Shrewsbury, M P, D W H, H W A, are correct. All others are wrong.

SOLUTION OF PROBLEM No. 455.

WHITE.	BLACK.	WHITE.	BLACK.
1. Kt to Q Kt 6th	B to K 3d (best)	3. R to Q Kt 3d	B takes R
2. R to Q Kt 4th	B takes P or (a)		

(If instead of taking the Rook, Black play 3 P to Q Kt 8th, White's reply is Kt to B 4th (ch), and then R mates.)

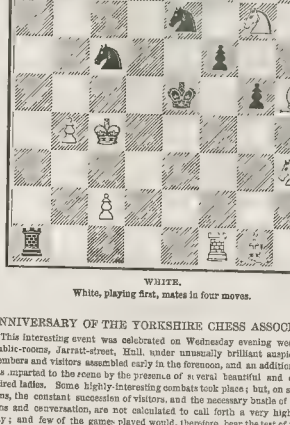
WHITE.	BLACK.	WHITE.	BLACK.
(a) 2.	P to K Kt 6th	4. P to Q B 3d	
3. R to Q Kt 3d	P to Q Kt 6th or (a)	And mates next move.	

WHITE.	BLACK.
(a) 3.	
4. P takes R, and mates next move.	

PROBLEM No. 457.

This fine position is the invention of H. J. WALLENRATH, of St. Petersburg.

BLACK.



WHITE.

White, playing first, mates in four moves.

ANNIVERSARY OF THE YORKSHIRE CHESS ASSOCIATION.

This interesting event was celebrated on Wednesday evening week, at the Public-rooms, Jarrat-street, Hull, under unusually brilliant auspices. The members and visitors assembled early in the forenoon, and an additional charm was imparted to the scene by the presence of several beautiful and elegantly-attired ladies. Some highly-interesting combats took place; but, on such occasions, the constant succession of visitors, and the necessary bustle of introductions and conversation, are not calculated to call forth a very high order of play; and few of the games played would, therefore, bear the test of publicity.

Shortly after six o'clock the dinner was announced; and about one hundred gentlemen sat down to a repast, served in admirable style, and replete with every delicacy and substantiality of the season.

The chair was occupied by C. Frost, Esq., F.R.S., the President of the Hull Club, supported on the right by H. Staunton, Esq., Sir Geo. Stephen, Major Robertson, and Alderman Craven, President of the Halifax Chess Club; and on the left by Samuel Warren, Esq. (Recorder of Hull), J. G. M. Harrison, Esq. (Sheriff of Hull), the Town Clerk, and S. Newham, Esq.

The usual loyal and patriotic toasts having been drunk and responded to, the chairman proposed "The Bar," and associated with it the name of "Mr. Warren, the Recorder of Hull."

Mr. Warren returned thanks in a long and eloquent address, and sat down amidst loud cheers.

Sir George Stephen, in proposing "The health of the Mayor and corporation of Hull," took occasion to expatiate in eloquent and humorous terms upon the merits of the chess-table. He said, "In whatever field the cry of honour is heard, the English soldier knows not when he is beaten: but we have a distinction, peculiarly our own—it has a little Hibernian touch about it. We fight before, we war to promote peace and a good understanding, and we rise from every contest with renewed affection. This is a distinction that carries the splendour of the parade, and shines above the yet more dazzling glories of the battle-field. Chess has progressed, as well as all around it. It matters not, except to the antiquary, where it was invented—whether it came from India or from China; whether two hundred years before Christ, or six hundred years after: all that concerns us is the progress it has made." Sir George took a cursory view of its history, from the time of Philidor to the present day, mentioning its principal masters, and then proceeded—"Chess had made such progress some few years ago, that I fondly hoped to see the day when in every poor man's cottage the chess-board would find a shelf; and I hope to see it still: for I am well convinced that it would tend more to induce that domestic order which we all desire to see reign there than all the temperance societies, and all the legislation, and, I may even say, than half the sermons of the country." Sir George Stephen was greatly cheered throughout his amusing and effective speech.

The toast having been duly honoured,

Mr. Cronholm, in rising to propose a toast, expressed his regret that the distinguished name put into his hands by the committee had not been entrusted to one of the talented literary men to whose speeches they had listened with so much delight. They would have found a charming subject—a name that would for ever be illustrious in the annals of chess. As a player, Mr. Staunton had distinguished himself by unrivalled powers of combination and evolution, both for attack and defence. The Parisian editor of the *Palamède* has awarded him high praise for his tactics in defence—he speaks of "ce mur d'airain dont Monsieur Staunton sait entourer ses pièces." But our champion had shown that he was not merely, when occasion required, the impregnable wall of chess, but that he knew how to be its Scipio, and drive Hannibal out of Italy by carrying the war into Africa; or, to borrow a nearer illustration from the great captain to whose death Major Robertson had alluded in terms so feeling and appropriate, the advantage of a mental discipline and training, not inferior to that offered by the mathematics themselves. He had, therefore, the greatest pleasure in proposing "Health and prosperity to Mr Staunton."

The toast was received with great and continued applause.

Mr. Staunton responded in an appropriate speech.

Several other toasts having been given, the proceedings terminated a little before midnight.

On the following morning, Mr. Frost entertained a select number of the visitors at breakfast at his house. After the *déjeuner*, the meeting was resumed at the public rooms, and at mid-day the party was again regaled at a sumptuous luncheon, provided by the respected treasurer to the club, Mr. Hansell.

Before the final separation of the assemblage a committee, consisting of some of the most influential members, was held, and it was unanimously decided to extend the association, so as to include the chess clubs of Manchester, Liverpool, Birmingham, Nottingham, Lincoln, Leicester, Derby, Durham, and Newcastle, under the title of "The Northern and Midland Counties Chess Association." Several resolutions affecting the rules and regulations of the association were then agreed to.

TESTIMONIAL TO ALDERMAN SIDNEY.

ALTHOUGH the administration of the affairs of the City of London is a subject of frequent objection, the records of the Corporation present many striking instances of the well-directed energies of citizens in the discharge of their official duties. A memorable addition has just been made to the number by the recognition of the special services of Alderman Sidney, in a successful assertion of the rights of the City; which his brother Aldermen have very properly distinguished, as follows:—

At a Court held on the 12th instant, Sir Chapman Marshall moved,—

That the Lord Mayor should present the vote of thanks voted by the Court of Aldermen to Alderman Sidney on the 21st of December, 1851, for the zeal, talent, and perseverance with which he successfully asserted the City's right to an allowance from the Consolidated Fund for the charges of prosecutions, and sons, by which an annual cost of upwards of £4800 was saved to their funds.

Sir Chapman Marshall bore the warmest testimony to the laborious, zealous, and skilful exertions of his excellent brother Alderman.

Alderman Kelly, in seconding the motion, said he had carefully watched the conduct of Alderman Sidney from his first election as a common-councilman up to the present time, including the exertions made by him in Parliament, as well as his labours in the Corporation, and he affirmed that the services rendered by him deserved the warmest approbation of his fellow-citizens.

The Lord Mayor, in pressing the very elegant testimonial of the approbation and gratitude of the Court for the extraordinary services rendered by Alderman Sidney to the citizens of London, passed a well-merited eulogy upon the services of Alderman Sidney, with whom his Lordship served as Sheriff of London and Middlesex; his Lordship adding, that he felt high gratification in addressing the worthy Alderman from the chair upon such a subject.

Alderman Wire, as original mover of the resolution in the Court of Aldermen, hoped and believed that the testimonial would stimulate Alderman Sidney to still greater exertions.

Alderman Sidney said he certainly expected that the Court would present to him some memorial of their approbation, because he had been informed that such was their intention; but he had not the least idea of the manner in which they meant to carry out their intention; and he was wholly incapable of expressing his gratitude to the Court for so very marked a testimonial of their esteem.

The testimonial consists of the Vote of Thanks engrossed upon vellum, within a rich frame, in which is the portrait of Alderman Sidney, painted by Sir W. C. Ross, R.A. In the top centre of the frame are the arms of the Alderman, with figures of Wisdom and Justice as supporters. On either side are the arms of the proposer and seconder of the vote. Next are two criminals, captive in chains; and beneath, in the ornamental compartments, are the Book of Laws, the Sword, the Balance, and various emblems. Supported by cherubs, among the banners of England, beneath a canopy upheld by Caryatides, are groups representing Genius and Perseverance; while the figure of Victory, rising and crowning him, points to his reward. Next are figures of Perseverance and Fame; and beneath the British banners are figures of Law and Commerce, holding shields bearing the arms of the Town Clerk and Chamberlain; and at the base are the arms of the City of London and Lord Mayor. The motto is connected with the ornament by cherubs; and the whole design is richly filled in with fruit and flowers. (We have engraved the Portrait upon the next page.)

Mr. Alderman Sidney is a native of Stafford, and was born in the year 1800. Mr. Alderman is extensively connected with commerce, and is much respected in the important manufacturing town of Leeds, where he has established an excellent charity, entitled the "Leeds Tradesmen's Benevolent Institution," for the relief of aged and decayed merchants, traders, manufacturers, and their widows. To the funds of this association Alderman Sidney has contributed the munificent donation of 500 guineas.

Alderman Sidney has resided in London since the early part of 1837; he became a member of the Corporation in 1842, and was elected Alderman of Billingsgate Ward in 1844; in which office he has been distinguished by great energy, having stood in the foremost rank of corporate reformers in its truest sense: upon all occasions, he has evinced the utmost solicitude to uphold civic rights; but he has ever advocated a larger extension of the municipality for the city of London. He served the office of Sheriff in conjunction with the present Lord Mayor (Alderman Hunter), and displayed much sympathy with the then neglected state of prison discipline in the City; and chiefly from the remonstrances of the Sheriffs at that time originated the building of the House of Correction recently opened at Holloway.

At the general election in 1847 Alderman Sidney was elected a representative in Parliament for his native town; and, though not at present a member of the Legislature, he was invited by a large number of the electors of Banbury to contest that borough at the present general election; and, without any canvass on the part of his friends, polled an honourable majority of the votes. He is a member of the Conservative party at Cambridge. At the above meetings, Viscount Ranelagh, Chairman; and Colonel Brownlow Knox, M.P., Vice Chairman; and Lord Alfred Churchill, Colonel Dickson, Henry Fownall, Esq.; the Rev. J. Mr. Worthington; G. L. Gruneisen, Esq.; members of the executive committee; and Charles Lewis, Esq., the solicitor and secretary *pro tem.*, have been the speakers on behalf of the society.

TELEGRAPH FRANKS.—The Electric Telegraph Company are, it is stated, about to issue what will be a great commercial convenience; viz., telegraph franks, or free message papers, for sale throughout London and the large towns. Each of these franks will represent a five-shilling message, and the convenience to the purchaser will be, that he can have his own form of message printed at his counting house, or with him on his travels, and send his communication at any moment to the telegraph office by messenger, without losing at the trouble, as is the case now to an extent unavoidable, of attending at an office to get a message form. The purchase of these franks will not entail any extra charge upon the purchaser, but be included in the five-shilling charge for the message.

SECESSION FROM THE CHURCH OF ENGLAND.—It is our very painful duty to announce that Lord Charles Thynne, uncle of the present Marquis of Bath, and son-in-law of the Bishop of Salisbury, a canon of Canterbury and rector of Longridge Deverll, near Warminster, has acceded to the Roman communion.

EARLY CLOSING MOVEMENT.—An important step in this matter has been taken by the Great Northern, London and North-Western, Midland, Lancashire, Yorkshire, and Leeds Northern, Railway Companies. They have resolved to cease collecting or receiving goods for the goods' train, at seven every evening, at Leeds, Bradford, Wakefield, Dewsbury, Huddersfield, and Halifax, so as to "curtail within reasonable limits the hours of attendance of those employed in the merchandise department on railways;" at the same time it will ensure a punctual despatch of the trains.

NEW CHAPEL OF EASE AT ETON.

THE population of the town and parish of Eton having increased nearly 1000 souls within the last twenty years, and the addition to the numbers of the school having greatly enlarged the congregation of parishioners from the College chapel, which is also the parish church, the want of additional spiritual provision has long been recognised. To meet this requirement it was some time since resolved to build a new chapel, in accordance with the munificence and taste of the Royal founder of Eton. The Provost and Fellows of Eton very handsomely gave the site, together with the munificent sum of £500. Her Majesty and Prince Albert subscribed £100; the Rev. E. Coleridge and pupils, £155; the Rev. Dr. Hawtrey, £100; the Revs. W. A. Carey, H. Lunnd, E. K. Durnford, C. O. Goodford, Dr. Oakes, and J. Wilder, £100 each; Rev. S. F. Mansel, £105, and other sums—in all, to the amount of £5000—were collected.

The ceremony of laying the first stone by her Royal Highness Prince Albert, took place on Monday week. Shortly before twelve o'clock the seats, erected to accommodate between 2000 and 3000 persons, were filled by the ladies of the College, and the gentry of Windsor and the surrounding neighbourhood; the students of the College were also present.

The Bishop of Oxford (the Lord Bishop of the diocese), accompanied by the Rev. Dr. Hodgson, provost of Eton, and the fellows of the

MR. ALDERMAN SIDNEY.—FROM THE TESTIMONIAL PRESENTED TO HIM BY THE COURT OF ALDERMEN.—(SEE PRECEDING PAGE.)

College, the Rev. Dr. Hawtrey, and the masters of the school, and the building committee, walked to the site from the College. There was a full muster of the students, the whole body turning out. His Royal Highness Prince Albert arrived punctually at the appointed time, attended by Colonel Phipps, Colonel Seymour, and Major Bidduiph. As soon as the Prince had taken his station, the ceremony of laying the foundation-stone proceeded. The Rev. the Provost of Eton then read a special service, concluding with an impressive prayer.

The Prince then placed the coins, and a roll of parchment, in a glass bottle, in the centre of the stone, and the trowel being presented to his Royal Highness by the architect, the Prince spread the mortar and proved the stone to be level and true in its bearings; and, on returning the trowel to the architect, his Royal Highness remarked emphatically: "I certify that this stone is correctly laid."

The four last verses of the cxxii. Psalm were then admirably sung by the lay-clerks and choristers of College Chapel, and the children of Pawney's School; and the Benediction having been pronounced, the proceedings terminated.

His Royal Highness, after the ceremony, proceeded to Eton College, and, after inspecting the boys' library and other departments of the College, partook of an elegant luncheon at the Provost's lodge, provided for the occasion by Mr. Layton, the Royal confectioner. Covers were laid for thirty. The company included the Provost and Fellows, the Rev. Dr. Hawtrey, Rev. E. Coleridge, and all the assistant masters of the College. After luncheon, the Prince left for the Castle, amidst the hearty cheers of the students.

The church is designed in the decorated or second pointed style, of which Camberwell New Church, and Trinity Church, Pimlico, are the best recent metropolitan examples. The plan consists of a nave 103 feet long, 23 feet 6 inches wide, and 46 feet high; north and south aisles, 103 feet long, and 13 feet 9 inches wide; chancel, 53 feet long and 23 feet wide; with a tower and spire placed at the north-east angle of the church and chancel. The nave will have six bays, divided by clustered pillars, with very gracefully moulded shafts and richly foliated capitals. The exterior of the structure will be faced with the Bargate rag-stone and Bath-stone dressings. The interior walls will be lined with ashlar of Bath stone. The church will accommodate 1000 persons—all the sittings free. The seats and open-timbered roofs will be of oak. The spire, 160 feet high, will form a conspicuous object from the surrounding meadows and the Great Western Railway. Mr. Benjamin Ferrey is the architect; and Mr. George Myers, the contractor. The estimated cost for the church is between £7000 and £8000. When this building is finished, the present unsightly chapel facing the High-street will be removed, so that the east end and tower of the new church will be seen from the principal thoroughfare.

HIS ROYAL HIGHNESS PRINCE ALBERT LAYING THE FOUNDATION-STONE OF A NEW CHAPEL-OF-EASE, AT ETON.

CHRONOMETER WATCH MADE FOR AN INDIAN PRINCE.

This Chronometer, of pocket size, lately commissioned from Messrs Smith, Elder, and Co., booksellers and East India agents, Cornhill, by his Highness the Maha Rao Rajah Serwaee Burmeh Singh Bahadoor, Walee of Alwur, is a very beautiful specimen of watch manufacture, both in respect to workmanship and to the taste displayed in its ornamentation. It has been manufactured by Messrs. M'Cabe and Co., of Cornhill; it is expressly to be used for astronomical reckonings; and in its construction and adjustment it is stated to be perfect so as to

GOLD CHRONOMETER FOR THE WALEE OF ALWUR.

fit it to stand the very severe tests stipulated for. The chronometer is contained in a double hunting case of gold, enriched with diamonds and other gems. The body of the case and groundwork for the adornment is of a very delicate turquoise-coloured enamel; the edges, bow, and pendant being tastefully set with rubies and emeralds, and the exterior rims on both sides set round with large diamonds.

The upper cover displays a regal chhattar (a symbol in use by the Princes of India, to mark exalted rank), of crimson and white enamel, fringed and edged with diamonds, surmounting an escutcheon set round with an elaborate scroll-work of diamonds, showing, in Devanagari characters of pure gold, on an enamelled ground, the designations and titles of the owner, which may be literally translated—"The Most Glorious the Friend of Sita and Ram", the Illustrious Maha Rao Rajah Serwaee Vijaya Singh, the Heroic; Government of Alwar, Samvat (anno) 1907."

The lower cover is ornamented with diamonds, rubies and emeralds, arranged into a very elegant design. Appended to the chronometer are a massive gold chain, seal-key, and seal, the whole enamelled and set with precious stones, to correspond in style with the watch; each separate link of the chain having its appropriate ornamentation. The seal contains a carefully-adjusted compass.

Altogether, this is an exceedingly beautiful specimen of British art, and reflects great credit not only on the well-known manufacturers of it, but on the taste and liberality of the high personage by whose order it has been made.

Alwar, or Alur, is a principality in Upper Hindostan, mostly situated in the north-western quarter of the Agra province, between the 27th and 28th degree of north latitude. The town of Alwar is the capital of the Macherri Rajah's dominions, and is strongly fortified. This Potentate reigns over a territory equal in extent to about 3000 square miles: but the districts comprising which are considerably intermingled with those belonging to the British Government and to contiguous native chiefs. A treaty of alliance was concluded in the year 1803, by Lord Lake, with this prince, who throughout the campaign of 1804 evinced great fidelity to the British cause; for which, in 1805, a considerable addition was made to his dominions, from territory mostly resumed from the Rajah of Bhurtpore; and these amicable relations with the British Government have since subsisted without interruption.

TESTIMONIAL TO MR. JUSTICE CROMPTON.

This handsome vase (beautifully executed in silver by Messrs. Morel) has just been presented to the Hon. Mr. Justice Crompton by the Bar of the Northern Circuit practising at the Passage Court, Liverpool. Mr. Justice

TESTIMONIAL PRESENTED TO THE HON. MR. JUSTICE CROMPTON.

Crompton, prior to his elevation to the bench, was the judge of the eminent tribunal, held at Liverpool, for the trial of civil causes to any amount, and which bears the name of the "Passage Court," in consequence of its being established peculiarly for the speedy administration of justice in a port where parties concerned might be going on their passage to sea. The Court is now presided over by Mr Edward James. Mr. Crompton, while Judge of the Court, performed his duties with great ability, and much public satisfaction. He was also very popular with the barristers practising before him; and from this circumstance, doubtless, originated the presentation of the above Testimonial.

HARVEST IN KILKENNY.—(SEE NEXT PAGE.)

WRECK OF THE "DUCHESS OF KENT" RAMSGATE STEAMER

It will be in the recollection of our readers, that this ill-fated vessel was run down by the Antwerp steamer *Ravensbourne*, on the 1st of July last: a detailed account of the accident appeared in our journal of the 3d; and an Illustration of the catastrophe in the paper of the 10th of that month.

After many disappointments, from chains breaking, &c., on the 5th of August a successful attempt to raise her was made by Mr. Bell, of Whitstable, assisted by Mr. Grier, the engineer, and an experienced body of divers, who then succeeded in lifting and bringing her in closer to the shore; by the 17th of that month, she was, by other liftings, &c., brought with her deck to the level of low water; and subsequently got high and dry on the mud, a little below Grays pier.

Some expectation was entertained, in the first instance, that the vessel might again be made seaworthy; but, on inspection, when fairly raised, she was found to be so twisted and shattered, that any attempts in that way were hopeless; and the saving of the engines and boiler was all that could be accomplished. The subjoined Engraving represents the work of taking out the engines on the mud-bank at Grays.

MODEL LODGING-HOUSES, IN ST. JAMES'S, WESTMINSTER.

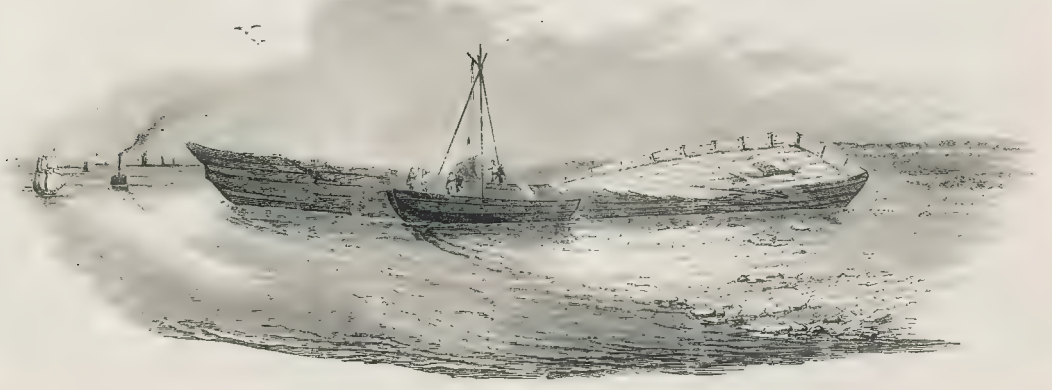
Among the many "Model Lodging-house" Societies that are now in operation throughout the metropolis, there is one recently instituted by Lord Ingestre, and which is about to commence its work at the back of the Lion brewery, in Broad-street, Golden-square, where stood until lately a square block of squalid buildings—a perfect warren for thieves—and known vulgarly as "The Barracks."

The report of the institution which has set about this reformatory labour gives the following account of its history and objects:—

The formation of this society dates from the 21st of June last, when certain of the vice-presidents met at the house of Captain Gladstone (M.P. for Devizes), in accordance with the wish of Lord Ingestre, the general impression being that the condition of the working classes, as regarded their dwellings, was growing worse from year to year; whereas the houses of our wealthier countrymen were generally provided with comforts which, in former times, were unknown. The members present, therefore, determined, as far as lay in them, to amend this acknowledged grievance; some of them had spent much time among their poorer brethren, and had carefully considered their condition.

The society gradually increased, new members were added, subscriptions obtained, and several plans were soon laid before the general committee. At length a plot of ground in the worst part of St. James's, Westminster, was obtained. It was covered with wretched and dilapidated dwellings, which formed a quadrangle. To this there was no entrance but through the houses themselves; yet within this quadrangle, at a distance from the houses of only six feet, was a cow-house, the upper and lower floors of which were crowded with cows and pigs. The buildings generally were of the worst description, the kitchens occupied as dwelling rooms, and inhabited, in some instances, by several families; thieves often lay hid there, when obliged to leave their accustomed resorts at the east end of London. An agreement for a

MODEL LODGING-HOUSES, ST. JAMES'S WESTMINSTER; PROPOSED BY THE GENERAL SOCIETY FOR IMPROVING THE DWELLINGS OF THE WORKING CLASSES.



WRECK OF "THE DUCHESS OF KENT" STEAM-BOAT, AT GRAYS.—"TAKING OUT THE ENGINES."

lease for ninety-nine years of this ground has been obtained. The houses have been removed, with one exception, and that only waits the commencement of the new building. Calculations have been made, and it is satisfactorily shown, that at least sixty-four series of rooms can be erected for the sum some what exceeding £9000. An architect, of great experience, has certified that the money thus expended will yield five per cent. a proper margin being left for necessary expenses; the working man will thus be enabled to rent at least two comfortable rooms (and, in some instances, three) with water laid on, at the same price which he now pays for one miserable wretched apartment. The money for the will, it is hoped, yield a fair rate of interest, which interest will form a yearly increasing fund towards extending the plan to other districts. Mr. Stirling, of the Belvedere Slate-works, Lambeth, adds the report, has presented to the society some houses, situate in Bermondsey, near the celebrated Jacob's Island. The property, which is held for the residue of a term of which 41 years are unexpired, is subject to a ground-rent of £50 a year; and an outlay of about £200 will be required towards rendering the houses comfortable and wholesome; but the buildings thus repaired will yield an adequate remuneration for the money expended on them.

"But such undertakings," urge the committee, "cannot succeed without considerable outlay in the first instance; and, when the amount of benefit conferred on the working classes is considered, and the introduction of a better system through the means of such societies, is taken into account," the committee say "they confidently appeal to the support of their wealthier countrymen."

The design for the building was supplied by Mr. Charles Lee.

THE IRISH HARVEST.

The results of the recent harvest affairs in Ireland, so far as grain has been brought under the flail, or through the thrashing-machine, has been very satisfactory. The produce of wheat—whether in wheat, oats, or barley—the yield has proved much above the average of any former year, for a quarter of a century, at least. "Flax," says one of the accounts, "proves a full turn-out as to quality of fibre, and we feel gratified to state that a large quantity of seed is already saved. The scotch-mills are very busy, and still cannot keep up to the demand for preparing flax for the market. Mills connected with the manufacture of breadstuffs are fully engaged; many of them are working extra hours All these facts show a very hopeful state of affairs, both in relation to agriculture and the prospects of manufactures."

The harvest field, which our Artist has pictured upon the preceding page, is from Kilkenny, an inland county of the province of Leinster, where the soil is very fertile, and the prospect is all that is cheering. The harvest people, though pictured specimens of the Irish peasantry, in neatness of appearance resemble English farm-labourers; and we wish that such was the general characteristic of the agricultural population of Ireland.

METROPOLITAN NEWS.

CABINET COUNCILS.—On Monday, Tuesday, and Thursday, Cabinet Councils were held at the Foreign-office, which were attended by nearly all of the Ministers.

MEETING OF PARLIAMENT.—The following circular has been addressed by the Chancellor of the Exchequer to such members of the House of Commons as are supposed to be friendly to the Administration:—"Downing-street, Oct. 18. Sir, The meeting of Parliament has been fixed for Thursday, the 4th of November, when the House of Commons will immediately proceed to the choice of a Speaker, and to the consideration of business of the highest importance. I take the liberty of earnestly requesting your presence on that day; and I trust you will also excuse my suggesting a wish that you would let me know whether it will be consistent with your convenience to attend at the opening of the session. I have the honour to be, Sir, your faithful and obedient servant, B. DISRAELI."

THE PROPOSED SITE FOR THE NEW NATIONAL GALLERIES.—The Royal Commissioners of the Great Exhibition have recently completed some very large purchases of land, which, it is understood, are to be applied to the above object, in combination with premises such as that now at Marlborough-House, and generally for the promotion of arts, manufactures, and commerce. The charter granted by her Majesty gave power to appropriate the surplus derived from the Great Exhibition to such purposes; but the enormous sum of that profession must have already exhausted that surplus, and the nation will have to supply the requisite funds for all that is to follow. The site chosen for the realisation of all this is at Kensington Gore Estate, and the line of houses which stretches almost uninterruptedly from the new houses on Hyde Park-terrace up to Kensington turnpike is an extensive tract of land now principally occupied as market-gardens, except that part of it which stands westward on the road called Gloucester-road, in which Mr. Cumming's house and grounds, called Gloucester-lodge, were situated. The first tract of land, about twenty acres, were obtained by the Commissioners from the trustees of the parish of St. Margaret, Westminster, at a cost of £60,000, or thereabouts, but the principal purchase (a very recent one) is from the Baron de Villars, who has sold forty-eight acres of land to the Commissioners for the sum of £180,000. For some months past negotiations have been carried on for the purchase of a piece of land which almost thus completes the boundary, as much as £4000 per acre has been given. The general scheme we understand to be this: about 200 yards on this side of the turnpike at Kensington a road is to be cut, 100 feet wide, from Kensington-gore to Brompton, coming out at the back of Onslow-square. This road will furnish an enormous frontage for the new galleries to the west, and the *façade* will return at the south and to any depth required. The quantity of land secured will also allow of ornamental grounds around the building to a considerable extent.

THE LATE DUKE.—EAST INDIA COMPANY.—At a special general meeting of East India proprietors, held on Wednesday, at the India House, the following resolution was agreed to: "That as a testimonial of the gratitude with which the East India Company must ever remember that the glorious career of the Duke of Wellington commenced in India, and that the consideration of the British power there was greatly promoted by his brilliant achievements, a marble statue of that illustrious commander be placed in the General Court-room."

LADIES' CHARITY SCHOOL.—The half-yearly meeting of the patrons and subscribers of this charity was held on Tuesday at the premises of the institution, Jones-street, Bedford-row. John Masterman, Esq., M.P., the treasurer of the institution, in the chair. After the election of three children to fill up vacancies, the report was read, which stated that there were 51 children in the house who are boarded, clothed, and educated for five years, and trained to domestic service. The funds were in a satisfactory condition. During the proceedings the children came into the room and sang a psalm. They presented a remarkably clean, healthy, and contented appearance. This institution is one of the oldest charities in London, having been established 150 years. Dr. Johnson, the great lexicographer took great interest in it, and Mrs. Thrale was one of the committee, and took active part in the management.

LONDON COLONIAL TRAINING INSTITUTION.—On Wednesday afternoon a public meeting was held in this institution, Great Smith-street, Westminster, to take leave of eight respectable adult emigrants, who have satisfactorily undergone the twelve months' probation prescribed by the society, were sent out to an outfit and a free passage to America, where they might commence a new career, industry, and economy the trade started by them while under the care of the institution; Mr. A. Bunsen in the chair. A letter was read from the Earl of Shaftesbury, expressing regret at his Lordship's inability to be present, and desiring the interests of the institution "[illegible]" might be presented to each of the individuals on their departure. Several gentlemen having addressed the inmates of the institution in a serious and Christian like spirit, the proceedings closed by the last of singing, [illegible] impressive and touching manner, the "Prodigal's Return," and by prayer and benediction.

BIRTHS AND DEATHS.—The births registered in the metropolis for the week ending last Saturday, were—Males, 796; females, 781; total, 1567. The deaths during the same period were: Males, 530; females, 542; total, 1072; being nearly the same number as in the previous week. The deaths of last week do not exceed the usual rate of mortality at this season of the year.

METEOROLOGICAL OBSERVATIONS.—At the Royal Observatory, Greenwich, the mean daily reading of the barometer was above 30 in. on the first four days of the week; and the mean reading of the week was 29 545 in. The mean daily temperature of the week was 49·9°, which is 2° above the average. The mean daily temperature rose to 54·8° on Friday, which is 8·6° above the average. The wind blew from the north at the beginning of the week; it then changed to south-west; and, except on Friday, when it was in the south-east, blew in this direction during the rest of the week.

THE PASSENGERS ACT.—The *Gazette* of Tuesday night contains the announcement of the revocation of the Passengers Act of 1849, and the New Order in Council prescribing "such rules and regulations as to her Majesty may seem fit for observing order, for promoting health, and for [illegible] passengers on board ships proceeding from [illegible] and for the [illegible] of the [illegible] of her Majesty's possessions abroad."

GRAND DRAWING MATCH.—The first of the two engagements between Thomas Mackaney [illegible] and James Cardiff of Newcastle-on-Tyne took place on Tuesday [illegible] Lough Swilly, Ireland. The distance was from Fahney to Moville, Mr. E. Searle [illegible] the referee. After a hard struggle, Cardiff was declared the victor, winning only by a short length. The distance was done in 30 minutes, the pace being slow on account of the land water.

CHURCH, UNIVERSITIES, &c.

PREFERMENTS AND APPOINTMENTS.—The following promotions and appointments have recently taken place:—*Archdeaconry:* The Rev. F. Gould to Raphoe. *Rectories:* The Hon. and Rev. H. P. Cholmondeley to Brodswell cum-Addlestrop, Gloucestershire; the Rev. W. H. Gunner, senior tutor and one of the chaplains of Winchester College, to St. Swithin, Winchester; the Rev. A. R. Hill to High Roding, Essex; the Rev. W. C. Madden to Burgh Apton, with Holverstone, Norfolk; the Hon. and Very Rev. Dr. G. Pellew, Dean of Norwich, to Great Chart, near Ashford, Kent; the Very Rev. W. R. Lyall, D.D., Dean of Canterbury, to St. Dionis Backchurch, London. *Vicarages:* The Rev. H. Pollard to Edlington, Lincolnshire; the Rev. E. M. Barry to Scothem, Lincolnshire; the Rev. J. Hodgson to Bloxham-cum-Milcombe, Oxfordshire; the Rev. W. Marshall to Hton; the Rev. A. C. Cushing to Beaminster, Dorsetshire; the Rev. H. Roberts to Aberdaron, Carnarvonshire.

TESTIMONIAL.—The Rev. W. Birch, rector of Hardwicke, Cambridgeshire, from the parishioners of Gazeley, on the termination of his curacy of that place, which he held 35 years.

THE NEW CHURCH IN THORNHILL-SQUARE, ISLINGTON.—The Bishop of London has refused to consecrate this church unless it be dedicated to some other saint than St. George.

ST. DIONIS BACKCHURCH.—A memorial, signed by the churchwardens, overseers, and sixty inhabitants of this parish, has been presented to the Dean and Chapter of Canterbury, setting forth that the late Dean of Norwich was incumbent of the parish for twenty-four years, during the whole of which time he was non-resident; and praying that a clergyman may be appointed to the rectory who, by residing in or near the parish, may be able to fulfil in person the various duties of his charge.

THE NEW VICE-CHANCELLOR OF OXFORD.—In a Convocation holden at Oxford, on Saturday last, a letter was read from the Chancellor of the University, the Right Hon. the Earl of Derby, nominating the new Vice-Chancellor, the Rev. Richard Greswell, Senior Fellow of Worcester College, in the room of the Rev. Dr. Plumptre, Master of University College, whose term (four years) of holding the Vice-Chancellorship has expired. The Vice-Chancellor has appointed the following heads of Houses to be Pro-Vice-Chancellors, who are to exercise his power in case of his illness or necessary absence from the University:—The Master of University College, the Warden of New College, the Principal of Brasenose, and the Warden of Wadham.

ORDINATION OF A LUNATIC FOR PITCAIRN'S ISLAND.—On Sunday morning, Mr. G. H. Nobbs, who has for twenty-five years gratuitously performed the offices of pastor, surgeon, and schoolmaster among the interesting community, consisting of 170 persons, at Pitcairn's Island, was admitted into holy orders, at Islington, by the Bishop of Sierra Leone, under letters dimissory from the Lord Bishop of London

The Convocation will meet on Friday, the 5th of November, being the day after the meeting of Parliament. The place of meeting, in pursuance of the queen's writ, will be St. Paul's. On the occasion of the prayers that are in Latin, are to be read by the junior Bishop present, and a sermon, also in Latin, is preached They then adjourn to the Chapter-house, where the names of the Upper House are called over, and the Lower House are directed by the Archbishop to return to the Cathedral to choose their Prolocutor and present him to his Grace at the next meeting, which will be on the following Friday at the Jerusalem Chamber, Jewin-street, where business is then prorogued. They then meet for the purpose of preparing an address to the Queen.

THE LAST PORTRAIT OF THE DUKE OF WELLINGTON.—We are informed by Mr J. W. Glass, that the late Duke of Wellington sat to him for the last portrait which was taken. The Illustrious Duke honoured Mr. Glass with several sittings last summer, and but a short time prior to his departure for Walmer.

NEW ATTORNEYS.—As many as one hundred and eighty-three persons have given notice of their intention to apply to be admitted attorneys at the Court of Queen's Bench in the ensuing Michaelmas Term.

MONETARY TRANSACTIONS OF THE WEEK.

(From our City Correspondent.)

Notwithstanding that a fair average money business has been doing in the Consul Market, the week, prices, owing to the numerous sales effected on account of private holders of stock, have, in some instances, had a fluctuating tendency. The numerous sales effected on account of the projected line of railway from the London and Brighton to Beaminster, Dorsetshire, and the Rev. Mr. Cumming's house and grounds, called Gloucester-lodge, were situated. The first tract of land, about twenty acres, were obtained by the Commissioners from the trustees of the parish of St. Margaret, Westminster, at a cost of £60,000, or thereabouts, but the principal purchase (a very recent one) is from the Baron de Villars, who has sold forty-eight acres of land to the Commissioners for the sum of £180,000. For some months past negotiations have been carried on for the purchase of a piece of land which almost thus completes the boundary, as much as £4000 per acre has been given. The general scheme we understand to be this: about 200 yards on this side of the turnpike at Kensington a road is to be cut, 100 feet wide, from Kensington-gore to Brompton, coming out at the back of Onslow-square. This road will furnish an enormous frontage for the new galleries to the west, and the *façade* will return at the south and to any depth required. The quantity of land secured will also allow of ornamental grounds around the building to a considerable extent.

THE LATE DUKE.—EAST INDIA COMPANY.—At a special general meeting of East India proprietors, held on Wednesday, at the India House, the following resolution was agreed to: "That as a testimonial of the gratitude with which the East India Company must ever remember that the glorious career of the Duke of Wellington commenced in India, and that the consideration of the British power there was greatly promoted by his brilliant achievements, a marble statue of that illustrious commander be placed in the General Court-room."

LADIES' CHARITY SCHOOL.—The half-yearly meeting of the patrons and subscribers of this charity was held on Tuesday at the premises of the institution, Jones-street, Bedford-row. John Masterman, Esq., M.P., the treasurer of the institution, in the chair. After the election of three children to fill up vacancies, the report was read, which stated that there were 51 children in the house who are boarded, clothed, and educated for five years, and trained to domestic service. The funds were in a satisfactory condition. During the proceedings the children came into the room and sang a psalm. They presented a remarkably clean, healthy, and contented appearance. This institution is one of the oldest charities in London, having been established 150 years. Dr. Johnson, the great lexicographer took great interest in it, and Mrs. Thrale was one of the committee, and took active part in the management.

LONDON COLONIAL TRAINING INSTITUTION.—On Wednesday afternoon a public meeting was held in this institution, Great Smith-street, Westminster, to take leave of eight respectable adult emigrants, who have satisfactorily undergone the twelve months' probation prescribed by the society, were sent out to an outfit and a free passage to America, where they might commence a new career, industry, and economy the trade started by them while under the care of the institution; Mr. A. Bunsen in the chair. A letter was read from the Earl of Shaftesbury, expressing regret at his Lordship's inability to be present, and desiring the interests of the institution "[illegible]" might be presented to each of the individuals on their departure. Several gentlemen having addressed the inmates of the institution in a serious and Christian like spirit, the proceedings closed by the last of singing, [illegible] impressive and touching manner, the "Prodigal's Return," and by prayer and benediction.

BIRTHS AND DEATHS.—The births registered in the metropolis for the week ending last Saturday, were—Males, 796; females, 781; total, 1567. The deaths during the same period were: Males, 530; females, 542; total, 1072; being nearly the same number as in the previous week. The deaths of last week do not exceed the usual rate of mortality at this season of the year.

METEOROLOGICAL OBSERVATIONS.—At the Royal Observatory, Greenwich, the mean daily reading of the barometer was above 30 in. on the first four days of the week; and the mean reading of the week was 29 545 in. The mean daily temperature of the week was 49·9°, which is 2° above the average. The mean daily temperature rose to 54·8° on Friday, which is 8·6° above the average. The wind blew from the north at the beginning of the week; it then changed to south-west; and, except on Friday, when it was in the south-east, blew in this direction during the rest of the week.

THE PASSENGERS ACT.—The *Gazette* of Tuesday night contains the announcement of the revocation of the Passengers Act of 1849, and the New Order in Council prescribing "such rules and regulations as to her Majesty may seem fit for observing order, for promoting health, and for [illegible] passengers on board ships proceeding from [illegible] and for the [illegible] of the [illegible] of her Majesty's possessions abroad."

GRAND DRAWING MATCH.—The first of the two engagements between Thomas Mackaney [illegible] and James Cardiff of Newcastle-on-Tyne took place on Tuesday [illegible] Lough Swilly, Ireland. The distance was from Fahney to Moville, Mr. E. Searle [illegible] the referee. After a hard struggle, Cardiff was declared the victor, winning only by a short length. The distance was done in 30 minutes, the pace being slow on account of the land water.

Worcester, and Wolverhampton, 52 per Cent., 8½; Shrewsbury and Birmingham, New, Guaranteed, 11½; South Devon, New, 1½.

FOREIGN.—Chartered and Argentines, 1½; Grand Junction of France, 7⅞; Namur and Liege, with interest, 8½; Northern of France, 33⅛; Norwegian, 9½; Paris and Lyons, 29½; Paris and Strasbourg, 33½; Paris, Caen, and Cherbourg, 8½; Rouen and Havre, 18; Sambre and Meuse, 10⅛; West Flanders, 4½. Ditto, New, 1½. Mines have been steady, but without leading to much business. On Thursday, Agua Fria were 1⅛; Australian Freehold, ⅜ to ⅝; British Australian Gold, ⅛; Carson's Creek, ⅛; Colonial Gold, 1⅛; New Grenada, ⅜ to ½; Nevada Mines, ⅛ to ⅜; Port Phillip, 1⅛ to ⅜; United Mexican, 7⅞ to 8; Yuba, 1⅛.

FRIDAY EVENING.—The Consol Market has been by no means active to-day, yet prices are supported. The Three per Cents—Money—have been done at 100¼, and for the Account, 100⅜. The New Three-and-a-Quarter per Cents have been 103⅛; and the Three per Cents Reduced, 99⅝. Bank Stock, 224. India Bonds, 84s to 86s; and Exchequer Bills, 74s premium. The Turkish Scrip has been 4⅞ to 5⅛ premium. Other Foreign Securities steady. Railway Shares firm.

THE MARKETS.

CORN-EXCHANGE (Friday).—Generally speaking the arrivals of English wheat have been slightly on the increase during this week; but the samples fresh up-to-day were very moderate. The show of samples of both red and white was comparatively small. The attendance of town and country buyers was by no means large, yet the sale for home-consumption, wheat was steady, at Monday's prices. About 1600 quarters changed hands for forward delivery. Upwards of 18,000 quarters of foreign wheat have come in this week, and most kinds changed hands to a fair ext. at late currencies. Several floating cargoes sold, chiefly on Irish account, at full prices. In barley and malt a small supply of English and foreign barley on show Real fine malting parcels were the turn dearer Grinding and distilling sorts were firm. Malt, the show of which was small moved off steadily, at very full prices. There was an improved history for oats, the consumers of which were freely operating. Beans, peas, and flour moved off at steady, at extreme rates.

ARRIVALS. English: wheat, 2950 qrs; barley, 2230; malt, 1260; oats, 1830; flour, 1179; Irish: oats, 13,210. Foreign: wheat, 19,320; barley, 1,010; oats, 6090; flour, 26,000 barrels.

ENGLISH.—Wheat, Essex and Kent, red, 38s to 40s; ditto, white, 40s to 43s; Norfolk and Suffolk, red, 36s to 40s; ditto, white, 38s to 42s; rye, 30s to 32s; grinding barley, 26s to 28s; distilling ditto, 29s to 30s; malting ditto, 30s to 34s; Norfolk and Lincoln malt, 60s to 66s; brown oats, 18s to 24s; Kingston and Ware, 26s to 28s; Cheveller, 26s to 28s; Yorkshire and Lincoln potato, 22s to 24s; Scotch ditto, 22s to 24s; Kingital and Cork black, 19s to 22s; ditto, white, 17s to 22s; tick beans, new, 29s to 32s; ditto, old, 33s to 36s; grey peas, 34s to 38s; maple, 35s to 36s; white, 36s to 40s; boilers, 38s to 42s per quarter. Town-made flour, 40s to 43s; Suffolk, 38s to 40s, Stockton and Yorkshire, 34s to 36s per 280 lbs. *Foreign:* American flour, 19s to 22s per barrel; French, 57s to 58s per sack.

Seeds.—Linseed and rapeseed, as well as cakes, continue in request, at full prices. In other articles very little business is doing

LONDON, Monday Morning.—Wheat, 38s (old), 34s (new); barley, 27s 6d; oats, 17s 10d; rye, 29s 6d; beans, 34s 3d; peas, 36s 6d.

Oats.—Wheat, 1s; barley, 1s; oats 1s, rye, 1s beans, 1s, peas, 1s.

Flour.—Town-made sells, several parcels have been disposed of at very full prices; but the demand by private consumers is less active. However, common sound Congou cannot be purchased under 9d per lb. Up to Saturday the duty was paid on 35,952,317 lbs. against 33,4..,285 lb in 1851.

Sugar.—West India qualities have sold freely, at a further advance in the quotations of 6d per cwt. Other kinds of sugar have realised full prices. Fine yellow Barbadoes, 39s to 40s, middling ditto, 36s to 38s 6d; mid..ng yellow Jamaica, 35s to 36s, good to fine brown Demerara, 36s to 38s; fine yellow Mauritius, 37s to 39s; middling to good, 34s to 36s 6d; grey, 32s to 37s; middling to good white Bengal 37s 6d to 38s. Soft yellow Manilla parcels steady, at from 34s to 40s per cwt. The total clearances to the 25th instant were 3,147,8s5 cwts, against 4 038,467 cwts in 1851.

Coffee.—Several parcels of good ordinary native have been withdrawn from public sale, at 40s per cwt. In Plantation kinds only a moderate business is doing; but foreign are held for higher rates.

Rice.—About 5000 bags Bengal have found buyers, at from 11s 6d to 12s per cwt for fine white.

Provisions.—The market for Irish butter is in a sluggish state In prices, however, no change can be noticed. English and foreign parcels as in demand. Ine sale for bacon is limited to a few parcels are quoted at 48s to 5s. Lard has advanced 2s per cwt. In other article ex very little to doing.

Tallow.—P.Y.C. on the spot, is selling at from 43s 6d to 44s per cwt, and 43s 3d to 43s 6d for old Hams are buyers for all the year at 42s 6d Town tallow, 43s 6d per cwt, nut cash. Rough fat, 2s 2d per 8 lb

Coals (Friday).—Bute's West Hartley, 15s 6d; Buddle's West Hartley, 15s; Newton Main, 15s 6d; Hetton Main, 15s 6d; Eastfield Moor, 15s 6d; Wylam, 15s 6d; Sawarts, 15s; Keanon, 17s 3d; Tees, 15s per ton.

Wool (Friday).—The demand continues rather active for all low hogs, at full ra es of currency. The supplies on offer are large. Duty, £255,000 or £260,000.

Mid and East Kent coaglings 32s to 39s, Weald of Kents, 7s to 84s; Ditto choice, 95s to 105s; Farnhams, 120s to 125s; Ditto choice, 130s to 140s, Country, 90s to 100s, Linto choice, 105s to 110s per cwt.

Yesterday (Monday) at Mark Lane Sunday's market was fairly attended as to number, but their general quality was inferior. Shedding breeds moved off steadily, at, in some instances, full Monday's quotations. Other breeds were dull, and 2s per head lower. Sheep—the arrivals of which were but moderate.—were in fair request, at full currencies the primest Downs realising readily, as to quality, 4s per 8 lb. Lambs sold briskly, at full rates. Calves—the supply of which was on the increase—at an advance of 2d per lb. There was more doing in pigs, at full prices—

Beasts, 2,200; sheep, 12,000; calves, 300; pigs, 270.

Per 8 lb to sink the offals: Coarse and inferior beasts, 3s 6d to 3s 8d; second quality ditto, 3s 8d to 3s 10d; prime large ditto 3s 10d to 3s 6d; prime Scots 3s 8d to 3s 10d; coarse and inferior sheep, 3s 8d to 3s 10d; second quality ditto, 4s 0d to 4s 2d; prime coarse-woolled ditto, 4s 2d to 4s 4d; prime southern ditto, 4s 4d to 4s 6d; large coarse calves, 3s 8d to 3s 8d, prime small ditto, 3s 8d to 4s 0d; large hogs, 3s 10d to 3s 8d; neat small porkers, 4s 0d to 4s 10d; suckling ox ves, 18s to 30s; and quarter ditto, 7s to 12s each. Total supplies Beasts, 1,410; sheep, 120, sheep, 3100; calves, 300, pigs, 250 Foreign: beasts, 360; sheep, 1600; calves, 90.

Newgate and Leadenhall.—We had an improved demand for each kind of meat, at very full prices—

Per 8 lb to sink the offals: Inferior beef, 3s 0d to 3s 4d; middling ditto, 3s 6d to 3s 8d, prime large ditto, 3s 10d to 4s 0d, prime small ditto, 4s 2d to 4s 4d; large pork, 3s 6d to 3s 8d; inferior mutton, 2s 8d to 3s 0d, middling ditto, 3s 2d to 3s 6d, prime ditto, 3s 8s to 4s, veal, 3s 8d to 4s 10d, small pork, 3s 8d to 4s 0d.

LIFE of FIELD-MARSHAL the DUKE of WELLINGTON, the Commander-in-Chief of the British Army. By J. H STOCQUELER, Esq., Author of "The British Officer," "The Handbook of British India," &c. Vol 1, fcap 8vo, handsomely bound in cloth gilt, price 6s.

The present volume will embrace all the events of his remarkable military career down to the end of the campaign of 1814. The second, all the operations from Waterloo to the close of the Duke's life. The illustrations, from Drawings by Lieutenant-Colonel LEAKE, taken during the Peninsular campaigns, convey the most accurate views of the scenes of his exploits, together with Sketches of Battles and Portraits of the British Generals who were his distinguished places in the history of the immortal Duke's career

On November 1st will likewise be published,

SEALSFIELD'S CABIN BOOK. Illustrated with Eight Tale Engravings. Forming Volume Twenty-seven of the Illustrated London Library. Contents—Scenes and Sketches of the Interior American and Mexican War. Cloth, uniform with "Three Years in the Sierra Madre."

Also ready on November 1st,

WELLINGTONIANA: Anecdotes, Sayings, and Opinions of the DUKE of WELLINGTON. Collected by JOHN TIMBS compiler of "Laconics," Author of "Popular Errors Explained," &c. Crown 8vo, Illustrated. Plain, in wrapper, 1s; or bound in cloth, 1s 6d.

Now ready,

FIELD-MARSHAL the DUKE of WELLINGTON.—A Sketch of his Career. By JOHN TIMBS. Illustrated with WATERLOO "Up Guards and at 'em!" From a Painting by Sir THOMAS LAWRENCE, engraved by W. BROMLEY, A.R.A. Length 2 feet 1 inches by 3 feet 4 inches. Price 5s

Just published, price 1s, post free, in an Elegant Wrapper, or in cloth 1s 6d,

A COPIOUSLY ILLUSTRATED BIOGRAPHY of FIELD-MARSHAL the DUKE of WELLINGTON, embracing his Military and Political Career

London: INGRAM, COOKE, and Co, 227, Strand

[illegible], 20, Great Marlborough-street.

COLBURN and Co.'s NEW PUBLICATIONS

To be had of all Booksellers.

1. THE RIGHT HON. B. DISRAELI'S POLITICAL BIOGRAPHY of LORD GEORGE BENTINCK. Fifth and Cheaper Edition. Revised in 1 vol, post 8vo. 10s 6d bound

2. THE BARONESS D'OBERKIRCH'S MEMOIRS. Illustrative of the Secret History of the Courts of France, Russia, and Germany. 2 vols, 21s 6d. "We commend these charming volumes most heartily to every reader. They will entertain the most fastidious, and instruct the most profound."—Examiner.

3. REVELATIONS of SIBERIA. By A BANISHED LADY. 2 vols, 21s.

"This interesting work by a lady of quality, who for a political offence was exiled to Siberia, contains a lively and graphic picture of the country and the people, their manners, customs, &c., and gives a correct information and valuable insight into the economy of what has been hitherto a terra incognita to all but political offenders."—Daily News

4. THE MARVELS of SCIENCE, and their TESTIMONY. By MRS. HOWITT. A Popular Manual of the Sciences. By R. WEDDLUM, Esq. Dedicated by permission to the King of Hanover. 1 vol, 10s 6d bound.

5. THE ROMANCE of the FORUM; or, Narratives, Scenes and Anecdotes from Courts of Justice. By PETER BURKE, Esq., Barrister-at-Law. 2 vols, 21s.

THE NEW NOVELS.

1. UNCLE WALTER. By Mrs. TROLLOPE. 3 vols.

"Uncle Walter is an admirably conceived and exceedingly entertaining novel. Mrs Trollope has written better than ever, in her position as one of the ablest fiction writers of the day."—Morning Post.

2. FANNY DENNISON. 3 vols

"A story of considerable merit."—Athenæum

"A novel of more than ordinary merit—an exciting story, crowded with forward incidents."—Morning Post

3. THE KINNEARS: a Scottish Story. 3 vols.

NEW WORK BY THE AUTHOR OF "VANITY FAIR," "PENDENNIS," &c.

Just published, and ready at all the Libraries,

ESMOND. A Story of Queen Anne's Reign. By W. M. THACKERAY, Esq. In Three Volumes, crown 8vo, price £1 11s 6d

London: SMITH ELDER, and Co. 65, Cornhill.

This day is published, price 1s,

READING for TRAVELLERS. No. 1, containing OLD ROADS and NEW ROADS

London: CHAPMAN and HALL, 193, Piccadilly.

MR. CHARLES LEVER'S NEW WORK.

THE DODD FAMILY ABROAD.—The First Number is published this day price, 1s, with Two Illustrations by H K BROWNE.

London: CHAPMAN and HALL, 193, Piccadilly.

ARNOLD'S (DR. T. K.) SCHOOL EDITIONS OF THE GREEK POETS, with ENGLISH NOTES.

Now ready, in 1 vol, price 3s,

EURIPIDIS RECURSA; with ENGLISH NOTES. By the Rev THOMAS KERCHEVER ARNOLD, M.A., Rector of Lyndon, and late Fellow of Trinity College, Cambridge.

Recently published in this Series:—

1. SOPHOCLIS EDIPUS COLONEUS. 2s. 6d.
2. ——— ŒDIPUS TYRANNUS, 2s 6d
3. ——— PHILOCTETES, 3s.
4. ——— ANTIGONA, 3s.

With English Notes, translations from the German of Schneidewin

5. ÆSCHYLUS ARISTOPHANICA, The CLOUDS, 2s 6d.
6. ——— The BIRDS, 3s 6d.

With English Notes, by Professor FELTON.

Nearly ready,

7. EURIPIDIS HIPPOLYTUS. With English Notes.

RIVINGTONS, St Paul's Churchyard, and Waterloo-place.

GROOMBRIDGE'S FARM AND GARDEN ESSAYS.—This day is published, 1 vol, small post 8vo, price 3s

THE FARM and GARDEN ESSAYS, comprising complete Treatises on the Cultivation of Arable Land; Rearing and Management of Poultry; Annals for the Flower Garden; Fruit Trees; Kitchen Garden; Vermin; Weeds; and Steading of Cattle; a Treatise on the Horse; the Garden Frame; how to construct, how to use, and how to make the most of it; the Greenhouse—its construction and management properly treated.

London: GROOMBRIDGE and SONS, 5, Paternoster-row.

Just published, 8vo, cloth, 2s.

PULMONARY CONSUMPTION and its TREATMENT. By WILLOUGHBY MARSHALL BURSLEM, M.D., Senior Physician to the Manchester Dispensary.

London: JOHN CHURCHILL, Princes-street, Soho.

Fourth Edition, price 5s 6d, Illustrated with interesting Cases,

ON ASTHMA, CONSUMPTION, BRONCHITIS, and other CHEST DISEASES.

By which is well known by all who work on Consumption, and the present publication will add to his fame.' Weekly Dispatch

London: SAMPSON LOW, 47, Ludgate-hill; EFFINGHAM WILSON, Royal Exchange; by post from the Author, 25, Lloyd-square

Just published, price 1s,

THE OLD CRYSTAL PALACE IN HYDE PARK.

THE LAST OF THE OLD CRYSTAL PALACE IN HYDE PARK.

The Crystal Palace has vanished as if by a touch from a fairy's wand. When we last illustrated the edifice it formed one of the most picturesque ruins in the world. Now the site appears a desolate waste. The last column and the last girder have been carried away in Mr. Younghusband's vans to the new edifice at Sydenham, and nothing is left save the gigantic blocks of coal and the columns of granite which stood before the western entrance. They are to be sold by public auction next Monday, and then the site of the Crystal Palace will be handed over to the Board of Woods and Works, to be by them re-turfed or sown with grass-seeds, as may seem best. A few days ago, one of the fountains exhibited at the Crystal Palace might be seen in careless but graceful proximity to the fine old elm-trees which stood under the central transept on the south side. (*See Illustration.*) Here and there, too, a fire, lighted by the workmen to melt the lead of the gas-pipes, rose picturesquely among the trees, with its curling wreaths of smoke.

But the fountain has disappeared. The last fire has been quenched. Gas-pipes and tubular drains have been taken up. The ground has been broken and dug up, and the site of the Crystal Palace, under the influence of the late heavy rains, presents the appearance of a vast area of heavy mud.

But while the site of the Great Exhibition building presents an unpoetical aspect, which must sorely afflict the ghost of that edifice those great landmarks, the noble elms of the transept, and the lesser trees of the north-western side, still remain to mark the outline of the building. Nor are other natural features wanting. The row of young trees along the entire length of the north side, and the road and a similar range of trees on the south, mark with indelible accuracy, the longitudinal site. On the west, a line drawn northwards from the small gate leading to Kensington Gardens will give the western frontage; and the great eastern frontage facing Apsley House, which was reserved for humble equestrian visitors, will be indicated with sufficient accuracy, for a century to come by two or three large trees, which reared their lofty heads just opposite the entrance.

Thus, the pilgrim from other lands need never seek a monolith of the site of the Crystal Palace. He may enter the building in imagination at the south transept, under the foliage of that branching elm (may it's shadow never be less!)—and upon the very spot where so many thousand pulses quickened with the sensation of a new surprise. Aided by the beautiful sister trees in the north transept, and the natural features which we have pointed out, he will have no difficulty in saying, "Here stood the Crystal Fountain—here the portrait of the Queen and Prince Albert, upon china—here the wondrous Koh-i-noor, now re-cut—here the French organ—here the 'Amazon and the Tiger'—and here the 'Greek Slave!'" On the western side he will step a few paces, and say, "Here stood the famous trophy of Spitalfields silks—here the woods of Canada and the Colonies—here the Colebrookdale Summer-house, with its Eggie-slayer—here the huge stone fountain, designed for a market-place—and here the Liverpool Model." He may imagine he still still stands beneath the roof of the Crystal Palace, and may fill his ears with grand old organ harmonies of Bach and Handel, such as Best drew out of the great organ by Willis in the Western Gallery; or he may fancy he hears the pleasant hum of a well-ordered crowd, who see something to admire at every step. May the grass grow freshly verdant over the site of the old Crystal Palace, for it has set the world thinking!—And many rivals abroad, and many scions and imitators at home, testify to its world-wide fame and amazing success. Pleasant memories are about thee, fair spot of English ground, and shall descend to far distant generations!

FOUNTAIN IN THE NORTH TRANSEPT.

PROGRESS OF THE NEW CRYSTAL PALACE AT SYDENHAM.

It has been erroneously stated that *working* models of antediluvian animals would be exhibited crawling upon the strata to which they belonged; the fact is that models of these gigantic creatures will be represented each standing on the stratum which was the surface of the earth in its era.

Among the applicants who have already applied for space in the New Palace, are all the important manufacturers of agricultural implements.

The following sculptures have been selected from the British Museum to be cast for the Egyptian Court of the Crystal Palace:

The two Lions of Lord Prudhoe; a sitting figure of Pharaoh Amenophis III.; a sitting figure of the goddess Pasht bearing the name of Pharaoh Shishak, and a standing figure of the same divinity; the colossal head of a Ram, from one of the Sphinxes in the avenue from Luxor to Karnak; the statue of a priest; a mould of the head of the Colossus of Abusimbel, to be cast in cement for the colossal statue in the nave.

From the Egyptian paintings in the British Museum, there have been selected, to be copied, viz. a measured drawing of the "Statue of Sesostris, his wife, and mother, and child," a "View of the Hall of Columns, at Karnak;" and a "View of the *façade* of the Rock Temple at Abusimbel."

Along the entire length of the new Palace on one side, the upright columns which support the galleries are now fixed.

The rails for the new Crystal Palace traffic along the line of the Brighton Railway, are now in a forward state. The railway traveller on this line may notice on his left, between the Sydenham and Anerly Stations, navvies hard at work preparing the ground. The space through the wood for the line of rails that is to run into the Palace, is now cleared of trees, and presents a picturesque woodland scene, the timber lying across the way in happy confusion, flanked by the living trees, now clad in the brilliant reds and yellows of advanced autumn.

Among the celebrated sculptures which Messrs. Digby, Wyatt, and Owen Jones have obtained, are casts from the Ecole des Beaux Arts, of the "Bacchus" of Michael Angelo; a shield, said to be by Benvenuto Cellini; part of the frieze from the Forum of Trajan; forty-nine pilasters from the tomb of "Louis XII.," at St. Denis; a bas-relief representing "Cosmo de Medici driving away Vice, and leading back Virtue," and a bas-relief of the "Holy Family:" both by Michael Angelo.

SITE OF THE TRANSEPT, NORTH-EAST.

ILLUSTRATED LONDON NEWS SUPPLEMENT.

VOL. XXI] SATURDAY, OCTOBER 30, 1852. [GRATIS.

GAINSBOROUGH AND HIS WORKS.

THE pictures by this artist, in public or well-known collections, are not very numerous. The National Gallery boasts of two, the "Market Cart" and the "Watering-place:" which, however, have recently been consigned, with the rest of the British school, to Marlborough House, where, owing to the imperfect light, they cannot be properly seen. In the Dulwich Gallery is one of his most charming portrait subjects, a group of Mrs. Sheridan and her sister Mrs. Tickell. In the Grosvenor Gallery are three pictures by this artist—one, "The Blue Boy," noticed hereafter; the other two, a landscape, "The Cottage Door," and a "Coast Scene," respectively. Of "The Cottage Door" we give an Engraving. It is impossible to look upon this charming subject without participating in the hallowed sentiment of domestic peace and repose which breathes in every touch. The shady retirement of the spot, the warmth that seems to penetrate through the rich summer foliage, the rustic grace and earnest joy of the figures, all denote the calm and unspeakable delights of an English home.

Truly did Reynolds say, "whether Gainsborough excelled most in portraits, landscapes, or fancy pictures, were difficult to determine; or whether his portraits were more admirable for exact truth of resemblance, or his landscapes for a portrait-like fidelity to nature, such as we see in the works of Rubens, Ruysdael, and others of their schools."

Gainsborough was a thoroughly original, and peculiarly an English artist. Deriving his first inspiration, and taking his earlier subjects, from amid the groves and rustic scenes of his native Suffolk, he afterwards improved upon his first achievements by the force of his own genius. He borrowed nothing from foreign examples; and he owed little of the arcana of art to the revelations or example of others. The difference between him and all other landscape-painters who had preceded him was, therefore, very apparent and well defined. Whilst Wilson added the grace of Classicism to the inspiration of nature, and became the English Claude, Gainsborough, like Salvator Rosa, formed his style upon an exact, though feeling, embodiment of the scenery and incidents with which he happened to be surrounded. But how different those subjects we need hardly remark:—Salvator Rosa's being of the wild craggy passes in the Appenines, or the gloomy solitudes of the plains of Italy, with banditti for his heroes; Gainsborough's, of the smiling dells, the shady groves, the peaceful homesteads of merry England, with happy and industrious peasantry for their occupants. The same love for the beauties of well-conditioned nature which led to the selection of such subjects in the way of landscape, also disposed his hand for the kindred department of portraiture; and it is remarkable that the same healthy truthfulness characterises his works in both those styles.

This artist, of whom England may well be proud, was born in 1727, at Sudbury, in Suffolk, where his father was a clothier. He was sent, in due course, to school; where, however, on all possible occasions, he neglected the instructions of the village pedagogue, in favour of the more fascinating pursuits of art. Aware, probably, that he was doing wrong, he kept his sketching propensities a secret as long as he could; but at last the truth came out. One day he ventured to request a holiday, which was refused, and the young artist actually committed forgery, imposing his own penmanship for that of his father, in a formal request, couched in these words—"Give Tom a holiday." His parent looked upon the fraudulent document with trembling eyes, exclaiming, "The boy will come to be hanged." When, however, he was informed of the pursuits to which his son devoted the hours stolen from the grammar and spelling-book, and beheld some of his sketches, his brow cleared up, and he proclaimed, "The boy will be a genius."

His sketches, at this time, were undoubtedly very numerous; but, as he was very lavish in giving away his earlier productions to any one who admired or took a fancy to them, the number which is known to exist is comparatively small. In connexion with one of these juvenile works an amusing anecdote is told. On one occasion he was concealed among some bushes in his father's garden, making a sketch of an old fantastic tree, when he observed a man looking wistfully over the wall at some pears, which were hanging ripe and tempting. The slanting light of the sun happened to throw the eager face into a highly-picturesque mixture of light and shade, and Tom immediately sketched his likeness, much to the poor man's consternation afterwards, and much to the amusement of his father, when he taxed the peasant with the intention of plundering his garden, and showed him how he looked. Gainsborough long afterwards made a finished painting of this Sudbury rustic—a work much admired amongst artists—under the name of Tom Peartree's portrait. He loved to show his powers in such hasty things; and, from the unembarrassed freedom of mind and hand with which he produced them, they take rank with his happiest compositions.

From drawing he proceeded to attempt colouring; and, after painting several landscapes, which evinced great genius of handling, and a genuine appreciation of the proportions of colours, he removed to London, where he received a few lessons from Gravelot, and from Hayman, one of the companions of Hogarth. We do not apprehend, however, that either the length of time he received instruction in these quarters, or the amount of the information he obtained for them, was such as materially to qualify Gainsborough's claims as an original and self-taught

"THE COTTAGE DOOR." BY GAINSBOROUGH.

genius. Certain it is that he was only in his eighteenth year when he returned to his native place a confirmed painter, having already displayed those principles of colouring for which he was afterwards distinguished. After this time we have no reason to believe that he took instruction, or even borrowed a hint from any artist, living or dead. Indeed, throughout life he was so eccentric, and, it may be almost said, self-opinionated, that he seemed to delight in running against the rules set up by others; and he actually painted a celebrated picture known as the "Blue Boy," in consequence of a dispute between himself and other artists upon the principles of colouring; but more especially with a view practically to disprove, or, at least, to set at defiance, the opinion enunciated by Sir Joshua Reynolds in one of his lectures, that the preponderance of blue in a picture was incompatible with harmony and good effect of colour. In this picture, which is a portrait of the son of Mr. Buttall, and which is now in the Grosvenor Gallery, the artist has represented the figure standing in a satin dress of a cold blue colour, with a very rich and glowing background. There can be no question as to the masterly treatment of the one idea, and the successful manner in which an undeniable difficulty was overcome; but it may still be doubted whether, as far as relates to the general principle laid down by the first President of our Royal Academy, the effort established anything.

Soon after his return to Sudbury, he met with a young lady named Margaret Burr, having £200 a year in her own right. A mutual affection sprang up between them, which, in due course, was cemented at the altar. With his young wife he soon afterwards established himself at Bath, then standing next, in point of art-patronage, to the metropolis. There he remained, painting portraits and landscapes of good prices, and living in comparative affluence. In illustration of his *easy bonhommie* and generous nature, a pleasing anecdote is recorded. One of his acquaintances in Bath was Wiltshere, the public carrier, a kind and worthy man, who loved Gainsborough, and admired his works. In one of his landscapes the painter wished to introduce a horse, and, as the carrier had a very handsome one, he requested the loan of it for a day or two, and named his purpose; his generous neighbour bridled it and saddled it, and sent it as a present. The painter was not a man to be outdone in acts of generosity; he painted the waggon and horses of his friend, put his whole family and himself into it, and sent it well-framed to Wiltshere, with his kind respects. It is considered a very capital performance. From 1761, when Gainsborough began to exhibit his paintings at the Academy, till his removal from Bath in 1774, Wiltshere was annually employed to carry his pictures to and from London. He took great care of them, and constantly refused to accept money, saying, "No, no; I admire painting too much," and plunged his hands into his pockets to secure them against the temptation of the offered payment. Perceiving, however, that this was not acceptable to the proud artist—the honest carrier hit upon a scheme which pleased both. "When you think," said he, "that I have *carried* to the value of a little painting, I beg you will let me have one, sir; and I shall be more than paid." In this coin the painter paid Wiltshere; and overpaid him. His son is still in possession of several of these pictures, and appreciates their value.

In 1774, he left Bath, and settled in London, at Schomburg House, in Pall-Mall: where his reputation and his business rapidly increased. It should be stated that, besides his proficiency in the art of painting, he was passionately fond of music, and was a tolerable performer upon more than one instrument. These accomplishments, set off by a handsome person, and naturally agreeable manners, made him a general favourite. He was thus enjoying the hey-day of fame and prosperity, when a swelling took place in his throat, which soon assumed the dreadful appearance of a cancer, which, baffling all medical skill, carried him off on the 2nd August, 1788. His remains, by his own direction, were buried near those of his friend Kirby, in Kew Churchyard, where a simple grave-stone was placed to his memory.

THE ENAMELS EXHIBITED IN THE GALLERIES OF THE LOUVRE. BY M. LE COMTE DELABORDE,*

MEMBER OF THE FRENCH INSTITUTE, KEEPER OF THE MEDIÆVAL AND RENAISSANCE COLLECTIONS IN THE LOUVRE.

During many years the Grecian, Roman, and Egyptian antiquities, as well as the paintings of the great masters of the 16th and 17th centuries, seemed to be the only artistic remains worthy of preservation in the galleries of Kings and Princes, and in national museums. After the 16th century mediæval monuments fell into such general disrepute as often to be considered the productions of a barbarous and ignorant age, owing, no doubt, to an absurd supposition that prevailed among artists that no instruction was to be derived from the immense glyptic stock bequeathed by Suger, Jeanu. d'Evreux, Marie de Medicis, Donatello, Jean de Pise, Alpais, Luca della Robbia, Francis I., Henry II., and Henry III.

The works of the Italian *renaissance* met with the same ill-deserved fate. Despite the popularity they had enjoyed in the 16th century, they were abandoned at the time of Louis XIV., to give place to more "grand.ose" conceptions.

The consequence was, that under the reign of Louis XIV. the French artists neglected the development of the inspirations of their own countrymen, to become the mere copyists of a foreign school; so that, at the end of the last century, the re-action in favour of the Greco-Roman forms had thoroughly supplanted the industrial arts of all the preceding national ages.

The Greco Roman style, so much in fashion during the period of the French Empire, had a bad influence upon the productions of industrial art in every department. The most cursory glance at the costume, furniture, and monuments of the Napoleonic period will convince us that the imitators of the Grecian school of that time were remarkable for nothing so much as their poverty of invention. In fact, no style could be so inappropriate for both the national architecture and decoration of articles in general use. The genius of the French mind, full of creative power, accommodates itself with difficulty to the imitation of others.

Fortunately for art, at the time when the Greco-French school was predominant, and professed the deepest contempt for all productions which had not their origin in classical traditions, a few artists, superior to the prejudices of their age—Alexander le Noir, who, at the time of the revolutionary storm in 1793, had rescued from the attacks of Vandalism so many precious monuments of the national sculpture of bygone ages Vivant Denon, keeper of the Imperial Museum; Villemin, who, in 1806, had published his splendid work entitled "Monumens Francais Inédits;" Révoil, the clever pupil of David; Ducommesard and Sauvageot—felt the necessity of restoring to its natural channel the misdirected inspiration of the age. They believed that the style of the mediæval monuments, as well as those of the *renaissance*, possessed both power and vitality; and they commenced at once, in good earnest, the revival of the abandoned productions of ancient times.

It was, however, not till several years after the Bourbon restoration had taken place, that the reaction against the ridiculous Imperial school produced any important change. Louis XVIII., of classical memory, paid very little attention, and gave very little encouragement, to the new school. Every effort was made by private individuals, who silently and steadily followed their masters in their retrospective investigations.

In fact, who could anticipate, in 1695, that the renovation of some old-fashioned cabinets were, after a lapse of twenty-five years only, to lead the French industrial art towards complete and incontestable triumph in the Great Palace of the Works of All Nations.

Meanwhile, abroad, the foreign Sovereigns followed the progress indicated by some modest French archæologists. In Dresden the Grüne Gewolbe, and the Historical Museum; in Munich, the Treasure Room, the rich chapel, and the Vereinigten Sammlungen; in Vienna, the Belvedere Palace, the Imperial Treasury, and the Medallion Room; in Berlin, the Konigliche Kunst-Kammer; in Florence, the Cabinet des Gemmes, were filled with works of art of the mediæval age and *renaissance*.

Charles X. showed a more enlightened interest than his predecessor, Louis XVIII., in this movement of the age towards the study of the remains of French art and inspiration. He purchased and placed in the Louvre the glyptic collections of MM. Durand and Révoil, and added all the works in the possession of the "Liste Civile," at that time dispersed over France, in the different Royal residences. All these beautiful works of art were, however, placed again without either scientific or chronological arrangement, in the galleries of the Louvre. Jewels, goldsmiths' works, precious stones, enamels, were exposed to view with Chinese "laques" and Italian "mezza-majolica" in the same room of the hall of the Sept Cheminées. Ivory, wood-carvings, and furniture, were placed in two rooms at about half a mile distant from one another. One, in the court, was situated between the rooms which now contain the Grecian, Roman, and Egyptian antiquities. The second, looking on the river, interrupted the series of pictures of the modern French school. How much of their utility and interest these monuments of the middle ages and *renaissance* lost by such a separation is evident, for sacred instruments, arms, jewels, and domestic utensils are not to be viewed only as examples of the genius of artists, or as models for the imitation of pupils; they are a faithful reflex of the domestic life of our ancestors; their study is indispensable to the historian who is desirous of penetrating the inner life of past ages. To unite the objects of one branch of art in *one* place, is the only way to enable us to study its rise, progress, and decay. To separate them is to disorganise the very *materia prima* of history, and to sacrifice the true interests of historical research—an absurdity too often permitted in England.

Under the reign of Louis Philippe, Goldsmith's works, incrusted enamels, wood and ivory sculptures, enamel painting of the Limoges school, Palissy and Italian earthenwares, and stained glass, were again and again left to decay in dust and obscurity. The Museum of Versailles, with which, at his own expense, he endowed the French nation, occupied all the attention and absorbed all the resources of the King—a munificent donation, however, sufficient to perpetuate the artistic fame of a King, and gain for him the gratitude of the world of art.

In the revolution of 1848, the collections of the Louvre, which before made part of the usufructuary dotation of the crown, fell into the hands of the state, and particular grants were made to the museum by the successive Assemblies. Two millions were applied to the restoration of the two great rooms known as the "Grand Salon" and the "Salle des Sept Cheminées," when, fortunately, may be seen at the present moment the most complete collection of the different species of enamels in existence, in an unbroken series, displaying all the transformations of the art, from the Mosaic enamels of the Byzantines to the miniatures on gold of Petitot and his imitators; enamels of the painters of the Limoges school, and incrusted enamels; mezza-majolica earthenwares; vases of hard and metallic substance, engraved and enamelled by the greatest goldsmiths in the 16th century.

These last works are, unfortunately, not the most numerous in the Louvre. The value of the material has caused the loss of many treasures of precious metals—few have escaped, through so many ages, necessity, avarice, and fashion. This has been, doubtless, a great misfortune for the art; for it may be remembered that, in the middle ages, goldsmiths were considered as the workmen *par excellence*, and men of universal knowledge. Down to the middle of the 16th century the greatest artists had been goldsmiths: Jean de Pise, the great Donatello, Filippo Brunelleschi, the Cellini, and the Florence Cathedral; Lucca della Robbia, the inventor of the sculpture on earthen enamel; Ghiberti, the author of the marvellous gates of the baptismal fonts of St. John; Pallaiolo, Andrea Verochio, Dominico Ghirlandajo, and Francesco Francia, who all started from the workshop of goldsmiths, and themselves actually practised both the craft and trade. We have not sufficient space to enter into a description of the peculiar beauties contained in each of the pieces in the collection of the Louvre. An entire volume would not this, nor even describe the "joyaux d'or" alone, and "antres choses précieuses trouvées au cabinet du Roi à Fontainebleau," the helm and shield of Charles IX., the Royal ring of St. Louis, the "St. Esprit" of Henri III.; without mentioning the glyptic treasures of agate, chalcedony, sardonyx, jaspar, crystal, and lapis-lazuli, from the chapel de l'Ordre du St. Esprit and St. Denis Abbaye.

This collection has fortunately been entrusted to the care of the Comte Delaborde. It could not fall into better hands. The varied knowledge possessed by the learned keeper in all parts of the art, renders him competent for any of the departments of his keepership. The profound studies which he has followed for many years with reference to the state of the arts of the middle ages and *renaissance*, the important works which he has published on the subject, have pointed him out as the most approriate conservator of the monuments of the two periods; and also for the publication of the "Notices" which each of the conservators is bound to compose of the objects entrusted to his charge.

The "Catalogues" formerly provided were little more than a mere list of the objects exposed to view; but of late the public has become more desirous of information; a taste for art is more generally felt than formerly; not only amateurs, but numerous connoisseurs, have sprung up in each branch of knowledge; and the people—the million, whose yearly-increasing crowds throng the galleries of the Louvre in Paris, and of the British Museum in London—are not now stimulated by a mere idle curiosity, by a mere desire to gaze; they examine, and wish to understand. The "Notice" of M. Delaborde is calculated for the well-informed visitor, as well as for those to whom the art of enamelling has been hitherto entirely unknown.

In an introduction full of interest, M. Delaborde explains the chemical constitution of enamel, the casting and oxydes of which different enamels are composed, and the different metals to which they have been applied. After giving a list of the names of the different kinds of enamels on copper, silver, and gold, he divides them into two great classes—the enamels of painters and the enamels of goldsmiths; the different processes employed in the manufacture serving to mark the separation between the two sub-classes into which these two great genera are divided. 1. The *cloisonnes* enamels, which adorn with fine *cabochons* stones the borders of bas-reliefs, and which are ordinarily executed in gold, in squares of small dimensions. 2. Enamels of Limoges, *en taille d'epargne*, or enamels of *basse taille*, so called by Cellini, in his "Traité d'Orfèverrie" M. Delaborde names them transparent enamels in relief—an appellation which has the advantage of explaining in four words the process of their manufacture. He afterwards (before entering into a description of the monuments contained in the Louvre) examines into the origin and process of formation of each enamel. As he proceeds, he discusses all matters upon which questions have been raised by the art of enamels, especially the following, whether the ancients were acquainted with the method of employing enamel on metallic recipients.

When dealing with the enamels made by the painters of the Limoges school, M. Delaborde accompanies each description with a short account of the life and works of the artist. He points out the different styles of painting, the processes they have made use of, their signatures and monograms, and, indeed, everything which may assist in the discovery of the authorship of anonymous works.

The researches of M. Delaborde have been most unbounded and laborious. There are in his catalogue more than 400 enamels from works of the Limoges school. The Penicauds, Leonard Limousin, Pierre Raymond, Pierre and Jean Courtoise each description with a short account of the life and works of the artist. He points out the different styles of painting, the processes they have made use of, their signatures and monograms, and, indeed, everything which may assist in the discovery of the authorship of anonymous works.

The researches of M. Delaborde have been most unbounded and laborious. There are in his catalogue more than 400 enamels from works of the Limoges school. The Penicauds, Leonard Limousin, Pierre Raymond, Pierre and Jean Courtoise each description with a short account of the life and works of the artist. He points out the different styles of painting, the processes they have made use of, their signatures and monograms, and, indeed, everything which may assist in the discovery of the authorship of anonymous works.

Jean Penicaud, the third of the name, is, according to M. Delaborde, the painter *par excellence* of the Limoges school: "He could have gained in Italy alone," says the illustrator, "that refinement of taste, that softness of style, that grandeur of effect which characterise all his works. Parmegiano, among all the Italian masters, seems to have had the greatest influence upon his style." "La Vierge et l'enfant Jesus," No. 174, by Jean Penicaud, is an admirable picture, and, considered as an artistic work, the most delicious enamel of the Louvre Museum.

The "Notice" of the enamels in the Louvre, which forms a volume of 343 pages, is only the first part (history and description) of M. Delaborde's task. The second part is a glossarium, wherein all written documents and proofs leading to a complete history of enamels are collected.

(Paris, Sept., 1852, printed by order of the French Government.)

Literature and Art.

The Photographic Album. Bogue.

The results of the liberation of photography from the restrictions of the patent laws are already becoming evident, and the publication before us may be regarded as the first fruits of its freedom in this country. The historical notice, which we published in former Supplements, has made our readers acquainted with the progressive development of the phenomena connected with the chemistry of the sunbeam. Although many processes of considerable beauty, and of much interest, have been invented by Herschel and other experimentalists, the calotype process of Mr. Henry Fox Talbot has proved the most generally useful; and, variously modified, it has become of almost universal application.

All the processes on paper originated in this country, and from the facility which this material offered to travellers and others, it has nearly superseded the use of the metal plates of the Daguerréotype On the Continent, where, from the first, the art of photography has been untrammelled, the progress towards perfection has been more rapid than among ourselves. The productions of Le Gray, Blanquart, Everard, Martin, and Niepce de Saint Victor, in France, and of Count Flacheron and others, in Italy, have been superior to the ordinary run of calotypes produced in England. In Paris, for some time, a photographic publication has existed, and so spiritedly has it been carried forward that travellers in Greece, Egypt, Arabia, Turkey, and other distant and storied lands, have added by their contributions Hence, at a comparatively small cost, there are now sold in Paris most faithful representations of the temples of Thebes and the tombs of Carnac, of the relics of the Assyrian monarchy and the resting-places of Nubian kings. The beautiful fragments of that Athenian refinement which has not yet lost its all-powerful influences upon the world, and the stern grandeur of old Rome are copied by the sun's unerring pencil, and placed, for a few francs, in the portfolio of the untravelled Parisian.

Mr. Fox Talbot, it is true, some years since commenced his "Pencil of Nature," and published some calotypes: but, these being most unhappily selected, and by no means remarkable for their excellence, the publication failed as a speculation, and was soon discontinued. Under the heavy incumbrance of license-fees, no English publisher has since been bold enough to make another experiment; and while photographic views of historical interest have been sold over every part of the Continent, their sale has been prevented in the island which gave birth to the beautiful art of photography.

For all the purposes of the traveller, and for those of the publisher, photography may now be regarded, however, as free from restriction. The reservation in favour of calotype portraits scarcely affects either one or the other. We cannot but regret that the arrangements made by the patentee with his agents compelled him to make this reservation, and we would venture to suggest to those interested, the formation, by subscription, of a fund to compensate those licensees, and to entirely liberate the art.

The four calotypes now published have been executed by Mr. Roger Fenton, and they certainly mark the commencement of a new era in photography. The views are such as an artist would have selected, and they form, indeed, studies from which an artist might, with advantage, copy. Beautiful, however, as these calotypes are, they are far from perfect, and as we deem it important that we should at once direct attention to their defects, and thus lead, as we hope, to the desired improvement, we venture, in the best spirit of criticism, a few remarks. The author of these pictures has adopted, probably, the best form of manipulation, and he has certainly produced photographs which few can rival. But Mr. Fenton and all other photographers have yet much to learn before they can produce pictures which shall be reflexes of nature in the beautiful gradations of light and shadow. If we take up either of the four photographs in this Album, we cannot but observe that the high lights and the shadows are more decidedly contrasted than in nature, and want the harmonious blending of the middle tones, which are the great charm of the picture. In the "Village Stocks," the five posts; in the "Old Well walk," the front of the mansion; and in "Tewkesbury Abbey," the windows of what we understand to be a conservatory are offensively white, in contrast with the trees, which are in deep indistinct shadow. The details of the "Old Barn" and "Old Well walk," the thick of corn and trees on the left of the picture are in unnatural gloom.

To overcome these defects it is important to attend most strictly to a few physical facts:—

1. The reflected radiations from differently-coloured surfaces are not equally *chemically active*, under any circumstances of illumination.

2. The energy of chemical action is not directly proportional to the amount of illumination, as measured by the eye.

3. This disagreement of the illuminating and chemical radiation, being different for different chemical combinations, their exact relations for each particular sensitive surface should be ascertained.

Now, as the surface of the white posts in the first-named photograph, when strongly lighted by the sunshine, radiated at least seven-eighths more chemical rays than did the dark-brown stems of the trees which were in shadow, a better picture of these would be procured in one minute than there would be of the trees in eight; and so therefore before us was produced by an equal exposure of the calotype paper to every part, the trees are indistinct, and the posts lines of intense white light The same result is unpleasantly evident in the strong contrast between the white spots, which we believe to be daubs, and the graveyard, in Tewkesbury Abbey

The most effective general mode of obviating these defects will be to work under a clear sky, when the sun is shining; but when it is illuminating the sombre parts of the picture, leaving all such as are light in colour under the influence of diffused light only.

The best results will be obtained by operating with a lens reduced to the smallest possible size; thus avoiding all extraneous light, and with a paper sufficiently sensitive to be acted on by the weakest radiations. When the sun is shining on a building, we see, howsoever deep the shadows may be, the details of all the parts in shadow; but in copying such a building, under such circumstances, we get a very disproportionate effect. In diffused daylight, although a longer time would be required to obtain a good result, the result, when obtained, would be far more harmonious and pleasing.

As no letter-press description accompanies these photographs, we may possibly aid many of our readers by explaining the process by which they have been obtained. Mr. Fenton has been celebrated for the success with which he has followed the process of M. Gustave Le Gray upon waxed paper; and we presume, therefore, these pictures have been thus executed. Attention to the following directions will enable any one to produce good pictures.

Paper selected of good quality is placed upon a hot plate and thoroughly impregnated with white wax, all the superfluous wax being removed by means of blotting paper. Some rice water is prepared by infusing 240 grammes of rice * in three litres of distilled water, until the glutinous portion, and that only, of the rice is dissolved. In this is to be dissolved, of

Sugar of Milk	40 grammes	0 centigrammes
Iodide of Potassium	15 "	0 "
Cyanide of ditto	0 "	80 "
Fluoride of ditto	0 "	50 "

Into this, when filtered, the waxed papers are placed, one by one, and allowed to soak for half an hour or an hour: they are then removed and carefully dried.

These sheets are rendered sensitive when required by the following:—

Distilled Water	160 grammes
Nitrate of Silver	10 "
Acetic Acid	12 "

In this solution the papers are immersed for a short time, care being taken to remove all air-bubbles from the surface of the waxed paper. These papers being carefully dried in the dark, may be kept for a day or two for use.

After exposure in the camera obscura for the required time, which can only be discovered by experience, but which varies from 1 minute to 30 minutes, with the character of the light and of the object, the image is developed by placing the picture in a bath of—

Distilled Water	1 litre
Gallic Acid	4 grammes

* To enable all our readers to convert these weights and measures into English ones we may state that the French litre is 1.762 pint, or about 1¾ pint Imperial measure; the gramme is 15½ grains English nearly; and the centigramme is .1543 grain English.

After being fully developed, the photograph is fixed by soaking for some time in—

Filtered Water . .	..	800 grammes
Hyposulphite of Soda . .	..	100 „

Then, being well washed and dried, it forms a well-defined *negative* picture, from which any number of *positive* impressions can be obtained.

We would suggest to the publisher the importance of selecting, for the future numbers of his "Album," views which have an interest beyond their mere pictorial beauty. Our cathedrals, abbeys, and castles furnish charming subjects for the photographic artist, and these every lover of English history would desire to possess in that truthfulness which photography ensures.

MEMOIRS of the BARONESS D'OBERKIRCH, COUNTESS DE MONTBRISON. Written by Herself, and edited by her Grandson, the COUNT DE MONTBRISON. 3 vols. Colburn and Co., London. 1852.

Whoever has contemplated what is termed the "*willow pattern*," in a service of delf or porcelain, with the view of ascertaining the secret of its former popularity, will acknowledge that he could see nothing which ought to have attracted, but that he found a thousand things which should have repelled and shocked, the taste of the public. nothing original in the design nor clear in the execution : a homely subject meanly treated, a common-place scene miserably depicted, men like the men in a child's Noah's Ark, a bridge like the blade of a knife asslant, a perspective monstrously and incredibly erroneous, and not even one meretricious beauty of colour or of figure, to compensate for the most prodigious combination of artistic defects ever collected in so small a compass. Yet the "willow pattern" was one of the greatest successes in the annals of baked earth. Neither Napleon nor General Tom Thumb, neither Jenny Lind nor Kossuth, neither "Uncle Tom's Cabin" nor the satire of Cervantes; neither hoops to the dresses of ladies nor party-patches on their cheeks, in the days of Queen Anne; nor any other *extrum* among mankind, ever reached a predominance in their respective spheres that could make this species of stained crockery ashamed of its own universal and enduring portion of favour. The secret, perhaps, was, that the absurd pattern in question was at first stamped on nothing but true china, and came straight from those ingenious barbarians who supplied us with that admired commodity. Now, what the inestimable material accomplished, in this case, for the worthless design traced over its surface, a great, a momentous, or a memorable subject has done in literature for many feeble and foolish incubrations. The time just before the French Revolution is one of the most instructive in the annals of mankind As cause precedes effect, people still love to search, in that boding epoch, for the lights by which to read and to understand the catastrophes to which the world, and, above all, France, are then tending: and few there are among those who have beheld the fifth act of the prodigious drama, that would not wish to peruse the fourth, at which it was not their lot to be present. Every eye rests with a vague, indefinable fascination on

The torrent's smoothness, ere it dash below.

Indeed, not only causes which interest the mind of the thinker, but signs which excite the imagination of the more careless and desultory observer, must all be sought in the smiling and tranquil and deceitful period that forerunn and introduces some eventful epoch. This explains the immense and durable attraction by which (often unconsciously) the people of our own day have been swayed, when offered any opportunity, by the traditionary conversation of the aged, or by books written at the time and in the presence of the very society which was the parent, as it were, of the French Revolution, to investigateits characteristics, and ponder over its pregnant occurrences.

The "Memoirs of the Baroness d'Oberkirch" were written at this epoch; and really when we have said so much, we know not what to add, in consedence, in their favour. Of course, nothing that was produced in such a period, can be wholly void of significant matter to the thinking reader. But, except that in the sketches of the social incidents of this book, the spirit of that demented and infatuated era of a fearful and mighty day is most faithfully exhibited, we are at a loss what other commendation we can honestly bestow. Those who read the work well; those who read it not may persuade or do betray. It is full of the decrepitude of the latter part of the 18th century. But we will give, for the satisfaction of our readers, a full description of the gist, contents, and character of the production. In the first place, the work was written in French; but not, as we are informed (for the original we have not seen), in the French of Madame de Sevigné. In the next place it is translated into rather indifferent English, from the rather indifferent French of the lady who wrote it. But then she was both a Baroness and a Countess of Alsace. This is no trivial circumstance. It would be unpardonable not to mention the fact. The lady herself, independently of many indirect intimations of her views scattered throughout the three volumes (for, resolute reader, there are three !), tells us expressly, in the very first chapter of the first volume (page 17), that of Providence she asks, "In her son-in-law, only high birth: *there to a remedy for every defect but the want of that.*"

This work—written in such French as must have been better than the English, translated into English which could not be worse—contains a letter or two of Göethe, and of Luvater, and of Wieland; a few particulars about the celebrated impostor Cagliostro (which are really exciting); a very interesting ghost story of the Emperor Paul, of Russia, told when he was Grand Duke, and on a visit in Paris; some verses of incomparable demerit, accompanied by criticisms less meritorious still; some three or four very affectionate epistles to the authoress from Dorothea, Duchess of Wurtemburg, Consort of the Emperor Paul, and named Mary in the Greek Church; some prodigiously dull details of a genealogical nature concerning half-a-dozen second-rate families (we beg pardon—"*Houses*"), the authoress's among the number; one or two readable anecdotes, and an infinity of absurd reflections not very pointedly expressed. Such is this book. The bulk of the narrative consists of the most frivolous particulars, which, if recounted in conversation, would make an intelligent person feel sleepy; and yet here they are written, here they are published, and published fifty years and upwards after the composition had been completed! We must do the authoress, who seems to have been a rather amiable sort of lady, who drew around her many friends, and had the merit (for it is a merit, not merely a happiness) to retain their unity and confidence to the last—we must do her the justice to say that she had, apparently, not decided that her incubrations should see the light. Setting out with a candid disclaimer of any pretensions to the character of a *bel esprit*, she tells us that "she writes that she may pass over in her mind the principal events of her life. My recollections are dear to me," says she, "because I alone have a right to them. *To divulge them would be to diminish the happiness they afford me.*"

We confess, however, that we cannot reconcile either this averment, or her intimation that her daughter was destined to be the only reader of her work, with a passage which occurs somewhat later, and which runs thus:—"I may have angered a little too long over these accounts of my family, but I do not regret it. In the *first* place"—(here we may remark, in passing, that our authoress forgets to give us any "*second* place" whatever)—"in the first place I wished it to be distinctly known from what race I have sprung—I feel it to be a conscientious obligation." She wishes it to be known from what race she sprang But known to whom? She was not going to publish. Her daughter, the only intended reader, surely knew already "from what race she sprang!" Did the writer's own mother compose a book to teach the daughter which family among men was hers? As to the "conscientious obligation," it is startling as it stands. Why not have given a reason for this overpowering sense of a solemn duty?

Of the general character of this book's *matter* we have said enough. In fact, it consists of such revelations as that, in a year named, the authoress went to town, and came back, and went again, and returned; that Marie Antoinette, during a carnival, was dressed in a dress of some sort, which is described; that some Duchess said something to some Countess; that Louis XV. set his face against some fashionable costume; and how sorry the ladies were at the King's perversity, the fashion was so pretty, &c

The style is on a par with the matter—that is, it is below criticism. We beg the student of good writing, as an art in itself, to give his attention, for example, to the following sentence :—

Apologising for this digression, to which I would put an end were I not obliged, before entering on the history of my life, to relate the origin of my intimacy with the illustrious family of Montbelard and Wurtemburg: living in the same neighbourhood was the primary cause.

This is copied *verbatim* and the reader will perceive that, as the case stands, the first number of the period will never be finished while this world lasts. We really regret to have to give such an account of any well-meant production ; but, in the interests of literature, we could neither speak differently, nor say less.

PICTURES FROM ST. PETERSBURG. By EDWARD JERRMANN. Translated from the original German by FREDERICK HARDMAN. London: Longman and Co., 1852.

So early as the eleventh century, in the square of Taurus, in Constantinople, there stood a brazen statue, which had originally graced the streets of Antioch; and on the pedestal of this statue was inscribed a solemn prophecy that the day would yet come when the Czar of the Russians should reign in the capital of the first of the Eastern Cæsars. The Russian monarchs themselves have, from time immemorial, been impressed with the same anticipation; nor is it confined to the Court: it has taken fast hold of the imagination and of the faith of the people. So deep is this conviction, that it has contributed, so far as Turkey is concerned, to give a character of patience to the policy of the Russian Government. It is no worth while to risk any premature embroilment for the sake of an acquisition regarded as so inevitably certain. Men can afford to wait for an event which they believe to be foredoomed. Had Peter the Great built his capital amid the blooming vineyards of the Crimea, the present splendid jewel of the Gulph of Finland would never have blazed in its frozen setting. But now the Russians consider that two capitals in two opposite extremities of a huge empire, destined to perpetual increase, and reserved for progressive conquest. Add to this arrogant and perilous superstribition on the one hand, two opinions expressed on the other with singular energy, by a great and far-seeing mind, the late Emperor Napoleon. The first is to this effect -that, if a *general* war ar se in Europe, and if England and Russia be ranged on opposite sides, it will happen that, at the first cannon shot, India will be lost to the former, and, possibly, gained by the latter; and that, before the hazard closes, Turkey will be dismembered. The second of the two opinions was embodied in the now celebrated apophthegm.—*In fifty years, Europe will be either Republican or Cossack!*" Seventeen years, more or less, are still required to test the value of the prediction, and to ascertain whether Napoleon was deceived, or whether he had read aright the signs of Europe, its promises and its perils

We have adverted to circumstances and incidents which might appear extraneous, in order to engage the interest of the reader in a subject calculated to repay attention. The empire of Russia is not, as that of China, segregated in its policy from the general destinies of mankind; and we ourselves belong to that portion of the world which will be ever affected by the movements, and concerned in the fortunes of this "silent giant" of the East.

The book, which has occasioned, rather than suggested, these discursive reflections, has no pretensions to the character of a political monitor, or even of a historical record. It is merely what it professes to be—a series of light and easy "pictures from St. Petersburg." The spirit of the work is rather that of partiality than of hostility towards the Russian system, and especially towards the living embodiment of that system, the Emperor Nicolas, who, indeed, is himself Russia. And here, in the cause of logic, and for the sake of putting a subject in a plain and just light, we must observe that everything is not said when it is said that the happiest political condition is that of a people enjoying and using the highest degree of liberty. It remains to add that it is not every nation which could use liberty; and that there are races who would be likely to employ it as a drunkard employs wine, or a maniac a knife. It is indeed undeniable that it is far better for a people to be capable of regulating their own affairs in common and municipal action. than to be unfit for self-government; but if they be unfit to govern themselves, then it can conduce to no happy results that they should prematurely seize the power. Every external blessing, or in other words, every gift, whether of nature or of civilisation, requires in its possessor certain qualities, the absence of which will turn the blessing into a curse. A good dinner is certainly preferable in itself to a crust eaten standing. Yet the glutton to whom the crust would have done no serious injury, may owe his death to the generous board. It is no cant to say that we seriously question how far the Russians are qualified to understand the uses of freedom. Suppose, to-morrow, there were introduced into Russia a universal franchise, and suppose the whole population were to put it in exercise, we feel convinced that despotism, "pure and simple," would emerge from the voting-urns, and would command a huge and crushing majority, against any other system whatever. The "Sheepskin" would, with unconscious and piously-meant profanity, record their suffrages to a man in favour of "God and the Emperor." Suppose, on the other hand, a very limited franchise were established, including the somewhat developed power and inclinations of the upper classes, the only ones to be the immediate subversion of the throne, the proscription of the Imperial family, and perhaps the violent death of its head; and then the establishment of the worst form of oppressive oligarchy, which, whether it stood its ground or was shaken by the bloody convulsions of monarchic usurpers, would grind the face of the masses. But some one, perhaps, will be disposed to object to this view as incomplete, and to urge that we have supposed only the two extremes of electoral right, the widest and the narrowest; and that it is necessary to take up another hypothesis, the investiture of the middle classes with the franchise, excluding the lower population from its exercise. But there are no middle classes in Russia. Above serfdom, which the present Emperor has the honour be it said—for why should we not speak of him as he is?) has, by example on the crown lands, and by several general edicts, made immense progress in suppressing, above serfdom, or above the condition of the classes where a remnant of serfdom is still in operation, there is but one vast and martial hierarchy of facetious rank, rising through some nine or twelve grades of nobility, but including no large independent body whatever, which might correspond with or adumbrate the "middle classes" of England, or the *bourgeoise* of France. Russia means an immense horde of peasantry and lords: sheep-shins, an army of prodigious amount and formidable efficiency, and a military ruler in "jack-boots." If we pass the great gap where a middle class is *not*, and ascend the social scale, we must not be deceived by names. Almost every well-dressed Russian is indeed a "prince;" but not one in a hundred of these princes possesses a principality, and numbers of them swarm at St. Petersburg who would be glad to command the pecuniary means enjoyed by the commonest commercial clerks in the city of London. The really great Princes, like Sherimetiff, Orloff, and others, are great by their opulence merely. They have not a vestige of political power remaining; and if they acquired it, and could use it freely, the form indeed of Russian despotism would be changed, but its rigours might not be mitigated. At present they may dream, in the depth of their truly gorgeous palaces, that we are living times when their great grandsires wielded a mighty and almost predominant authority; and if they could not quite subvert the throne, yet block it, and make it pass say that the natural death of those who sat thereon was assassination.

But we might be beguiled into criticisms which would too much divert our attention from a charming book on Russian manners, to the more serious conditions or characteristics of Russian society. Edward Jermann's work, of which Mr. Frederick Hardman has given the beneficial public a most agreeable translation, is well and favourably known in Germany. The reader who begins, will finish these delightful sketches

Unquestionably, the views taken by the author of Russia will shock the preconceived notions and "foregone conclusions" of numbers of Englishmen. In one chapter, that headed "The Emperor Nicholas," he labours to prove, and certainly he brings to the attempt a mass of startling evidence, that the Russian Monarch is not only one of the greatest reformers of this or any other age, but that the beneficial changes which he has prosecuted during his whole reign amount to a vast peaceful *revolution*. That is Herr Edward Jermann's word. But if the book were not instructive, as it surely is, yet it is so graphic that it will well reward the perusal.

Judging of the author from his present production, we should think him a good-humoured, upright, and intelligent man—humorous, lively, easily pleased, shrewd, and observant. And these are the qualities for a gossipping traveller, who tells his wonders by our own fire-side.

GOLD-MINING AND ASSAYING. A SCIENTIFIC GUIDE FOR AUSTRALIAN EMIGRANTS. By JOHN ARTHUR PHILLIPS, F.C.S. Griffin and Co.

In this manual, the author aims at removing the speculative character of gold-seeking, by rendering the Australian emigrant fully acquainted with the various processes of mining and metallurgy; the author predicting that the larger proportion of the natural wealth will ultimately fall to the share of the intelligent and the industrious. The study of this book upon the voyage will, we dare say, give the reader the start of the less-informed adventurer, upon their reaching the Gold-fields. Here we have the subject systematically arranged, commencing with sources or localities of gold, its mineralogical and chemical characters, examination of deposits, assaying and processes, mechanical preparation of gold ores, washing and amalgamation, apparatus and re-agents required by the gold assayer; and Government regulations respecting gold mining. The book is plain and practical throughout, aided by several useful illustrations.

REPORT ON THE EXCAVATIONS MADE ON THE SITE OF THE ROMAN CASTRUM AT LYMNE, IN KENT, IN 1850. By CHARLES ROACH SMITH, F.S.A.

About two years since, when Mr. Roach Smith's very interesting archæological quarto, illustrative of the antiquities of Richborough and Reculver, was in the hands of the printer, a valuable addition to its treasures was made by the discovery and investigation of the remains of a Roman castrum at Lymne, about a quarter of a mile south of the village of that name. The modern name of the remains is Studfall Castle: they are placed on a long rugged declivity, sloping from the main land to the Romney marshes. a tract of some 56,000 acres, intersected with dykes and a labyrinth of roads, and in high cultivation, chiefly as pasture land, sustaining 300,000 sheep and numerous herds of cattle, and protected by the strong Dymchurch wall from the encroachments of the ocean. Here was the the Portus Lemanis, one of the great harbours of Roman Britain, through which, for some centuries, poured a stream of communication with Gaul, and which shared with Rutupiæ (Sandwich) the honour of sheltering the Roman fleet. The port is no more; but from the elevation of Lymne, the eye can still trace its sea margin in the arid sandy soil. The point is an important one; for, when invasion by Napoleon was apprehended, the surveyors cunsidered the site of the entrance of the Portus Lemanis the most advantageous for the enemy's landing. Opposite, and to the south-west of Lymne, at the time when the Portus Lemanis existed, the land is thought to have stretched at least a mile beyond the present sea-boundary; and this tract, now submerged, as well as the whole of the Romney marshes, are believed to have been cultivated and peopled by the Romans. Upon this cliff were seen the disconnected walls of the castrum, but affording a very unsatisfactory notion of its form; between the fragments there being many open spaces without a vestige of masonry. To trace their connexion, Mr. Roach Smith, with his friend, Mr. J. Elliott, jun., of Dymchurch, proposed to excavate; and public subscription contributed the requisite funds, which the parsimony of the Lords of the Treasury, and the remonstrances of the Society of Antiquaries, failed to furnish. Permission was obtained from the proprietors of the land; and forthwith the excavation was commenced, Mr. Elliott superintending the works, and having, with the labourers, to journey daily four miles to and from the works: and Mr. Smith, from time to time, investigating the results. Thus they discovered the original line of the walls, and the plan and character of the castrum, the destruction of which was by a landslip: a portion of it sank forty feet, so recently as 1728. The extensive masonry of the walls and towers has been uncovered: the lower walls of a Roman house have been unearthed within the area of the castrum; and fragments of inscribed tiles and coloured pottery, a bronze bracelet, variegated glass, and some 260 coins, mostly from the close of the third to the middle of the fourth century, have been discovered: but the most important relic is an altar, stated in the inscription to have been erected by Aufidius Pantera, prefect of the British fleet; this being the first altar yet discovered on the long line of the Saxon shore. To Mr. Smith's highly-satisfactory report, Mr. Elliott has appended some notes, suggestive as well as descriptive; and the archæologists conclude with an account of their stewardship, by which it appears that the labour has cost £102, and that the whole expenses have been £135, including about £16 towards the expenses of printing, &c. The report and notes, with their numerous engravings, are altogether one of the most attractive illustrations of the Roman dominon in Britain that we remember to have seen; and the authors and the subscribers to the fund are alike entitled to special thanks for their enthusiasm and liberality. The gratifying results of the Lymne excavations have induced the Earl of Burlington to allow Mr. Roach Smith and Mr. Mark Antony Lower to excavate at Pevensey, whence discoveries of kindred interest may be expected.

(*Continued on page 366.*)

ALGERIAN ANTIQUITIES AT THE LOUVRE.

THERE have just been arranged, in a special gallery of the Louvre, at Paris, a number of remains of antiquity, collected in Algeria, since its first occupation by French troops. These relics have been dug up by the colonists in their fields, or in preparing the foundations of their houses. They were at first placed in the Public Library of Algiers, by the scientific commission; but in 1845, Marshal Soult, at that time Minister of War, who was also charged with the Administration of Algeria, resolved that there should be formed, at the Louvre, a special collection of these antiquities; and hence results the present exhibition, though somewhat hardly realised.

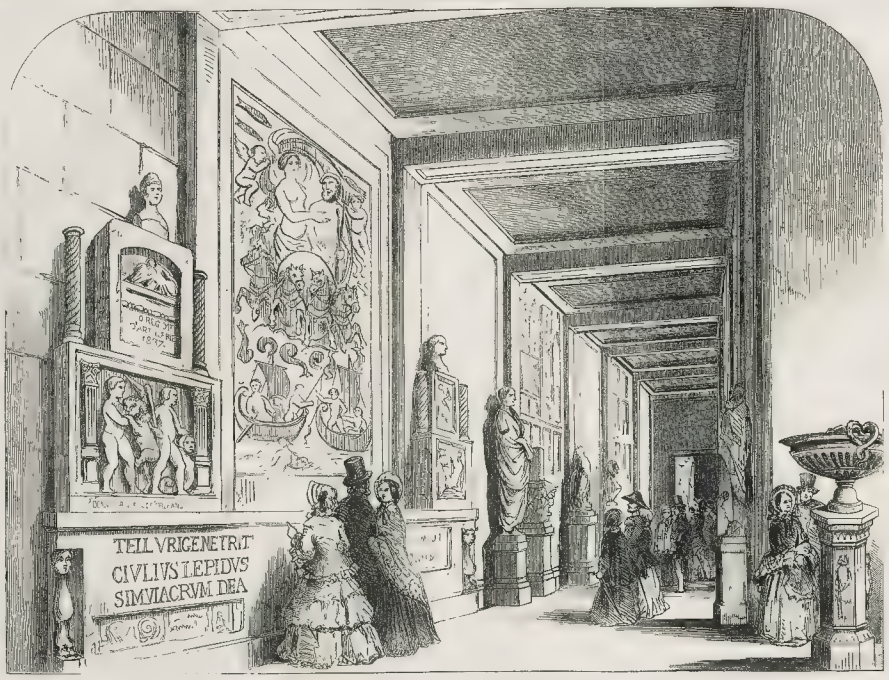
The space appointed to this collection is scarcely proportioned to its importance, and to the further development it must receive, as all parts of the territory become colonised. It is well known that the Romans had imparted a high degree of civilisation and of prosperity to their possessions in the north of Africa; and that they have left, as evidences of their greatness and power, a multitude of monuments and remains, of all sorts. Unfortunately, the greater, and doubtless also the better, part of these valuable relics, have been scattered abroad by the Arab tribes. Since the French occupation, they have been little better treated; and the military spirit, which is but little conservative in its nature, has caused many of them to disappear, employing them unheedingly in military constructions. Entire villages might be cited, especially that of Smendon, in the province of Constantine, which have been built quite upon the site of ancient centres of population, and with materials obtained from Roman buildings.

The antiquities hitherto discovered in Algeria will not add much to the knowledge we already possess of ancient art. Nor will they shed much light on the history of the country under the Romans. But they cannot fail to interest antiquarians and archæologists, on account of the period to which they belong. The lovers of art, also, will find among them instances of the finest forms of Greek art, from which Roman art so largely derived its inspiration. They will be gratified to meet, in this collection, some busts and statues of great beauty, which must still further confirm the high idea we have already formed of the advanced state of the plastic arts among the ancients.

The greater number of the objects in this gallery belong to religious ceremonials, or to the customs of ordinary life; such as votive altars, gravestones and their inscriptions, domestic and other utensils, and architectural fragments. The latter class of objects, which filled so large a place in Roman life, are represented by some bas-reliefs of battle-scenes. Amongst these we would particularly refer to a fragment of a bas-relief in white marble, about three feet wide, exhibiting a battle, in which a Roman is represented under the feet of a fallen horse, with warriors fighting hand to hand, over the croup of the animal. Among the objects belonging more particularly to art, may be remarked several fragments of architecture, of superior style and execution; two or three portions of statues, covered with sculptures, as well as acroters, capitals, and shafts of columns: all which show that the Romans had carried with them to Africa the finest traditions of art, and had erected their edifices in sumptuous style.

Everything belonging to the Roman occupation in this collection is a valuable acquisition to the history of art. It is to be regretted that this part is not more interesting as regards political history and ethnography; but it may be expected that new researches will produce more satisfactory results, especially if some well-informed men would but undertake the task, and direct their investigations to the principal points assigned by history to the great Roman establishements on the northern coast of Africa, which have not yet been visited, or only superficially.

The Arabian period, which succeeded, is but limitedly represented. Naturally, great curiosity is excited with reference to the interesting epoch between the Roman and French dominations. Anything which could throw light upon the constitution of that semi-barbarous society which succeeded into the place of the Roman civilisation, is of the highest interest. Unfortunately, however, the nomadic tendencies and mobile character of the different races which have succeeded each other in the north of Africa could not be expected to leave many durable monuments. The Arabian race builds but little, and the tribes which have aggregated together, and formed themselves into a national organisation, do not appear to have had any notion of art, and lived, besides, under a condition of servitude, which must have compressed all flight of imagiant on, and all aspirations towards the beautiful. It is thus that scarcely of this period have been so rarely found. The collection in the Louvre contans exceedingly few specimens, and those indeed among the Algerian antiquities are of little importance. They are simply a few stelæ, or funereal monuments, and some rare fragments of architecture. There is one observation strongly suggested by the latter. They show that Italian art at once disappeared from Africa with the Roman conquerors, and that their successors immediately, without any transition, introduced Oriental art. They present that exuberance of detail, that caprice, or, we might almost say, that fecundity of imagination, remarkable in the Byzantine style. Among them are two or three fine specimens of that style, especially a beautiful fragment of an archivault in black marble, which reminds one of the most charming



ALGERIAN ANTIQUITIES IN THE LOUVRE.

fantasies of the Ogyval style; and two capitals, one of which, especially, is extremely elegant.

We give a view of the Gallery in the Louvre containing the Algerian antiquities. In the foreground is a copy of a beautifully wrought mosaic, found in the province of Constantine, in 1842, by the soldiers of the 3d Regiment of Chasseurs d'Afrique in a plot of ground which they cultivated. It was lying buried about three feet deep in the soil, among ruins of ancient buildings, and was recovered in fragments, and restored with the greatest care. It measures about 20 feet square, and is rectangular. It represents the Triumph of Neptune and Amphitrite, and is enriched with a profusion of details, referring to the sea and to the mythology it illustrates. In symmetry of piece-work and careful execution this mosaic may contrast with the most perfect specimens.

On the left, under this important fragment, is a bas-relief—given by the Duke of Orleans, eldest son of Louis Philippe—representing Hercules overcoming the Lion, and the same hero felling the Chimera. Above this bas-relief is placed a stone, apparently detached from an altar, decorated with a bird resembling an owl, and with a row of ovolos across its width. A modern inscription on one side commemorates its finding by the 10th Regiment of Artillery. To the right, and as a pendant to the bas-reliefs, is a very nice Bacchanal. The god, crowned with vine-leaves, presses the juice of grapes into a horn placed in the mouth of a satyr. A female figure plays cymbals; and, on the other side, Silenus, intoxicated and staggering, supports a figure which it is not easy to divine.

The funereal monuments in the second Illustration are the two stelæ mentioned above. The inscriptions are finely cut in relief. They are in white marble, in very good preservation.

Between the above is a very fine arabesque, cut into the marble. It is an exquisite specimen of the ornamentation of the Arabs, and seems a detached fragment of the decoration of some edifice, as it was no particular character, which would make it assignable to a different purpose.

Another of the capitals mentioned above gives an idea of the style of architecture which prevailed in Africa, subsequently to the Roman domination.

On the right is a very fine antique vase, also found in Africa. It is not possible to confound its elegant form and skillfully-treated details with the Roman period. It is evidently a production of Greek art, and must have been brought to Africa after the Roman occupation; for nothing in the ruins, discovered hitherto, resembles it in style or magnificence. It is not improbable that this exquisite relic had been captured by the Algerine corsairs, in more modern times: and being afterwards abstracted from the rapacity of the masters of the country, may have been abandoned and forgotten. But, certainly, in our judgment, this vase cannot have belonged to the Roman epoch; for the absence of all remains which can at all come near this, in purity of taste and perfection of form, we think fully authorises such a decision. On the left are some ancient tomb-like relics; and above the whole is a fragment of an antique frieze in marble.

ALGERIAN ANTIQUITIES IN THE LOUVRE.

"THE ASSUMPTION OF THE MAGDALEN," BY GIULIO ROMANO, IN THE NATIONAL GALLERY.

THE ASSUMPTION OF THE MAGDALEN. FRESCO.

BY GIULIO ROMANO.

After the usual vacation, the National Gallery was re-opened to the public on Monday last. We take this occasion to produce an Engraving of the fresco by Giulio Romano, recently imported from Rome, and presented to the nation by Lord Overstone.

Giulio Pippi, surnamed Romano, was one of the favourite pupils of Raphael, whose touch he is considered to have imitated very closely. In his best days, however, he was altogether wanting in the grace and purity—the fine sentiment of his master; and when, on the death of the latter, he was left to his own resources, and to the dictates of his own fancy, he was often betrayed into a wildness, and even coarseness of subject, as well as a carelessness of treatment, in which it would be difficult to trace the hand of a scholar of the divinest painter that ever lived.

The work now before us is one of four, painted in fresco for the lunettes of the church of Santa Trinita d' Monti, at Rome, and which were engraved by Marc Antonio. It represents the "Assumption of the Magdalen," one of those monkish legends with which all Roman Catholic communities are familiar. Upborne by ministering angels, the beatified penitent reclines (not very gracefully, perhaps), her gaze fixed on the glorious heaven opening on her view, and shedding its refulgence on the canopy of rosy clouds around. The head of the principal figure has much of the beauty and grace characteristic of the Roman school; and the entire composition, though bearing abundant marks of haste, is remarkable for life, and vigour of intention. It must be added that the position in which this work is placed in our ill-built National Gallery is neither calculated to enhance the intrinsic merits of the composition, nor to soften the merely superficial defects in the treatment. It is at once too low in regard to the perspective, much too near the eye, and subjected to a cruel glare of light, which renders the crudities of handling painfully conspicuous. We need hardly add that it was neither for such a position nor for such a light that the artist painted; and therefore it would be unfair hastily to pronounce upon the merit of a performance which, in the position to which it was originally destined, doubtless came out with very superior effect.

DECORATION OF THE MANSION-HOUSE.

The official residence of the Chief Magistrate of the city of London, in general design, externally resembling a superb Italian palace, possesses internally but little artistic character. The style of the rooms is sumptuous, but heavy; and the principal saloon, the Egyptian-hall, is very deficient in embellishment, so that upon grand festivals the room is generally decorated with sculpture and other works of art borrowed for the occasion. The citizens have long been sensible of this defect; and some time since the General Purposes Committee of the Corporation made some tasteful suggestions for filling up the sixteen niches in the side walls of the Egyptian-hall, where, doubtless, the architect, Mr. Dance, intended sculptured groups or figures should be placed. Mr. Bunning, the City architect, being consulted upon the subject, replied:—

I beg to propose that some of our first-rate sculptors be applied to for statues in plaster, so that the niches be at once filled, and that they be remunerated by an order to one or more of them in each year for a statue in marble (to substitute those in plaster), representing some passage in our national history or in the works of our English poets; the subjects to be selected, and the amount to be paid as remuneration, to be determined upon by the committee previously to the issue of the order. By such a system these vacant niches would become filled, in a few years, with first-rate works of art, at a moderate annual outlay.

In these views the committee have concurred; and, in addition to the statues in the niches, Mr. Bunning has suggested the introduction of two sculptural panels, of circular form; one to be placed over the entrance to the drawing-room suite, and the other over the door of the long parlour. Application for two characteristic designs was accordingly made to Mr. Henning, of Pimlico, whose name is so well known in connexion with the reduced restorations of the Marbles of the Parthenon, and the Phigalian Marbles; as also the sculptured copies of the Cartoons of Raphael. In reply, Mr. Henning has designed the two accompanying medallions, which have been approved of by the committee, and produced in plaster of Paris. The vintage group is, we believe, intended for the parlour, and the music and painting for the drawing-room entrance. Both are compositions of great merit, in classic treatment and feeling; and we hope to see them executed in marble, and placed in the positions for which they have been designed, as a portion of enlightened patronage of art, which "will excite gratitude in artists and admiration in the public, and give the encouragement so much required in this country to art in general."

BAS-RELIEFS DESIGNED BY MR. HENNING FOR THE DECORATION OF THE MANSION-HOUSE.

LITERATURE.

(Continued from page 363.)

MEMOIR OF DAVID SCOTT, R.S.A : with seven Illustrations. By Wm. B. SCOTT. Adam and Charles Black, Edinburgh.

When we turn in vain "from grave to gay," and take up the novel and the book of science with equal *ennui*—for such moods come over the best readers and thinkers—we still find in biography, especially in auto-biography, something to attract, something to draw us again with renewing zest and restored interest into life and thought. In the category of such biographies eminently stands that of David Scott—artist and thinker, dreamer and struggler—aiming at the highest, conquered by the least and lowest, by the mere common needs of life, by want of health and means. It is written by a brother, capable in writing, but especially near to him in affection, and in clear-sighted sympathy of thought and aim. Much of it, however, is written by himself, which is still better; notes, scraps of journals, outbursts of the vexed heart, great and too-often over-strained efforts at self-satisfaction. There are also many valuable reflections on art and works of art; concise, potent in meaning, fresh, and original. It is a book which goes over much old ground—old as man all biographies, and indeed all books, must do: even in art, it travels extensively over the most beaten paths—Rome, Venice, Italy, in short—yet there is no triteness in it. What more could we say? As artist and as traveller, the hero thinks right out from his own central perceptions, and is not content to look less deeply than into the central virtues or vices of what he does look at. With him there are no repetitions of *ipse dixits*, no superficialities. Such a book may be read by any one with interest, but by the artist and art-lover with much profit.

David Scott was born in Edinburgh, in October, 1806. His was a somewhat sombre Scottish home, darkened by many deaths, as well as by the heavy, clouded atmosphere of religious fanaticism His father was a well-known engraver, whose studio and the works of art necessarily connected with his pursuits, early familiarised the son with the face of art. Out of pupilage in this studio there came forth several men of talent; among others, John Burnet, the well-known engraver of some of Wilkie's best works, and still better known by his own compositions and writings. Among such works as "Blake's Illustrations of Blair's 'Grave,'" emblematical figures by Hamilton and others, and a various collection of prints and scraps, young David nestled fervently—early inspired to rude attempts at composition, even then of the poetic and ideal sort. About nineteen, religious tendencies bearing strongly on him—as they seem generally to do about that time with all earnest, minds—strengthened the bent towards the abstract and supernatural in him; and though the clouds of surrounding acerbity were afterwards dissipated by the light of larger thought, his mind remained tinged always by a sad and serious hue. An instinctive perception, also, of the greatness of humanity, and of his own participation in it, a respect for that greatness and for truth itself, too sincere to overlook or excuse the ordinary littlenesses and meannesses, the pretensions, trappings, and make-believes of life, led him already, and ever after, to look with a severely-penetrating eye on all their developments. For the frivolous and vain in life or art, he had no sympathy, and little tolerance.

In 1827, being now twenty-one, he began to form some after-enduring friendships; took decided steps in art-study; got up a "Life Academy," in conjunction with several students some of whom are now not unworthily known; and, in 1828, exhibited his first picture, sad and almost prophetic in subject, "The hopes of early genius dispelled by death." He had already visited London, seen something of such art and artists as the public delighted to honour, and had come to the conclusion that, in the whole, "taste in art is surely very low." Thomas Campbell, Wilkie, Turner, Burnet, Irving's church, Chantrey's gallery, Etty's, Danby's, Martin's, Haydon's pictures, seemed to form the earliest points of this visit. After this came a visit to Paris, and then to Italy, the ideal subject. Already the voice of criticism had said to him what it still said to him to the end, kindly or savagely, "Shoot a lower aim; you speak a dead language;" and already he had replied by the question which tormented his whole life, "What am I to do?" a question which, however, he did answer in no other way than by painting on as before. In January, 1831, "called on Constable; he agrees to publish my 'Monograms of Man;'" inventions, as usual, out of the abstract. In February came the criticisms of the press, and they were generally most lauda tory; "I must yet give them further assurance that they have treated me justly." In November, he wrote Coleridge about his designs for the "Ancient Mariner" and the poet, in a long, sad letter, replied that he knew nobody who would publish it. Next year, came the exhibition "Sarpedon," "Nimrod," "Pan and Apollo," "Aurora," and sketch of "Burying the Dead:" "newspapers rather favourable" Then turned his face to Italy. From Leith he sailed to London, and there saw Coleridge, and got several letters for Rome; visited Paris and the Louvre, Geneva, Milan. Thence he went by Bergamo, Verona, and Padua, to Venice, where he spent fully a month, encountering now and then familiar faces, among the wonders of art Thence again he went by Parma and Bologna to Florence, where he naturally made another longer halt, though short withal, to see and see into the great works there; visiting "the tombs of Dante, Buonarotti, Alfieri, Galileo, Machiavello, Aretino," lying in the Cathedral there with "many others that are dead." In fine, passing by way of Sienna, he entered Rome on the 8th of December, 1832. Though in these various places he did not stay to copy, being already far out of the bondage of copying, nor even much to study, he has left sufficient evidence in notes upon their art-treasures and other peculiarities, to show that he did not fail to take inward sharp-sighted observance of them.

At Rome, until early in March, 1834, he devoted himself to effort, strenuous, though in many ways disturbed, towards fuller realisation of his ideal aims in art. Frequent forced removals of abode; unrestrected labour, sometimes for fourteen hours a day; stern self-examinations, thoughts "gloomy and black," doubts of himself and of his aim, with reflux of stouter resolve—ever the fatal whooping of an owl wherever he changed to: these, with the verdicts of visitors upon his works, kept his over-sensitive nature in almost unabated storm. The revulsions of doubt and of renewed self-confidence, of hope and of despair, of joy and of down-crushing sorrow, he who would walk in the fields which David Scott trod and sought to labour into worldworshipped flower and fruit, must lay it to his account to live among; to endure calmly, if possible; and neither fret at, nor be borne down by whether his choice be the field of art, of thought, or of events. Few men indeed are so armed within, in mail of heaven's own proving, as to bear on long and unswervingly in this career—men, through whatever seeming cause, sink as we call it prematurely; and they who would take their place in the lists had better weigh the forces to be encountered in some other scales than those of hope and of enthusiasm. Into the details of Scott's labours here, his various pictures and designs, we have not space to enter. His last and largest work here, the summing up of his efforts and progress hitherto, was, "Discord, or the Household Gods Destroyed:" *his* rendering upon canvass of the oldest story of all oldest myths and newest never-ending story of the moderner; and still unfinished facts; the new tearing down the old; the storm, and fire, and despair of progress, and reform, and emancipation. On this picture he staked his hopes anew—to find himself anew beleaguered by disappointment. Wrapt in his own perceptions of the highest and one

MUSICAL REVIEW.

THE SCHOOL OF MUSICAL COMPOSITION. By DR. MARX. Robert Cocks and Co.

Dr. Adolph Bernhard Marx was born at Halle, in Germany, on the 27th of November, 1798. He studied music from an early age, although he took to the law at the beginning of his career. Such was, however, his passionate love for music, that he went to Berlin, and amidst great financial difficulties, commenced the study of the theory and history of music. In 1823, he became the editor of the *Berlin Musical Gazette*, and for seven years directed that intellectual and independent publication with the greatest talent and zeal. In 1830 he was appointed Director of Music at the University of Berlin—a post which he holds at this moment. He received his diploma of Doctor in Music from the University of Marpurg. In 1850, in conjunction with Dr. Kullak and Herr Julius Stern, Dr. Marx founded the Berlin Academy of Music, offering to all singers and instrumentalists, teachers, and composers, as well as amateurs, a complete plan of instruction, whether elementary, executive, or inventive. A private stage is provided for dramatic vocalisation, and opportunities are afforded for the performance of new works by students. The pupils enter at the age of twelve years, and the annual cost is about 100 thalers (£16). This institution has made great progress since its formation. Dr. Marx published "the Art of Singing, in Theory and Practice," in 1826; "On Painting in Music, with a May greeting to the Philosophy of the Art," in 1828; "The Science of Musical Composition, Theoretical and Practical," in 1837 and 1838; "General Science of Music" in 1839; "An Essay on the Value of the Vocal Solos of Handel at the present period;" "Considerations on the actual state of the Opera in Germany;" and various pamphlets on the music of the Greeks, Counterpoint, Fugue, &c. In addition to these works, Dr. Marx has composed, besides editing the "Passione" and other works of Bach, a musical drama called "Jerz and Bately," produced in Berlin, in 1829; the music of a melo-drama, played at Konigstadt, in 1827; an oratorio, "St. John the Baptist," executed in 1833, at the Church of the Trinity, in Berlin. His great work is the present one under review, "The School of Musical Composition—Practical and Theoretical," the translation of which has been made by Augustus Wehrhan, of Dublin, who escapes his acknowledgments to James Clarke, Esq., for his great assistance. The first edition of Dr. Marx's volume appeared in Berlin in 1837, the original preface to which is full of enthusiasm. He studied the theoretical works of Kernberger, Marpurg, Albrechtsberger, Gottfried, Weber, Reicha, &c; he examined Logier's musical system; he acknowledges earnestly the benefit he derived from these masters; but still in their works he could not find the secret of acquiring the artistic skill developed in the scores of the master-minds, he could not learn how "to read and understand the language conveyed in the symbols of the wonderfully beautiful and enchanting world of sound," and to become a master at least of its technical forms. The inquiry brought him to the conclusion that there must be general principles of musical foundation, and there was no such thing as lifeless mechanism in the spirit of art. His opinion is, that the object and task of a school of art, is to "assimilate a thorough and most comprehensive knowledge of art, with the consciousness and feeling of the learner, and to make it from the commencement lead to artistic activity." We wish our space permitted us to print the eloquent preface of Dr. Marx, to the present edition, issued by Messrs. Cocks and Co., an edition entirely re-modelled by the author, who gratefully and gracefully declares that Handel could not have raised himself to perfection but in the free atmosphere of England. "During a whole century," writes Dr. Marx, "we Germans have advanced in song—have lulled and purified ourselves in music and in philosophy, as in the shaded waters of a lonely Druidical lake, while England equipped her fleets, laid the foundation of the greatest empire in the world, and from her own free womb gave birth to the most free of all nations. Perhaps the solitude and quiet leisure of a people forced back upon their internal resources was the indispensable condition of that wonderful union between number and clairvoyance, in which Beethoven was able to penetrate to the inmost recesses of the soul, and there perfect his art, as long before him it had been given to the German, Bach, to behold and proclaim the mysteries of the gospel in the symbolism of sound."

Another volume will follow the present one, the divisions in which are lucidly laid down, and the doctrines conveyed in clear language. Every pupil and every professor should study the themes of Dr. Marx; every amateur and every composer should deeply ponder on his principles of elementary composition. It is in the analyses of works of genius that Dr. Marx develops his school of composition; the explanations are addressed to the faculties and perceptions of every class of learners, whose time of apprenticeship is never ending; the task of the true artist, as the Doctor justly remarks, having no bounds, "for he is the child of his time and of his nation," and his "creation is the ideal representation, the spiritual reflex, of the world as it was at the period in which he lived."

The Drama.

THE dramatic season has re-commenced with great spirit. Theatrical managements are alive and active. Revivals and novelties have entered into diligent competition. Never were there more indisputable signs of life and progress.

SADLER'S WELLS, by way of inaugurating the new season, has adopted, as a revival, one of the most neglected of Shakspeare's dramas. This charming comedy is generally supposed to have been the companion piece of "Love's Labour Lost," and originally entitled "Love's Labour's Won." Perhaps the former play, if subjected to a refined analysis, might throw some light on "All's Well that Ends Well." There is, however, a marked difference between the two works. In the earlier one the plot is invented by the poet—the later derives its story from Boccaccio, through Painter's "Palace of Pleasure." On the other hand, both are courtly plays—both are effusions of the fancy, rather than of any higher or sterner faculty—both are stamped with euphuism—both are erotic in their theme—and present love in a state of travail and difficulty; both are meagre in incidents, crude in treatment, but poetic in dialogue: each furnished with a character or two, whose purity or nobility serves to redeem the general grossness of the manners, and to apologize for, if not to justify, equivocal conduct of their own. We have to judge them, not by their acts, but by their motives.

These plays contain sketches of character which Shakspeare matured in more elaborate productions. Thus, *Rosalind* and *Biron* were afterwards perfected in *Beatrice* and *Benedick*. The parts of *Helen* and *Diana* have also a great resemblance to *Isabella* and *Mariana*, in "Measure for Measure." The expedient in both cases is the same. *Bertram* is but a more feeble *Angelo*. The *internal* evidence would certainly lead to the belief that "All's Well" was a prior work. Probably, it preexisted as such under the title of "Love's Labour's Won."

The comic portion of the plot is both original and new. *Parolles* is altogether a Shaksperian creation. To Mr. Phelps the public is, of course, indebted for the revival. We think him right, notwithstanding the obvious objections to which the plot of the play is liable. The spirit of the poetry is so pure that it embalms the materials which it enkindles. In truth, whether in reading or seeing the play acted, we regard little the incidents that form the background. The present dialogue and situation afford the charm. Those incidents, too, were conceived with no irreverent a m. Our Shakspeare knew nothing of that modern false delicacy, which is ashamed of human nature. He took that as he found it; content to clothe it with an elegant veil of exquisite poetry and sententious wisdom, which aided its beauty and interest without hiding its proper form.

But while conceding thus much to the natural truth in all Shakspeare's dramas, their occasional want of that refinement which is required by modern opinion, forms a good argument why the attention of modern managements should be turned towards a new drama, illustra ive of ages less rude, and imbued with the principles that rule the one in which we are living.

The improvement that has taken place in this company since the recess is evident from the excellent manner in which the tragedy of "Lear" is now cast. Owing to this improvement, probably, the present revival of this great tragedy has been longer-lived than the former attempt only a few seasons back. More popular, also, would this pathetic drama have been in itself, but for the barbarous manners which it represents. The same lesson, enforced by a story and situations more in accordance with modern feelings, would have been more acceptable. A similar lesson, though in another direction, has been taught by the failure of Lillo's "Arden of Feversham"—a domestic tragedy, of some merit. Domestic dramas, far inferior in skill and story, have, when treated in a more modern style, become exceedingly popular. Why, then, the failure of this? Because of the obsolete taste in the style. Modern domestic dramas are written in prose, or in a familiar kind of blank verse, such as in the "Hunchback" and the "Love Chase;" often rugged enough, but leaving the dramatist at liberty to express his thoughts in any way he pleases. Lillo, on the contrary, affected a stilted and classic phraseology, which gives to the expression a false elevation—a stateliness foreign to the thoughts and sentiments, which are frequently poor enough. To our modern apprehensions, accordingly, the action and the dialogue are at cross purposes. In fact, such writing as Lillo's is the transition style of compo-ition between that of the Elizabethan dramatists and that of the Victo-ian playwright. The subject agrees with the practice of the latter; the style is borrowed from the former, or rather from the French tragic mode, such as we have it in Otway, Rowe, and Southern. And Lillo was greatly inferior to these really pathetic, though ra- ar- ficial, poets; hence, he never obtained the vogue in which they triumphed for a period. But their day is now passed; and no histrionic talent could render "Venice Preserved," "The Fair Penitent," or "The Fatal Marriage," a successful experiment on the modern boards. Nothing, then, belonging to that period of transition will be satisfactory: something altogether new, or a spirited revival of the elder period is the only possible alternative.

In the latter case, considerable alterations are frequently necessary and these alterations sometimes go to the extent of substituting altogether other elements for the spirit, tone, and meaning of the old play. It is in this way that "The City Madam" of Massinger has been adapted to the Islington stage. The speeches of *Luke* are retained, but the character has undergone "a sea-change." What Massinger intended for poetry, is converted into madness; and, at convenient *lucunæ*, bits of sentiments ity are introduced, to lead to *Luke's* conversion and repentance in the end. Old heathen Massinger is christianised. A proceeding like this virtually makes a new (and, perhaps, better) play of the old materials; but, nevertheless, it vitiates and falsifies the old one. The ingenuity expended in the invention of the requisite incidents to make the obsolete drama tolerable, would, we are fain to think, be more honestly bestowed on some original production. In another of these revivals, at the same theatre, Old Rowley's "Woman Never Vexed," adapted by Mr. Planché, the process has been restrained within reasonable limits; and we have a very fine old drama, disburthened of incumbrances, but not otherwise interpreted than purposed by the muse whose inspirations visited nightly the ancient poet.

These reflections are intended generally, as bearing on the question of revivals and adaptations in its largest application, and not by way of censure on any particular theatre or management. To Mr. Phelps and Mr. Greenwood a debt of public thankfulness is due, for having maintained in quick and honourable recognition the cause of dramatic poetry on the public stage. Thus they have accomplished by means of the old poets, and in the best way, and to the utmost extent that a suburban theatre, with low prices of admission, and with a limited arena, permitted. To others better situated a higher aim is proper.

Our readers will naturally turn to the PRINCESS' Theatre for some experience of a more costly mode of management. The last revival at this establishment, as our readers will recollect, was that of the Shakspearean comedy of "Much Ado about Nothing." Superbly as it was placed on the stage, Mr. Kean's production of the new piece, which he has doubtless found to be more profitable. These have been hitherto of the lighter kind, such as "The Prima Donna" and "Mont St Michel," both in two acts. Both appeal to modern feelings—the former having a refined *spiritual* interest; and the latter embodying a graceful superstition and a retributive moral. But, an endeavour at political satire in one of the scenes—an impossible attempt to put down the social anomaly of capital punishment in a Christian land by the force of ridicule—placed the new piece in jeopardy. The prior drama, dealing with less material interests, and charged with some touching incidents in an affair of the heart, will, doubtless, live for many a day. But, more important tasks will engage the attention of this enlightened management.

Passing on to the HAYMARKET Theatre, we meet with the more recent productions of living authors, with one or two revivals, for the convenience of *debutants*. "Money," and "The Road to Ruin," introduce to us Mr. Barry Sullivan and Miss Rosa Bennett; while "The Friendships" may be accepted as earnest of the kind of entertainment that may be expected from the approaching management by Mr. Buckstone. The interest of the proceedings at this theatre, during the present season, will be much enhanced by the fact that Mr. Webster is about to retire from its direction. No man has more largely encouraged than Mr. Webster the production of new and original pieces; and perhaps, on the whole, he has displayed a commendable judgment: old stage conventions and the starring system have, however, shackled his efforts. The latter has evidently perished; and the former must be permitted to depart, that progress may be possible. From Mr. Buckstone's active and acute intellect much may be hoped. At present, however, we have to do with Mr. Webster's management, whose energies during the month have been contented with the production of a farce or two. One by Mr. Maddison Morton, entitled "The Woman I Adore," might have been better; the other by Mr. Sterling Coyne, and called "Box and Cox Married and Settled," though but the continuation of a former drama, is of greater interest. These, however, are but initial steps in the season. In our next Literary Supplement we shall have, doubtless, something of importance to criticise. Mr. Webster will scarcely suffer his "farewell season" to pass away without signalising it by some exploit which may be remembered to his honour.

The recent opening of the LYCEUM Theatre gives us but little to say; but as the portals once put up at this theatre generally have a long run, the present bill may continue for some weeks. Nevertheless, to us it has a mere provisional look. The revival of the "Golden Fleece," excellent and elegant as it is, can only be designed to hold the stage while something else is preparing; and the equivocal reception of the leading drama, the "Mysterious Lady," is suggestive of an approaching change in the performances. This house lives on novelty, but it must be of the most polished description. First-rate acting, such as is found in the Princess's theatre, demands and deserves first-rate dramatic writing. The best, done in the best style, and set off with the best appointments: in these words may be expressed the principle on which this gay theatre is governed. The conductors are guided by the most exquisite taste in all the minutiæ of distance competition. It is true that the French drama is too much indulged in; but no bald translation is tolerated. Every fresh importation is extensively and expensively manipulated to such an extent, as to entitle its production to take rank, in some degree, with original efforts. The thing is much bettered by the adapter as to make it his own. He rises, at any rate, to the consideration due to an imitator. He is not a mere copyist, but an artist; not a mechanical *traducteur*, but an author The dialogue is, for the most part, original, and the mere outline of the French work conferred; or, as mostly happens, used as suggestive of a better plot, with English manners and English sentiments.

The OLYMPIC, under the experienced management of Mr Farren, is next in order. This veteran actor has had much difficulty in founding a theatre under his auspices; but he has at last succeeded in the Strand. In Wych-street it is perfectly established, with a good company and an appreciative audience. An infinite number of new pieces of all kinds have been produced here. The current bill announces three new pieces every night. "Uncle Tom's Cabin," the "Master Passion," and the amusing farce of "Wanted, 1000 Young Milliners for the Gold Diggings." We hear, and rejoice in the information, that, good as all this is, something much better is about to be attempted; and that the talents of Mr. Hoskings, Mr. Compton, Mr. Cooke, Mr. W. Farren, jun., and Miss Reynolds, are destined to be employed in still higher efforts. This elegant theatre is well adapted for the worthiest experiments; and its contiguity to the Strand will always enable it to command enlightened audiences.

We regret to say that we have nothing favourable to report of the MARYLEBONE. This theatre, to which Mrs. Warner imparted so high a character, has sadly degenerated. One redeeming point is the monthly pittances itself, Mr. Buchanan has found there a stage to justify himself; and though we cannot pronounce him a finished actor, we are happy to concede to his possession of considerable power and more promise.

As the manager of the theatre just named is advertised as lessee of DRURY-LANE for the season commencing next Christmas, some remarks on that ill-starred edifice may fitly conclude our *resumé*. To the observant eye of an experienced critic, nothing is more clear than that its present condition is due to the misconduct of the committee for letting the building. Considerations of rent alone seem to have directed their resolution, and not the fitness of the proposed lessee. That noble stage might still be peopled with the persons of the poetic drama, if the principle of management to be adopted were the first thing considered, and not the amount of rent offered. It is inconceivable to us that genius, intelligence, and enterprise, should have been rejected in favour of candidates without either; when all that is wanted is that ample opportunity should be given to a capable director for realising the prestige to the national theatre, by the production on its boards of dramatic and historicic genius. To such an aim as this some sacrifice of rent might, in the first instance, be made, but the result would be invulnable in the regained character and permanent prosperity of the theatre. The present public faith is evidently deficient in the quarter where it should be most readily found; yet, in this faith, the structure was founded, and without it the purpose of its erection cannot be realised. These walls, once classical, should be held sacred—a determination on the part of those who have power and authority over their disposal, would pre-serve them to their right use With the will a way would soon be discovered for obtaining the desired result. But it is manifest that the will does not exist; and thus it is that all the proceedings in relation to this magnificent temple of the Muses are deserving of censure only on the part of every sincere lover of the drama, and of those sincere and honest minds who desire to blend with all stage amusements the highest interests of morality and taste.

NEW BOOKS, &c.

Electro-plated Spoons, Gold and Silver bought, or taken in exchange 9, Coventry-street, Haymarket.

SARL'S ARGENTINE SILVER PLATE, 37 and 38, CORNHILL.—This beautiful metal continues to stand unrivalled for resemblance of real silver plate in appearance and tone, combined with its brilliant appearance, defies all competition. It is upwards of 12 years since this manufacture was introduced by SARL and SONS to the public and, notwithstanding the many spurious and inferior imitations, the constantly increasing demand for former precedents, thus giving a convincing proof of its having answered the end proposed, which was to produce an article possessing all the durability and appearance of silver at one-sixth its cost. The magnificent stock has recently been enriched with many splendid novelties in Dinner, Tea, and Breakfast Services, never possessed so many attractions as at the present time. The Spoon and Fork manufacturer includes all the various patterns that are made in solid silver, and orders to any extent can be immediately executed. Their new and enlarged pamphlet of drawings and prices is just published, and now ready for circulation It may be obtained gratis by anyone at the manufactories, 37 and 38, CORNHILL, and 13, Cornhill.—Caution: The public are hereby cautioned that no article is genuine, except purchased at Sarl and Sons'. No other parties are authorized to sell it.

THE ROYAL EXHIBITION.—39, Albemarle-street, Piccadilly.—Valuable newly-invented, very small, powerful, Wellscopic and Field Glass, the size of a watch, to show minute objects at a distance of from four to five miles which is found useful to Tourists, Travellers, Officers, Gentlemen, Gamekeepers, and Gamekeepers. TELESCOPES, possessing such extraordinary powers, that some in this collection, no extra size, will show distinctly Jupiter's Moons, Saturn's Ring, and the Double Stars. They superside every other kind, and are of all sizes for the Navy, Army, Travellers, Shooting, Military purposes, &c. Opera and Race-course Glasses with wonderful power; a minute object can be clearly seen from ten to twelve miles distant Invaluable newly-invented Spectacles.
DEAFNESS.—NEW DISCOVERY.—The ORGANIC VIBRATOR, an extraordinarily powerful, small, newly invented Instrument for Deafness, entirely different from all others, to surpass anything of the kind that has been, or probably ever can be produced. Being of the same colour as the skin, is not perceptible; it enables deaf persons to hear distinctly at church and at public assemblies; the unpleasant sensation of sounding noises in the ears is entirely removed, and it affords all the assistance that possibly could be desired.—S and E SOLOMON, Aurists and Opticians, 39, Albemarle-street Piccadilly.

PORTSMOUTH SAILORS' HOME
October 21st, 1852.
THE EARL of NORTHESK, having visited this Institution, and finding that, in addition to the sum necessary for rebuilding the room pronounced accommodation, ONE THOUSAND POUNDS are wanting to complete the purchase of the adjoining houses, has kindly offered £500 for this object, if nine other persons will, to the same amount, evince their gratitude towards British Seamen and thus commemorate the Centenary of the glorious Battle of Trafalgar

Manufactory—Deptford, Kent, S E
Offices—Hanover-street, Hanover-square, W

TREASURES of NATURE.—It has been well remarked that there is not an imperfection that flesh is heir to for which a remedy is not at hand, to discover which we have only to search the wide expanse of nature. A most simple production was scarcely be offered than in the application of a natural production, of which the principal ingredient is the Balm of Columbia, in most where the human head has been deprived of its beaom or and natural ornament. As a dressing for the preservation of the hair, none of the hair, OLDRIDGE'S BALM of COLUMBIA is unrivalled, and in cases of baldness it is perfectly unfailing.—3s 6d, 6s, or 11s per bottle; no e bor prires. Ask for Oldr ge's Balm, and never be persuaded to use any other article as a substitute.—13, Wellington-street, Strand, and sold by all dealers.

THE EMPRESS of CHINA'S TEA, imported this season for the first time, and containing all the choice sorts of the first picking. Packed in air-tight tins, of various sizes, at 4s 8d per lb. This fine Tea has been carefully analysed and examined, and submitted to the most severe chemical tests, by Robert Warrington, Esq, Chemical Operator to the Society of Apothecaries, and pronounced by him to be "Genuine." Mr J C LEAKE, M H C S E., and L A C., has also analysed it, and has affirmed that he can find no trace of copper, lowwood, or any chemical dye, and recommends it as a most "wholesome beverage." A London tea-taster, of thirty years' experience, has also certified that "it consists of many sorts of really fine tea, very carefully and most judiciously blended" and hundreds of the principal tea dealers in he United Kingdom, who have become agents for the sale of it, have pronounced it superior to any previously imported; and all who taste it, not only continue to drink it, but recommend it to their friends also. Applications for agencies, where none are yet appointed, may be addressed by Brittania Dairy, 4, Bishopsgate, Messrs MOORE and CO, the sole Wholesale Agents, Fenchurch-street, London

ALLSOPP'S PALE ALES BARON LIEBIG ON CERTAIN RECENT ANONYMOUS ADVERTISEMENTS
MESSRS ALLSOPP and SONS have great satisfaction in being enabled to publish the following extract of a letter, addressed to them from Munich, 13th September, 1852, from Baron Liebig to Mr Henry Allsopp, Brewery, Burton-on-Trent.
"To my great astonishment, a report of my opinion has lately been called to several anonymous articles and advertisements headed by my name, such as the following, whose author alleges our misrepresents a the nutritive value of your beer. I beg leave to say that I had never analysed your beer, nor perhaps ever tasted it in my life, and to make a retractation on my part of the original statement.
"I emphatically declare that I had not the slightest knowledge of those anonymous articles, the contents of which I entirely disapprove, and I request to have my name left entirely out of the statement made in my letter to you, which certainly you were and are at perfect liberty to publish."—JUSTUS LIEBIG
"Munich, 13th September, 1852."

ALLSOPP'S PALE ALES and BARON LIEBIG.—Although not in the habit of replying to anonymous advertisements, Messrs Allsopp cannot consider it to reserve some of a very discreditable nature to the parties concerned, Messrs ALLSOPP and SONS are compelled to publish another of an announcement bearing the names of Professor LIEBIG, to which an explanation publicly has been given. Messrs Allsopp and Sons regret that recently as they have endeavoured to meet every statement made emanated from an unworthy jealousy on the part of those who should rather have shown gratitude for the honour and exposure which Messrs Allsopp and Sons have not spared to remove the otherwise tedious prejudice frequently met with by private friends. The case is briefly from the mistake of a French chemist
Messrs Allsopp and Sons would now call the attention of the public to the following extract
That the original letter of Baron Liebig is addressed to Mr Henry Allsopp, individually:
That he therein intimates that he had been applied to by Mr. Henry Allsopp to analyse their beer, and that his opinion had been requested—for course for publication—by that gentleman
That Baron Liebig acknowledges the receipt of samples of Allsopp's Pale Ales, from the London bottlers, as well as other samples of the same, sent to him by Messrs Allsopp for private friends. He does not specifically founds the opinion reported by him to Mr Henry Allsopp in that letter on any personal analysis of the particular beers he may incidentally some wrong impression conveyed to that eminent man in respect to an alleged undue publicity given to his opinions.

Burton-upon-Trent, August 25, 1852.

THE ILLUSTRATED LONDON NEWS.

No. 588.—VOL. XXI. SATURDAY, NOVEMBER 6, 1852. [SIXPENCE { WITH SUPPLEMENT, GRATIS.

THE OPENING OF PARLIAMENT.

THE British Legislature has commenced its ordinary session under circumstances that render its meeting of more than usual interest and importance. The Parliament of the world has opened. Constitutional liberty, in the only great country in Europe where it is either understood or permitted, is about to give the neighbouring nations a new example of its effective working. We may be assured that those nations will watch with curiosity, not unmixed with a deeper feeling, the deliberations of an assembly so illustrious, and, unfortunately for the interests of humanity and civilisation, so unrivalled.

The meeting of a new British Parliament, and its probable results, are always to be considered under a twofold aspect. How will its constitution affect home politics? and what influence will its deliberations exercise upon the general policy of Europe, and of the world? At the present time both of these questions are of a complexity seldom seen, and of an importance seldom exceeded in history.

The "condition of England" question, that a few short years ago was of such painful interest, is now most cheering. If the observer or commentator takes his stand upon platform high above the bustle and jostle of warring factions, and of the fragments of dismembered parties that exist in and out of the Legislature, he will have much reason to rejoice at the position of his country, and the most satisfactory grounds for hoping that England will more than ever be the example and the guide of less favoured nations, and the friend and mainstay elsewhere of those principles of rational liberty and moderate statesmanship which have made her what she is. Formerly, ere the late Sir Robert Peel had crowned a career of usefulness by immolating his heart, his friendships, and his own consistency, upon the altar of a paramount and sacred public duty, the condition of the people of England was one upon which no statesman could reflect without misgivings for the future. The repeal of the Corn-laws, and the emancipation of industry from the impediments and trammels of a tax upon food, has happily either altogether removed or greatly diminished this anxiety. With cheap food and steady employment, the people once believed and felt to be so dangerous, are happy and contented. The jails and the workhouses are empty; the manufacturers' labourers have wages to spare, not only for comforts and luxuries, but for provident investment; and the farmers' labourers, formerly the least paid, the most hopeless and dispirited of all labourers, find, to their comfort, that they are no longer a drug and an incumbrance upon the soil, but that they are valuable for their thews and their sinews, for their skill and for their good conduct. They have at last been raised above the daily dread of the workhouse that formerly beset them.

We are aware that it is not alone to the repeal of the Corn and Navigation-laws, and to the gradual remission of taxes that impeded the extension of trade and manufactures, that all these favourable results are to be attributed. The discovery of the gold of California and Australia, and the pre-existent causes which led to what is called the "Exodus" of the Irish, and what may as justly, in regard to Australia, be called the "Exodus" of the English people, have no doubt contributed to raise the value of labour, both skilled and unskilled, in every part of the country; but the state of the Revenue—which, notwithstanding the almost yearly remission of large items of taxation, continues to show a surplus—is a fact that California and Australia, and the "Exodus" of the people, cannot explain. The departure of such vast hordes of enterprising, energetic, and industrious men as those which now swarm out of their native land at the cry of "gold to be had for the digging," would, had the Corn-laws been unrepealed, and had Free Trade been still the almost hopeless theory which Mr. Cobden found it when he entered public life, have been a calamity, instead of a blessing. The circumstances of Great Britain have been vastly altered by the operation of both these causes; and it will be the greatest of the duties that will devolve upon the Parliament of 1852 to prepare a financial policy in accordance with these new and favourable facts, and to settle thereby upon a still more solid and permanent basis the prosperity of the country. If we descend to a lower level of contemplation, we shall find that the re-affirmation, consolidation, and extension of these great principles, will involve the personal fate of many statesmen, as well as the existence of the actual Administration. But these, however important, and however exciting as mere party questions, dwindle into insignificance, when compared with the larger questions of the national well-being in which they are included. Whatever may become of the political reputations of certain men, and whatever painful personal sacrifices of pride and consistency they may be called upon to make, we cannot doubt for a moment of the progression and triumph of those true principles of trade and fiscal policy, which allow a great people to thrive and to be happy, and to stand first in wealth, in enterprise, and in industry, among the nations of the world.

As regards foreign politics, it must be confessed that the New Parliament will enter upon its existence at a critical period. The omens of impending trouble and confusion, if not of strife and calamity, are many, and they thicken around Europe as we write. Everywhere we behold the elements of change and disorder. Mighty armies are marshalled, and no one knows against what enemy or what country they will be led forth in battle array. Russia is strong and ambitious, fully armed and equipped; Turkey runs the risk of crumbling to sudden decay, from internal weakness, even more than from foreign aggression; Austria is running the career of a bankrupt and a spendthrift, and only holds together her ill-consorted states, principalities, and kingdoms by an amount of coercion, which it is ruinous to employ, and which

COMMENCEMENT OF THE WORKS OF THE PETROPOLIS RAILWAY BY THE EMPEROR OF BRAZIL.—(SEE NEXT PAGE.)

it would be fatal to relinquish. Prussia, and the other states of Germany, after long panting and striving for a liberty akin to that enjoyed by the English people, are in the strong grasp of a military despotism, broken up into jealous, petty, and hostile sovereignties, and in the agonies of an almost mortal struggle; some of them with their own subjects, and some against dominant nations and races, which keep them in subjection. Belgium and Switzerland, where there are still some remnants of human right, are threatened with political extinction; and France, ruled by the evil spirit of the whole *imbroglio*, dances with frantic eagerness around the car of the perjured potentate who has enslaved and dazzled her. Everywhere in Continental Europe we see the unhappy spectacle of nations that desire freedom, but do not understand it; of nations that both love and understand, but cannot attain it; and of nations that are the slavish, and even contented victims of unrelenting despotism. In all the darkness of Europe there is but one bright spot, and that is in our own island. Although there are many questions in abeyance—that may well cause uneasiness, among ourselves, such as unhappy theological disputes, the fierce polemics of Ireland, the state of the Church of England, and other points of difference, minor perhaps, but still of grave significancy—the New Parliament of this country may well be proud of the position it will hold, and thankful for the privilege of legislating for so great and so advancing a people. Representative Government, elsewhere discredited, has its abiding place and sanctuary here; and, whatever the chances and changes of factions and parties amongst us may be, we may confidently indulge the hope that the cause of constitutional liberty thoughout the world will not suffer through any act or deed of the British Legislature.

COMMENCEMENT OF THE WORKS OF THE FIRST RAILWAY IN BRAZIL.

THIS event—of the greatest importance to the empire of Brazil—was celebrated with great *eclat* on the 29th August last, when the Emperor, with his Ministers and the principal officers of State, formally commenced the works of the first railway yet undertaken in this flourishing empire.

The Imperial Petropolis Railway and Steam Navigation Company was projected last year by Senhor Ireneo Evangelista de Souza, for the purpose of bringing into closer connexion with Rio the healthy and fashionable city of Petropolis, and of forming the first link in the great chain of railways intended to connect the producing districts with the seaport. The elevation of Petropolis is 2750 feet above Rio, and it consequently possesses great attractions, from the coolness of its atmosphere. The city is at the summit of the mountains which bound the bay of Rio on the north; and it is at this time reached by voyaging to the head of the bay, and along a crooked river to Porto d'Estrella; thence by carriages to the foot of the mountains; and the ascent of the mountain is usually made on mules. A magnificent road has recently been opened, by which carriages can ascend the mountains to Petropolis. This road is a work of great utility; displays much skill; and it ranks, in point of magnitude and costliness, as the greatest public work of Brazil.

The city of Petropolis is the summer abode of the Emperor and of all he wealthy families of Rio; and it is the point towards which the great roads from the interior converge; and all the produce—coffee, sugar, tobacco, &c.—of immense districts passes through Petropolis to reach the mountain road, and descend to the water.

The Railway now in course of construction runs from the head of the bay to the foot of the hills, a distance of about ten miles; and from the edge of the elevated table land where Petropolis is situated, surveys for a continuation of the railway are being made.

Through the illness of a member of the Imperial family, and a consequent change of residence, the ceremony of inaugurating the works had been deferred for some weeks; but on the day above named (Aug. 29), his Imperial Majesty Don Pedro II., the Empress (with their children and infant), and the Ministers of State, left the Marine Arsenal at 7 A.M., on board the steamer *Thetis*, and proceeded to the head of the bay. Here the Emperor's barges were in waiting to receive the party, which proceeded up the river Inhaumer, to Porto d'Estrella, and, disembarking at this place, they were conveyed in the Emperor's coaches to Fragozo—a delightful spot, near the foot of the mountains, and where the ceremony was to take place. The Imperial party reached Fragozo at half-past eleven, and were received by Senhor Agnias, the secretary, and Mr. Bragge, the engineer, and were conducted to tents erected on the ground. After a little rest and refreshment the Emperor walked over the ground, and examined the preparations made for working. The august party then assembled at the ground marked for the first cutting, and the Vicar of the Freguezia (parish) assisted by the ecclesiastics of the neighbourhood, proceeded to consecrate and bless the undertaking. A barrow, of the magnificent woods of Brazil, and a shovel of silver had been provided; and the shovel was now presented by the engineer to the Emperor, who proceeded to cut a turf and place it in the barrow; and the instant the shovel touched the ground, a grand discharge of fireworks took place. After depositing the sod in the barrow, his Majesty handed the shovel to the Minister of the Empire, who cut the second sod. The Ministers of Finance, of Justice, of Foreign Affairs, of War, and of Marine, each cut a sod in turn, and were followed by the President of the Chamber of Senators, the President of the Chamber of Deputies; and lastly by the originator of the line, Senhor Ireneo The Emperor then wheeled the barrow thus loaded some distance along a platform carpeted with the flags of all nations; and Senhor Ireneo finished the wheeling, and deposited the earth in the spot indicated by the engineer. Cheers for the Emperor, the Empress, and the Brazilian Constitution, were then most enthusiastically given, and salvos of rockets and bombs were fired.

After the Royal party had retired to their tent, the plans of the Railway were explained to his Majesty; and a plan for the drainage of a large marsh on the line of Railway, was also submitted by Mr. Bragge His Majesty appeared much interested, and asked many questions. A collation was served at three P.M., and at four their Majesties and suite departed for the city.

THE NATIONAL GALLERY AND GREAT EXHIBITION SURPLUS FUND.—It seems the report of the Government having purchased the plot of ground near Kensington as a site for a new National Gallery is incorrect. The property in question has been purchased by the Royal Commissioners, with the surplus funds of the Great Exhibition. It is intended to present it to the nation, and to request the Government to erect upon the said plot such suitable for a new National Gallery, for the reception of the trade collections formed from the late Exhibition, which will be greatly augmented when suitable accommodation is afforded; also suitable premises for the School of Design; and for affording the means of carrying out a system of "industrial education" similar to that suggested in the first report of the Royal Commissioners

IRISH POOR-LAW APPOINTMENTS.—The *Morning Herald* says—"So far from additional offices being created, a reduction has taken place in the staff of the board. When Mr. Commissioner Hall retired, Mr. Inspector Senior was appointed to fill his place, but Mr. Senior's place was not filled up, thus a saving of about £1000 a year was effected. Eleven temporary inspectors have been discontinued, seven of them have been retained as permanent, four have been discontinued. In future no inspector is to be paid more than £700 a year, with no allowances beyond travelling charges, thus a saving of £3000 a year is at present effected; while, by reductions as vacancies occur, further savings will be made."

THE AUSTRALIAN ABORIGINES.—By the last accounts from Australia the aborigines had become much seems to the settlers in the interior, in consequence of the number of men who had gone to the gold diggings and left their wives and families in an unprotected state. The latter were taking refuge on the towns and villages for security.

A short time since, a very old priest, residing in a commune in the Dordogne, having taken ill, sent for a woman who had been his nurse to attend him. She came every day to attend on her part until his death, and for the purpose she walked several miles The good woman is not less than 114 years of age. She has witnessed the following forms of Governments:—Louis XV., Louis XVI., the first Republic (with its reign of four metamorphoses), Napoleon, Louis XVIII., the Hundred Days, the second Restoration, Charles X., Louis Philippe, and the present Republic.

FOREIGN AND COLONIAL NEWS.

FRANCE

(From our own Correspondent.)

PARIS, NOV. 3.

Abd-el-Kader! Abd-el-Kader!—is the name in everybody's mouth at present; those who have not seen him overwhelm those who have been so fortunate with questions which the latter are but too proud and delighted to be able to reply to at full length, occasionally with the addition of such details as their imaginations may supply, to fill up any blank in the narrative, or add interest to its details. The Emir is of a moderate height, his figure is cast in the most perfect symmetry; slight, lithe, and muscular, strength and grace are united in every limb, displayed in every movement. His face, of a pure oval, is pale; his nose straight as that of a Greek statue; his eyes, which are not black, but of a deep blue, have a mingled expression of pride, of gentleness, of melancholy, and of latent ardour, that renders them really indescribable. This face is *encadrée* by a glossy black beard and whiskers. Abd-el-Kader's dress is remarkably simple; no ornaments nor brilliant colours interfere with its perfect plainness; while his white burnous and haïck are only conspicuous from the natural grace with which they are worn. His manners are calm, dignified, and gentle; an air of patient abstraction is remarkable in all his demeanour; nothing seems to excite in his mind any vivid emotion of pleasure, astonishment, or admiration. Much of his time is employed at his devotions; and, on his visiting Notre-Dame and the Madeleine, he spent some moments in prayer. As may be imagined, his appearance at the grand representation at the opera, was the principal attraction of the evening. There he sat, calm, silent, and impassible; his thoughts, probably, far from the scene and sounds around him; displaying neither interest nor *ennui*, but the same tranquil abstraction which marks his manner on all occasions. A good deal of amusement was excited by the entrance into his box of M. ——, the celebrated marine painter, who insisted upon bestowing on the Emir, for the benefit of the audience, a most demonstrative *accolade*, an operation to which he submitted with a resignation worthy of a better cause.

Brilliant as was the representation at the Opera, the enthusiasm was certainly very moderate; the entrance of the President was not greeted with all the rapture, the enchantment, the loyalty, &c., which the newspapers are pleased to describe. The *cantata* was, altogether, the most successful affair of the evening.

The Théâtre Lyrique is giving a new opera comique, entitled, "La Ferme de Thilmour." The music, by M. Varney, is very pretty and original; the libretto, taken from so-called Scottish life, is a truly Parisian conception of what goes on in the Highlands, and would be decidedly weak in any locality. Still, as a whole, the thing is attractive and agreeable. We are now at liberty to state, that the drama to which we alluded last week, as having been so enthusiastically admitted at the Théâtre Français, is written by Mme. Emile de Girardin (Delphine Gay), and is entitled "Lady Tartuffe." The principal rôle is entrusted to Mdlle. Rachel.

Apropos of Mdlle. Rachel, we must not forget to give our readers a description of the Imperial acknowledgments of her's and M. Arsène Houssaye's homage to the *Chef de l'Etat*, in the latter's poem, "L'Empire, c'est la Paix." M. Fleury was charged with a complimentary missive, written by Louis Napoleon himself, to the celebrated *artiste*, accompanied by a bracelet of great value. On a ground of green enamel is a large cluster of rubies and diamonds, which can be detached so as to form a brooch. An identical gem in the same cluster to match, which may be made to serve as buttons The gift to M. Arsène Houssaye is a gold box, enamelled with blue, and on the lid is a cypher in diamonds, encircled by brilliants of considerable size.

Splendour in all things is especially the order of the day. The fair dames, who for so many years have monopolised to themselves the glories of scarlet and purple, embroideries and silks, gold and silver, and other such vanities, may well be astonished when they see the "inférieur sexe" doff their sad-coloured garments, and come forth clashed and braided, and bedizened and padded, and made up for an official reception!

The Prince Callimaki has at last received his recall, which he has long been expecting, from the Ottoman Empire He is, it appears, to be replaced by Vely Pacha. Prince Callimaki will be a good deal regretted in Parisian society.

Some of the most brilliant and magnificent *fêtes* that have been given here for the last few years have been at the Ottoman Embassy.

The success of "Le Pere Gaillard" and "Le Bonhomme Chrétien" continues to increase every day in Paris. It is being translated at all sides, its merits are being discussed in every society, and the *Journal des Débats* has given it a most extended and favourable review, which is being quoted in various other journals. We recollect any English work, that is to say, any work in English in short, as Mr. Micawber would say, any work, not French excite the same sensation here.

The Almanack is to be published on the 1st of November, and it is early in September. Fêtes are become intolerable, warm clothing insupportable. On the Boulevards, in the Champs Elysées, people sit till ten o'clock at night in the open air. In short, the summer has had a prick of conscience for leaving us so soon, and is come back to spend a few days with us before it gives place to winter.

The difficult question of the succession has at length been settled in a manner strongly indicative of the cunning of which, if Victor Hugo is an authority, Louis Napoleon possesses a large share. In the first instance Louis Napoleon simply intimated his wish that the Constitution should appoint Jerome Bonaparte and his family as next in succession to the Imperial Crown, in the event of the death of Louis Napoleon without issue. Such an arrangement was at least simple and natural; but, there are partisans of Louis Napoleon, such as M. de Morny, General de St. Arnaud, M Fortoul, and some others, even in the Ministry, who look upon the Empire as merely temporary, and who are most desirous that the settlement should be made in such a form as to leave the question of the succession as open as the nature of a so-called hereditary Empire would permit. These gentlemen hinted to Louis Napoleon that a presumptive heir in the neighbourhood of the Throne was always troublesome, and was likely to be parcularly so in the person of Napoleon Bonaparte, Jerome's son; they, therefore, advised Louis Napoleon to make the Empire hereditary in his own family in direct succession, but to make an arrangement by which, in the event of his having no son, he might adopt any member he chose of the Bonaparte family as his heir. On the other hand, Jerome Bonaparte, who, as well as his son, is at the present moment on excellent terms with the President, contended that, if his name were omitted in the act of settlement, the omission would be considered by the whole world as an acknowledgment on the part of Louis Napoleon that the Empire was not to be hereditary in the family of Napoleon the Great, and that it would, moreover, be a slur upon the character, both of himself, the last surviving brother of the Emperor, and his son. Louis Napoleon has contrived to oppose an arrangement which, while it appears to effect a compromise between the two contending parties, by giving way to both, actually disappoints both parties, and defeats them in their objects. The plan is as follows:—Jerome Bonaparte and his family are to be nominated in the Constitution of the Empire as next in succession, but Louis Napoleon is to have the power (failing direct heirs of his own) to supersede their rights by the adoption of any other male member of the Bonaparte family, whom he may choose But, if he does not adopt an heir in his lifetime Jerome or his Heir male succeeds as a matter of course. The effect of his plan is evidently favourable to Louis Napoleon, and to him alone. Jerome and his family can hardly considerthemselves the heirs presumptive, for their rights may be superseded by adoption; and the adversaries of the Jerome family have failed in their efforts to limit the settlement to the heirs of Louis Napoleon in direct succession, so that they have not got rid of the embarrassments which they might encounter from the nomination of the Jerome family, in the event of the death of Louis Napoleon without issue

Rumour speaks of a contemplated further suppression of the press in Paris; and of a military display, of which no particulars reach us, at Fontainebleau, the soi disant Empire, to consist in the fact that Fontainebleau, as in old times, was to have been honoured with a Royal hunt; but that the Prince President, who was to have been present, has changed his mind, and will go to Compeigne instead

A commercial treaty favourable to England is talked of. Meanwhile the liberated Abd-el-Kader is the "Cynthia of the minute." The Parisian journals minutely chronicle his going out and coming in. On Saturday he visited the Prince President at St. Cloud, which palace was for the first time probably startled from its propriety by the prayer of a Musulman. Whilst waiting for the arrival of the Prince, Abd-el-Kader thought fit to perform his religious duties: he was received by the Prince with marked kindness. The President, who was surrounded by all the members of the Cabinet and several of his aides-de-camp, rallied up the chief as he was bending to kiss his hand, and pressed him in his arms with emotion. After this salutation, his Highness offered to show Abd-el-Kader the palace; but the Emir wished first to renew, in a solemn manner, the oath which he had sworn at Amboise, and asked the Prince's permission to address him in a few words, of which the following is the purport

Monseigneur,—You have been good and generous to me. I owe you the liberty which others had promised me, and which you had not promised me, but which, however, you have accorded me. I swear to you never to violate the oath which I have made to you. I know that persons assert that I will not keep my promise, but believe no such insinuations I am bound both by gratitude and by my word; and be certain that I will never forget what both one and the other impose on a descendant of the Prophet, and a man of my race.

Then the Emir added:—

I am not satisfied with merely affirming to you by word of mouth what I have just said. I desire to leave in your possession a writing which may be for all a testimony of the oath which I have here repeated. I now remit to you this document, which is the faithful interpretation of what I think.

The Prince replied that he was the more touched with the present proceeding, as he had not required any promise; that he had full confidence in him, having found a sufficient guarantee in his knowledge of the Emir's character; and that this spontaneous act of the Emir was a proof that he (the Prince) had been right in trusting him.

After hearing the address read, the Prince conducted the Emir over the Palace. In the course of conversation some happy expressions fell from Abd-el-Kader. The Minister of Justice, being presented to him, observed how slight a resemblance there existed between his attributions and those of the Minister at War. "A good empire," said the Emir, "leans for support on justice and the army." Several times Abd-el-Kader insisted on the principle generally prevailing that a Musulman is not bound by the oath made to a Christian, and protested energetically against such a doctrine. The Emir, in speaking to the Prince of his gratitude, said, "My bones are old, but as to the rest of my body it has been made young by your benefits." The Prince was again pleased himself to conduct the Emir to the stables, and pointed out to him his favourite horses, which Abd-el-Kader much admired. He was astonished at the beauty of the stables. "They are quite a little palace," said he. The Prince announced to the Emir that he would shortly exhibit to him a grand review of cavalry, and that for that occasion he would lend him an Arab horse. The Prince added that, as the Emir had not been on horseback for a length of time, he must come on Monday and try the horse which he should select.

Abd-el-Kader paid a second visit on Monday to St. Cloud, and rode out on an Arab horse, with the Prince President, in the Park for the space of about an hour. The Prince inquired of the Emir how his aged mother was at present? "During my captivity," replied the Arab chief, "my mother required a stick to support her step; but since my liberation, she has become younger, and can walk without any extraneous aid." On Tuesday Abd-el-Kader paid visits in Paris to several personages of note. He first went to see General Magnan, with whom he spoke of the French army, its courage, and glory, and expressed a wish to see the manœuvres at Vincennes. The General promised to give him notice when his wish could be gratified. The Emir afterwards paid visits to M. Fould, Minister of State; M. de Persigny, Minister of the Interior; and the Archbishop of Paris. On leaving the Archbishop, he proceeded to the Hôtel des Invalides, where, in the absence of the Marshal Prince Jerome Bonaparte, the Emir was received by General Saubosi, and the other officers of the establishment. He asked to see the tomb of the Emperor Napoleon, and exclaimed, on viewing it, "This sepulchre, so great and so beautiful, is worthy of him whose immortal name fills the world; his mortal remains are here, but his glory is everywhere." He afterwards visited the infirmary, and said, "It is a cause of grief to me to think that any of these brave men should have been wounded by my followers; but I was defending my country, and the French will pardon me when they learn that my enemy was worthy of them." The Emir then went to see the Grand Chancellor of the Legion of Honour, the Ministers of Finance and Marine, and the menagerie of M. Huguet de Massilia. He admired exceedingly the courage of this latter individual, in entering the dens of the animals. "Never," say he, "since the time of Daniel was such a thing seen." On Wednesday Abd-el-Kader was present at a grand review, at Versailles.

BELGIUM.

The new Ministry is formally gazetted. The fresh infusion consists of MM. de Brouckere, Foreign Affairs; Piercot, Interior; Fauder Justice. It seems M. Liedts, Finance; M. Vandenpeereboom, Public Works; and Arnold, War; remain in the Ministry. The correspondent of the *Daily News* gives the following particulars respecting the antecedents of the new men. The writer says: "M. de Brouckere, after studying with brilliant success at the University of Liege, was nominated substitute of the Procureur of the King at Ruremonde, and afterwards Procureur of the king at the same town. Elected in 1830 a member of the Congres National, and appointed by that assembly to be one of its secretaries, he took a prominent part in its glorious work. On the 25th of August, 1831, the *arrondissement* of Ruremonde elected him its representative in the Chamber of Deputies. In May, 1833, he was elected for Brussels, and represented the capital until 1848. In 1841 he was made Governor of the province of Antwerp until the Belgian Ministry, and subsequently was transferred in the same capacity to the province of Liege In 1850 he was appointed Minister Plenipotentiary of the King of the Belgians in Italy. It was M. de Brouckere who negotiated the treaty wit Piedmont.

M. Fauder, like M. Brouckere, studied at Liege. He was first nominated substitute of the Procureur du Roi at Louvain, and afterwards transferred in the same capacity to Antwerp. In time he became Advocate-General at the Court of Appeal at Brussels and subsequently Advocate-General at the Court of Cassation. M. Fauder is a lawyer, and a man distinguished for lucidity of intellect. He joins to it a firmness of character to great firmness of principles.

M. Piercot, who, before accepting the portfolio of the Interior was burgomaster of Liege, is a native of Brussels. He, like his colleagues, received his education at Liege. He afterwards became *avocat* of the Court of Appeal at Leige, and had not abandoned legal pursuits when he was called to direct public affairs. M Piercot is a firm and sincere Liberal, and, it is said, an excellent speaker.

NAPLES.

It seems that mercy deigns to visit the breast even of the King of Naples. We learn, during his recent tour in the provinces he has liberated more than fifteen hundred prisoners. In the province of Catanzaro upwards of a thousand Constitutionalists have been sent to their homes. His Majesty has commuted the decision of the Grand Court, on the Miceli affair, three galley-slaves, Scarpetta, and Barbaris, are to pass the rest of their days in the Ergastolo; Scisciolo and Leopardi are to be exiled; and the rest, condemned to the galleys, have already had the chains put round their bodies. But they again have received a commutation, and are to suffer but the named accorde in irons. Thus, those sentenced to thirty years will wear the chains fifteen, and so on. The correspondent of the *Daily News* suggests that the clemency of the King, when properly weighed, is illusory, because it is well known that the days of persons in question seldom live in the galleys more than half the time which the commuted period will give them

AMERICA.

The principal subject of excitement seems to be the Cuban affair. As soon as it it was known in New York that the *Crescent City* had arrived, a procession was formed, and made its way to the foot of Warren treet, where the vessel was anchored. In the procession were several persons in uniform, with the "lone star," or free flag of Cuba. A band of music was in attendance, and played patriotic and stirring airs. The procession having arrived at the point nearest the ship, the brass gun was again brought into requisition, and a salute was fired in honour of Lieutenant Porter, the commander of the *Crescent City*. The compliment was acknowledged by Lieutenant Porter, who replied through the guns of his ship At the head of the procession was carried a banner, on which was painted, in bold letters, "The American flag shall not be insulted"

Captain Porter it seems, when at Havannah, was denied all communication with the shore, because he had on board the obnoxious Mr. Smith: so he left a protest, and steamed back to New York

MEXICO.

Count de Montholon, the French Chargé d'Affaires at Guayaquil, and suite, arrived in the *Quito*, from Lima, having left the former port after a succession of insults. It appears that at the commencement of Flores'

expedition, several persons who were persecuted by Urbina took refuge in the house of the French chargé, and these he refused to deliver up to Urbina's Government for punishment. On the 3d of August there was a Democratic banquet held at Guayaquil, and in the evening the guests, amongst whom were seen several members of the Government, formed a procession and marched through the streets, headed by a band of music. On arrival in front of the French Legation the music ceased, and an uproarious cry of "*Muera Manholon!*" "*Abueren los Franceses!*" which also demanded satisfaction, but without success. An account of the whole affair has been forwarded to France.

WEST INDIES.

By the *Magdalena*, Royal Mail Company's steam-ship, which arrived at Southampton on Wednesday, we learn that the Queen of Assembly in Jamaica will proceed to business on the 9th of November.

The crops of sugar, &c., for 1852, October to October, was 34,413 hhds ; 18,371 puncheons rum ; 11 casks of molasses ; 4,653,781 lbs. pimento, 7,077,903 lbs. coffee. The previous year : sugar, 40,283 ; rum, 18,401 ; molasses, 40 casks; 1,176,876 lbs. ginger; 4,439,697 lbs pimento ; 5,595,373 lbs. coffee.

At Martinique and Guadaloupe sad havoc has been made by a most malignant species of African fever. The cholera is raging at Havannah, especially among the negroes.

LIFE IN MELBOURNE.

(Extracts from Private Letters from Melbourne, dated May 3d, 1852.)

By the time you get this the gold fever will have become prevalent in England ; but if you know any who thinks of coming out, try, by all means in your power, to persuade them to stop at home. The reports you read in the newspapers are very much exaggerated ; and it would take two or three sheets of paper, if I were to enumerate the trials and troubles of the diggers. Thousands have left all ; a few are benefited. I think I am correct when I say that 30,000 persons are digging now. Compare this number with the amount of gold discovered, and it would not yield to each an ounce a week. Many are carried off by dysentery, after a few days' pain. illness : they die amongst strangers, and strangers carry them to their graves. This winter hundreds will die of starvation. It requires 25 tons of flour daily to feed the diggers : that is, 250 sacks of flour, each weighing 200 lbs ; and flour, up at the Diggings, is now £10 per sack ; so that there is spent daily, for flour alone, £2500. But this sum is nothing, for as much more would be given willingly ; still the awful fact is, there is not sufficient flour up at the Diggings for the winter's supply ; and now the roads are in such a dreadful state that drays are not able to get up there. A friend of mine rode twelve miles on horseback along the road the other day, and counted fifteen drays "bogged," that is, stuck in the deep mud, the bullocks unable to drag them out. Drunkenness has increased to an alarming extent, and so has murder. It is not safe to go about 3& hours after dark ; the wretched villains, who lurk in the sombre corners of the streets, have a knack of rushing out upon persons, and seizing them by the throat and choking them. More than three or four, and sometimes five or six people have been found dead in the streets of Melbourne in the morning. Even in broad daylight, it is by no means a rare occurrence for one to be knocked down and robbed. . . . I live very much the right price (I very seldom dine at the eating-houses) ; I had £4 lbs to-day for a quarter of Wether mutton, and I pay £1 for sawing up a load of wood for her. £20 per ton. Bread, 1s 4d. a 1s 6d. loaf, and soon will be much dearer. Butter, no better than the cheapest of that in England, is 3s 6d per lb. Servants, from £30 to £40 per annum, and they can never be got to do anything proper, or do it somebody worries ! I was tired of having a maid of all work, so I got rid of her, and now I have a girl of fifteen, who is very much better. I was offered a good cook at £50 per annum, but I have not engaged her. Coals, £3 per ton. Horses are very dear. I bought for £60, as little ware they valued ; Horses which, a few months back, would fetch only £5 or £10, are now sold for £40 to £60 : some go as high as £80, or even £120 The roughest and commonest drays are sold for £70 : nothing less.

It cannot be denied that some persons have made a great deal of money, but these are chiefly amongst the very lowest class in our colony ; and then it is quite amusing to see the use they put it to. Their heads are perfectly turned. I have myself seen a coarse, vulgar woman, dressed in the richest satin dress, with enormous gold rings on her equally enormous large hands, and holding a parasol in the shop, striding through the streets, laughing and talking, anything but quietly, with a man in dirty trousers and a blue serge shirt, very often with his sleeves tucked up. At another time I have seen one of our hired coaches, being driven along as fast as the horses could gallop, filled with women and men, smoking, drinking, and singing : presently one of these newly-converted aristocracy will see an old mate driving a bullock-team, and will call out to the driver to halt, although the horses are pulled up all of a heap, and bring them upon their haunches, the man has leaped out of the carriage over the door, and the coachman, and, after loud congratulations and shaking-hands, enough to wring the very arms out of their sockets, off they go to have a friendly bottle, probably of the most expensive champagne, at the nearest public-house. Such, dear . . . are the scenes which are constantly to be witnessed every day in Melbourne.

Our winter is just about setting in. It has not ceased raining for these three days. The country has been much benefited by these rains, for six weeks ago there was not a blade of grass to be seen, and the country had a brown and barren appearance ; but now it is beautifully green, and the herbage (or native grass, for we have no field herbs here) is growing very quickly, so that there is no want of grass during the winter.

LAW AND POLICE INTELLIGENCE.

LAW APPOINTMENTS IN INDIA.—A short time since the Chief-Justeeship of Bombay, vacated by the retirement of Sir Thomas Erskine Perry, was filled up by the promotion of Mr William Yardley, late Puisne Judge at that presidency. The seat of the other on the bench is to be now owned upon Mr. J. R. Jackson, the present Advocate-General of the East India Company at Calcutta

THE "ANGLO-CELT" NEWSPAPER.—Monday being the first day of term, Mr. Justice Crampton took his seat in the Court of Queen's Bench, Dublin. A grand jury having been sworn, his lordship proceeded to address them with respect to the duties which they would have to perform. He first referred principally to the prosecution instituted by the officers of the 31st Regiment against the proprietor of the *Anglo-Celt* newspaper, for libel, and stated that it was the intention of her Majesty's Attorney General to enter up a nolle prosequi on record on that case, which it would be their duty to consider and decide upon with as much despatch as possible. His lordship referred to that record, and at two o'clock returned into court, when Sir Timothy O'Brien, the foreman, intimated that they had found a true bill against Zachariah Wallace, Esq., proprietor of the *Anglo-Celt*, for libel. Mr. Wallace was called on to plead within four days.

THE SIX MILE BRIDGE MURDER.—On the motion of the Attorney-General, the Court granted a conditional order to quash the several indictments which arose out of the Six-mile Bridge affair. Notice to be served on the attorney who acted for the next of kin at the inquest

QUEEN'S CRIMINAL COURT.—A special session of the above court was held on Tuesday, in accordance with the provisions of the Central Criminal Court Act, for the purpose of fixing the days for holding the sessions for the ensuing year, and any other business that might require to be disposed of. At twelve o'clock the court was opened by the Right Hon. the Lord Mayor and the following Judges:—Mr. Baron Alderson, Mr. Justice Coleridge, Mr. Justice Maule, Mr. Justice Cresswell, Mr. Justice Erle, Mr. Baron Platt, Mr. Justice Wightman, and Mr. Justice Crompton. The following Aldermen were also present:—Sir C. Marshall, Farncomb, Lawrance, and Wire. Mr. Clerk, the Clerk of the Court, said that the Judges had appointed the sessions for the remainder of the present and the ensuing year to be holden on the following days :—

1852.			1853.	
Monday	Nov. 22	Monday	April 4	
Monday	Dec 13	Monday	May 9	
		Monday	June 13	
Monday	Jan. 3	Monday	July 4	
Monday	Feb. 21	Monday	Aug. 15	
Monday	Feb. 28	Monday	Sept. 19	
		Monday	Oct. 24	

The Court was then adjourned to Monday, November 22.

THE LATE DUEL AT EGHAM.—In the Court of Queen's Bench, on Wednesday, application was made for bail on behalf of Mr. Barronet and Alfred Cooper, seconds to Mr. Cornwall. The application was unsuccessful. Justices Coleridge Wightman, and Erle all concurring with Lord Campbell in deciding that the prisoners could not be bailed.

EXTENSIVE ROBBERY AT MESSRS WHITTAKER AND CO.'S, IN AVE MARIA-LANE.—On Sunday the premises of these extensive publishers were entered, and the whole of the safes broken open, and £1000 worth of property carried away. The arrangements for the robbery were very deeply laid, and there is little doubt have been sometime in contemplation, as the opportunity taken for carrying it into effect was precisely at the time when it was known that large sums of money would be received by the firm for magazines and other periodicals ; the publishing day being the last day of the month, but in this instance, the 31st of October falling on Sunday, the money was collected on Saturday, the usual business day, consequently there was no opportunity of lodging the receipts in the bank of the firm, and the cash was left at the above-mentioned establishment. From this circumstance, coupled with the fact that it was pretty generally known amongst the trade that the watchman or porter, who had charge of the premises at night, was permitted to go home on Sundays, it is strongly suspected the thieves are, or have been, in some way connected with the publishing business.

The New Legal Year began on Tuesday. The common law courts commenced it with the smallest list of arrears ever known. Altogether there were but 47, distributed thus : -In the Q.B , 24 ; in the C.P., 6 ; in the Ex., 17. Of these in the Q B. 16 are especial cases and demurrers, 4 are new trials, and 4 appeals from the county courts. In the C.P. there is one demurrer, 2 are enlarged rules, and 3 are new trials ; and in the Ex. the special paper has 5, the peremptory paper 3, and the new trial paper 29, including one that stands for judgment

CHURCH, UNIVERSITIES, &c.

APPOINTMENTS AND PREFERMENTS.—The following appointments and preferments have recently been made :—Passenger : the Rev. Dr. John Hymers, Margaret Preacher in the University of Cambridge, to Brandesburton : the Rev. T. Turpin, to Farndish ; the Rev. B. F. Carlyle, to Cam : The Rev. Martin White, to St. Thomas Hellmouth : the Rev. H. Harrison, Junior, *Rectories* : the Rev. G. J. Chilcott, to Spittlegate, the Rev. L. Pinnock, to Caldecot, the Rev. A. T. Russ, to Weald, the Rev. A. Orbell, to Farndish. *Chaplaincies* : the Hon. Granville Anson, M.A., Minor Canon of Winchester Cathedral and Chaplain of Casemates : the Rev. J. Bull, to Bishop Wearmouth and St. Mary's College in that city.

THE ARCHBISHOP OF CANTERBURY AND THE PLYMOUTH MEMORIAL.—Sir Sidney Waterlow, M.P., has received the Archbishop's answer to the address from the Corporation of Plymouth, in reference to the determination of doctrines and practices into the Church during the last few years which cannot be reconciled with the articles of the Reformation. This is a subject upon which, unhappily, I have been so often obliged to declare my opinion, that I need not repeat it now. The memorial, however, proceeds to complain of a practice, originating in these erroneous doctrines, which can scarcely be distinguished from the auricular confession of the Church of Rome. I agree with the memorialists in believing this practice to be equally unscriptural in principle and mischievous in effect. But I trust that public opinion is so uniform in condemning and repudiating it that the continuance of such a system, either at Plymouth or elsewhere, will be more effectually prevented than it would be by the authority or by legal enactments ; both of which, we know by experience, are commonly too easy to evade."

CANDIDATES FOR HONOURS AT OXFORD.—The number of candidates for classes at the approaching public examinations, from the 10th to the greatest number ever known.

The President of Sion College has called a meeting of the Fellows, to consider what measures they ought to adopt in reference to the revival of the active powers of Convocation

The annual gaudy at New College, Oxford, which takes place early in November, will not, in consequence of the lamented death of the Duke of Wellington, the late Chancellor, take place this year.

The exercises for the degrees of Bachelor of Music were performed in the Music School, Oxford, on Wednesday afternoon, before the Vice-Chancellor, Sir Henry Rowley Bishop, Knt., Professor of Music, and a crowded audience

The parishioners of Fareham have recently presented to their vicar a testimonial, an elegant silver tea and coffee service and the last Edition of the "Encyclopædia Britannica.

PROVINCIAL INTELLIGENCE

SIR GEORGE GREY'S TESTIMONIAL.—The adjourned meeting of delegates from the several districts in the county of Northumberland, was held at the Star Inn, Alnwick, last week. The subscriptions will raise the handsome sum of £400. The testimonial is to consist of a candelabrum, a salver, and two jugs, each bearing the appropriate inscription which has been prepared. The arms of Alnwick, Morpeth, and Berwick, are to be engraved on the candelabrum ; and four figures, representing an agricultural labourer, a miner, a smith, and a seaman, are to surround it. The presentation is to take place at a public dinner at Alnwick, towards the close of the year ; and to enable a large number of the working classes to attend, it has been resolved to fix the price of the ticket at 3s.

RETIREMENT OF THE ROMAN CATHOLIC BISHOP OF NOTTINGHAM.—Dr Hendren, the Romish Bishop of Nottingham, has, it is said, applied to the Pope for permission to retire from the onerous responsibilities connected with his see in consequence of a pressure of age and ill health, and is awaiting his Holiness's reply. The reason assigned for Dr. Hendren's retirement is, that, in consequence of growing infirmities, he is unequal to the arduous duties of his office.

ANOTHER SLIP ON THE GREAT NORTHERN RAILWAY.—Early on Monday morning, another slip of earth occurred on the Spittal-gate cutting on the main line of the Great Northern Railway, within a short distance of the place where a similar accident happened on the 13th ult. The recent heavy rains, it is supposed, have caused the soil, which is of a treacherous character, and on Monday, about an hour before the daily passenger traffic commences, one of the men on duty observed the sandy near the up-line give way, and presently a considerable quantity of earth fell upon both lines of rails, completely blocking them up. Notice was immediately given to the station-master and he on the cutting, and as soon as possible a large force of men was collected, and set to work to clear the obstruction.

COLLISION ON THE BRIGHTON RAILWAY.—On Monday, a shocking accident, but fortunately attended with no loss of life, occurred near Reigate. The particulars are as follow :—About 36 minutes past 10 o'clock, A.M., being the time by the down train that the 10 o'clock passenger up-train is due at Reigate, a goods train had arrived at Redhill goods station, consisting of about 48 chains south of the Reigate passenger station. The larger portion of the goods train was put into a siding, and the engine then took from the remaining waggons on the down line about six, and, after depositing them in the same siding, returned to the head of the waggons on the down line. Almost immediately after, the up-train, which had left Brighton at 10 o'clock, came in sight, and as the instant of its approach the driver of the goods train on the down line started, while the porter in charge of the points and signals, for some reason yet to be explained, turned, it is said, the goods engine and waggons on to the up-line, without putting up a signal. The consequence of this extraordinary conduct was a collision, the engine of the passenger train striking the engine attached to the goods train. Fortunately, the shock was not attended with all the fearful consequences that might have been apprehended, as the driver of the up-train had already slackened his pace. On Tuesday, an investigation took place before the magistrates at Reigate, which ended in sentencing to two months imprisonment, with hard labour, William Lemon, engine-driver of the goods up train ; James Clarke, chief guard ; Thomas Halloway, fireman of the same ; and James Brewer, pointsman and porter.

AWFUL MURDER IN DEVONSHIRE.—On Friday night or Saturday morning last a most barbarous murder was committed at the village of Malon, in the parish of Stockland Monacesorum. This hamlet is situated about four miles south-west of Axminster, and about ten miles from Plymouth, and the person murdered is a Mrs. Mary White, a widow, about sixty years of age, who was carried on a small but extensive business, selling tea, coffee, candles, &c. The old lady bore an excellent character for frugality and honesty. She lived in the house alone, occupying the lower room as a somewhat miserable cottage as her shop, and the up-stairs room was her sleeping apartment. In this room she had a large box, in which she kept her money, which was believed by all her neighbours to be considerable. It was made known on Saturday morning, to some of the deceased not appearing, one of her neighbours got a ladder and crept into the chamber, and discovered the dead body, but so horrified was he that he thought it was that of a man. Information was made known the fact to his neighbours, he, with others, again ventured into the chamber. One of the men went forward and pulled down the bed-clothes, when an awful sight presented itself. The poor woman lay in a pool of blood ; her head had been almost literally severed from her body. Everything in the bedroom was apparently undisturbed ; but the pocket of the deceased was found quite empty at the top of the stairs, on the left-hand side of the bed.

COMPLETION OF THE SUBMARINE TELEGRAPH.

On Monday, the first communication between Cornhill and Paris, by means of the electric telegraph, took place. Although a telegraphic communication has existed for some time between Paris and London by means of the submarine electric telegraph, in connexion with the wires on the Dover line and those on the Northern of France, yet this was the first attempt to speak direct from Paris to Cornhill, by the wires of the Submarine Telegraph Company and the European and American Telegraph Company, which have laid down a line of wires along the main-coach road from London to Dover, where the communication with the submarine cable, and thence is brought into communication with the wires of the Paris. The Submarine Telegraph Company originated in a concession granted by the French Government, chiefly to forge the extensive operations which were given in 1849, to last for ten years, on condition that it was carried out at the end of December, 1851. An experimental insulated wire was laid down across the Channel, which proved a failure as regards the object desired, after a few hours afterwards. Transgression the company applied to the public and to capitalists for money, but without effect. Mr. Crampton, the well-known engineer, then undertook to carry out the project. The plan was successfully laid down in time to save the concession. Mr. Crampton was assisted in the undertaking by Mr. Wollaston, the other engineer of the company ; and the triumphant success of this first attempt is to be more readily appreciated when it is remembered that three distinct endeavours have been made to lay down wires across the Irish Channel, all of which have failed. Mr. Brett was the contractor for the line from London to Dover, Sir Crampton (with Mr. Wollaston) being the engineer, and Mr. F. Edwards, one of the directors of the company, and Messrs. Davis and Campbell, solicitors, carried out all the business arrangements in connexion with the undertaking. At one o'clock the offices of the company, at 30, Cornhill, were thrown open to all who took an interest in the proceedings. A great number of persons looked in during the day, which was "close" holiday, on the Stock Exchange and on the Paris Bourse.

On ascending upstairs into the instrument-room, at one o'clock, we found the French machine, invented by Brequet, at work, in direct communication with Paris. The appearance of the instrument is attractive ; instead of the dials, with double needles, now so familiar to most of us, there is a small black and white ivory tablet, in the centre of which is a white dial, so as to describe angles of 45 and 90 degrees, with a fixed vertical line passing through the centre, performing, in fact, the action which any one walking past the Admiralty might have seen in full play when the semaphore on the top was at work. The motion of the handle which governs the electric current, and the motion of the arm are precisely rotatory also, and the stile assumes round very quickly, indicating the letters by the various angles it forms with the centre line. The reason why two needles were employed reflects some credit on the French Government ; it was found that the semaphore system was very extensively used in France, and, as the electric wires displaced these comparatively slow means of communication, the Government, anxious that the improvement might be applied to, but not be thrown out of work, and that their skill and experience should be made available to the uses of the State, adopted this rotating arm on the dials of the telegraphs.

The French Government first used their machine under the care of MM. Foy, Breguet, and Dufresne ; but whether it was from the unfavourable character of the weather, or some other cause—the extreme delicacy of the apparatus, and the difficulty of obtaining the proper balance of power for it, were suggested as a likely one—it did not seem very successful. Indeed, the French gentleman in charge of it, said that the very perfect insulation of the submarine cable was against them, for it returned the current in the wire. It is also to be observed, that this machine was worked by a very large galvanic combination, consisting, apparently, of 25 or 30 batteries of 12 plates each. Several communications took place by this apparatus ; but the working of it was said not to be so satisfactory as that of Wheatstone's. A wire having been secured for the ordinary double needle telegraph, a message was immediately received from Paris. Several other messages were sent and answers received during the day, and the Wheatstone's telegraph was brought into play, the action on the wires seemed somewhat better. A good deal of confusion took place, as was very natural, in such a day of preliminary experimentalising between the various machines. But by the end of the day the following message was sent to Paris. It will be seen the directors of the company have been the first body in this country to acknowledge the Empire :

"The directors of the Submarine Telegraph Company beg leave to approach his Highness the Prince President with the expression of their best thanks for the assistance which he has uniformly given towards the establishment of this international means of communication between France and Great Britain.

"May this wonderful invention serve under the Empire to promote the peace and prosperity of the world.

"Dated 1st November, 1852, 30, Cornhill, London."

We shall next week publish an Illustration of the scene.

TESTIMONIAL TO MR. BERNAL.

THE Liberal electors of Rochester, anxious to testify their admiration and esteem of their late member, Mr. Bernal, recently entered into a subscription for the purpose of presenting him with a piece of plate. The requisite funds having been raised, they have purchased a magnificent centre-piece, forming a candelabrum : it stands three feet high, and has six branches, beneath which are three figures, representing Commerce, Justice, and Wisdom. The inscription is as follows: "Presented to Ralph Bernal, Esq., by the liberal electors and inhabitants of the city of Rochester, as a testimonial of their estimation of the many services rendered to his country by his unflinching advocacy of civil and religious liberty, Free Trade, and Parliamentary Reform, throughout a long senatorial career of thirty-two years, during seventy-five of which he most assiduously attended to the interests of their ancient city as their representative in Parliament." On one side the base is engraved the arms of the honourable gentleman, with the motto "Spes et Fortitudo ;" whilst on another is the crest : both of which are tastefully executed. The weight of it is 231 ounces—the cost nearly £200.

The candelabrum has been manufactured by Messrs. Smith and Nicholson, Regent-street, Lincoln's-inn-fields, and was exhibited to the subscribers, at Rochester, a few days prior to the presentation.

EARTHMEN FROM PORT NATAL.

A FEW months ago rumours were current in the town of Croydon that two little half-naked savages from the Orange River had arrived at the Hare and Hounds Inn, at the little village of Waddon, a mile from Croydon. They were said to be of well-formed but Lilliputian proportions, filled with fun, and unable to express their wants save by a few guttural and uncouth sounds. When taken into an apartment they would climb the chairs, examine the long-glasses and other objects with lively curiosity ; but, if suddenly spoken to, they would crouch down upon the floor like half-tamed animals, who dreaded the keeper's lash. By-and-by they were said to be reclaimed to the usages and decencies of civilised life ; they learned to speak a few English words. The traveller was now sometimes startled by grotesque, strangely-ornamented attires of beads, feathers, and strips of skin, which flashed across the high road, followed by another similar figure in full chase, with not unfrequently a leading English boy or two brandishing up the rear, and joining in the sport. If, pondering that they had entered the village inn, and were now playing in the paddock and garden, he should enter it and send for some sherry and the landlord, he would make the acquaintance of those interesting little natives of the land of Bushmen, Hottentots, and Kaffirs, who have been rescued from the lowest depths of barbarism, and surrounded by the novel sights, sounds, and comforts of English civilisation. What he will see for himself and hear concerning them we now proceed to set forth.

The children, although beautifully formed, are of remarkably diminutive size. They have the appearance of being eight or nine years of age ; yet the boy is confidently said to be fourteen years of age, and the girl sixteen. How small they are for their age will be seen when it is stated that they are only 39½ inches high. There is nothing misshapen or dwarf-like in their growth ; and the shortness of stature and cleanderness of *physique* is said to be a well-known peculiarity of the native race to which they belong—the males of which are seldom more than from 4ft. to 4ft. 4 in. in height, and the women a little less.

The boy's name is "Martinis"—the girl's name, "Flora." Their complexion and skin are of a warm brown of a pleasing hue. Their physiognomy is intelligent and engaging. Their lustrous black eyes have a soft and affectionate expression, indicative of the perfect docility and mildness of disposition which characterise them. The nose is the worst feature in the face. Between the eyes there is scarcely any protuberance, and the nose is so spread as to be almost confounded with the cheeks, until the nostrils appear. They are wide, but very little raised. The lips are rather thick, and the mouth wide ; the teeth, white as those of a sheep ; the forehead, high and narrow ; and the cheek bones broad. The hair is of remarkable colour and texture. It resembles the wool of a black sheep, strong, short, and coarse. It grows in stiff spiral lines, so that the scalp is everywhere seen. Both children are naked to the muddle, and bare-legged, but do not appear to feel the cold. They answer questions intelligently, and have evidently good natural faculties. The little girl has a slight impediment or stutter in her speech, but this may probably be overcome, as it is not observable when she sings. Both children have an excellent ear for music, and love the "Buffalo Gals," "I'm going to Alabamy," and "Britons never shall be Slaves," with evident enjoyment. They also dance together, and Flora, being entreated to dance a schottische, moves about with the easy and natural grace peculiar to her sex. Matennis is a fine little savage, beautifully formed, and with well-developed muscles. Flora is also a nicely-made child, of more slender and delicate frame, but perfectly healthy.

He or gen of the Earthmen at the Cape of Good Hope is supposed to be analogous to that of the Bushmen and Hottentots ; but their habits are totally distinct. The Bushmen build huts and live in little villages, but the Earthmen burrow in the ground, and hence derive their name. By burrowing, the reader must not understand that they dig little under the surface like rabbits, but that they scratch hollows in the ground to shield them in a measure from the wind. These hollows they line with a little straw, and then cover themselves with a slight grass mat, out of which project their feet to warm a fire, which burns in the centre of the hollows. A mat is hung to windward by the aid of two rods spread perpendicularly, and another mat fastened to the third rod, is spread horizontally over the below. This is all the protection the Earthmen possess against the heavy dews and atmospheric changes of night ; they scratch themselves

BOY AND GIRL OF THE BARTHMEN TRIBE, FROM PORT NATAL.

they then live upon locusts, which the women of the tribe gather during the season. They also eat the larvæ of ants, and a root resembling garlic. They are sometimes so straightened for food as to be compelled to gnaw the skins of the animals which they have previously shot. The tribe thus destitute of every vestige of civilisation is found along the whole extent of the Orange River, but they so cautiously avoid the settlements, that many colonists who have resided in Port Natal and other districts of South Africa for years, have never seen them. This Lilliputian race of human beings have, however, the character of great docility, and are said to be very faithful to those to whom they attach themselves.

The dress worn by the boy Martinis is said to be that usually worn by the males of his tribe. He wears a tuft of small feathers on his forehead; beads hang from his temple and around his neck; and from a coloured girdle of beads round his loins are suspended strips of skin and the tails of animals. The girl wears a head-dress and lappet of coloured beads a leopard-spotted piece of wool around her waist, and strips of hair cover her legs. Her demeanour is modest and feminine. Both children display so much aptitude for learning and for imitation, that in a few years it is probable their acquirements and habits will in no respect differ from those of the English children with whom they may be brought up.

ENTRANCE OF THE FIRST STEAMER INTO PORT NATAL.

On August 18, the long-expected steamer *Sir Robert Peel* anchored in the outer Bay of Durban; but, owing to heavy southerly gales having prevailed on the coast, the bar was too rough to allow of the port boat crossing it, to take a pilot on board. It unfortunately continued so over Sunday, and on Monday was not deemed smooth enough to venture out; but Mr. Lamport proceeded in his cutter, the *Agnes*, taking with him two pilots, one for the *Rydal*, and one for the *Sir Robert Peel*; and, at half-past four P.M., the steamer gallantly floated over the bar without the slightest inconvenience, and with some feet of water to spare. A large concourse of persons, including a numerous cavalcade of ladies and gentlemen, had assembled to witness *the entrance of the first steamer into Port Natal*; and as she entered the harbour, and when she anchored opposite the

SILVER CANDELABRUM PRESENTED TO R. BERNAL, ESQ.—(SEE PRECEDING PAGE.)

Custom House, she was greeted with hearty cheers, which were responde to by those on board. Great, however, was the disappointment, wh it was announced that she had no regular mail on board; the M and June mails having been put on board the *Ceres*, which left Tab Bay on the 30th ult., two hours before the *Sir Robert Peel* entered The public disappointment, however, was happily, in this case, not long duration, for the *Ceres* arrived the following (Tuesday) evenin bringing four mails in 21 large sacks, and thus, after all, enabling them answer correspondence by the return steamer, to depart on the 28t Although the *Sir Robert Peel* did not bring the usual mails, she brou intelligence from Europe of a week's later date than the departure the monthly mail. This was received at the Cape by the *Hellespo* which left Plymouth on the 26th June, having made the passage out the unprecedentedly short period of thirty-two days. The *Queen of South*, which brought the mail to the 15th June, did not finally le Plymouth until the 20th, having been compelled to put back from str of weather, and a trifling accident. She is the first of the line splendid screw-steamers to India, *viâ* the Cape and Mauritius; and this line, in future, the Natal mail will be forwarded.

The *Sir Robert Peel* left England on the 12th June, and St. Vincent the 30th. Her detention was caused, it is said, by the arrangemen that were being made for the conveyance of her Majesty's mails Natal, which have been completed. She left Table Bay on the 5th Ju arrived at Algoa Bay on the 8th, and departed on the 11th. The p sengers speak highly of her accommodations and sailing qualities, well as of the skill and courtesy of her commander, Captain Boxer.

ENTRANCE OF THE FIRST MAIL STEAMER INTO THE BAY OF NATAL.

THE STEAM-FRIGATE "FAID GIHAAD," BUILT FOR THE PACHA OF EGYPT.

THE EGYPTIAN STEAM-FRIGATE, "FAID GIHAAD."

In the course of the ensuing week this splendid vessel will leave our waters for Alexandria. She has been built by Messrs. Mare and Co., of Blackwall, and engined by Messrs. Maudslay and Field, for the Pacha of Egypt. She is flush decked. Immediately abaft the funnels is a smoking room, eight feet in height, fitted up in a style of great splendour, but wind and water tight; next, a covered house, in size and appearance similar to the smoking-room, from which the descent is made to the main deck, on which are the state cabins and saloons.

Proceeding below to the apartments of his Highness, by a mahogany staircase we enter an ante-room of spacious dimensions, with state bedrooms on either side. This apartment divides the two great state saloons. On each side of the fore or smaller one are four state cabins, with ventilating doors, similar to Venetian blinds, with baths and other conveniences, in the Turkish style, separating the saloon and state-rooms from the engine-room. Both saloons and the intermediate ante-room are fitted up in a uniform style of great richness and effect. The panels are chiefly of maple, lined with mahogany, and ornamented and ingrained with coloured woods in various devices, the crescent and star occupying prominent places in the centre of each panel.

On the lower deck, and under the saloons, state cabins, and the other apartments exclusively devoted to his Highness, are the cabins allotted to the members of his suite and his immediate personal attendants. These are fitted up in a style more Oriental than the principal apartments.

On the main fore-deck is the men's mess—the tables are suspended in rows on either side from the upper deck; and every convenience has been attended to in this respect. Near to the men's mess are rooms for the engineers, and on the deck below are the sleeping berths of the officers, midshipmen, and men. The other portions of the vessels are devoted to stores, ballast, &c.

The *Faid Gihaad* has been designed, constructed, and fitted, under the immediate superintendence of Mr. Waterman, junior. Her dimensions and armament are as follow:—

Length between perpendiculars	.. .. ..	283 feet
" Over all	.. .. ..	318 "
" On keel for tonnage	. .. ..	238 "
Breadth of beam ..	.. .. ..	40 "
Depth of hold ..	.. .. ..	30 "
Draught of water ..	.. .. ..	16 "
Burthen ..	.. .. ..	2300 tons
Power	.. .. ..	800 horses

ARMAMENT.

Upper deck ..	. ..	2	84-pounder pivot guns	
" ..	.. ..	12	32 "	broadside guns
Main " ..	.. ..	14	32 "	"

This gigantic vessel is to be exclusively employed by the Pacha for marine excursions.

PITCAIRN'S ISLAND.

(From a Correspondent.)

As there appears to be a growing interest in the affairs of Pictairn's Island, the accompanying Sketches, which I made during a recent visit there in H.M.S. *Portland*, may be interesting, especially as by the time you receive them, Mr. George Nobbs will have arrived in England for the purpose of being ordained. He has officiated as minister during the last twenty-three years, greatly to the satisfaction of the islanders, if one may judge by the respect and affection which they entertain for him. The Rev. W. H. Holman (chaplain of this ship) remains there in his place. We brought Mr. Nobbs as far as Valparaiso. More than one meeting was held by the elders before they could bring themselves to consent to his leaving them, though only for a few months; at last, their anxiety to have a regularly-ordained clergyman, prevailed. We found these excellent people fully deserving all the praise which has been bestowed upon them. They are like one large family, living in perfect harmony with each other. We were treated by them like brothers, and welcomed everywhere.

CHURCH, AT PITCAIRN'S ISLAND.

The population is now 21 families, making altogether 170 souls—82 males and 88 females. Arthur Quintal is the oldest man, and George Adams next; these being the only male survivors of the first generation. They are badly off for clothing, which they purchase from the whaling vessels that occasionally touch there; their money is derived from the sale of their surplus yams, &c.; but, owing to the small size of the island (4½ miles in circumference), together with the rapid increase of the population, they must in a very few years withhold from ships all supplies, except water. The endeavours of Mr. Carleton and the Baron de Thierry to teach the natives singing, have been successful. They now sing together in parts beautifully, and are very grateful to these gentlemen for this tuition. They meet twice a week to practice; and we heard them sing a variety of glees, &c., extremely well. We arrived on the morning of Sunday, August 8th. As soon as we hove to off Bounty Bay, Arthur Quintal and George Adams, with as many as a whale-boat could contain, came on board to pay their respects to the first Admiral who had ever visited them. Shortly after, they requested leave to attend prayers in the Admiral's cabin, which are read every morning by the chaplain. When breakfast was over, the band was ordered up; they had never heard one before, and their delight was very great. They called, first of all, for "God save the Queen;" her Majesty having nowhere more loyal or affectionate subjects than the Pitcairn Islanders. Some marches, polkas, &c., called forth the remark that such tunes seemed scarcely proper for Sunday. About half-past 8 A.M. the Admiral landed in a ship's cutter, having some natives to pilot her. This was the only instance of a ship's boat being able to land during our stay there. The inhabitants, especially the ladies, received the Admiral with great joy. Several natives attended divine service on board, and afterwards accompanied us on shore. We were taken to all the houses and presented with fruit. Our chaplain performed the afternoon service, and preached an excellent sermon. The hymns were sung in regular parts by the whole congregation. I doubt much if any church in England (excepting cathedrals) can boast of such a good choir. The congregation were very nicely dressed; indeed it is a great point to have white shirts on Sunday. The Sabbath is strictly observed. On Monday and Tuesday many of the ladies came on board, but were wretchedly sea-sick. The crew of the *Portland* requested permission, which was granted, to present the islanders with three casks of rice, twelve bags of bread, and one cask of sugar; the value of these articles being charged against their wages. Mr. Nobbs left the shore amidst the tears and blessings of his little flock, by whom he is sincerely beloved. Before making sail on our course, we

THE GRAVE OF JOHN ADAMS, PITCAIRN'S ISLAND.

ran in close to the island, hoisted the Royal standard, at the particular request of the islanders, who had never before seen it displayed, fired a Royal salute, manned the rigging and gave three cheers for the islanders, which they answered heartily. We made a quick passage to Valparaiso, arriving there on the 30th of August.

Mr. Nobbs, who is mentioned by our Correspondent, arrived by the *Orinoco* steamer on Saturday week, from the West Indies. He was the bearer of despatches from Admiral Moresby, in the Pacific Ocean, and his object in coming to England is to obtain some assistance for the religious education of the people of Pitcairn's Island, and to induce the Government to allow English ships of war to visit the island oftener than they now do. Mr. Nobbs is about sixty years of age, and about twenty-five years ago visited Pitcairn, and was allowed to remain on the island as a religious teacher, and to practise medicine. He is one of the few strangers ever allowed to remain at Pitcairn, and to be considered as one of the community. Mr. Nobbs married Sarah Christian, granddaughter of Fletcher Christian, acting lieutenant of the *Bounty*, by whom he has eight sons and two daughters.

In 1850 five gentlemen were left on the island, in consequence of the vessel from which they landed having been blown off Pitcairn during the night. One of these passengers (it is stated in the *Panama Star*) was the Baron de Thierry, the original possessor of the Franco-Grandino Privilege, for the Inter-Oceanic Railway, afterwards Sovereign Chief of the Marquesas, and King of the Sandwich Islands. His Majesty was reported to have been devoured by his subjects, but we hear that he has escaped that fate, and is now living with his family in California, giving instructions in music, of which he is a great proficient.

In 1831 the islanders were removed by the British Government to Tahiti, as it was feared that the island would not furnish sufficient food for the increasing population. There they were soon visited by sickness, and having lost twelve of their number, they made up their mind to return, and it is remarkable that with the copper bolts of the *Bounty* which had been brought to Tahiti from Pitcairn Island, by the islanders, they were enabled to charter a vessel to take them back.

Pitcairn's Island is peculiarly interesting at this moment, as it is about half way between Panama and Australia, and when the steamers begin to run, they will have to touch there for water and vegetables, and at the Gambier Islands, about 300 miles from Pitcairn. The latter having no port, and being iron bound, offers no facilities for a coal station; but the Gambier Islands hold out great inducements, and will probably be selected by one at least of the companies about to ply between Panama and Sydney.

We have engraved two of our Correspondent's Sketches. One represents the east end of the church erected at Pitcairn in 1847; the length of the building is 80 feet; breadth, 16 feet; height, 15 feet; the bell, a small one, is hung upon a double gibbet. At the west end of the church is a banian-tree, the foliage of which is in two layers, and appears close and compact, as if clipped; beneath its shade are three graves.

In the second View is shown the grave of Adams, of the *Bounty*; it is marked by a wooden tablet, inscribed "Sacred to the memory of John Adams. Died March 5, 1829." The tablet (which is only put up when there is a ship off the island), rests against a low stone, similar to that of the grave upon the right, where lies the wife of Adams's son George. The spot is enclosed with palisades; and on the right of the entrance grows a species of oleander, the leaves from six to eight inches in length.

CALENDAR FOR THE WEEK.

SUNDAY, Nov. 7.—22nd Sunday after Trinity. First *Gazette* published, 1665.
MONDAY, 8.—Halley born, 1655. Camden died, 1623.
TUESDAY, 9. Prince of Wales born, 1841. Lord Mayor's Day.
WEDNESDAY, 10.—George Fox died, 1690. Martin Luther born, 1483.

TO CORRESPONDENTS.

AN OLD PUPIL OF M G DE T—We shall be glad to receive the sketches, portrait, and other matters referred to in the letter of our correspondent.

NAPOLI, Kelso—The subject of the intaglio impression received, is a figure of Hercules leaning against a column.

NUMISMATIC—Your coin is a consular denarius of the Calpurnia family, and is very common.

SPRINGTOWN WILD MAN, wants to know which of the three following is correct, *wassegoose*, *weighgoose*, or *waygoose*, and what the term is derived from. The *waygoose*, for thus we find it spelt, denotes a custom common amongst the Merchant Taylors' Company. Moxon's Exercise," published in 1683, amongst other regulations adopted by the printers of that time, we find the following:—"It is also customary for all the journeymen to make every year new paper windows, whether old ones will serve again or not, because that day they make them, the master printer gives them a *waygoose*, that is, he makes them a good feast, and not only entertains them at his own house, but besides gives them money to spend at alehouses or tavern at night. This feast was always kept about Bartholomew tide, and the custom was that no work was done after candlelight till the master printer had given his waygoose."

LIONNY Sir James Stephens's masterly essay on Hildebrand is in the 81st volume of the "Edinburgh Review."

MARIE GREY—Apply to the Proctor in Doctors' Commons, who will obtain at once for you a licence to be married in the parish you name. The fees are about £3.

HALIFAX—We apprehend that the surviving brother could not, under the circumstances, retain the living for the future benefit of his own son.

AN INQUIRER. Arms of Tate—"Per fesse or and gu. a pale counterchanged, three Cornish choughs ppr. *Crest*: An arm embowed and couped at the shoulder, vested per pale gu. and or, holding in the hand ppr. a pine branch of the second. *Motto*—"Tidecka and thancke."

KELSOE Mrs ANTONIA—Tablet was a resident of Taunton, Somersetshire.

ELEVEN YEARS' SUBSCRIBER—Income-tax must be paid upon an income below £150 a year, if the exemption be not expressly claimed.

A ZANETTE—Roman Catholic witnesses are generally sworn exactly in the same manner as Protestants. Some Roman Catholic witnesses, however, more particular than others, may require the New Testament used to be consecrated by the Roman church—when, of course, such a Testament only will be tendered to them.

R W W—Crest of Lowrance: "A demi-turbot erect ppr., the tail upwards."

A CONSTANT READER—Unless your grandmother was an heiress you are not entitled to use her arms in any way. Your bearing should be the simple paternal coat.

PERROTT—Arthur John Otway Esq., M.P. for Stafford, is fourth son of the late Admiral Sir Robert Otway, Bart.

AN AMATEUR, Dublin—Apply to Mr. Weale, publisher, High Holborn.

A VERY POOR MAN, Tunbridge Wells—Apply to the new Crystal Palace Company.

A A D, Birkenhead, and A CONSTANT READER, Addiscombe—We have not room.

F L L, Sandham—Apply for the Daguerréotype apparatus to Horne, Thornthwaite, and Co, Newgate-street.

THE CENSUS.—In reply to numerous inquiries, we have to state, that it is not at present in our power to publish the complete account of the population of the British islands, which we have long contemplated and promised. We published an outline of the general results when they were first stated by the Census Commissioners, but we declined them, and have since declined, to publish details which were known to be inaccurate, and were expected to be speedily corrected. From that time to the present we have been in almost daily expectation that the accurate details would be published; and, having inquired in the proper quarter, we can now state that the labours of the Census Commissioners are nearly complete, as to the mere numbers of the people in every hamlet, parish, and town of England, and are expected to be laid before Parliament by Christmas. At the same time the work of ascertaining the occupations and the ages of the people, has as yet made but little progress. The detailed enumeration only at different periods, is complete. It is impossible, therefore, for us to publish a work for which the materials are not yet supplied; nor would the correct enumeration, which is now nearly prepared, be of much use to the public, unless it were accompanied by the occupations and ages of the population. When they will be ascertained and laid before Parliament, we cannot say, but, certainly not for several months; and, till they are, we are obliged to postpone the publication of a CENSUS SUPPLEMENT.

On the 15th NOVEMBER will be published, price 1s.,

THE ILLUSTRATED LONDON ALMANACK
FOR 1853,
Being the Ninth annual issue of this publication; with splendid ENGRAVINGS, by B. FOSTER, Esq., and other eminent Artists. The Astronomical Department by JAMES GLAISHER, Esq., F.R.A.S., and of the Royal Observatory, Greenwich. The Notes on the Months by Mrs. ALARIC A. WATTS.
London: Published by WILLIAM LITTLER, 198, Strand.
*** Country orders supplied for cash only.

WITH THIS WEEK'S "ILLUSTRATED LONDON NEWS"
IS PUBLISHED A SUPPLEMENT, GRATIS.

THE ILLUSTRATED LONDON NEWS.

LONDON SATURDAY, NOVEMBER 6, 1852.

We had hoped that Free-Trade banquets and demonstrations were at an end—that the National Anti-Corn-law League, having done its work, and achieved its victory, had disbanded itself; and that an organisation so prone to good, but so powerful for evil, had ceased to exist. Such was the general feeling of the country at this time last year. We believe that no men participated more largely and more cordially in that feeling than the principal members of the League and the other gentlemen who, in Parliament and out of it, had most zealously advocated the doctrines of Free Trade. The sudden and accidental installation of the present Ministry—not on account of the particular merits of Lord Derby and Mr. Disraeli, but on account of the very crying and very particular demerits, and short comings of Lord John Russell and his colleagues, created a well-founded alarm, that the battle of Free Trade, though gallantly won, would have to be fought over again. Immediately the League started into life and vigour, as fresh, active, hopeful, and impatient, as if it had never dismissed its lecturers, closed its ledgers, done its work, and been fairly dead and buried. Its members took Lord Derby and Mr. Disraeli at their word. Believing that the sentiments which these statesmen and their followers had expressed while in opposition, would continue to guide their conduct when in office, they prepared to do again the work of the previous seven years. Happily for the country, the task was not immediately necessary. The League, having notified its existence in a manner not to be mistaken, remained quiescent, but watchful. On Tuesday last, however, Mr. Cobden and his friends and supporters made a grand—and let us earnestly hope, a last—demonstration. The object of the meeting was, as Mr. Cobden informed his auditory, "to make the Government declare its opinions." Mr. Cobden, as we learn from a speech which recalls to mind his best oratorical efforts in olden times, will show no mercy to the Administration if it do not collectively "eat its words," and confess that Free Trade does not lower wages; does not cause a drain of gold from this country; and does not throw land out of cultivation. He proposes, "that if the Queen's Speech do not contain a distinct renunciation and recantation of Protection on the part of the Administration," to move a vote of want of confidence, either by an amendment to the Address, or by a substantive motion. We shall, therefore, soon know the policy and tactics of the Session. In the interests of the public peace, and of the public business, we can but hope that the Ministry will speak out in such a manner as shall remove all doubt of their opinions and intentions. The uncertainty has already lasted too long. The Parliament of Westminster is quite sufficient to conduct the business of this nation. There will be mischief, if we have a contemporaneous and a conflicting Parliament, at Manchester. The Manchester Parliament, it must be confessed in justice, has no wish to live. At one word from Lord Derby, on behalf of the Government, it will give up the ghost, and, as Mr. Bright phrases it, "become matter of history." The sooner the word is spoken, the better for the Ministry, for the League, and for the country.

The storm that was impending over the Turkish Empire seems, for the present, to have blown over. The rumours of insurrection and revolution in the capital have proved to be unfounded; but, it appears certain that the affairs of that State are even yet in a position of such difficulty as to require not only consummate skill, but extraordinary good fortune, to avoid the greatest dangers. The East is not the land of reforms, and Mahomedanism is not the religion of progress. If they were, there might be a hope that Turkey, a State by no means more effete and ill-governed than Austria, might ultimately surmount all her present perils. If her despotic government and her stagnant faith could produce statesmen and administrators of sufficient energy and wisdom to coerce, restrain, and punish her rebellious Pachas; to develop the resources of the land; to encourage the agriculture and the industry of the people; and to protect all classes from the rapine and extortion of provincial governors and of semi-independent potentates—pesty in their several sovereignties, but great for evil; and by one grand and well-considered reform to restore her dilapidated finances, there might be reason to hope that Turkey might hold her own in Europe for ages yet to come. But such a hope is groundless. The reforms of the last and the present Emperor are but reforms of outward show. The Turks have partially adopted the Frank or European costume; and they have established steamboats, and a newspaper. Beyond this, their reforms have not been carried. Their costume has not altered their ideas of government or of religion; steam-boats have not adapted Mussulman ideas to those of Europe; and their newspaper conveys no information, political or other, to the people beyond the walls of Constantinople, and to very few within it. The spirit of Mahomedanism is as unprogressive as that of Buddhism. It has a limited expansion, which it attained ages ago, and which it has never shown a tendency to overpass. Much as statesmen may dread any events that tend to weaken that Empire, and powerful as may be the reasons that exist for the non-extension of Russia into that fertile, beautiful, and commanding portion of Europe, it is impossible to avoid coming to the conclusion that, sooner or later, the Turks will be driven into Asia. Although little is yet known of the real state of matters in the councils of Constantinople, or of the part played by the French Ambassador in the late crisis; sufficient has been made public to show that Turkey at this moment needs all possible support from her allies, and from all who are interested in the peace of Europe.

MR. MACAULAY IN EDINBURGH.—Mr. Macaulay, on Tuesday, addressed the electors of Edinburgh for the first time since his election in July last. He received a warm and enthusiastic reception from a very crowded meeting. In alluding to the manner in which he had been placed in the political world since he was last in Parliament, he paid an eloquent and affecting tribute to the memory of the late Duke of Wellington. Mr. C. Buller, and Sir Robert Peel, without the last of whom, he said, he should not know the House of Commons again. He referred to the revolutions and counter revolutions which had taken place on the Continent, and attributed the tranquillity of this country to the passing of the Reform Bill of 1832, and the adoption of Free Trade in 1846. He declared his intention to defend the latter from both direct and indirect attacks, and to help to extend the former in a free and liberal spirit. After a withering exposure of the present Ministers—especially Mr. Walpole, Sir Fitzroy Kelly, and Mr. Christopher—Mr Macaulay proceeded to say that in no case would he again be a member of any Administration, but he hoped soon to see a Ministry in office which would deal with the franchise in a large and liberal spirit, and that the constituency would be extended—not so much in lowering the franchises to the reach of the masses, as by enabling the masses to rise to the level of the franchise.

THE COURT.

WINDSOR CASTLE.

The Queen and the Prince Consort have entertained a succession of Royal and distinguished visitors during the past week.

His Royal Highness the Duke of Cambridge arrived at the Castle on Saturday, and remained the guest of her Majesty until Monday.

The Duke and Duchess de Nemours arrived at the Castle on Tuesday; and, after enjoying the hospitality of the Court for two days, took their departure on Thursday.

The Marquis of Exeter, Viscount Hardinge, Lord Raglan, the Right Hon. B. Disraeli, and the Earl and Countess of Shaftesbury, have also enjoyed the hospitality of the Court during the week.

Her Majesty has taken frequent drives, generally accompanied by her illustrious relatives, the Prince and Princess of Hohenlohe Langenburg; and the Prince Consort has enjoyed the sport of shooting almost daily, accompanied by the guests at the Castle.

Their Royal Highnesses the Duchess of Cambridge and the Princess Mary, attended by Baron Knesebeck, paid a visit to the Duchess of Gloucester, at the Bedford Hotel, Brighton, on Saturday last. Their Royal Highnesses returned to Kew in the evening.

His Excellency the Portuguese Minister and the Countess de Lavradio entertained at dinner, on Monday, at the residence of the Portuguese legation, a distinguished party of the aristocracy and *corps diplomatique* invited to meet the Duke and Duchess de Terceira.

His Excellency the French Ambassador, and the Countess Walewski gave a grand dinner, on Tuesday evening, at the residence of the Embassy in Grosvenor-square, to their Graces the Duke and Duchess de Terceira.

His Excellency the Baron Bentinck, Minister of the Netherlands, returned to his residence in Lowndes-square, last Sunday, from the Hague.

The Duke and Duchess of Montrose have arrived in Belgrave-square, from Scotland. The Duchess is on the eve of her confinement.

The Marquis of Lansdowne has been suffering from the gout lately. Lord John Russell paid a visit to Bowood last week, and passed two or three days with the noble Marquis.

The Countess of Jersey and Lady Clementina Villiers have arrived at the family residence in Berkeley-square, from visiting the Prince and Princess Nicholas Esterhazy at Vienna.

The Earl of Morley, who has been ill, is so far recovered that he is expected in a few days at Saltram, his beautiful seat near Plymouth.

The Earl and Countess of Minto are on the eve of leaving this country for Genoa, where, we believe, his Lordship contemplates a residence of two years.

The Earl and Lady Constance Grosvenor have arrived at Escrick Park, Yorkshire, on a visit to Lord and Lady Wenlock, from Inverary Castle, where they had been visiting the Duke and Duchess of Argyll.

Viscount Duncan met with an accident recently, by falling from his horse, at Dundee. It is not of a nature to excite any serious apprehension.

The Chancellor of the Exchequer returned to town on Wednesday from Windsor Castle.

RAILWAY MEETINGS.

THE LONDON AND NORTH-WESTERN.

On Wednesday a special general meeting of the proprietors of this company was held at Euston station, to consider the proposal to amalgamate the company with the Midland Company. The chair was taken by T. Smith, Esq., deputy-chairman of the board, who spoke at considerable length in favour of the proposed measure. Some little discussion then occurred, Mr. Upcraft and Mr. Bright having spoken strongly in favour of adjournment.

Mr. Gesch, M.P., thought the proprietors had had time enough to consider the measure. The matter would again be submitted to the shareholders, in compliance with the Wharncliffe standing order, when parties holding more than one-fourth of the stock, represented at the meeting specially convened for the purpose, could reject the bill. It would, therefore, require three-fourths of the property represented to vote in favour of the measure at a future time. Some steps must be taken by the Legislature to protect railway property. It was a lamentable thing that in order to protect the property of the company, amounting to £20,000,000, for seven months in every year, during the session of Parliament, almost every man in the establishment was obliged to attend committees of both Houses, in order to be in readiness to defend it from insidious attacks.

The amendment proposed by Mr. Dickinson and seconded by Mr. Bright, to the effect that the question be postponed, was put, and negatived by a large majority.

The Chairman then proposed the following resolution:, which were put and carried:

That it is expedient to effect a permanent union of interest between the London and North-Western and Midland Railway Companies, and to amalgamate the undertakings on the following terms, namely:—That the relative value of the two undertakings be ascertained and fixed, by three referees of high character, that their decision be given after the passing of the Act of amalgamation; but in case the first application to Parliament fails, further application shall be made in the following session. It shall, however, be competent for either company to call upon the referees to fix the relative value of the two undertakings, which values not to be to any case fixed until the 31st of December, 1853.

That the directors be accordingly authorised to introduce and prosecute, in the ensuing session of Parliament, a bill to carry into effect the foregoing resolution, and to take such measures in furtherance thereof as they may deem fit, and as counsel may advise, consistently with the powers of the parties.

On the motion of Mr. Hopes, a cordial vote of thanks to the chairman was passed, and the meeting separated.

BOSTON AND MIDLAND COUNTIES RAILWAY AND DOCK COMPANY.

A public meeting of the inhabitants of the town of Sleaford and its vicinity was held on Friday week, at the Assembly-rooms, for the purpose of promoting the above enterprise, which has for its object the connecting of Nottingham and the Midland districts with the port of Boston.

Mr. I. Newbatt, agent to the Marquis of Bristol, occupied the chair, and a deputation from the board of directors was present.

The chairman, in opening the proceedings, said, that about six or seven years ago the residents were having to suffer many disadvantages of connecting the important seaport of Boston with the consuming and manufacturing districts. The railway company was anxious to consult the wishes of the town of Sleaford, and he thought the town would do well to go heart and soul with the deputation, because, if they failed now, they might despair of ever getting a railway at all. For himself, it was his intention to support the company so far as he could do so consistently with his duty to others. He believed, was not yet positively fixed upon, and he was unable, therefore, to say precisely where it would go; but he knew that there would be every desire to make the line as good and as service-able as it could be to the town of Sleaford and the district generally.

Mr. Staniland (solicitor to the undertaking) briefly explained the nature of the project, which, he said, had been set on foot by the joint exertions principally of parties resident in Boston, and by others in London, who were anxious to obtain a line of railway between the port of Boston and the Midland districts. Money was now most abundant. The spirit of enterprise was abroad, and he did not despair of obtaining in the ensuing session an act of Parliament for carrying out the project. (Cheers.) To point out to that large and influential meeting the advantages of having this line constructed would be superfluous, and he would only add that it was intended to go into the immediate suburbs of Sleaford, and to pass on thence to Grantham.

Mr. Kirk proposed a resolution to the effect

That a deputation from the company having attended that meeting and explained the nature of the undertaking, the meeting was of opinion that such line of railway would be of the greatest advantage to the landed, agricultural, and trading interests of the town of Sleaford, and pledged itself to give its cordial co-operation to carry out the concern.

Mr. Nichols seconded the resolution, and it was carried unanimously.

Mr. W. Foster, Mr. P. Moore, Mr. Gudson, and others briefly expressed themselves in favour of the scheme, and offered to take a considerable number of shares. The majority of the meeting also volunteered to subscribe for shares, and a large number were taken up, in accordance with the desire of the directors that the enterprise should be purely supported by local contributions.

At a [illegible] Mr. [illegible] Esq., [illegible] other [illegible] Duke of [illegible], not [illegible] to this work, or the motion [illegible] Bristol, Esq., the Hon. H. T. Hervey, M.P., was unanimously carried [illegible] Hervey Nevile, Esq., deputy-chairman. After [illegible] the ordinary arrangements, the meeting, comprising several of the promoters of the line, and the new acting directors, elected [illegible] purposes of allotting shares. Great was the disappointment [illegible] applicants, who were ready to subscribe for [illegible] power to give.

MIDLAND.—A special meeting of this company was held at Derby on Wednesday, to take into consideration [illegible] for the union of the London and North-Western and Midland Railway Companies. There was a very large attendance of shareholders. Mr. Ellis, the chairman, presided. Resolutions in favour of the proposed scheme having been carried, power was given to apply to Parliament for an act to make the railway from Hitchin to Leicester, the capital to be taken from the unpaid capital of the Midland; and the meeting broke up.

THE YORK, NEWCASTLE, AND BERWICK, and the YORK and NORTH MIDLAND have held meetings this week in favour of mutual amalgamation. The LEEDS NORTHERN have held a meeting for a similar purpose, but the meeting was adjourned till the 1st of December next.

OPENING OF THE NEW PARLIAMENT.

The opening of the new Parliament took place on Thursday. The weather was exceedingly fine, and Palace-yard was consequently very much crowded. Westminster Hall, too, which is now the temporary entrance to both the House of Lords and the House of Commons, was completely filled with strangers.

HOUSE OF LORDS.

The new Parliament was opened in the House of Lords by Royal Commission. The Lords Commissioners were the Lord Chancellor, the Duke of Northumberland, the Marquis of Salisbury, the Earl of Lonsdale, and the Duke of Montrose.

The Lords Commissioners took their seats at the foot of the Throne, shortly after two o'clock; when

The Lord Chancellor, advancing to the woolsack, directed Sir A. Clifford, the Usher of the Black Rod, to summon the members of the House of Commons to give their immediate attendance at the bar.

The Usher of the Black Rod accordingly retired, and in a few minutes afterwards he returned to the House, accompanied by Sir Denis Le Marchant, the Chief Clerk of the House of Commons, and a large body of the new members. The Chancellor of the Exchequer, Mr. Secretary Walpole, Sir John Pakington, and other members of the Cabinet being among the foremost.

The Chief Clerk of the House of Lords then read the Royal Commission for the opening of Parliament; after which,

The Lord Chancellor, in the name of her Majesty, and by virtue of the Commission which had just been read, directed the gentlemen of the House of Commons to retire to their own chamber and choose a Speaker. The members of the House of Commons accordingly withdrew.

Their Lordships then adjourned. Prayers having finished, the swearing in of the Peers was proceeded with.

HOUSE OF COMMONS.

The Reporters' Gallery was thrown open at half-past one o'clock by which time a large cluster of members had already assembled on the floor, chatting noisily together in knots, or warmly shaking hands and welcoming each other's return to the House. Shortly before two o'clock, Captain Gossett, the Deputy Sergeant-at-Arms, appeared upon the floor, bearing the Mace, which he laid at the foot of the table. At this period the House was beginning to get very full. Those who were in any way attached to the Government took their seats upon the Ministerial benches; while the other members, who had occupied seats in former Parliaments, took up their old positions, either as supporters of her Majesty's Government, or followers of the Opposition. The Chancellor of the Exchequer looked very much fagged and careworn, and so, indeed, did Sir John Pakington, the Secretary of State for the Colonies; and Mr. Hamilton, the Secretary for the Treasury; but all the other members of the Government, who mustered in great force, appeared to be full of health and spirits. Mr. Hayter, the "whipper in" of the Opposition, was early in attendance, and seemed to be busily intent upon calculating the extent of his forces, while Lord Henry Lennox did the same kind office for the Ministerialists. The front bench on the Opposition side was quite empty, if we except the presence of Mr. J. Wilson and Mr. T. Baines, who took up their position at the extreme end of the bench.

Shortly after two o'clock, Mr. Williams, the principal doorkeeper, appeared upon the floor, introducing

The Usher of the Black Rod, who was in full uniform. Advancing to the table, and addressing the Chief Clerk, he said: "Gentlemen: I am commanded by the Lords Commissioners, by virtue of the Commission addressed to them by her Majesty, to require the immediate attendance in the House of Peers of this honourable House to hear the Royal Commission read."

The majority of the new members, headed by Sir Denis Le Marchant, then left the House

After a short absence the Chief Clerk returned to his seat at the table, when the election of the Speaker was immediately proceeded with, the right hon. gentleman, who filled that elevated post in the last Session, being meanwhile seated in the front bench of the Ministerial side just below the gangway.

RE-ELECTION OF THE SPEAKER

Mr. Robert Palmer said it now devolved upon the House, in obedience to her Majesty's commands, to proceed to the performance of its first and most important duty; namely, that of selecting from their own body some honourable member who should fill, during the ensuing session, the chair of the House. He begged, therefore, to propose for that office the Right Hon. Charles Shaw Lefevre, who had already filled the chair for a period of thirteen years. (Cheers

The motion having been seconded by Lord Robert Grosvenor, was supported by Sir R. H. Inglis, who congratulated the House upon having a person of such large experience to fill the chair.

The Right Hon. C. Shaw Lefevre said, even with the experience he had acquired, he should almost have hesitated again undertaking the duties, but he felt that he was under a debt of gratitude to the House for its unvarying kindness during the period that he had served in the chair, and that he had no alternative but to accept the office again. (Cheers.)

The motion was then put by the Chief Clerk, and carried by acclamation; after which the right hon. gentleman was conducted to the chair by the mover and seconder of the motion, amidst loud and long-continued cheering.

The Speaker having ascended the steps of the chair, said:—Before taking his seat he must be allowed once more to thank the House for the compliment they had paid him, and to assure them that the renewed mark of their confidence would, if possible, cause him to redouble his anxiety to discharge faithfully and impartially the duties which belonged to the office of Speaker. (Cheers.)

The Chancellor of the Exchequer said he must now be allowed to congratulate the Speaker upon having received the highest honour which English gentlemen could confer upon any one who possessed their confidence and esteem He remembered that during four Parliaments of the Queen, the Speaker had occupied the same post that he now filled; and during that time, those who were old members of the House had frequent opportunities of witnessing the courage with which the right hon. gentlemen vindicated the privileges of the House, and the firmness with which he maintained order in their debates, and supported that impartiality which should always regulate their conduct. (Cheers.) It sought, perhaps, without presumption, having had the honour of a seat in the House when the right hon. gentleman was first elected to the chair, and having been a member of the House during the interval, he allowed to notice one trait in the conduct of the right hon. gentleman which he had often observed, and which he thought would have alone entitled the right hon. gentleman to their increased confidence. (Hear, hear) It was this—he had often observed that in those conflicts which occasionally occur, where mere routine could not guide the individual filling the chair when he was, as it were, taxed upon a moment, the right honourable gentleman's resources have never failed him He had always been, in such a crisis, sustained by his own knowledge and zeal, as well as by the high character which the House entertained for him

Lord J. Russell felt that it was a matter of the greatest importance, and one of the greatest good fortune, that, at this particular period, when there were so many members of the House without experience, they should have to preside over them a gentleman who had already shown the highest qualifications for the eminent post of Speaker, and who, whenever it was necessary to enforce the orders and rules of the House, did it with so much firmness and courtesy that he always secured the willing obedience even of those who might seem disposed to question his decision. (Cheers.)

Mr. Hume also congratulated the House on the choice they had made, and took the opportunity of recommending that, in future, it would not be necessary to attend the Speaker's levees in full dress. ("Hear," and laughter.)

Mr. F. Mackenzie then moved the adjournment of the House, which was carried.

Sir Mary Cray, Kent.—This locality has been recently the scene of great festivity. In celebration of the nuptials of one of the amiable and accomplished daughters of Mr. Joynson. The marriage ceremony was performed on Thursday, the 21st ult., in the place of worship known as the Temple, which Mr. Joynson has recently erected. The building is capable of containing 1000 persons, and, on the present occasion, was crowded with those desirous of witnessing the ceremony. The service was read in a very impressive manner by the Rev. T. Beggin, Minister of the Poultry Chapel, London. The friends, who had a number to the number of nearly 100, afterward sat down to an elegant dejeûner, and the festivities of the day concluded with a ball On the Saturday following Mr. Joynson entertained a party of friends, and the workmen engaged in his factory, when "Long life and happiness to the bride and bridegroom" was drunk with great enthusiasm.

POSTSCRIPT.

THE DUKE OF WELLINGTON'S FUNERAL.

In our second edition of last week, we gave the programme of the proceedings in the public funeral. We now add the following particulars:—

On the evening of Wednesday, the 17th of November, the remains of Field Marshal Arthur Duke of Wellington, K.G., will be removed, under an escort of cavalry, from the Hall of Chelsea Hospital to the Audience-room of the Horse Guards; and on the following morning, at half-past seven o'clock, the procession, having been formed in St. James's Park, will proceed up Constitution-hill, through Piccadilly, by St. James's-street, along Pall-mall, Cockspur-street, Charing-cross, and the Strand, to Temple-bar, and thence to the cathedral church of St. Paul's.

Upon arrival at St. Paul's Cathedral, the Marshalmen and Conductors will divide and range themselves on each side at the foot of the steps without the great west door; the Chelsea and enrolled pensioners, together with the soldiers from every regiment in her Majesty's service (two officers from every regiment having been previously provided with seats in the nave behind the place assigned to the soldiers) proceeding into the nave, will file off right and left; the rest of the procession, having alighted, will move forward in order to the west door of the church; on entering which they will proceed up the nave. The officers of arms, the officers bearing the banners, with their supporters, and the officers of the late Duke's household, will take their places in the area.

The deputations and delegations from public bodies, the officers of the Tower of London and of Dover Castle, the Cadets of Deal, Walmer, Sandgate, and Sandown, the Barons and officers of the Cinque Ports, the physicians of the deceased, chaplains, and the High Sheriff of the county of Southampton, will be conducted to their seats. The Common Council, Sheriffs, Recorder, Aldermen, and Lord Mayor will proceed to their own seats. The Companions, Knight Commanders, and Knights Grand Cross of the Bath, representing the Order of the Bath, will be conducted to the seats appropriated to them; the Lords Justices, the Master of the Rolls, the Chief Baron and Chief Justices, the other official personages, Ministers, and great officers of State, will also be conducted to the seats appropriated to them respectively.

His Royal Highness Prince Albert will be seated in a chair on the right hand of the Chief Mourner; the suite of his Royal Highness will take their places near his Royal Highness.

The Body, when taken from the Car, will be received by the Dean and Prebendaries, attended by the Choir, and borne into the Church, attended and supported as follows:—

The Spure, borne by York Herald.
The Helmet and Crest, borne by Richmond Herald.
The Sword and Targets, borne by Lancaster Herald.
The Surcoat, borne by Chester Herald.
Foreign Batons.
The Baton of the Deceased, as Field-Marshal, borne by the Marquis of Anglesey, K.G
The Coronet and Cushion borne by Clarenceux King of Arms.

Five General Officers, bearing Banncrols, Four Supporters of the Pall.

THE BODY.

Five General Officers, bearing Banncrols, Four Supporters of the Pall.

The remainder of the Procession will follow as before marshalled.

The Supporters of the Pall will be seated on stools on each side of the body. The officers bearing the Banncrols will be ranged behind the Supporters of the Pall.

The Chief Mourner will be seated in a chair at the head of the Body; his supporters on each side. The Prayer-book-bearer behind, and the Assistant Mourners upon benches behind them. The Ambassadors and friends of the deceased will take places behind the Choir Members.

The Body being placed on a Bier, and the Pall being removed, the Coronet and Cushion will be placed on the Coffin, as also the Field-Marshal's Baton of the deceased

The Foreign Batons will be held during the ceremony by military officers of high rank in the respective armies of the different Foreign Powers, and they, with the Marquis of Anglesey, will remain as mourners at the foot of the Coffin.

The part of the Service before the interment and the Anthem being performed, the Body will be deposited in the Vault; and the Service being ended, Garter will proclaim the Style, and the Comptroller of the deceased, breaking his Staff, will give the pieces to Garter, by whom they will be deposited in the Grave.

PALL-BEARERS.

General Viscount Combermere, G.C.B. and G.C.H.
General Marquis of Londonderry, G.C.B. and G.C.H.
General Viscount Hardinge, G.C.B.
Lieutenant-General Lord Seaton, G.C.B., G.C., M.G., and G.C.H., &c.
Lieutenant-General Viscount Gough, G.C.B., &c.
Lieutenant-General Sir Charles J. Napier, G.C.B.
Lieutenant-General Sir J. L. Lushington, G.C.B.
Lieutenant-General Sir George Pollock, G.C.B.
Major-General Sir Harry G. W. Smith, Bart., G.C.B.

Lieut.-General Lord Ragland was nominated as a pall-bearer, but prefers his position as a private friend.

It has now been decided what regiments and detachments from regiments and *depôts* not in London will come up to town, where they will receive on the 15th inst, and will all witness the Lying in State at Chelsea Hospital, and will be present in the funeral procession of their late gallant Commander-in-Chief. With the exception of the under-named regiments, the various corps in the service will be represented each by three officers, one sergeant, one corporal, and six privates:—The whole of the officers, non-commissioned officers, and men of the 33d Regiment, from Glasgow, will attend. The whole of the officers, non-commissioned officers, and men of the Rifle Brigade of the 1st battalion at the *depôt* from Walmer; the whole of the officers, non-commissioned officers, and men of the Rifle Brigade, 2d battalion, from Canterbury. The Royal Artillery, the Royal Marines, and the corps of Chelsea Pensioners, will also form part of the procession.

No scaffoldings, platforms, or erections of any sort, on or near any part of the line of procession, will be allowed to be so constructed as to cause annoyance or obstruction in the thoroughfare; and the surveyor of her Majesty's public works will minutely survey all scaffoldings or erections, and order all those to be removed which shall be found too slight, or likely to endanger the lives of her Majesty's subjects.

The Peers in Westminster Abbey.—Friday being Guy Fawkes Day, the Lord Chancellor, accompanied by several Peers, went to Westminster Abbey in procession to hear a sermon delivered by the Bishop of Norwich. A great many persons were present which he had often observed, and which he thought would have alone entitled the right hon. gentleman to their increased confidence. (Hear, hear) It was this—he had often observed that in those conflicts which occasionally occur, where mere routine could not guide the individual filling the chair when he was, as it were, taxed upon a moment, the right honourable gentleman's resources have never failed him He had always been, in such a crisis, sustained by his own knowledge and zeal, as well as by the high character which the House entertained for him

The Address in Reply to the Royal Speech.—It is stated, on reliable authority, that the address in the House of Commons will be moved by Lord Lovaine, member for North Northumberland, and seconded by Mr. E. Christopher Egerton, the member for Macclesfield.

Convocation of the Clergy.—Friday being the day appointed for the assembling of the clergy of the upper and lower house in convocation, a very large attendance of the clergy from the various dioceses assembled in St. Paul's Cathedral to receive the Archbishop of Canterbury, who arrived at the Chapter-house shortly before eleven. Prayers were read by the Bishop of Llandaff, and the sermon (in Latin) was preached by the Rev. Dr. Jeremy, of Cambridge. After the sermon, the Queen's writ for the assembling of Convocation was read by the Archbishop's registrar, when the Archbishop dismissed the lower house to elect their Prolocutor. The clergy then assembled in St. Paul's Cathedral, and proceeded to the election, when the House adjourned until Friday next. The upper house having also adjourned, the proceedings terminated.

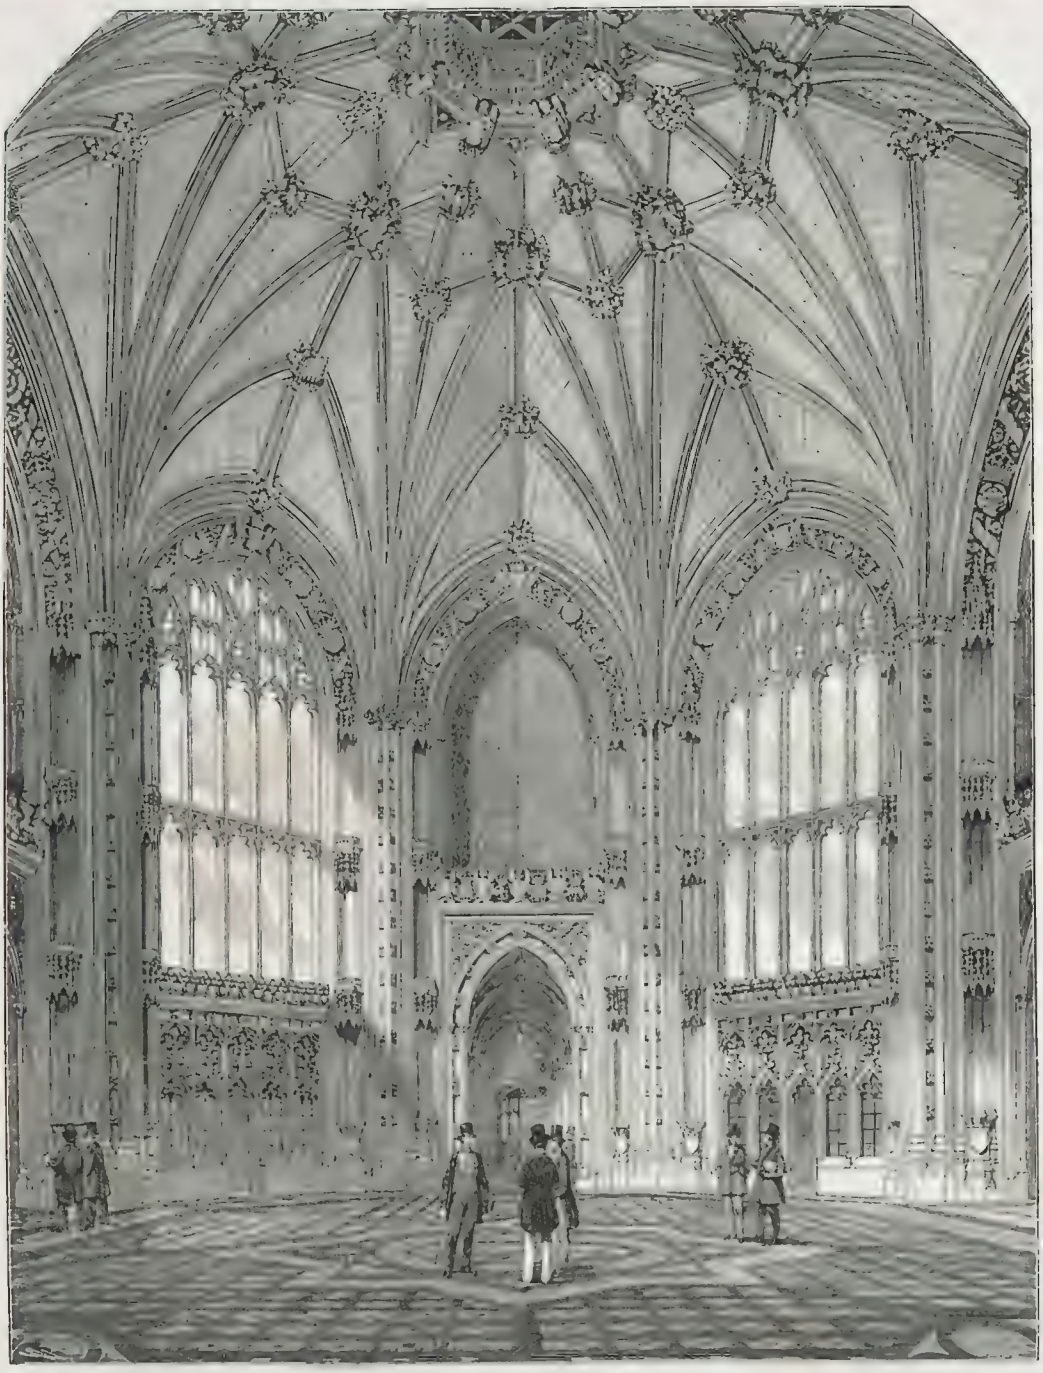
LATEST FOREIGN NEWS.

FRANCE.—MEETING OF THE SENATE.

The Senate met on Thursday, when ten members demanded that the people should be consulted as to the re-establishment of the Empire. M. Fould, Minister of State, declared that the Government did not oppose the proposition, which was referred to a special commission, whose report will be presented on Saturday. In the message read by order of the President, we find these words:

Indeed in the re-establishment of the Empire the people finds a guarantee for its rights and a satisfaction to its just pride. The stablishment is a security for the future cleaving, as it does, the evil ... ...

THE NEW PALACE, WESTMINSTER.



THE GREAT OCTAGON, OR CENTRAL HALL, NEW HOUSES OF PARLIAMENT.

THE assembling of the New Parliament, on Thursday, suggests the continuation of our Illustrations of the approach to completion of the New Palace at Westminster; commencing with

THE CENTRAL HALL.

This, the largest of the halls in the New Palace of Parliament, possesses a groined roof of remarkable extent and beauty. It is octagonal in plan, and is 60 feet in diameter, each side being 24 feet in width. It is more than 70 feet in height, and is lighted by four windows, of imposing height and fine design. The splays of the windows are decorated with richly-canopied niches, for statues, to the springing of the arches; and roses and crowns fill the spaces over the arches. Beneath each window is a boldly-designed brattishing of Tudor flowers and shields, over a cornice under which the wall is perforated into five compartments; four of them being glazed, and the centre one forming a door, opening into a small apartment behind, which serves as an office. The sides of the octagon, not having windows in them, are splayed in a corresponding manner, the splays being also filled with niches, and crowned roses, as before described. The space within the splays being divided about midway in height, the upper half forms a lofty panel; whereon, at some future period, will be painted, in fresco, an historical subject. The lower half of the space contains a very handsome and deeply-recessed doorway; the splays being filled with bosses, in exquisite variety of design and felicity of execution. The doorway on the south communicates, through a small vestibule, with the Peers' lobby to the House of Lords; that, to the east, through a similar vestibule, into the lower waiting-hall and long corridor. The doorway on the north communicates, by a vestibule, with the House of Commons; and the west opens directly into St. Stephen's Hall. The pavement is a most magnificent specimen of Minton's encaustic tiles; and, its prevailing pattern may be gleaned by reference to our Engraving; the colours are extremely rich and beautiful. The glazed doors, in the east and west sides, are very beautifully executed in their several details. The groining of the roof, springing from clustered columns at the angles of the octagon, is not more remarkable for the beauty of its design, than for its great depth; and the bosses, at the various intersections, are equally noticeable from being all of different designs; the larger ones displaying, with elaborate fullness, the armorial bearings of some of the English monarchs, and the smaller ones, crests, devices, &c. The lanthern in the centre is octagonal in plan; and where the groining meets, are bosses of demi-angels, holding shields. The windows at present are filled with plate-glass; though, at some future time, they will be filled with glass of the richest colour.

THE SPEAKER'S CHAIR IN THE HOUSE OF COMMONS.

Our second Illustration from the New Palace at Westminster is a representation of the Chair of the Speaker of the House of Commons

MR. WHITESIDE, Q.C., SOLICITOR-GENERAL FOR IRELAND, M.P. FOR ENNISKILLEN.—(FROM A PHOTOGRAPH BY BEARD.)

placed at the north end of the House, and elevated on a dais of three steps. In design and execution the Chair is a splendid example of wood-carving, the details being most elaborately finished. The whole is of oak. The arms are fitted with every convenience, including desks for writing; and the seat is covered with green morocco leather, to correspond with the seats in the House. Behind the Chair is a door communicating with a vestibule opening into the house-lobbies, the Speaker's retiring-rooms, &c.

PARLIAMENTARY PORTRAITS.

JAMES WHITESIDE, ESQ., Q.C. AT THE IRISH BAR, AND M.P. FOR ENNISKILLEN.

THE high reputation long since attained by Mr. Whiteside in his own country, as an advocate of the first order, where forensic genius has been of so frequent occurrence, would alone justify our anticipating in our readers a natural curiosity to know something of his career. He has, however, an additional claim on our attention, as a member of her Majesty's Government (Solicitor-General for Ireland), as a representative of the borough of Enniskillen, in the House of Commons, and as the author of a work on Italy, which has had a very great success.

The admiration felt towards Mr. Whiteside by his own countrymen might seem exaggerated, if it were not beyond dispute that, as a political and general advocate, he stands in the very first rank, by comparison, with living contemporaries. Among these we do not, of course, include Lord Brougham or Lord Lyndhurst; but, as the Irish bar is at present constituted, Mr. Whiteside may be almost said to be without a rival there. The Protestants are proud of him, because he is a stanch upholder of their pretensions, as well as a member of the Government; while the Catholics have not forgotten that he, although an Orangeman, was the eloquent defender of Daniel O'Connell during the memorable State Trials, as well as of Meagher and Smith O'Brien at Clonmel.

Mr. Whiteside—as we gather from an eloquent notice in the *Dublin University Magazine*, a few years back—was born in the year 1805, at the Glebe House of Delgany, in the county of Wicklow. His father was the Rev. William Whiteside, pastor of the parish; a man, like his son, of considerable literary attainments. He died while Mr. Whiteside was still young, leaving the subject of this memoir, and another son, under the legal guardianship of the Rev. James Whitelaw, the Rector of St. Catherine's, and himself the author of a "History of the City of Dublin. Mr. Whiteside's brother is, or was, the Vicar of Scarborough. The early education of the two brothers was superintended by their mother.

In due time Mr. Whiteside went to Dublin University, where he was not distinguished for any extraordinary application, but gained some prizes in the classics. His university career concluded, he came, in the year 1828, to London, in order to prepare himself for the bar. He is stated to have spent three years here in close and constant study. On his return, in 1830, he was called to the bar. It was not, however, until the year 1831 that he began to practice. Whilst in London, he was a pupil of Thomas Chitty, and subsequently of Swanston. He also attended the Law Class of the London University, where he distinguished himself, and obtained prizes. Whilst a pupil of Chitty, he occupied himself (as many of his young countrymen do under similar circumstances) in writing for periodicals. Some sketches of his which appeared in two publications—the *National Magazine* and the *Literary Gazette*—are spoken of in terms of praise. He also wrote in other Irish periodicals. When attending the Law Class at the London University, he also became a member of the Debating Society there, where his oratorical powers first developed themselves. He is said to have so far distinguished himself as to have been selected to deliver an opening address. From the same authority we learn that among his associates at this time were Mr. Napier (whose sister Mr. Whiteside espoused); Mr Forster, of the *Examiner*; and Mr. Robert Tighe.

We have mentioned that he was called to the bar in 1830, but that he did not practice till 1831. Promotion at the Irish bar is not usually more rapid than with ourselves; but, as in England, a man of superior ability is almost certain to attract attention. This was the case with Mr. Whiteside, on whom his friends and contemporaries had looked as a rising man long before he attained distinction. The fortunate opportunity came, we are told by the authority already referred to, through the instrumentality of an old friend, the present Sir James Emerson Tennent, on whose behalf he was engaged as counsel on circuit. The ability of his speech attracted attention; and business, as is usual, when once the impulse has been given, came pouring in. Among the cases mentioned, as having drawn forth his powers, are one at Monaghan, where he defended a man named Gray, and another at Armagh; also, a defence of the *Comet*, Dublin newspaper. His friends also speak of a memorable instance of an objection made by him in a bigamy case, which raised the question whether marriages between Episcopalians and Presbyterians, solemnised by ministers of the Presbyterian form, could be sustained in law. The point thus raised led to an appeal to the House of Lords, when the objection of Mr. Whiteside was confirmed, and Lord Lyndhurst paid him the compliment of saying that nothing could be added to his argument.

Mr. Whiteside was now steadily rising in his profession; and he had made himself a general favourite with its members. In 1842, the present Lord Chancellor of England, the Lord Chancellor of Ireland, recognised Mr. Whiteside's talents by giving him the silk gown.

The culminating point of Mr. Whiteside's professional career was now approaching. Political events in Ireland had long since assumed a serious aspect. O'Connell, combining the art of a lawyer with the daring of a demagogue, had worked up the population to a pitch of excitement so dangerous that he alone seemed to be able to restrain them from open defiance of the law. The monster meetings, although perhaps exaggerated in regard to their numbers, took a formidable shape when it was felt that so many hundreds of thousands of ignorant persons were under the control of one man; and, in the success of this new scheme for intimidating the English Government and Parliament, the agitator had allowed himself to be transported so far beyond the bounds of his usual wariness as to have furnished the law officers of the Crown with the materials for a prosecution. Perhaps the highest

MR. CHARLES GEACH, M.P. FOR COVENTRY.—(FROM A PHOTOGRAPH BY BEARD.—SEE NEXT PAGE.)

tribute that could have been paid to the forensic reputation of Mr. Whiteside was his having immediately received a retainer to defend the great Roman Catholic agitator, although himself notoriously a stanch Protestant. His speech on the occasion of the State trials was one of the most masterly efforts of forensic eloquence of which our present history affords an example. It was not to be supposed that it could command a verdict; nor is it our purpose to follow out its public results. Its immediate effect on Mr. Whiteside's position was what might have been expected. His professional business, already enormous, was much increased; but the excitement and tension of the faculties occasioned by too close and unremitting an application to his professional duties affected his health, and his physician ordered him to Italy. There he resided during two years, and it was there that he collected the materials for his work on that country, which, although at first somewhat decried by those whose interest it touched, was subsequently so successful, that it has now, we believe, reached its fifth edition.

A remarkable proof of the high estimation in which Mr. Whiteside was held in Ireland, was afforded in the facility with which, on his return from Italy, he was enabled to resume his position and recover the business which had been suspended during his forced absence. His next great case was the defence of William Smith O'Brien, and Meagher, when tried for high treason at Clonmel. His speech on this occasion was, also, a masterly effort; but, of course, the position of the prisoners rendered success impossible.

Mr. Whiteside continued to pursue his profession with success and great distinction, until, on its being rumoured that a Conservative Ministry was likely to be in power, all men naturally looked to him as one of the new law officers. When Lord Derby at length assumed the Premiership, Mr. Whiteside was immediately nominated Solicitor-General for Ireland, and an opening was found for him at Enniskillen by which to enter Parliament. He had a severe contest, however, with

THE SPEAKER'S CHAIR, FOR THE NEW HOUSE OF COMMONS.

Mr. Collum, a gentleman of considerable local influence, and possessed of a sturdy obstinacy. At the last general election, Mr. Whiteside had again to sustain a contest with the same persevering opponent.

Great expectations were formed of Mr. Whiteside's performances in the House of Commons. It is seldom than an advocate of great reputation sustains his fame as a Parliamentary speaker. Mr. Whiteside, so far as he has gone, has done so with more than average success. His first speech was on the Ecclesiastical Titles Bill, and he again spoke on the same subject in the course of the session. Speeches of his will be found in the Parliamentary records, on the Criminal Justice Improvement Bill, on the County Court Act Amendment Bill, on the Parliamentary Representation (Ireland) Bill, and on the Tenant Right (Ireland) Bill—all during the two sessions, 1851 and 1852. Mr. Whiteside also delivered one or two smart and rattling speeches, in answer to two gentlemen who have made themselves conspicuous on the Liberal side—Mr. Bernal Osborne and Mr. Bright. His speech on the Militia Bill was, perhaps, on the whole, the best he delivered. In it, he attacked Mr. Cobden and Mr. Bright in a way to attract attention. Mr. Whiteside's parliamentary oratory differs, like that of all advocates, from his forensic efforts, in being more subdued and less ornate. Mr. Whiteside is a fluent speaker, who will become more impressive as he advances in confidence and a knowledge of the House. He has already won his way, in his official capacity, and by no means below the reputation of Lord Derby for judgment and discrimination in his selection of the members of the Irish branch of his Administration. Mr. Whiteside will, no doubt, attain a still higher rank in his profession. As a lawyer, a scholar, and a gentleman, he is certainly one of the ornaments of the present House of Commons.

MR. CHARLES GEACH, M.P. FOR COVENTRY.

WHILE the sayings and doings of soldiers, statesmen, and political agitators, are familiar in men's mouths as household words, how little is known by the public at large of the magnates of the industrial community—of those men who have grown with the growth of England's prosperity; and, from the days of Watt downwards, have been among the most successful artificers of her greatness! Yet such men abound in the most successful artificers of her greatness! Yet such men abound in the most successful artificers of her greatness! Yet such men abound in

LITERATURE.

THE ILLUSTRATED LONDON LIBRARY.

THE THREE COLONIES OF AUSTRALIA, &c.: THEIR PASTURES, COPPER-MINES, AND GOLD-FIELDS. By SAMUEL SIDNEY, Author of the "Australian Handbook," &c. With numerous Engravings. Ingram, Cooks, and Co., London. 1852.

At this moment, as it has been vividly said, the three kingdoms are going to the antipodes. To abate the exaggeration to the limits of fact, is, if possible, to render the case more worthy of attention, and more provocative of anxiety. Those who go are likely never to return; if they entertain some vague project of seeing once more their native land, in distant years, it will be but to visit its opulence sooner where they once dwelt in penury—perhaps in disgrace; to enjoy the contrast which memory will afford to vanity; to indulge a natural sentiment of pleasing rather than painful contemplation; and then, once more, the pious office having been discharged, to depart for ever from the country which had refused to support their youth, to that which crowns their age with abundance. They do not now leave us to come back to us in any capacity, but that of visitors. So far from it, those who go send for those who stay. And to this enormous emigration—unprecedented in the history of our race, far greater even in numbers than any which Goth or Vandal ever poured out of steppe or forest—the territories is Australia, which has completely eclipsed in its attractions the dubious, disorderly, and blood-stained rivalry of California. A new Anglo-Saxon or Celtic-Saxon empire is growing up at the antipodes; it is questionable whether the actual position and the real tendencies of this prodigious colonising activity do not more seriously concern England than if our entire population, instead of thus striding itself, were to be poured out into new regions, and to change collectively its exhausted ancient dwelling-place for a more propitious soil, a more extensive country, and a happier clime.

The work before us is divided into three principal sections: historical, descriptive, and practical. The first part gives an exceedingly interesting account of the discovery, early government, and progress, up to the present time, of this Britannia of the nations. The second part describes the natural history of Australia: its agriculture, trade, stock-farming, and mining pursuits, and its legislative, religious, and educational institutions. The third, and practical section, in which the subject of emigration is sensibly treated, will prove a useful lesson to most people, and one which cannot fail to be of great importance to those who contemplate emigration. We cannot be too solicitous to secure ample and accurate information on such a point. It concerns the destiny of millions. One very critical question is, simply and shortly Who ought, and who ought not to emigrate? Mr. Sidney furnishes the answer. Nothing can be more clear, more explicit, or more worthy of attention than his advice on the one hand, and his cautions on the other. And, really, when we consider the advantages to be gained, and the dangers to be avoided, by a careful study of such information, it does not appear to us sufficient to call this a pleasant and useful work, as it is; but we must pronounce it one of the highest and most practical value and importance.

Among incidental matters, we have a delightful account of Mrs. Chisholm's disinterested and noble exertions, together with some amusing and graphic notes of her own. Every one, who knew it not already, can see that she not only possesses an excellent heart, but that she is also a person of extraordinary fortitude, and a most enlightened understanding. She well deserves the title of protectress of the unfortunate and defender of the poor. We are tempted to make a short extract:—

> During the six years and eight months which she spent in Australia, Mrs. Chisholm, without wealth or rank, or any support except what her earnest philanthropy gradually acquired, provided for eleven thousand souls.
>
> Yet, since her sojourn in England, she has redeemed her pledge, and done much more. She has, with less than two thousand pounds, between 1850 and 1852, personally sent out more than one thousand emigrants of the best class, and has advised, corresponded with, or otherwise assisted twenty thousand.
>
> We have devoted thus much space to the colonising career of Caroline Chisholm, because with her exertions the colonisation of the interior commenced. Before her time emigrants were merely shovelled out on the shores, like so much live stock, to find their own way to market—to service, to marriage, to sin, or to death
>
> She first taught the Australian squatters that property has its duties as well as its rights. She tapped the springs of spontaneous, self-supporting emigration, and showed how closely the extension of national power was connected with social and domestic virtues.
>
> There is scarcely a line of her works or her evidence that may not be studied with advantage to those who are interested in colonisation, as a civilising, cultivating, Christianising instrument of practical power—because teeming with valuable facts and the sound conclusions of a sagacious mind.

The merit and interest of this publication are not limited to the author's share. It is "got up," according to the technical phrase, and equipped by the publishers in a manner that adds a facilitative value to that which might well dispense with any. It is beautifully illustrated, and speaks to the eye, no less than to the mind.

LIFE OF FIELD-MARSHAL THE DUKE OF WELLINGTON. By J. H. STOCQUELER, Esq. Vol. I. Mr. Stocqueler is already well and favourably known to the public as a writer on military subjects, and the masterly manner in which he has written this life of the great Duke will add much to the reputation he has already gained by the "Military Encyclopædia" and other works. He has brought to his task the pen of a skilful and ready writer, as well as great professional knowledge; and the result is a life of the greatest captain of the age distinguished alike by liveliness and lucidity of style, as well as by military accuracy and precision.

This volume brings down the Duke's life to the close of the war in 1814, thus embracing all his Indian and Peninsular campaigns. These are all described with fullness and accuracy, but not overburthened by unnecessarily minute details. Much of the material is drawn from original sources, and many of the anecdotes, &c., from personal communication with the late Duke. Mr. Stocqueler, however, does not confine himself to a mere history of the movements of an army and the doings of its chief; but he gives a faithful picture of contemporaneous events and personages, &c., and traces, in a calm and comprehensive manner, the various causes which produced the wars in which Wellington was engaged, and the various results to which the issue of these wars gave rise. Unlike many other biographers, Mr. Stocqueler is no blind admirer of the object of his worship, but gives his own opinion with a fearlessness that stamps the book with impartiality and independence.

The work forms one of the series known as "The Illustrated London Library," and is profusely illustrated by admirable engravings. The present volume contains, besides portraits of Wellington, Lord Hill, Lord Combermere, &c., portraits of all the French Marshals whom Wellington encountered and overthrew in Spain: Victor, Mortier, Massena, Jourdan, and Soult. All the chief battle-scenes are beautifully illustrated, the greater part of the illustrations being made from sketches taken during the war by British officers, and never before published. There is also a curious picture of Spanish ladies of the period, showing the style of dress then worn, which is copied from a Spanish book found among the booty captured at Vitoria. An excellent map of Spain and Portugal is introduced into the volume, and shows with great clearness and accuracy all the various movements during the Peninsular War. The chief engravings are printed on superior paper, apart from the text; and the work altogether has a handsome appearance.

POST-OFFICE LONDON DIRECTORY, 1853.—(Kelly and Co.)—This bulky volume, of some 2000 pages, comes to us with the many emendations rendered necessary by the official changes consequent upon the death of the Duke of Wellington. Such attention, in past years, on the part of the proprietors, has earned for the "Directory" the distinction of being the most complete work of its class. Its classification for facility of reference, it would almost appear, can no further go. The book is huge, and beyond the size of a Handbook; but its bulk has been of more than half a century's growth; and, moreover, it has but increased in proportion to the vast commercial city whose living interests it so fully represents. We can only say, that, whatever testimony we have borne to the vigilance and industry of the proprietor of the "Post Office Directory" of previous years, applies to every department of the volume before us for 1853. We should add that an improvement has been made in the binding, by substituting strong leather for cloth, so as to render it equal to the wear and tear of hourly reference.

ALFRED CROWQUILL'S STATUETTE OF THE DUKE OF WELLINGTON. We understand that presentation copies of this pupn ar work, to be graciously accepted by the Emperor of Russia, the Queen of Spain, and the King of the Belgians.

CHESS.

TO CORRESPONDENTS

A MUFF.—"A" gives the greater odds in the case mentioned.

ARTHUR T.—Tomlinson's "Amusements of Chess," published by Parker, West Strand, is a useful little work for a beginner. You might also procure Roberts's "Popular Introduction to Chess." These would serve to prepare you for more profound and difficult works, such as Jaenisch, and the Germans and Staglt is hard-book on the game.

G R L.—They have been marked for insertion and shall appear in due course

ZENAS, Boston, U.S.—There would be no King only actual in the position you suggest. Look again, and you will find you are four wide of the mark

C P de J St. Petersburgh.—We are apprehensive that our last communication addressed to Moscow has miscarried. Obliged by your offerings at your earliest convenience

A W S.—We do not understand the game of de man backgammon

ALPHA, STEVENS, and others.—The Rev H. Bolton's Problem No 446 will, doubtless, be demanded by the talented author, so that the obvious and commonplace solution in five moves may be prevented. The solution intended in its moves is one of remarkable beauty

M'G. Harney.—You will get either of the patterns of Chess-men named, well turned and of good durable material, of Dixon, the ivory turner, 72, Fenchurch street

TRIFLER.—If we are correctly informed, two matches have been arranged to be played between Messrs Harrwitz and Williams. In the first the openings are to be *ad libitum*, in the second, for the purpose of avoiding what are called close games each party will be obliged to begin with P to K 4th. It is much to be hoped that the gentlemen who have so liberally subscribed for the purpose of getting up these contests, will take measures to guard against their unfair protraction. A game should be played every alternate day; to begin at a fixed hour, and either party failing to be present to play at the appointed time should forfeit the set to his adversary, but to the club—for every such omission. It would also add greatly to the interest of the games, *if the time occupied by each player, on every move, were recorded with the move itself.*

R D S, SOPHIA.—Re-Sport.—They shall appear among our Chess Enigmas

ONE AT THE MEETING.—We agree with you that much of the success, and more of the comfort of the late festival at Hull was owing to the indefatigable attention of the Secretary, Mr S W Kirke, and it was certainly a remissness, though we make sure an intentional one, on the part of those concerned in the arrangements, that his valuable services were not rewarded by the customary compliment of a bumper to his health. The same remissness and, equally unjust, to the Treasurer Mr Barnett to whom in addition to his exertions in the cause of the Association, the company were indebted for the very handsome collation provided for them on the second day's assemblage

SOLANDER; Mr G. K. of Manchester; and others.—It is always customary in the Diagram of Chess position, to place the word "White" at the side of the Chess-board nearest the reader and "Black" on the opposite side. Whenever, therefore, these words are transposed, it must be considered a printer's error

A BURGESSES.—Yes we find a full account of the Hull Chess Meeting in the November number of the *Chess-player's Chronicle*. Our report was unavoidably abridged from want of space

F D, Bruges.—A copy of the last Number was duly forwarded. We shall be glad to receive the remainder of the games played with Herr M——, and to have some further particulars of your German tour

MAGNUS.—We are unacquainted with the address of the player mentioned, but you will probably learn something of his "whereabouts" at King's Chess Rooms, 69, New Oxford-street

DELTA.—Safely received, and acknowledged by letter

D W H.—See our notice below regarding Mr. Bolton's Problem. Your solution of No 457 is not correct

LEARNER.—Since writing the notice above respecting the contest between Messrs Harrwitz and Williams we hear that the first has commenced, and that Mr. Harrwitz is proclaimed the winner of the 1st game

SOLUTIONS OF "STELLA," by Albert, J M of Sherburn, Pike, Morsy, A M R, Sophia, J P of Newcastle, are correct

SOLUTIONS OF PROBLEM No 457, by A Z, Nimrod, Dorcas, Stella (late Jody), Argus, are correct

SOLUTIONS OF ENIGMAS by J M of Sherburn, J P of Bathead-green, Argus, Nimrod, Philo-Chess, are correct. All others are wrong

* * * Any correspondent having a copy of Salvio (1733), and of Ponziani (1768), to dispose of, may hear of a purchaser by applying to the editor

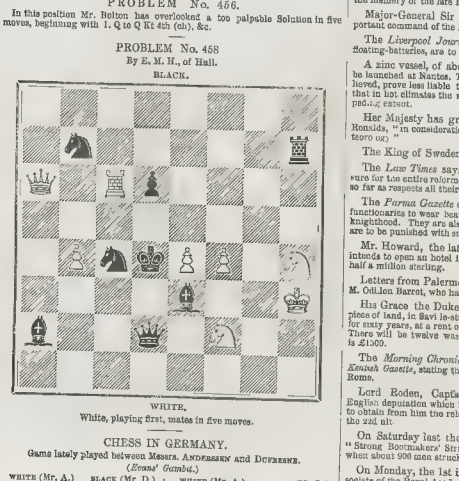
PROBLEM No. 456.

In this position Mr. Bolton has overlooked a too palpable Solution in five moves, beginning with 1. Q to Q Kt 4th (ch), &c.

PROBLEM No. 458

By E. M. H., of Hull.

BLACK.



WHITE.

White, playing first, mates in five moves.

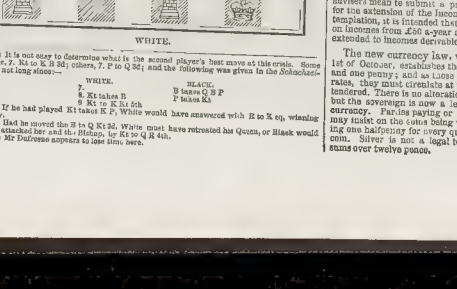
7. Castles	P to Q 6th (a)	16. B takes Q P	Q to R R 4th
8. Q to her Kt 3d	Q to K B 3d	17. Kt to B 6th (ch)	P takes Kt
9. P to K 5th	Q to K Kt 3d (b)	18. P takes P	K to K Kt sq

The following is a diagram of the position at this point: and we reserve the remainder of the game, that the student may discover what move White now made which decided the contest at once in his favour. The situation forms a really fine and instructive Problem:—

BLACK.



WHITE.

(a) It is not easy to determine what is the sound player's best move at this crisis. Some prefer, 7. Kt to K 3 3d; others, 7. P to Q 3d; and the following was given in the *Schachzeitung* not long since:—

WHITE.	BLACK.
7.	B takes Q B P
8. Kt takes B	P takes Kt
9. Kt to K 6th	

(b) If he had played Kt takes K P, White would have answered with R to K sq, winning easily.

(c) Had he moved the B to Q Kt 2d, White must have retreated his Queen, or Black would have attacked her and the Bishop, by Kt to Q K 4th.

(d) Mr Dufresne appears to lose time here.

EPITOME OF NEWS—FOREIGN AND DOMESTIC.

The *Assemblée* says, it is in a position to confirm the news of the conversion to Romanism of the Princess Caroline Wasa; but it adds that this conversion is spontaneous, inspired solely by conscientious feelings, and wholly unconnected with political considerations.

The *United Service Gazette* states that it is in contemplation among the officers of the army to propose for the acceptance of Lord Raglan a splendid and suitable memorial of the grateful sense of his efficient services during the many years in which he was Military Secretary to the late Commander-in-Chief.

Amongst the passengers to America by the *Canada*, which sailed from Liverpool on Saturday, was W. M. Thackeray, the author of "Pendennis" and "Vanity Fair."

The station-master at King's Norton, on the Midland Railway, to whose negligence was attributable the recent terrible collision at that place, was fined fifty shillings, on Saturday, for the neglect in which the accident originated.

It is very probable that the Duchess of Orleans, together with her family and suite, will shortly take up their abode for some time at Kitley, near Plymouth, the magnificent seat of E. B. P. Bastard, Esq., who is now residing at Lyneham.

A journal announces the death of Baron Jean von Gagern, who played an important part at the Congress of Vienna, and made himself remarkable for his determined opposition in claiming Alsace for Germany.

The Canadian House of Parliament have passed a resolution for an address to the Queen, asking her to take measures to secure a reciprocity of trade, and to repeal the laws conferring on American vessels advantages which Canadian vessels do not enjoy on American waters

On Saturday night last, another garotte robbery took place at Leeds. The victim was Mr. G. W. England, an extensive upholsterer and cabinet-maker in that town.

A child in the neighbourhood of the Hotwells, Bristol, has recently been poisoned by eating cockles. The death is ascribed to the presence in the cockles of a vegetable plant which is sometimes found in them.

A dreadful accident occurred on Saturday afternoon at the Arènes Nationales, in Paris. A rope on which two rope-dancers were performing, at a height of 30 yards, suddenly broke, and they were both precipitated to the ground; one was killed on the spot, and the other was so dreadfully injured that he died an hour after.

A Judge of the Court of Appeal has recently been tried in French Guyana for house-breaking. The eminent functionary was condemned to ten years' imprisonment, with hard labour

The *Vienna Gazette* states that the negotiations for a concordat with the Roman See are to commence forthwith. By desire of the Pope, they will be conducted at the Austrian capital.

The citizens of Norwich have determined upon erecting a statue to the memory of the late Duke of Wellington.

Major-General Sir Charles J. Napier, C.B., will receive the important command of the Kent Military district.

The *Liverpool Journal* states that a couple of block ships, to serve as floating-batteries, are to be sent to the Mersey.

A zinc vessel, of about 100 tons, called the *Comte le Hon*, is about to be launched at Nantes. This metal is cheaper than iron or paint, and will, it is believed, prove less liable to deterioration in water; but sailors are of opinion that in hot climates the zinc would speedily be covered with shells to an impeding extent.

Her Majesty has granted a yearly pension of £75 to Mr. Francis Ronalds, "in consideration of his eminent discoveries in electricity and meteorology."

The King of Sweden is suffering, at this time, from rheumatic fever.

The *Law Times* says that the Government intend to bring in a measure for the entire reform—if not for the abolition—of the Ecclesiastical Courts, so far as respects all their jurisdiction that is not strictly ecclesiastical.

The *Parma Gazette* of the 21st contains a decree forbidding all civil functionaries to wear beards or moustaches, unless they belong to an order of knighthood. They are also forbidden to wear their hair too long. Transgressors are to be punished with suspension for a first offence, and dismissal, if repeated.

Mr. Howard, the late proprietor of the Irving House, in New York, intends to open an hotel in London, on the American system, at an expense of half a million sterling.

Letters from Palermo, of the 15th ult., announce the arrival there of M. Odilon Barrot, who has since left for Catania.

His Grace the Duke of Northumberland has granted the lease of a piece of land, in Bavi le-street, North Shields, to the corporation of Tynemouth for sixty years, at a rent of £10 a year, for the erection of baths and washhouses. There will be twelve washing-places, and the estimated cost of the erection is £1300.

The *Morning Chronicle* contradicts the paragraph, copied from the *Kentish Gazette*, stating that Lord Charles Thynne has seceded to the Church of Rome.

Lord Roden, Captain Trotter, and the other gentlemen of the English deputation which is to wait upon the Grand Duke of Tuscany, in order to obtain from him the release of M. Madiai and his wife, arriv. d at Florence on the 22d ult.

On Saturday last the dispute between the masters and men in the "Strong Boonmakers' Strike," which has existed since the 18th of October, when about 900 men struck, was amicably settled.

On Monday, the last inst., Frederick Goodall was duly elected an Associate of the Royal Academy of Arts, Trafalgar-square.

The *Voss Gazette*, under date of Vienna, 27th ult., says:—"The English are beginning to send coals to Vienna. They have established a *dépôt* at Dresden, from whence they are sent to Prague, and are there cheaper than Austrian coals."

At the South-Western Railway terminus, on Wednesday, a box was discovered containing the body of a child. It had been in the cloak-room between six and eight months.

The returns for the borough of Hull and Maldon are to be petitioned against. The *Dublin Freeman's Journal* announces that no less than sixteen petitions are to be presented against the return of as many members of the brigade at the late general election.

At a meeting of the Dublin corporation, in the course of a discussion as to the attendances of the Corporation at the Duke's funeral., Mr. Reynolds, late M P. for Dublin, thought it not unbecoming to pass some strictures on the political career of the deceased statesman. Places for seventy-five members of the corporation are allotted in St. Paul's on the funeral day.

Sir Henry Bulwer left Rome on the 24th for Florence.

Dr. Lyon Playfair gave an introductory lecture on Wednesday, on the subject of industrial instruction on the Continent, at the Museum of Practical Geology, Jermyn-street.

A revolt has broken out in Syria and Mesopotamia.

Sir R. Ward, Lord High Commissioner of the Ionian Islands, arrived at Corfu on the 18th ult, from Constantinople

The Treasury order, issued on the 3d of August, to prohibit the vending of chicory under the name of coffee, came into operation on Thursday.

The race from Canton, between the English and American ships, has been won by the former

The gentleman who went out in the Australian mail packet *Sydney*, and who refused to go further than the Isle of Ascension, on account of the bad accommodation he experienced on board the packet, has had his passage money returned to him.

The *Corriere Mercantile* of Genoa of the 28th ult. states, from Parma, that the police having discovered that pigeons have of late been used by political secret societies to carry on correspondence, large numbers of those birds have fallen victims to the rifles of the gendarmes.

The *Times* of Wednesday states:—A semi-official communication has reached Dublin, conveying the comforting assurance that her Majesty's ministers mean to submit a proposition, on the opening of the present session, for the extension of the Income tax to Ireland. According to the plan in contemplation, it is intended that the tax shall be levied at the rate of five per cent. on incomes from £50 a-year and upwards; the imposition, however, not to be extended to incomes derivable from profits in trades or manufactures.

The new currency law, which took effect in New Brunswick on the 1st of October, establishes the value of the English crown piece at six shillings and one penny; and as these coins are now, therefore, a legal tender at those rates, they must circulate at their increased value, and cannot be refused when tendered. There is no alteration in the va ue of the English sterling or sixpence, but the sovereign is now a legal tender at twenty-four shillings and four pence currency. Parties paying or receiving sovereigns in gold, in sums over £50, may insist on the coins being valued in weight instead of by tale, and on deducting one halfpenny for every quarter grain short weight, over two grains in each coin. Silver is not a legal tender in sums over fifty shillings, nor copper in sums over twelve pence.

THE CRYSTAL PALACE AT SYDENHAM.

WATER FOR THE WATERWORKS.

In a secluded shrubbery, far away to the left, as we stand with our back to the Palace enclosure, is a picturesque scaffold, supported partly by living trees, and encompassed happily by the various foliage of an English plantation. The spot is perfectly quiet, and forms a curious contrast to the busy scene in the Park. Here, three or four men are quietly piercing the crusts of the earth in search of water for the fountains. In the upper part of the scaffolding, men are turning a windlass one or two turns, and then allowing it to retreat. Below, a man is working at a large bar which is fixed to the perpendicular bore; and as it falls when the windlass retreats, he turns the handle. This action makes the bore revolve slightly as it falls, and so gather the earth through which it cuts into the tube which is fixed to the end of it. This is the artesian process, and this process is going forward steadily. Sometimes the men find that they make no way with the tube; they then fix a screw to the end of the rod, and with this grind away, often through hard masses of solid rock. Occasionally, it is necessary to empty the tube—generally, about once in half-an-hour. This operation is tedious. The men above begin to work the windlass in earnest, and draw out of the earth a long iron rod, which reaches to the top of the scaffold. The man below now unscrews it, and fixes it in a groove at his side, near half a dozen other rods. Again the windlass revolves, and again another rod comes out of the earth, all wet, and soiled with blue clay; this is unscrewed as before; and so on, rods continue to be drawn (like gigantic worms out of the earth), till at last a long narrow tube comes to light. This has risen from a depth of two hundred and twenty feet! The tube is unscrewed from the rod, and emptied; and then once more it is lowered for further operations. In this way these men have bored to a depth, as we have already stated, of two hundred and twenty feet. To bore ten feet deep in a day is to do a good day's work; but when the bore is deep, it is not often that more than four feet are added to the depth of the well. "In another week," said the man, as he worked vigorously at the handle below—"in another week I expect we shall have water."

Through vegetable soil, through gravel, through clay, through stone, and through blue clay, this iron arm reaches, in search of water; heeding no obstacle, and patiently penetrating to any depth. When once a copious stream of water has been reached, a huge well, upon which crowds of workmen will work day and night, will be dug, and from it will flow the bright streams of water which, in the hands of science and art, are to flow here and there, from glorious sculpture, about the grounds of the People's Glass Palace. And for this end the work is urged forward. Two hundred and eighty feet is the depth now; and the men think they have reached a copious supply of water! A day or two more, and they have advanced a yard or two deeper, and found the stream that will supply the many fountains of the People's Palace. Of the Artesian Machinery we give an Illustration.

ARTESIAN BORING MACHINERY, FOR OBTAINING WATER FOR THE NEW CRYSTAL PALACE, AT SYDENHAM.

PROGRESS OF THE NEW CRYSTAL PALACE.

The Board of Directors of the Crystal Palace Company have decided to allow sales of objects exhibited to be effected by exhibitors in the Palace, under certain restrictions. This will enhance greatly the value of space to exhibitors, and add to the attractions of the scheme.

Mr. Crawshay and Mr. Randall have each contributed gratuitously an aloe to the botanical collection of the company. It has been finally decided to exhibit the specimens of natural history without glass cases. Thus, amid the date trees, the hippopotamus and crocodile, the pelican and the ibis, will be seen grouped together, at the visitor's feet, with no artifical medium to disturb the effect of this natural disposition of the animal and vegetable kingdoms.

The building is now fast rising; the second rows of columns appearing sharply against the sky on the brow of the hill. The incessant hammering upon metal, which reminded us during the erection of the Exhibition Building in Hyde Park, of a gigantic coffin manufactory, may now be heard at Anerley.

The contractors who have undertaken the levelling of the terraces, for the Italian gardens, have their part of the works now crowded with workmen.

The rose-garden is now nearly levelled, and the stiff natural soil turned up promises well for the health of the varieties of the beautiful flower, that are to enrich the air hereabouts.

Towards the Norwood and Anerley-roads, workmen are now erecting a stout wooden enclosure, calculated, apparently, to resist the strongest curiosity.

The clay fires are now extinguished, leaving huge heaps of red clay ready to form the foundations of the various paths that are to lead to the several attractions of the palatial gardens.

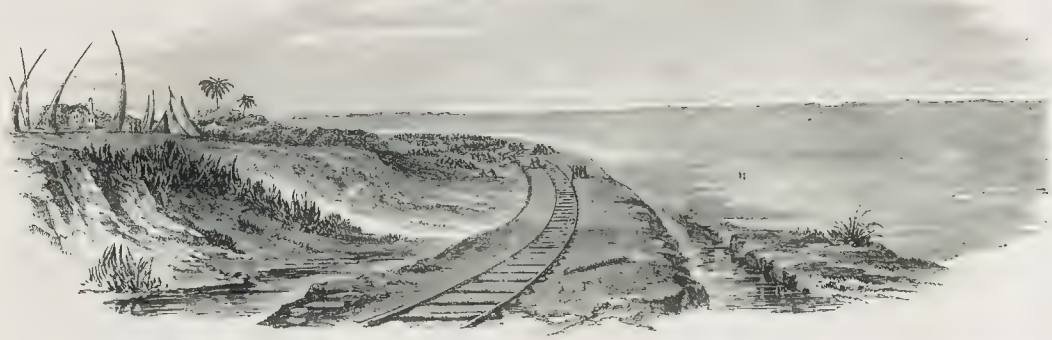
RAILWAY WORKS AT ALEXANDRIA.

The works of this important undertaking have progressed rapidly since we last noticed them. The earthwork of that portion of the line which lies between Alexandria and the Nile, upwards of sixty miles, is nearly finished; but before any part of the permanent way is laid, the engineers are anxious to test the durability of the embankments by the winter rains.

Twenty-four thousand men are now employed on the works, a very large number being engaged on the embankment close to Alexandria. The proprietor of some stores having demanded an exorbitant sum for a small piece of ground, through which the railway was to pass, the Pacha has determined to alter somewhat the line of road, which will be effected at a less cost than the sum the Viceroy himself had offered for the ground.

The Station for the Alexandrian terminus is to be erected close to the Mahmoudieh Canal, where the corn boats discharge their cargoes into extensive stores. Here, too, are numerous hydraulic cotton-presses, quantities of railway iron, timber, &c.; and a great number of labourers, camels, horses, mules, and donkeys are constantly employed, rendering the locality a very busy scene. The railway skirts Lake Mareotis for many miles, following the direction of the canal for some distance: it will, however, be much shorter than the old route by the canal and Nile, the distance being but about 120 miles, whereas the line by canal and Nile exceeds 160 miles

The accompanying Sketch is taken about two miles out of Alexandria, and shows a portion of the temporary rails in the foreground. On the right is seen Lake Mareotis, with its distant islands, and on the left, the Mahmoudieh Canal. A very large number of men were at work when our Artist visited the line: they work in gangs, under military surveillance; and several parties of cavalry are posted along the works, to prevent desertion. The tents of the soldiers present a very picturesque effect—guns, pistols, sabres, and Turkish saddles being ornamental accessories to the simple tents; and the troopers and their horses form highly artistic groups.



RAILWAY WORKS, AND TEMPORARY RAILS, NEAR ALEXANDRIA.

GARRON TOWER, COUNTY OF ANTRIM, THE SEAT OF THE MARCHIONESS OF LONDONDERRY.

THE TOWER OF GARRON.

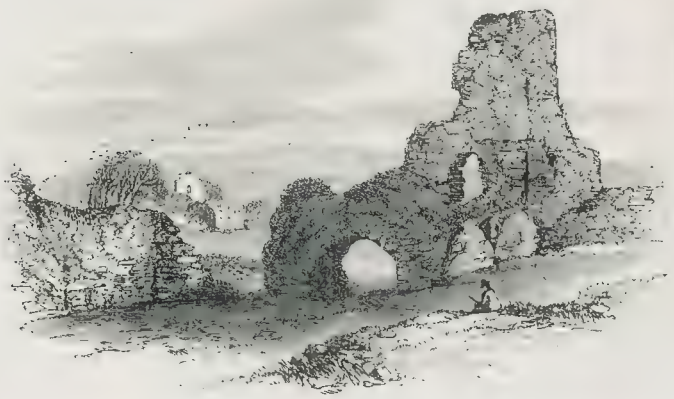
THIS magnificent mansion has been recently erected for the Marchioness of Londonderry as a summer residence, on her Ladyship's estate in the county of Antrim, to which property the Marchioness some years since succeeded in her own right as grand-daughter of the last Marquis of Antrim, her maternal ancestor. The Tower is situated on an elevated plateau at the summit of the cliff at Garron Point, which is known to tourists as one of the most majestic headlands on the Antrim coast, and the surrounding scenery is extremely wild and picturesque. The most remarkable objects on the circuitous northern road, which leads up to the Tower from the sea, are a large rock of limestone, called in Irish *Cleagh-a-Stockee*, in appearance somewhat like a man's head and neck, and looked upon by the country people with superstitious awe; and an enormous cut for the road, fully fifty feet deep, through the solid rock. The Tower is a castellated mansion, built after the style of the fifteenth century. The mansion forms three sides of a quadrangle, with a lofty octagonal tower on the east front, upon the verge of a precipice overhanging the sea, at a height of 270 feet. At the exiremity of the south wing, and at right angles with it, is the lofty arched entrance to the court-yard, through the warder's tower, fifty feet in height, with portcullis and machicolated battlements.

The principal entrance to the hall and staircase is through a lofty square embattled tower, leading through the armoury, which is filled with old armour and trophies, and is adorned with flags. On the first landing of the principal staircase is a large Gothic window, filled with stained glass, representing the Marchioness of Londonderry's illustrious paternal ancestor, Sir Harry Vane, who received the honour of knighthood on the battle-field at Poictiers. The grand baronial hall is of magnificent proportions, lately erected; and, with the principal drawing-room, commands a view of the sea and of the Scotch coast. The residue of the range to the south front is composed of the dining-hall and the Marchioness of Londonderry's private apartments, which look over the valley below, and the Irish coast. Along the verge of the precipice, overhanging the sea, is an embattled rampart, about 1200 feet in length, with embrasures and bastions, mounted with cannon, and stretching between the old English forts of Dunmall and Nappan, both of which are enclosed in the demesne. The background is filled by lofty mountains, forming a semicircular range from Dunmall to Nappan, leaving the Tower in the bosom of the amphitheatre below. The windows of the Tower command an extensive view of the Scottish islands and coasts, and of a portion of the Highlands, as well as of the headlands and bays of the coast of Antrim, as far as Island Magee on one side, and Tor Head on the other; while, on a clear night, no less than seven light-houses may be counted; and the projecting crags which stretch out here and there along the range, give the mountain, in the twilight, a striking resemblance to a regular fortification. A footway has been constructed at great expense from the lower road up to the tower on the face of the cliff, from which access is obtained to the inner court through the postern-gate in the battery. The stratification of the surrounding cliffs, which are composed of white limestone below, capped with dark basaltic rock, is characteristic of the peculiar formation of the Giant's Causeway, and of the northern coast of the county of Antrim, and exhibits some of the most interesting geological features to be found in any part of the world. On the face of the pure white limestone rock, at the point of its nearest connexion with Ireland, the Marchioness of Londonderry has had engraved some touching lines commemorative of Ireland's gratitude for England's sympathy during the unparalleled afflictions in 1846 and 1847.

ANTIQUARIAN EXCAVATIONS AT PEVENSEY.

OF these explorations, which we noticed *in limine* last week, we have now to record some gratifying results. The town of Pevensey (Peofnesea), dwindled to a village of some 200 inhabitants, is situated upon a headland, about half a mile from the sea, in the level called the Marsh of Pevensey, about ten miles to the west of Hastings and five from Eastbourne. It is surrounded by rich pastures and meadows, and is united to the village of West Ham by the fine remains of the great Roman castrum—the ancient Anderida, which, filled with Britons and Romano-Britons, held out for a long time against the Saxon invaders. It was the last great stronghold of the Britons after the Roman legions had been withdrawn. The old chroniclers represent the place as utterly ruined, and its site not to be traced; and, therefore, some have doubted Pevensey to be Anderida; but it is well known that ancient writers, living some centuries after the events they wrote about, were not always literally correct in their statements, and the destruction of the inhabitants of a place, and its consequent desolation, was quite enough to qualify the exaggerated terms in which the overthrow of Anderida is spoken of. Antiquaries, from existing remains, and from earlier historical evidence, seem now, with one or two exceptions, to concur in identifying the Roman castrum with the station Anderida, placed by the itineraries next to the west of the Portus Lemanis.

MAJOR HENDERSON, OF WESTERTON.—(SEE NEXT PAGE.)



REMAINS OF PEVENSEY CASTLE, SUSSEX.

The remote situation of these remains has hitherto almost concealed them even from the few antiquaries who have studied our national antiquities, and it has been left to Mr. Roach Smith and Mr. Mark Antony Lower to do justice to the extraordinary interest they possess, by instituting explorations, which have already given them publicity.

The castrum, which encloses some dozen acres, is by far the most perfect Roman building in this country. Nearly two-thirds of the great wall, 25 feet in height, and 9 in width, with huge solid towers, remains almost as perfect as ever, in defiance of time, of the ancient invaders, and of modern spoilers. On the side facing the sea, there is a bank of considerable elevation, looking over a second of about half the height. It was inferred that these natural advantages were considered by the Romans a sufficient substitute for stone walls, especially if, as it is supposed, the sea flowed up to this side of the fortress. The excavations have, however, shown that the outer bank is in fact nothing more than an overgrown wall, now buried many feet under the soil and herbage. On this side a small postern gate has been discovered, and one opposite to it in the north wall; the chief entrance is proved to have been the only one for carriages. The castrum includes a fine Norman castle, partly formed out of the Roman walls, the adaptation of which has been well developed by these researches.

We engrave a general View of the Ruins. It should be added that the above researches are carried on by subscriptions, unaided by the Society of Antiquaries, or any archæological association; although the investigation of this and other Roman stations will, it is reasonable to

suppose, enable our antiquaries to supply a lost chapter in the history of our country

We hear that Mr. Lower is preparing a detailed account of the discoveries made, for the next volume of the "Sussex Archæological Collections;" and that Mr. Roach Smith will follow with a report uniform with his "Report on the Excavations of Lymne," noticed in our Journal of last week.

PRESENTATION OF TESTIMONIALS TO MAJOR HENDERSON.

THE Bridge of Allan, situated at the southern base of the western termination of the Ochil Hills, has, for several years, held high rank among Scottish watering-places; for which distinction the public are principally indebted to the unfailing exertions of Major Henderson, who resides at Westerton, in the neighbourhood. In order to evince the sense entertained by the public of the Major's anxiety for the general welfare of the district in which he happily resides—his untiring energy towards the carrying out of every public object calculated to benefit the inhabitants of his vicinity—his unwearying efforts towards forwarding the physical and moral amenities of the village of Bridge of Allan—and his beneficent attention so constantly displayed towards the social comfort, the recreations, and the general conveniences of the numerous visitors who annually arrive at this rising watering-place, especially in the free admission of the public to his grounds—a large party of the inhabitants of the Bridge of Allan, at a public breakfast on the 30th ult., presented Major Henderson with a superb dinner service of silver plate. The presentation took place in the fine large hall of Philp's Royal Hotel. John Ross Mac Vicar, Esq., of the Union Bank, Stirling, occupied the chair; and Sir John Hay, Bart., and Ebenezer Burn, Esq., of Haugh, officiated as croupiers. After breakfast, during the playing of the "Queen's Anthem," the magnificent service of plate was placed on the table. Each article bears the arms of the Major, and the following inscription:—

To Major J. Henderson,
Of Westerton,
This Dinner Service is presented by One Hundred Friends,
In token of their estimation of his devotedness towards the public welfare,
And comfort of Visitors at Bridge of Allan.
October, 1852.

The plate was then presented by Mr. Mac Vicar, and Major Henderson returned thanks.

Dr Paterson, surgeon, next presented to the gallant Major, from the ladies of Bridge of Allan, a separate testimonial of their regard, viz. a Grand Pianoforte, value 100 guineas; for which elegant gift the Major returned thanks to the fair donors. Several toasts were then drunk, some complimentary verses were recited in honour of the Major, and towards noon the party broke up.

We here engraved a Portrait of the public-spirited Major, who is so well entitled to the title of "Superior of the village." He is represented in the costume of the Caledonian Curling Club; the Portrait being sketched from Mr. Lee's Royal Caledonian Club picture.

Major Henderson is second son of the late Mr. Alexander, of Powis, in the county of Stirling; and brother of Sir James Edward Alexander, the distinguished traveller. He has resided on his estate of Westerton for seven or eight years, since he left the army, with which he was latterly connected as Major in the Rifle Brigade. He is at present a Major in the Stirlingshire Militia, and Principal of the Ancient Fraternity of Chapmen of the shires of Stirling and Clackmannan. The Major has greatly distinguished himself as improver of Bridge of Allan, the chief of Scottish Spas, which he has been the means of rearing, in a few years, from the condition of a little rustic village to be a "city of villas," visited annually by upwards of thirty thousand persons.

A very interesting account of this watering-place, and the Airthrey Spa, has recently appeared under the title of "A Week at Bridge Allan," &c., by Charles Roger, F.S.A., Scotland.

THE THEATRES, &c.

HAYMARKET.

The comedy of "Richelieu in Love," after an eight years' abeyance, has received the Chamberlain's license, and was performed on Saturday, reduced to three acts. Mr. Webster has placed it superbly on the stage, and sustains himself the Cardinal hero. The character, as drawn by the present dramatist, has not the saliency and effect of Sir B. Lytton's portraiture; and becomes the dupe of a woman, *Anne of Austria*, Queen of France (Mrs. Stirling). This part is written with great care and knowledge of the sex; and, as acted, is the life and spirit of the piece. An Englishman, at a masqued ball, forces his attentions on her Majesty, not being aware that she is the Queen; while another makes the acquaintance of the *Princess Henrietta*, whose love he actually wins. *Richelieu* misleads the first-named gallant into the belief that the lady with whom he has been conversing was the *Countess le Dregon* (Mrs Selby); and he accordingly makes an assignation with the old dame, who acts as spy to *Louis XIII.* on his consort. This assignation the Queen and Princess contrive to be present, that they may compromise the character of the 500 watchful duenna. The whole party are interrupted by the wily Cardinal, who sends the Englishmen to the Bastile; and, presuming on her apparent guilt, makes love to the Queen. Great is the indignation of the latter; but she is clearly within the Cardinal's power, who has the King's entire confidence, and is especially empowered besides, to investigate the subject of her Majesty's imputed levity. The Queen is accordingly compelled to temporize in order to obtain the release of the two Englishmen. This done, she invites them, and also the Cardinal, to one and the same supper, where, by their surprise in discovering that she is the Queen, she proves her own innocence to the Cardinal. *Louis* is brought to the spot by *Le Dregon*, and is completely mystified by the presence of the Cardinal, who gives to the whole affair the appearance of a stroke of state policy to bring about a Royal marriage, the two Englishmen being none other than *Villiers Duke of Buckingham*, and *Prince Charles*, the affianced of the *Princess Henrietta*. The appointments of this drama were exceedingly rich. Mr. Webster having evidently spared no expense in its getting up. On the name of the writer being demanded, he declared his ignorance beyond the fact that it was by the author of "Whitefriars." The composition, though witty, is elaborate and artificial; and the style more in form than in substance. The acting of Mrs. Stirling is, however, we think, likely to prove attractive; though we cannot congratulate the management on the success of the other characters. The piece was loudly applauded

A new farce by Mr. M. Morton, entitled "A Capital Match," was produced with perfect success. The hero is Mr Keeley, who, as *Mr Sunnyside*, is engaged in procuring a husband for *Rosamond* (Miss Rose Bennett), the niece of *Mrs. Singleton* (Mrs. Leigh Murray); the latter not consenting to be married before the former. It turns out that *Rosamond* is, in fact, already married, and that *Mrs. Singleton* had fixed her affections on *Captain Tempest, R.N.* (Mr. Howe). Between them poor *Sunnyside* is made a sad scapegoat; but, as the difficulties appertain more to the dialogue than the action, it is not possible to describe them. That dialogue, however, is most humorous; and the house was kept in a constant roar. The piece entirely depended on Mr. Keeley, who performed with uncommon spirit.

ASTLEY'S.

A very magnificent spectacle, under the title of "The Bride of Golconda, or the Genius of the Ring," was produced on Wednesday. The drama, which is written by Mr Robert St. Clair Jones, has more than ordinary claims to attention. The moral is at least distinctly made out. The monarch *Amurath*, disregarding the admonition of his magic ring, transgresses the rule of right, by attempting the murder of *Selima*, his bride, and becomes transformed into a monster. In his new shape he is hunted by his own huntsman, and, being caught, is placed for exhibition in his own menagerie. The eyes of love, however, penetrate through this hideous disguise, and he is recognised by *Selima*. The benevolent genius, accordingly, restores him to his proper form; and ultimately he gains a victory over the traitor *Hassan*, and is re-united to his faithful bride. The scenes in this drama are numerous and grand; the groupings of men, horses, and elephants, are brilliant and picturesque. Indeed, on the whole, it may be pronounced one of the most gorgeous of Mr. Batty's hippo-dramatic spectacles, and draws largely, we should think, on the resources of the theatre.

SURREY.

"Uncle Tom's Cabin" has found a place on this stage, as on others, and is here acted with a power and effect which is likely to make the subject highly popular on the Surrey side of the water. The principal characters are very efficiently performed *George Harris* by Mr. Creswick, and his wife by Miss Clara Wynne. When we mention that Mr. Mead was *Legree*, and Miss Lebatt *Topsy*, the playgoer will conceive that the representation must have been at least satisfactory. Exception must, however, be taken to the performances of Mr. Elmore and Mr. J. Davis, as *Haley* and the *Kentucky Drover*. Both were coarse and noisy. Nevertheless, on the whole the piece achieved extraordinary success The house was crowded.

MUSIC.

SACRED HARMONIC SOCIETY.

The commencement of the London Musical Season may be always dated from the opening of Exeter Hall, for the gigantic performances of the now world-famed Sacred Harmonic Society. This interesting event took place last night under very favourable circumstances. In the first place, the Institution, for such it is, began its twenty-first campaign; secondly, the decorations of the splendid hall were first viewed by the general public; and, thirdly, divers alterations and improvements had been made in the organ, and in the construction of the orchestra. Exeter Hall was built in 1829, mainly through the instrumentality of Henry Pownall, Esq., the chairman of the Middlesex Magistrates. Amateur Festivals took place in 1834 and 1836; and it was in the latter year the Sacred Harmonic Society gave their first concert in the new edifice. In 1840, the society erected the organ. In 1850, various changes were effected in the interior of the hall, under the able direction of Mr. S. W. Daukes; the flat plaster ceiling was removed, a wood one being substituted many feet higher than the old ceiling; the organ was thrown back for a considerable space, and the unsightly square pillars supporting the great gallery were removed. There was but one opinion as to the gain in hearing and seeing, and ventilation, by these alterations. There only remained the decoration, and the removal of some defects in the lighting, and of an ugly funnel-shaped groin at the east end of the building, and to improve the mode of egress and ingress. With the exception of the last-mentioned drawback, the Exeter Hall proprietory has achieved everything that could be desired, but the approaches must sooner or later occupy its serious attention, as one grand entrance does not suffice for such a vast building

We subjoin the official report of the new decorations of the ceiling:—

The boarding which hitherto formed the ceiling has been canvassed and papered over its entire surface, and painted in all, forming the ground-work of the new design. This is composed of bands of fret-work, in vermilion, crowning the ceiling and each other diagonally, and uniting with horizontal ones on the ends and sides. The fret is outlined round with gold lines, and at each intersection an ornamental boss has been painted. The panels formed by the fret work are again subdivided, having in their centres white ornaments on a blue ground, surrounded by a white band; the spaces between this band and the fret are filled in with different shades of cream colour, separated from each other by dark broad lines. Between the lower fret and the cornice are horizontal panels of white, ornamented on a blue ground, and edged with white. These panels are enclosed by dark bands of colour (with a lighter shade between), running the whole length and breadth of the ceiling, and terminating at each corner with a flowing ornament in vermilion and blue. The ventilators have been made an ornamental feature. They consist of an inner and outer circle, connected by bars radiating from the centre; the panels thus formed are filled in perforated zinc, of pattern design, and gilt. The enrichments to the large cornice, with its trusses, the door and window dressings, are picked out in vermilion and blue, and the spaces between the trusses contain a white ornament, of a musical character, on a red ground. The general tint of the walls is a deep fawn colour, some shades darker than the ceiling. The caps to the pilasters are dead white, the pilasters themselves Sienna marble, the plain bases white and the dados red granite. The raised panels, with ornaments at their angles, are drawn under string courses to the windows and between the pilasters. The entire painting and decorating has been executed by Mr. H. H. Piper, of Eastcheap, from the designs, and under the superintendance of, the surveyor to the Hall, Mr. A. W. Maberly, of Buckingham-street, Adelphi, assisted by Mr. Gailing, jun. In the ceiling, as altered in 1850, a funnel-shaped groin was introduced at the east end of the building, in alter sufficient height for the organ, which was placed unusually high, from the circumstance of the platform extending over some starlights abutting upon a neighbouring church. This difficulty has now been overcome; the platform and the organ have been much lowered, and the organ brought forward, admitting the removal of the groin spoken of, and likewise securing more depth and height for the pipes of the organ to speak; and thus, for the first time, giving the builder an opportunity for properly developing the powers of the instrument. These alterations are the suggestions of Mr Costa, the Conductor of the Sacred Harmonic Society; and it is expected great additional improvement will result therefrom. One great point gained will be from the organ being placed more nearly on a level with the chorus: they will thereby receive more support, and be less likely to fall in pitch during occasional portions of the performance.

In our next week's notice we shall report as to the performance of Mr. Brownsmith yesterday morning, and as to the execution of Mendelssohn's "Christus" and Spohr's "Last Judgment;" together with the selection from "Samson," performed in honour of the late Duke of Wellington.

WINDSOR AND ETON AMATEUR CHORAL SOCIETY.—The report at the annual meeting gives a very gratifying account of the progress of the so sixty, of which Prince Albert is the patron. Her Majesty has given a donation of £10, and the Duke of Cambridge. The Hon. and Rev. Lord Wrothesley Russell is the vice-patron, and the Rev. S. F. Marshall is the president. Dr. G. J. Elvey is the musical director.

MUSICAL EVENTS.—Signor Schira, the composer, has gone to Turin, to produce a new opera.——Master Rendle, the young violinist, who had the honour of playing before her Majesty, at Buckingham Palace, has given a concert in Exeter, with success. Miss Rendle, his sister, made her *début*, as a vocalist, on the occasion.——Miss Wheatley, the pianiste, had a concert at Willis's Rooms last Tuesday night, assisted by Miss Poole, Miss Messent, Mr. F. Bodda, Mr. G. Case (concertina), and Mr. Wheatley (conductor).——The proposition of the Victoria Vocal and Instrumental Musical Society, to be founded by subscriptions of £5 each, has been issued; it is proposed that the concerts shall be sacred and secular, and the members only to be the performers. ——M. Jullien's Promenade Concerts will be commenced at Drury-lane Theatre next Monday; he has prepared some novelties for his month's campaign, after which he departs for a lengthened tour in the United States.——The Cecilian Society performed, on Thursday, Mr. Perry's oratorio "Jerusalem."——The London Sacred Harmonic Society sings its season on the 15th.

FOREIGN MUSICAL NEWS.—The performance of Berlioz's "Requiem" at the Church of St. Eustache, in Paris, was under the direction of the composer, who had an orchestra of 550 executants, vocal and instrumental, including therein the most celebrated singers and players in the French capital. The effect produced on the minds of the immense audience filling the church may be conceived when "Tuba mirum" quite electrified the assemblage. Meyerbeer was present. But one opinion has been expressed by the critics as regards the "Requiem:" it is Berlioz's masterpiece; in which the effects of instrumentation are beyond anything he has attempted in art.——The opening of the Italian Opera in Paris is fixed for the 15th inst., with Rossini's "Otello." Mdlle. Cruvelli will be the *prima donna*.——A new ballet, "Orfa," the music by Adolphe Adam, is in preparation for Cerito at the Grand Opera.——Ferdinand Hiller, the composer and pianist, has decided to return to Cologne, to resume his functions as director of the Conservatoire and of the concerts Lisart, a well-known manager in Italy, died recently at Florence.——Schwenke, a popular composer and accompanyist of Germany, died in Hamburg ——Madame Julienne, of the Royal Italian Opera of London, is now the star of the Barcelona Italian Opera-house; Lucchesi is the tenor.——The New York papers contain a project of a gigantic combination, to give the Italian Opera in the principal cities of the United States as in London. Sontag and Alboni are giving their respective concerts with success.

HER MAJESTY'S THEATRE ASSOCIATION.—A prospectus has just reached us setting forth the shareholders' privileges: a proprietor of 50 shares will be entitled to a personal *entrée* for all representations; one of 100 shares, to a reserved seat in the pit for all representations; one of 150 shares, to a pit box for two representations a week, the particular days being selected by the holder or in his preliminary notice; and a proprietor of 200 shares, to a pit stall for all representations. Mere proprietors may each season transfer their respective privileges of admission to members and a right of admission to a stall or reserved seat may be transferred nightly by voucher from the proprietor or his nominee; the transferee paying for each representation half the usual price of admission. These privileges are independent of the dividend receivable by the proprietor on his shares.

THE NEW YORK CRYSTAL PALACE.—The preparations for the erection of the Crystal Palace at New York, which is intended to be opened on the 1st of May next, are in such a state of forwardness, that there is no doubt of the whole building being completed in sufficient time for the reception of everything sent for exhibition by the contributors from Europe and the United States of America.

ELECTRIC TELEGRAPH.—The Electric Telegraph Company have just opened sixteen new stations—four in the west of England, seven in the north, and five in the north-east of England.

NAVAL AND MILITARY INTELLIGENCE.

THE CHANNEL SQUADRON.—The ships composing the squadron under the command of Rear-Admiral Corry, are still in the Sound. The gallant Admiral has taken up his residence at Moreshead's Royal Hotel. It is, therefore, inferred that the departure of the fleet will not be so soon as anticipated.

In the event of Rear-Admiral the Hon. Sir Fleetwood Pellew accepting a command, either his nephew, Captain Halsted, of the *Dauntless*, or Captain Fitzgerald, it is said, will be his flag-captain.

The conversion of the *Hannibal*, 90, at Deptford, into a screw-ship, is being prosecuted with, and from the number of men employed on her it would appear that she is to be completed without the least delay. She is to be lengthened about 10 feet abaft. Some of the stern timbers have already been removed

This being the customary period for effecting the reliefs of regiments serving in the Mediterranean, arrangements have been made to send the service companies of the 31st and 97th, which proceed to Malta to replace the 76th, which proceed to Nova Scotia to replace the 97th, which is to return home. The 48th and 71st Regiments proceed to Corfu to replace the 49th and 92d, which proceed to Gibraltar to replace the 44th, which proceeds to Canada, so as to bring the 20th Regt home. The 2d battalion 1st Foot proceeds from Cork to the Ionian Islands to replace the 30th Regiment, which proceeds to Gibraltar to replace the 56th, which proceeds to the West Indies to replace the 34th, which proceeds to Nova Scotia to replace the 42d, to come home. The 86th Regiment proceeds to Mauritius to replace the 2d battalion 12th Foot, sent from thence to the Cape of Good Hope.

The steamer *Great Britain* maintains her reputation nobly. On the 6th of September she was spoken off Ascension Island, having been out only sixteen days. At the same rate of speed, she might reach the Cape in about three weeks.

The screw steamer *Bengal*, built at Glasgow for the Peninsular and Oriental Steam Navigation Company, was launched on Saturday. The *Bengal* is the largest vessel ever built in Glasgow, being about ten feet longer than the *Great Britain*, although possessing neither the depth nor breadth of beam of that enormous steam-ship. The following are the principal dimensions of the *Bengal*:—Length on deck, 310 feet; length from fluvre-head to taffrail, 330 feet; length of beam, 39½; depth, 28 feet; tonnage, 3300 tons; engines, 470-horse power. The screw of the *Bengal* is to be 14 feet diameter. Her cabins are all to be erected on the main deck, to suit the Indian traffic; and we are informed that the Peninsular and Oriental Company intend to run her in the Indian Seas.

The Australian mail steam-ship *Melbourne* put into Lisbon on the 24th ult., leaky and dismasted. Several of her passengers refused to proceed in this unseaworthy vessel. The *Melbourne* left Plymouth on the 16th ult. All went well till the night of the 19th, when, in rather a high sea and fresh breeze, the ship began to roll very much, and all the topmasts were suddenly lost, and then the jib boom was carried away, nothing but the lower masts and the three lower mast-yard yards. Every exertion was instantly made to clear the wreck by cutting away, the ship rolling heavily and "laying" very much on one side. About the middle of the day the ship was got clear, but unfortunately the whole mass of rigging became entangled with the screw propeller, and the engines, which up to that time had performed their work, suddenly stopped. The situation of the ship now became very critical, as the wind blew fast to the stern of the ship, at times beat against the rudder, and rendered it almost impossible to steer. Twelve hours elapsed before the screw could be raised and disentangled from the floating wreck of topmasts and rigging, when the engines were then again set in motion, and the voyage continued. On the following day a leak was discovered in the mail-room, and the mail bags were brought on deck thoroughly saturated with wet. At the instance of the mail-agent, and in consequence of the leak, a course was laid for Lisbon. After some stay in the Tagus, the mail-agent required the ship to proceed again to sea for Australia without being docked, as he was affirmed the leak was stopped. The commander, however, refused to do so, and a survey was held in the presence of Lloyd's agent, the result of which was that the ship would be docked, the Portuguese authorities having placed all the resources of their arsenal at the disposal of the captain of the *Melbourne*. The *Melbourne* appeared totally unfit for the voyage to Australia, and devoid of healthy accommodation for the 253 passengers and crew who were on board.

NATIONAL SPORTS.

The steeple-chase and flat meetings next week embrace—Edgeware, on Monday; Liverpool, on the two following days; Cowbridge, on Wednesday, Thursday, and Friday; and Northallerton—confined to the "hunters"—on Tuesday and Friday.

COURSING FIXTURES.—Monday—Bishopwearmouth, Birkby, and Honiton; Tuesday Malton, Newcastle, and Cardington; Wednesday—Speithorne; and Thursday—Whitchurch and Evesleigh.

TATTERSALL'S.

MONDAY.—A very heavy, and a bad betting on the Newmarket Races prevented any regular business on future events; nothing, in fact, was done on the Epsom Handicap; and the only transactions on the Derby were 700 to 50 and 1200 to 100 against West Australian; and 3000 to 100 against Pharoid

EPSOM AUTUMN MEETING THURSDAY.

THE FADDOCK STAKES.—Bishop, 1. Lady-in-Waiting, 2.
THE BADDINGTON STAKES.—Tooloki, 1. Bonnie Maid, 2.
THE EPSOM AUTUMN HANDICAP.—Candlewick, 1. Dulcet, 2.
SELLING STAKES. Madame Landseni, 1. Bordeaux, 2.
BENTINCK PLATE.—Alegro, 1. Scarf, 2.

FRIDAY.

THE DURDANS STAKES.—May Day, 1. La Malheureuse, 2.
THE HURDLE RACE. Tomboy, 1. Harriott, 2.
THE SCRAMBLE STEEPLECHASE.—Nudley, 1. La Chonette, 2.
THE AUTUMN HANDICAP STEEPLECHASE.—Victress, 1. The Screw, 2.

SEAHLES, THE PEDESTRIAN.—On Monday morning last, James Searles, the pedestrian champion of England, completed his herculean task of walking 2000 miles in 2000 consecutive half-hours. Searles is a man of small stature, but of great physical and muscular strength. His last performance has considerably reduced him, he having weighed 11 stone 11lb. before he entered upon it, and, after its completion, he was reduced to 9 stone.

TESTIMONIAL TO ALDERMAN SIDNEY.—Last week (at page 355) we noticed the beautiful *bordure* inclosing the vote of thanks was design and executed by Mrs. Dowbiggin, Upper Charlotte-street, Fitzroy-square. The lady has, for several years past executed such works of the greatest merit for the Corporation of the City of London; amongst whom may be remembered addresses to the King of Prussia and Louis Napoleon; and recently, resolutions of thanks to the President of France and the municipality of Paris.

SALE OF COCHIN-CHINA FOWLS.—Among poultry fanciers, and those who take an interest in the improvement of poultry, there has of late arisen a Cochin-China mania. Among the sales of this rare variety is Mr. Sturgeon, of Grays, Essex, the sale of whose surplus early chickens, on Friday last, endeared in the Baker-street Bazaar a very large attendance of bidders. Among the highest prices were—1 cock and 1 hen, £12 10s.; 1 duck, £10 10s.; 1 pullet, £11; and several other pullets, varying from £5 to £7 10s. The lowest prices paid were 20s. and 30s., but of these there were few instances. The amount realised, above £600 for 160 fowls gives an average of rather more than £3 10s. for each fowl.

MONETARY TRANSACTIONS OF THE WEEK.

(From our City Correspondent.)

The extraordinary increase in the note circulation of the United Kingdom, as shown in our last week's impression, is one of the greatest proofs that could be adduced of the rapid development of the trade and commerce of the country. It has been asserted that the increase is wholly to be attributed to the mineral discoveries in Australia and California; but we must bear in mind that money, to be profitably employed, must have a rapid circulation—the culminating point of general prosperity. Four and twenty millions of notes, be it observed, will now certainly do the work of twenty millions in the olden times, from the circumstance just alluded to. The question is, where is this prosperity to stop? Private appearances seem to indicate a considerable improvement in the present state of things, and we have no hesitation in saying that Australia has yet to open markets for our manufactures to an extent at present scarcely to be anticipated.

Since our last, the transactions in the National Securities have not been to any large; nevertheless prices have been on the advance. Monday was a close holiday in the Stock Exchange On Tuesday and Wednesday the Three per Cent. Consols were firm, at 100¾ ¾. The market on Thursday was steady. Bank Stock marked 223¾; the Three per Cent. Reduced were 99¾ ¾; Three per Cent. Consols, 100¾ ¾; New Three-and-a-Quarters, 99⅝ ⅞; and Annuities for Account, 100¾. Long Annuities were 6 7-16 ⅜; India Stock, 275. India Bonds, 85s. to 87s.; and Exchequer Bills, 75s. to 78s. premium. South Sea New Annuities were done at 100.

Notice has been given that all bills of exchange payable at Whitehall on the day fixed for the funeral of the Duke of Wellington, must be presented two days before the proceeding day

Another issue of Canada Six per Cent. Bonds, to the extent of £200,000, has been made. Another issue will take place, to the extent of £250,000, to the Ontario, Simcoe, and Huron Railway. The bonds—bearing under official engagement to assist these companies who have 50 per cent. of their capital paid up—will be negotiated by Messrs. Baring.

For several weeks past an enormous speculative business has been transacted in cotton, and which, at one time, threatened to take off the whole of the stock in this country. Notwithstanding the unusually low value of money, and the ease with which discounts are obtained, the demand has fallen off, and prices have given way.

The imports of bullion this week have been again extensive, 360,000 dollars having arrived from New York, and 1,646,399 dollars from Mexico, the West Indies, &c.: included in the latter amount are 20,000 dollars in repayment of money advanced by Messrs Baring, and 8676 dollars for the Mexican dividends.

It is asserted that a loan of £600 000 will be applied for here, on account of the "Financial Union Bank of Paris," that the capital of the "Great Paris Brewing Company" will be raised in the Stock Exchange, and that the interest on the French Funds will shortly be reduced. On the whole, Foreign Bonds have commanded more attention, at slightly enhanced rates. The Swedish Loan, however, has been heavy, at ⅛ dis.; and Turkish Scrip has sold at 3 to 3 ¼ pm. The latter security having been completely repudiated by the Sultan, those subscribers to the loan will receive back the money already advanced by them, with a bonus of 7½ per cent.; hence, the Scrip has continued to mark a premium.

The miscellaneous Share business has included dealings in the shares of the Bank of Australia, at 60¾ to 61, Bank of British North America, 57½ to 57⅝; English, Scottish, and Australian Bank, 44¾ to 45; London Chartered Bank of Australia, 3⅝ to 3¾; Union Bank of Australia, 52; Peninsula and Oriental Steam, 87; Ditto, New, 43.

On Thursday, Brazilian Bonds were done at 101; Ditto, New, 101; Buenos Ayres, 6 per Cents, 81¾ to 80¾; Chilian 3 per Cents, 78; Mexican 3 per Cents, 24¾; Russian 5 per Cents, 118¾; Ditto, 4½ per Cents, 105¾; Spanish 3 per Cents, 31½; Ditto, New, Deferred, 19¾; Ditto, Passive, 6¾; Spanish Committee's Certificates, 3⅝ per cent.; Turkish Loan, 3¾ to 3¾ prem.; Belgian 4½ per Cents, 95; Dutch 2½ per Cents, 64¾; and Dutch 4 per Cents, 96¾. Bargains have been concluded in Danish 5 per Cents at 103¾; Ecuador Bonds, 5; Grand Duchy of Hesse Darmstadt Deferred, 62¾; Portuguese 4 per Cents, 38¾; and Sardinian 5 per Cents, 98.

There have been full average dealings in Railway shares. Foreign have continued to command unusually high prices, and were much higher, as a class, for the week's business. Caledonian, Eastern Counties, Great Northern, Great Western, Lancashire and Yorkshire, Midland, North Western, South Eastern, and South Western, have been considerably supported. Floating purchases of wheat were quite as dear. We had an active inquiry for all kinds of barley. The supply of white wheats, and really fine malting parcels were the item higher. No change took place in the value of malt. The show of oats was tolerably good. The trade was inactive at late currencies. Beans were 6d per qr. cheaper to sell. In the value of flour no change took place.

ARRIVALS.—English wheat, 3520 qrs.; barley, 1966; oats, 950; flour, 30 sacks. Irish: oats, 8893. Foreign: wheat, 20,790; barley, 3910; oats, 7026; flour 217 sacks, 10 770 barrels.

Liverpool.—Wheat, Essex and Kent, 5s 4d to 5s 8d; Scotch, 5s 4d to 5s 8d; Irish, 5s 4d to 5s 8d; barley, 2s 6d to 3s 8d; oats, Yorkshire and Lincolnshire, 2s 4d to 2s 6d; Scotch and Irish, 2s 4d to 2s 6d; beans, 4s 6d to 4s 8d; white peas, 4s 6d to 4s 8d; flour, 30s to 32s per barrel.

Wheat Market.—The demand for all sorts continues very inactive, and prices are almost nominal. Oats are 3s 6d for Scotch, and 3s 3d for Irish. Barley is 3s 3d. Shocking and Yorkshire, 31s to 32s per 496 lb. *Foreign:* American flour, 24s; per barrel; French, 37s to 38s per sack.

Tea Sale Market.—The demand for all goods continues very inactive, and prices are almost nominal. Oats are 3s 6d for Scotch, and 3s 3d for Irish.

Wheat.—English new, 30s to 34s per qr.; old, 36s to 40s. Maize, 24s to 25s. Oats, 16s to 18s. Oatmeal, 16s to 17s per load. Barley, 18s to 20s per qr. Beans, 24s to 26s per qr. Peas, 24s to 26s per qr. Flour, 30s to 32s per barrel.

Wheat.—The prices of wheaten bread in the metropolis are from 6½d to 7d for household ditto, 5d to 6d; fine ditto, 7½d to 8d.

Imperial Gazette, Thursday.—Wheat, 34s 9d; barley, 19s 3d; oats, 17s 6d; rye, 25s 6d; beans, 24s 6d; peas, 24s 6d.

Mark Lane Average.—Wheat, 36s 9d; barley, 22s 9d; oats, 17s 8d; rye, 28s 8d; beans 24s 6d; peas 24s 6d.

Duties.—Wheat, is; barley, 1s; oats, 1s; rye, 1s; beans, 1s; peas, 1s.

Tea.—The demand for common sorts has improved, and prices are from 2d to 3d per lb higher; but in most other kinds of tea the average business is doing at fully late rates. Up to the quarter day duty was paid on 35,500,000 lbs, against 34,700,000 lbs in 1851.

Sugar.—The market continues steady, and the sales of the week are considerable. Good refining qualities of white Bengal are sold at from 41s to 42s; fine to very fine, 43s to 43s; soft brown, 38s to 39s; middling yellow Manilla, 38s to 38s 6d; good to fine ditto, 39s to 40s; fine to fine ordinary Retined goods are steady, at from 45s to 45s 6d for low brown, and 46s to 48s for fine. The sales of sub-varieties to the 30th ult were 2 837 cwts, against 4 494 cwts in 1851.

Coffee.—8 vessel parcels of good ordinary native Ceylon have changed hands, at from 37s to 37s 6d per cwt. All other kinds of coffee are dull of sale.

Rice.—This article is quite as dear as last week, and fine white Bengal is worth 11s 6d to 12s per cwt.

Provisions.—The demand for Irish butter is very inactive, but we have no change to notice in prices. Foreign qualities move off slowly, but Dutch are firm, and quite as dear. Bacon has given way 2s per cwt. Lord steady. In other kinds of provisions very little doing. Hops are dull, and the demand continues inactive. In some instances buyers have been purchasing for first delivery at good prices.

Mark Lane.—Kent Goldings, 120s to 140s; Weald of Kent, 78s to 86s, Ditto, choice, 90s to 96s; Farnhams, 100s to 120s, Ditto, choice, 130s to 140s; Country ditto, 9s to 10s; Ditto, choice, 10s to 12s per cwt.

Coals (Friday.)—Gosforth, 7s; Belmont, 17s 6d; Johnson 16s 6d; Braddyll, 17s 9d; Hetton 16s 9d; Russell, 16s 6d; Whitworth 16s 3d; Hetton s.s.s., 16s 3d per ton.

Smithfield (Friday).—Although the supply of beasts on sale in to-day's market was very moderate as to number and extremely defective in quality, the demand for all breeds ruled heavy, and Monday's prices were with difficulty supported. We were fairly supplied with sheep, but the best Scotches were reserved, as by that time the Christmas orders, which was comparatively small, moved off slowly, but we have no alteration to report in the quotations. The very few supplies of calves on sale were readily cleared off at from 4½d to 5½d per 8lbs, including their small offal.

Per 8lb by the carcase.—Inferior beef, 2s 6d to 3s 4d; middling ditto, 3s 6d to 3s 8d; prime large ditto, 3s 10d to 4s 0d; prime small ditto, 4s 2d to 4s 4d; large coarse mutton, 3s 4d to 3s 6d; inferior mutton 3s 8d to 3s 0d; middling ditto, 3s 2d to 3s 6d; prime ditto, 3s 8d to 4s 0d; veal, 3s 8d to 4s 0d; prime small ditto, 4s 2d to 4s 4d; large pork, 3s 10d to 4s 0d; small ditto, 4s 2d to 4s 4d.

Newgate and Leadenhall (Friday).—The general demand ruled heavy, yet prices were not quotably lower.

Per 8lb by the carcase.—Inferior beef, 2s 6d to 3s 4d; middling ditto, 3s 6d to 3s 8d; prime large ditto, 3s 10d to 4s 0d; prime small ditto, 4s 2d to 4s 4d; large pork, 3s 6d to 3s 8d; inferior mutton 3s 8d to 3s 0d; middling ditto, 3s 2d to 3s 6d; prime ditto, 3s 8d to 4s 0d; veal, 3s 8d to 4s 0d; small pork, 4s 8d to 4s 0d.

THE LONDON GAZETTE.

TUESDAY, NOV. 2

BANKRUPTS.

E. TIPPE, jun, Calcutta, and Hereford-buildings Fenchurch-street. C. OLLIVIER, New Bond-street, music-seller. R. WARNER, Nelson place, City-road, coach maker. B. WARD, Tottenham-court-road, straw-bonnet manufacturer. F. LOADER, Rockhampstead, Hertfordshire, tailor. J. RICKFORD, Brighton silversmith. R. ATMORE, Gaywood, Norfolk, miller. A. and E. NEWBOLD, Birmingham, drapers. J. G. MENON, Birmingham, stationer. C. W. CROSS, Burn ngham, surgeon. A. MITCHELL, Cardiff Glamorganshire, draper. J. SCOTCH SEQUESTRATIONS.

TODD and CO. Glasgow and Leith, commission merchants. D SLOAN, Thornhill, Kennowshire, cotton-spinner. GODALL and SANDERSON, Edinburgh, builders.

BIRTHS.

On the 28th ult, in Belgrave-avenue, Dublin, the Lady of James Douglas Wilson, Esq, D A C G, of a son. —On Sunday last, at Bellevue, Aldworth Vale, Lynton, the wife of Wm Drury Chidson, Esq, of a daughter.—On the 29th ult, at Ross, the wife of the Rev Charles G Bagwell, of a daughter.—On the 30th ult, at Ballinderry, Lough Neagh, the wife of the Rev William Burnett, of a daugh er.—On the 29th ult, at Ealing, Mids, the wife of Samuel Lever, Esq, of a daughter, Elizabeth.—On the 31st ult, at Canterbury, the wife of the Rev Francis Edward Tuke, of a son.—On the 31st ult, at 9, Mansfield-street, Mrs Charles Manners Lushington, of a daughter.

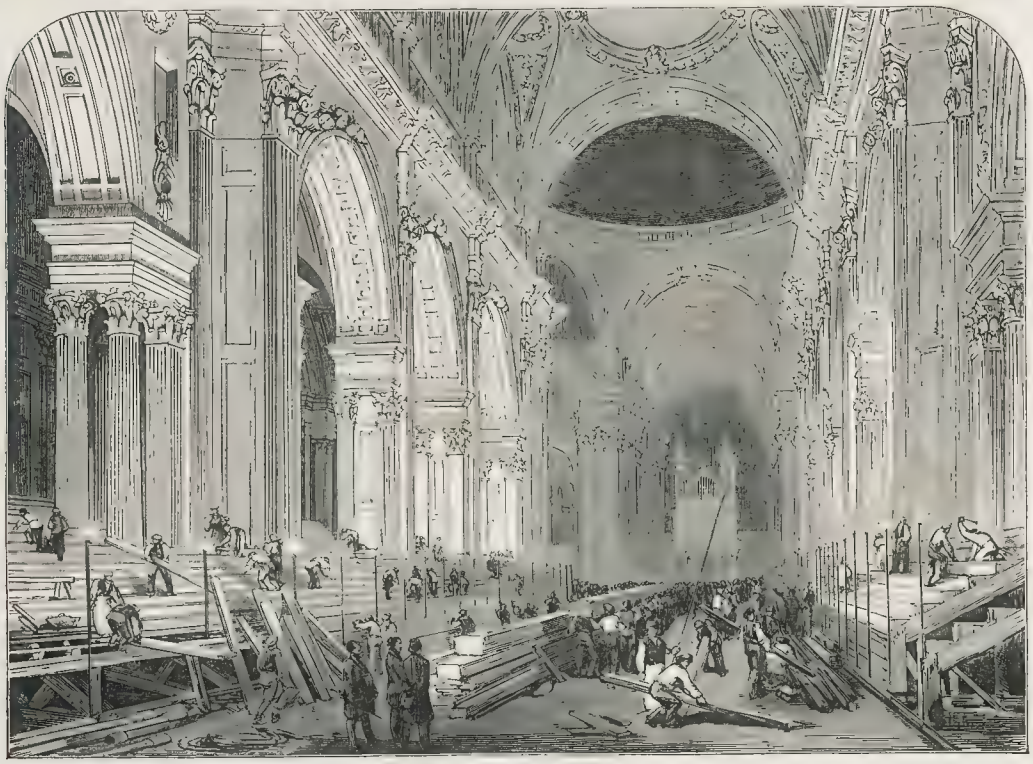
MARRIAGES.

On the 28th ult, at Marsham Church, by the Rev Edward Wright, Captain the Hon P Oliphant Murray youngest son of the late, and brother to the present Lord Elibank, Dora Hall, Pendlebiire, to Harriet Phillips, youngest daughter of J. Phillips, Esq, Bele-bridge Villa, near Stratton, Cornwall.—On the 29th ult, at the British Legation, Frankfort-on-the-Maine, Thomas Davidson, Esq M D, of Paris, to Jeanette Augusta, youngest daughter of Colonel Aschenbrenner.—On the 28 h ult, at Frankfield, Surrey, the Bishop of North Leone to Anne Adams, fourth daughter of the Rev S Hoare, vicar of Frankfield.—On the 2d inst, at St Marylebone Church, Thomas Dunn, Esq, of York gate, Regent's Park, to Louisa, the younger daughter of the Rev John Lansing Turner, Chaplain of Addenbrooke's Hospital, and lecturer at St Giles's Cripplegate.

DEATHS.

On the 28th ult, at Blackheath, aged 88 Mary Amelia, the beloved wife of John Phillips, F. Queen-street-place, Upper Thames-street and only surviving daughter of the late John Bevan, of Hadlow.—On the 28th ult, at Sugarapple-farm, Cambridge, the Lady Godolphin, in her 63d year.—On the 30th ult, at Fast Hall, Lancashire, Mary, the wife of Wm Pearson, and daughter of the late Rev Thomas Bowstead, Rector of Ashton-under-Lyne.—On the 31st ult, at Hampstead, Mary, the wife of Thomas Hall, Esq

PREPARATIONS IN ST. PAUL'S CATHEDRAL, FOR THE FUNERAL OF THE DUKE.



THE NAVE, BY GASLIGHT.

pear unseemly to form plans of future gratification, albeit they tend to the decoration and illumination of the Great Duke's great and stupendous mausoleum.

We have endeavoured to depict the *sights* which may be witnessed in St. Paul's when the lights and gas are kindled. But what can we say of the *sounds*, which can convey an idea of the tumultuous reverberations which are from morning to night kept up within the building? The hammer is incessantly at work in every corner of the edifice, except the choir, and the reiterated blows, more or less blending into one sound, form a ceaseless and deafening din, unlike any other sounds that people ever hear. As the floor of the interior is in no part taken up, the rafters have to be fastened to the lower beam of the principal by large iron bolts and ties. It is necessary that this should be done upon the spot, and hence the incessant music of the hammer and saw. Upwards of 700 loads of timber will be used, in and about St. Paul's; and a glance at the size and thickness of the balks, trusses, and rafters is enough to show that the galleries will be strong enough to support double the weight which they will contain on the day of the funeral.

SIDE AISLE, BY GASLIGHT.

THE ILLUSTRATED LONDON NEWS

SUPPLEMENT.

VOL. XXI.] SATURDAY, NOVEMBER 6, 1852. [GRATIS.

THE NEW PARLIAMENT.

THE General Election of 1852 began on the 6th of July, and was completed by the return of Mr. Dundas for Orkney, by the end of the month. In preparing the following account of its results, it was originally intended to discriminate as distinctly as possible between the members pledged to Protection and to Free Trade, on the supposition that this was the issue the constituencies had been called on to try. Subsequently, however, the Ministerial party disclaimed that issue: it became evident, too, as time advanced, that Protection, as a principle of policy, was almost universally given up, and had ceased to form a distinction between political parties in Parliament, though it still lingers in some of the public journals and in a portion of the community. A great number of members, who have declared their willingness to support Lord Derby's Government, have also declared that they are opposed to the re-imposition of any Protective duties on food. Almost every other principle of policy which has heretofore bound parties together—such as advocating or resisting Reform in the representation, the extension or restriction of religious liberty—has either merged in a great number of new views, which have not yet become rallying principles for great parties, or it is so generally acknowledged that it no longer kindles party zeal in its support. Perhaps no Parliament ever assembled at a time when so many and such very different objects occupied the attention of the electors and the elected. A large number of the rural population then thought only of getting back Protection; the town population, as the rule, were and are for Free Trade. The followers of Lord Derby and of Lord John Russell, though falling in pretty much with these two divisions, are not identical with them. The former embraces strong or rigid Conservatives, who would go back, in all directions if possible; Protectionists who would only restore a duty on corn; and Liberal Conservatives who would advance, and who gave up that duty, but seek compensation for supposed agricultural losses. The latter includes ultra Free-traders, anxious to carry out their great principle in all things; *quasi* Free-traders, who have a lingering love for Protection, applied to a limited number of objects; fearful Free-traders, who are rather forced to go with the stream, than convinced that it is running in a right direction; and anti Free-traders, who cannot get out of old habits, and continually try to restore and extend Protection in some shape or other. Besides these great divisions, Lord Derby's followers are very much divided on ecclesiastical matters. The unfortunate dissensions in the Church have led to a demand for a Convocation; a demand which is as vehemently resisted by some as it is made by others. Lord John Russell's followers, if we may any longer so designate the Opposition, are also divided on ecclesiastical matters, and include supporters of the Church, Dissenters, and persons opposed to the union between Church and State. They are divided, too, on constitutional questions, some being for a thorough and complete, or Radical Parliamentary reform; others for a moderate reform; others again for a very moderate improvement in the representation; and again others opposed to all further alterations in the representative system. Besides these various objects, some gentlemen are advocates of a Ten Hours Bill, others of Tenant Right, one or two support the Charter, a few desire to overthrow the Church establishment, and some to give, if possible, ascendancy to the Roman Catholics. There are in the House, Derby-Disraelites, Russellites, Palmerstonians, Peelites, and Hume's followers. To describe or designate all these shades of opinion, as professed by the different members—and without describing the whole, the description would have been very imperfect—would have been impracticable in a single paper. On these accounts, instead of classifying the members by their presumed political principles, it has been thought better simply to designate them in the list by the letters M., O., and D., to signify Ministerialists, Opposers of the Ministry, and those whose votes are Doubtful.

In making any calculations of the strength of the Ministerialists and the Opposition, it must be remembered that the former is on one point a united body, bound together by their long struggles in opposition to get place; and, in place, bound together by a determination to keep it. No great principle stands in their way. Their opponents may, to a certain extent, be bound together by a desire to turn them out; but the advocates of Tenant Right, of Roman Catholic Supremacy, of Dissenting Independence, of Radical Reform, of thorough Free Trade, are all men whose principles stand in the way of their forming a homogenous union; and they are not to be relied on to combine with the same tenacity to turn Lord Derby out as the Ministerialists are to hold together to preserve him and themselves in office. On this account we have been careful not to overrate the strength of the Opposition.

We have placed, accordingly, amongst the Ministerialists the greater number of those members who have been called Liberal Conservatives. As long as there is a doubt whether any other Government than the one in office can be formed, from the want of union amongst its opponents, a considerable number of members will support the existing Government. As the rule, they are opposed to popular innovation, and in favour of a strong Government to danger. Besides the difficulty of classification arising from the dissolution of parties, and from having a new Ministry, of which the principles are not defined, a great deal depends on opinion than advanced, since it was formed: its future measures are yet wholly unknown, and the degree of support it will receive is altogether uncertain. It is not likely that the votes of intelligent men will be pledged to a Ministry which shrouds itself in mystery.

Our designations are only offered, therefore, as a mere approximation to the strength of the Ins and the Outs. On questions affecting the existence of the Government at the beginning of the session they will probably be found tolerably correct. On all other questions they can give no information. They are no index to the votes of members on any question of principle, concerning either ecclesiastical or civil policy, nor are they an index to the opinions of the constituencies represented. We have, therefore, forborne to draw any deductions from them, as to the number of the people who support or oppose Lord Derby's Government.

By giving with each electoral division the number of votes and the number of its population, the number of persons each member represents may be seen at a glance, as well as how many of them are voters. With this information it is desirable to unite an account of the property in each division; but there is a want of correct statements, which apply uniformly, fairly, and equally to each and all. From a return of the "property assessed to the relief of the poor in each electoral division of England and Wales," obtained last session by Mr. Locke King, we have copied the value of the property in each of these divisions; but there is no corresponding information concerning Scotland and Ireland. For the latter there is a valuation of the counties, but it includes the represented boroughs, and this must be remembered in reading the table. The property rated in the counties of England and Wales is exclusive of the boroughs; in Ireland, the property rated in the counties includes, in most cases, that of the boroughs. For the counties and boroughs of Scotland, and for the boroughs of Ireland, the number of inhabited houses in each division is given as a substitute for an account of the property, though this is rather an index to the population than the property. For Scotland there appears to be no valuation of property in connexion with the Parliamentary divisions, except of houses rated to the poor in boroughs, which does not include the whole; and for Ireland, the valuation by baronies and unions gives no clue to the property of boroughs. With this explanation, the reader will understand the differences in our table, and the reasons for them.

It is necessary to say, that the distinctions between counties and boroughs, distributed under the heads of England, Wales, Scotland, and Ireland, has been preserved, to enable the reader to see at a glance how the different populations are represented. In order, also, to help to make the character of the Parliament known, we have designated the new members by asterisks, affixing one to those gentlemen who have never before sat in the House of Commons, and two to those who have been in Parliament before, but were not in the last Parliament. Those members who have merely changed their places are designated by a dagger. The names of the unsuccessful candidates are in italics. These preliminary remarks will enable the reader to understand the following tables:—

RESULTS OF THE GENERAL ELECTION IN 1852.
